Entry	Date	Proceedings and Orders
	May 16 1996	Petition for writ of certiorari filed. (Response due June 15, 1996)
	Jun 14 1996	Brief amici curiae of California, et al. filed.
	Jun 14 1996	Motion of Agudath Israel of America for leave to file a brief as amicus curiae filed.
	Jun 14 1996	Motion of Carl Anderson, Commissioner, et al. for leave to file a brief as amici curiae filed.
	Jun 14 1996	Motion of United States Catholic Conference, et al. for leave to file a brief as amici curiae filed.
	Jun 17 1996	Brief of respondents Timothy Quill, et al. in opposition filed.
	Jun 17 1996	Motion of Catholic Medical Association for leave to file a brief as amicus curiae filed.
	Jun 17 1996	LODGING consisting of ten copies of the U.S. Commission on Civil Rights publication," Medical Discrimination Against Children with Disabilities" submitted by counsel for amici Carl Anderson, et al.
	Jul 1 1996	Opposition of respondents to motion of Agudath Israel of America and all amici for leave to file a brief as amicus curiae filed.
	Jul 2 1996	DISTRIBUTED. September 30, 1996
	Jul 10 1996	Reply brief of petitioners Vacco, NY Atty. Gen., et al. filed.
	Sep 9 1996	Supplemental brief of respondents Timothy Quill, et al. filed.
	Oct 1 1996	Motion of Agudath Israel of America for leave to file a brief as amicus curiae GRANTED.
	Oct 1 1996	Motion of Carl Anderson, Commissioner, et al. for leave to file a brief as amici curiae GRANTED.
	Oct 1 1996	Motion of United States Catholic Conference, et al. for leave to file a brief as amici curiae GRANTED.
	Oct 1 1996	Motion of Catholic Medical Association for leave to file a brief as amicus curiae GRANTED.
	Oct 1 1996	Petition GRANTED. The brief of petitioners is to be filed with the Clerk and served upon opposing counsel on or before 3 p.m., Tuesday, November 12, 1996. The brief of respondents is to be filed with the Clerk and served upon opposing counsel on or before 3 p.m., Tuesday, December 10, 1996. A reply brief, if any, is to be filed with the Clerk and served upon opposing counsel on or before 3 p.m., Friday, December 27, 1996. Rule 29.2 does not apply. The case is set for oral argument in tandem with No. 96-110, Washington v. Glucksberg.

QUESTIONS PRESENTED

1. Should this Court grant certiorari to settle the question of whether, under the Equal Protection Clause of the Fourteenth Amendment to the United States Constitution, a state retains a legitimate interest in prohibiting physician assisted suicide while allowing terminally ill, mentally competent patients to refuse artificial life support?

2. Should this Court grant certiorari to resolve a conflict between the United States Court of Appeals for the Second Circuit and a state court of last resort on the issue of whether the Equal Protection Clause prohibits the states from banning physician assisted suicide?

LIST OF PARTIES

The following parties were appellants in the court below: Timothy E. Quill, M.D.; Samuel C. Klagsbrun, M.D.; and Howard A. Grossman, M.D. All are respondents here. The appellees in the court below included Dennis C. Vacco, Attorney General of the State of New York; George E. Pataki, Governor of the State of New York; and Robert M. Morgenthau, District Attorney of New York County. All are petitioners here.

PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT

PETITION FOR A WRIT OF CERTIORARI

Petitioners respectfully pray that a writ of certiorari issue to review the judgment of the United States Court of Appeals for the Second Circuit entered on April 2, 1996. The court's decision held that physicians who are willing to do so may prescribe drugs to be self-administered by mentally competent patients who seek to commit suicide during the final stages of a terminal illness.

OPINIONS BELOW

The decision of the United States Court of Appeals for the Second Circuit is reported at 80 F.3d 716 (2d Cir. 1996), and is reproduced in the appendix at 1a. The opinion and order of the district court is reported at 870 F. Supp. 78 (S.D.N.Y. 1994), and is reproduced in the appendix at 63a.

JURISDICTION

The decision of the United States Court of Appeals for the Second Circuit was rendered, and judgment entered, on April 2, 1996. This Court has jurisdiction to hear this petition pursuant to 28 U.S.C. § 1254(1).

CONSTITUTIONAL AND STATUTORY PROVISIONS INVOLVED

The constitutional and statutory provisions involved are the Due Process Clause and Equal Protection Clause of the Fourteenth Amendment to the United States Constitution, and New York Penal Law Sections 125.15(3) and 120.30.

The Fourteenth Amendment, Section 1, to the United States Constitution provides in pertinent part:

> No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

Penal Law Section 125.15(3) is entitled "Manslaughter in the second degree" and provides in pertinent part:

> A person is guilty of manslaughter in the second degree when . . . (3) He intentionally causes or aids another person to commit suicide. Manslaughter in the second degree is a class C felony.

N.Y. Penal Law § 125.15(3) (McKinney's 1987).

Penal Law Section 120.30 is entitled "Promoting a suicide attempt" and provides:

> A person is guilty of promoting a suicide attempt when he intentionally causes or aids another person to attempt suicide. Promoting a suicide attempt is a class E felony.

N.Y. Penal Law § 120.30 (McKinney's 1987).

STATEMENT OF THE CASE

This case challenges the authority of a state to prohibit physicians from taking active steps to aid terminally ill patients in killing themselves. Respondents are three physicians who, together with three terminally ill patients,[1] brought suit pursuant to 42 U.S.C. § 1983 to contest the constitutional validity of New York Penal Law Sections 125.15(3) and 120.30, which make criminal the acts of causing or aiding another to commit suicide or to attempt suicide (JA 13-15).[2]

The respondent-physicians assert that New York's penal provisions violate their right under the Fourteenth Amendment to the United States Constitution to provide active assistance to terminally ill patients to enable them to commit suicide. In the courts below, they argued that the "Fourteenth Amendment guarantees the liberty of mentally competent, terminally ill adults with no chance of recovery to make decisions about the end of their lives" (JA 15), that the right to

---

[1] The plaintiff-patients died by the time the district court rendered its opinion, leaving only the physicians as appellants before the court of appeals. A physician-patient relationship existed between only one of the physicians and one of the plaintiff-patients.

[2] "JA" denotes the Joint Appendix submitted to the Second Circuit Court of Appeals.

assisted suicide is a fundamental right (JA 16), and that New York's laws are unconstitutional under the Due Process Clause (JA 16). They also asserted that because terminally ill people may request the withdrawal of life sustaining treatment, the prohibition of physician assisted suicide violates the rights, under the Equal Protection Clause, of those patients who are terminally ill but are not on artificial life support (JA 17).

In an opinion dated December 15, 1994 (63a), Chief Judge Griesa of the United States District Court for the Southern District of New York treated a cross-motion to dismiss as one for summary judgment (65a), and held on the merits that the criminalization of physician assisted suicide involved neither a denial of a fundamental liberty interest protected by the Fourteenth Amendment's Due Process Clause nor a denial of equal protection under that same Amendment (72a-77a).

The Second Circuit affirmed that portion of the district court's opinion that found no substantive due process right to assisted suicide. *Quill v. Vacco*, 80 F.3d 716, 724-25 (2d Cir. 1996) (19a). The Circuit Court concluded, however, that New York's penal provisions violate the Equal Protection Clause, finding that physician assisted suicide is analytically no different than the refusal of life-sustaining medical treatment, and that no rational basis exists to support New York's disparate treatment of the two. *Id.* at 727 (24a). The court thus invalidated New York Penal Law Sections 125.15(3) and 120.30 to the extent that those laws impose criminal penalties on physicians who prescribe lethal dosages of medication for their terminally ill, mentally competent patients to aid those patients in committing suicide. *Id.* at 731 (35a).

REASONS FOR GRANTING THE PETITION

This Court's review is sought because of the profound importance of the questions presented. The Second Circuit's decision creates an unprecedented substantive constitutional

right under the guise of guaranteeing equal protection of the laws, and in so doing, has "transform[ed] the right to decide about medical treatment into a far broader right to control the timing and manner of death." New York State Task Force on Life and the Law, *When Death Is Sought: Assisted Suicide and Euthanasia in the Medical Context*, at ix (May 1994).

The interests at stake are critical. On an individual level, an erroneous decision by a physician in the course of assisting a suicide simply is not susceptible of correction. On a broader societal level, the outcome in this case will have enormous influence on whether assisted suicide becomes a standard part of our nation's medical practice, and on what will occur in hospitals, clinics and doctors' offices around the country.

Additionally, the decision below merits review because it decides an important federal question in a manner that directly conflicts with a decision by a state court of last resort. The Second Circuit's reasoning also is fundamentally at odds with that of the Ninth Circuit on the same issue.

I

THE SECOND CIRCUIT'S EQUAL PROTECTION ANALYSIS SWEEPS ASIDE HISTORICAL AND RATIONALLY-BASED STATE LIMITATIONS ON THE RIGHT OF SELF-DETERMINATION AND LEAVES THE LAW IN THIS AREA IN SUBSTANTIAL CONFUSION

Having declined to engage, under the Due Process Clause, in "the expansion of fundamental rights that are without support in the text of the Constitution," *Quill*, 80 F.3d at 724 (18a), the Second Circuit nonetheless granted constitutional protection to physician assisted suicide by employing an equal protection analysis of the challenged statutes. Predicated on a conclusion that assisted suicide is no different than the withdrawal of artificial life support, the Circuit Court declared that New York's prohibitions against physician

assisted suicide are not rationally related to a legitimate governmental interest and thus violate the Equal Protection Clause. In so holding, the court swept aside historical and rationally-based state limitations on the right of self-determination, and essentially "create[d] substantive constitutional rights in the name of guaranteeing equal protection of the laws." *San Antonio School Dist. v. Rodriquez*, 411 U.S. 1, 33, 93 S. Ct. 1278, 1297 (1972).

a. The Historical Framework of Penal Law Sections 125.15(3) and 120.30

New York Penal Law Section 125.15(3) states that "a person is guilty of manslaughter in the second degree when . . . [h]e intentionally causes or aids another person to commit suicide." New York Penal Law Section 120.30 states that "a person is guilty of promoting a suicide attempt when he intentionally causes or aids another person to attempt suicide." The first is a class C felony, the second a class E felony.

The State's criminalization of, and thus essential prohibition against, aiding another in self-destruction dates from colonial times and was established in the common law. *See* J. Dougherty, LEGAL AND JUDICIAL HISTORY OF NEW YORK 16-17 (1911) (citing early cases recognizing the prohibition). While the act of suicide itself was not historically made criminal in most states, 2 LaFave & Scott, SUBSTANTIVE CRIMINAL LAW, § 78, at 246-251 (1986), by the time of the ratification of the Fourteenth Amendment, some twenty-one of the thirty-seven existing states, including New York, had statutes making the aiding of suicide a criminal act. Marzen, O'Dowd, Crone & Balch, *Suicide: A Constitutional Right?*, 24 Duquesne L. Rev. 1, 63, 76 (1985).

By 1881, New York had categorized as first degree manslaughter the act of advising, encouraging, abetting or assisting another person to commit suicide. N.Y. Penal Code § 175 (1881). The State's current statutory provisions date from a 1965 Penal Law revision in which the "more sympathetic cases" of assisted suicide were placed within the category of second degree manslaughter, including those cases of "assistance rendered at the request of a person tortured by painful disease." 1965 N.Y. Laws, c. 1030 (codified at N.Y. Penal Law § 125.15(3)); Temporary State Commission on Revision of the Penal Law and Criminal Code, *Proposed New York Penal Law to the Legislative Session of 1964*, at 339 (1964). *See also People v. Duffy*, 79 N.Y.2d 611, 615, 595 N.E.2d 814, 816 (1992) ("section 125.15(3)'s proscription against intentionally causing or aiding a suicide applies even where the defendant is motivated by 'sympathetic' concerns, such as the desire to relieve a terminally ill person from the agony of painful disease") (quoting Temporary State Commission, *supra*).

b. Evolution of New York's Law Through the Work of the New York State Task Force on Life and the Law

In 1985, twenty years after New York's Legislature reaffirmed the sanctions against assisted suicide, then-Governor Mario Cuomo convened the New York State Task Force on Life and the Law to recommend public policy on health care decision-making issues raised by medical advances and new technologies. The work of the Task Force[3] includes a report issued in 1994, *When Death is Sought: Assisted Suicide and Euthanasia in the Medical Context* (May 1994), in which it specifically addressed whether the legislature should repeal the criminal prohibition against physician assisted suicide. In unanimously rejecting the concept, the Task Force noted that "the distinction between the refusal of medical treatment and

---

[3] *See, e.g.*, New York State Task Force on Life and the Law, *When Others Must Choose: Deciding for Patients Without Capacity* (March 1992); New York State Task Force on Life and the Law, *Life Sustaining Treatment: Making Decisions and Appointing a Health Care Agent* (July 1987); New York State Task Force on Life and the Law, *Do Not Resuscitate Orders: The Proposed Legislation and Report of the New York State Task Force on Life and the Law* (April 1986).

assisted suicide and euthanasia has not been well-articulated in the broader public debate" and that the "often-used rubric of the 'right to die' obscures" what it considered to be "critical distinctions." *Id.* at viii. In examining and ultimately rejecting medical proposals to legalize assisted suicide, including one such proposal co-authored by respondent Dr. Timothy Quill, *id.* at 142, the Task Force stated:

> Assisted suicide and euthanasia would carry us into new terrain—American society has never sanctioned assisted suicide or mercy killing. We believe that the practices would be profoundly dangerous for large segments of the population, especially in light of the widespread failure of American medicine to treat pain adequately or to diagnose and treat depression in many cases. The risks would extend to all individuals who are ill. They would be most severe for those whose autonomy and well-being are already compromised by poverty, lack of access to good medical care, or membership in a stigmatized social group. The risks of legalizing assisted suicide and euthanasia for these individuals . . . are likely to be extraordinary.

Id. at vii-viii. *See also* New York State Task Force on Life and the Law, *Life Sustaining Treatment: Making Decisions and Appointing a Health Care Agent*, at 41 (July 1987) ("[a]ll the Task Force members believe that as a matter of public policy the taking of human life must not be granted legal sanction").

Subsequent to the issuance of the 1994 Task Force report, and in accordance with the Task Force's consistent recommendation from 1987 to 1994, the New York State Legislature has taken no action to amend or repeal its statutory prohibition against physician assisted suicide. Penal Law Sections 125.15(3) and 120.30 thus remain in the form in which enacted in 1965. *See also* N.Y. Pub. Health Law § 2989(3) (McKinney's 1993) (adopted together with New York's statutory provisions on health care proxies in 1990, and stating

that the health care proxy provisions are "not intended to permit or promote suicide, assisted suicide, or euthanasia").

c. Legitimate State Purposes Underlying New York's Ban on Assisted Suicide

Brushing aside New York's long and considered look at its ban on assisted suicide, including physician assisted suicide, the Second Circuit found the distinction between acts that artificially sustain life and acts that artificially end life to be a distinction without constitutional significance. It then concluded that the State's disparate treatment of the two is unsupported by any legitimate state purpose.

The Second Circuit's equal protection analysis stands in stark contrast to the historical development and legislative history of the challenged penal provisions and the more recent work of the Task Force on Life and the Law. That history and work reflect the State's clear position, as a matter of chosen public policy, that participating in another's suicide, even for humanitarian ends, should not be granted legal sanction. Also clearly evidenced is the reasoned rejection of the view that the choice of a natural death through the withdrawal of artificial life support is either the functional or legal equivalent of a determination to induce death through the use of an outside lethal agent.

Disregarding New York's articulated record in this regard, the Second Circuit found "unequal treatment" of the terminally ill in New York, and then engaged in a rational basis scrutiny of New York's challenged penal provisions, which led it to observe the following:

> But what interest can the state possibly have in requiring the prolongation of a life that is all but ended? Surely, the state's interest lessens as the potential for life diminishes. *See In re Quinlan*, 70 N.J. 10, 41, 355 A.2d 647, *cert. denied*, 429 U.S. 922, 97 S. Ct. 319, 50 L. Ed.2d 289 (1976). . . . What concern prompts the state to

> interfere with a mentally competent patient's "right to define [his] own concept of existence, of meaning, of the universe, and of the mystery of human life," *Planned Parenthood v. Casey*, 505 U.S. 833, 851, 112 S.Ct. 2791, 2807, 120 L. Ed.2d 674 (1992) . . . . The greatly reduced interest of the state in preserving life compels the answer to these questions: "None."

Quill, 80 F.3d at 729-30 (3d Cir.).

Despite the court's short answer, state-imposed limitations on the right of self-determination, including a ban on physician assisted suicide, do find a basis in a legitimate state purpose. Indeed, as observed by this Court in *Cruzan v. Director, Missouri Dep't of Health*, 497 U.S. 261, 282, 110 S. Ct. 2841, 2853 (1990):

> [A] State may properly decline to make judgments about the "quality" of life that a particular individual may enjoy, and simply assert an unqualified interest in the preservation of human life to be weighed against the constitutionally protected interests of the individual.

Numerous factors justify and make rational, if not compelling, the exercise of a state's police power as embodied in the two New York statutes challenged in this case. They include not only the preservation of life and the prevention of suicide, but also the potential for the abuse of physician assisted suicide and the interest in protecting family members and loved ones; the maintenance of the ethical integrity of the medical profession;[4] and the protection of the interests of innocent third parties. *See, e.g., Compassion in Dying*, 79 F.3d 790, 816 (9th Cir. 1996) (en banc) (listing these, among others, as factors constituting a state's interests); *Eichner v. Dillon*, 73 A.D.2d 431, 465-67, 426 N.Y.S.2d 517, 543-44 (2d

[4] The Hippocratic Oath includes the sentence: "To please no one will I prescribe a deadly drug, nor give advice which may cause his death." STEDMAN'S MEDICAL DICTIONARY 647 (4th Unabridged Lawyers' Ed.) (1976).

Dep't 1980) (same), *modified on other grounds, Matter of Storar*, 52 N.Y.2d 363, 420 N.E.2d 64, *cert. denied*, 454 U.S. 858 (1981). *See also Cruzan*, 497 U.S. at 281, 110 S. Ct. at 2853 ("[i]t cannot be disputed that the Due Process Clause protects an interest in life as well as an interest in refusing life-sustaining medical treatment"); *Matter of Storar*, 52 N.Y.2d at 377, 420 N.E.2d at 71 ("[t]he State has a legitimate interest in protecting the lives of its citizens. . . . It may, by statute, prohibit them from engaging in specified activities, including medical procedures, which are inherently hazardous to their lives") (citation omitted).

State-imposed limitations on the ability to commit suicide with the aid of a physician are further justified by those reasons of universal application articulated by New York's Task Force on Life and the Law. They include protection of those affected by the "widespread failure of American medicine to treat pain adequately, or to diagnose and treat depression" and the safeguarding of those "whose autonomy and well-being are already compromised by poverty, lack of access to good medical care, or membership in a stigmatized social group." New York State Task Force on Life and the Law, *When Death is Sought: Assisted Suicide and Euthanasia in the Medical Context*, at vii-viii (May 1994).

These salient public concerns are heightened as the medical services delivery system moves toward health maintenance organizations, managed care, group medical practices and the involvement of an array of health care professionals, creating the threshold dilemma of just who decides if and when assisted suicide is morally and medically appropriate. At severe risk are the most vulnerable, including the severely handicapped and the elderly. The potential for irreversible abuse by uncaring relatives or health professionals with their own agendas is enormous.

The court's short answer—"none"—to the legitimate state purpose question resonates unconvincingly against a state's clearly rational interest in legislating to prevent assisted sui-

cide, including physician assisted suicide. Yet with that short answer, the Second Circuit now has essentially created a new substantive right to assisted suicide where one previously did not exist. That right goes far beyond the right to decide on medical treatment and enters the realm of controlling the manner and the timing of death.

d. A "Confused Enterprise" of Legislating

If permitted to stand, the Second Circuit's decision not only brings a legal sea change on an issue of national importance, but portends a "confused enterprise" of legislating, "requiring it to be conducted against a background of federal constitutional imperatives that are unknown because they are being newly crafted from Term to Term." *Cruzan*, 497 U.S. at 293, 110 S. Ct. at 2859 (Scalia, J., concurring).

Significant among the host of unanswered issues left in the decision's wake is the question of whether "terminal illness" is always readily and accurately identifiable and precisely when, and by what definition, a patient should be deemed terminally ill. In a situation where there is no margin for error, it must also be questioned whether an individual's mental state can be known with certainty to be uncompromised by disease, depression, inadequate pain management or the fear and pressures of being a family or social "burden." Corresponding to this determination is the question of who is entitled to judge that the decision to "hasten death" is an "informed" and autonomous one.[5]

[5] Speaking of the presumed collaboration between patients and physicians in "hastening death," the Second Circuit's decision references proposed guidelines for "obitiatrists," i.e., physicians who assist in suicide. *Quill*, 80 F.3d at 731 n.4 (34a-35a) (citing "Doctors Offer Some Support to Kevorkian: Urge 10 Guidelines in Assisting Suicide," N.Y. Times, Dec. 5, 1995, at A21). In a writing entitled MEDICIDE: THE GOODNESS OF PLANNED DEATH (1991), Dr. Jack Kevorkian defines "obitiatry" as the practice of experimentation on living humans while they are under anesthesia and prior to "medicide," *id.* at 202-03, saying:

(footnote continued)

Without constitutional resolution is the additional question of whether the right to receive lethal medications for self-administration includes the right to receive such drugs from medical professionals other than doctors whom the state has authorized to prescribe. An even larger issue is whether a mentally competent terminally-ill patient who is physically unable to self-administer a lethal injection or dosage should—or must—be allowed a physician-administered suicide.

Ultimately, the Second Circuit's finding of an equal protection violation arising out of purported unequal treatment of the terminally ill leads to the following reflection, articulated by the Supreme Court of Michigan in *People v. Kevorkian*:

> In this regard, we observe that a right of personal autonomy cannot exist independent of a recognition of human dignity, and that it would violate the concept of human dignity to measure the value of a person's life by that person's physical and mental condition. *See Cruzan*, 497 U.S. at 282, 110 S. Ct. at 2853. Further, because all persons possess a basic right to personal autonomy, regardless of their physical or mental condition, there would be no principled basis for restricting a right to commit suicide to the terminally ill. The inevitability of death adds nothing to the constitutional analysis.

447 Mich. 436, 470 n.41, 527 N.W.2d 714, 727-28 n.41 (1994), *cert. denied*, 115 S. Ct. 1795 (1995).

Without this Court's review and guidance, the Second Circuit's decision creates an ill-defined new substantive con-

> [M]y ultimate aim . . . is not simply to help suffering or doomed persons kill themselves—that is merely the first step, an early distasteful professional obligation (now called medicide) that nobody in his or her right mind could savor. . . . [W]hat I find most satisfying is the prospect of making possible the performance of invaluable experiments or other beneficial medical acts under conditions that this first unpleasant step can help establish—in a word, obitiatry . . . .

Id. at 214.

stitutional right, brought forth in the name of equal protection, which represents a radical departure from existing medical and legal tradition and places seriously ill patients at immediate risk of fallible judgments and irreversible error. Given the nature of what is at stake and the presence of an issue of exceptional national interest and significance, this Court should grant certiorari to review.

II

THE SECOND CIRCUIT HAS DECIDED AN IMPORTANT FEDERAL QUESTION IN A MANNER THAT CONFLICTS WITH A DECISION OF THE HIGHEST STATE COURT OF MICHIGAN AND WHICH IS AT SIGNIFICANT ODDS WITH THE REASONING OF THE NINTH CIRCUIT ON THE SAME ISSUE

The Second Circuit's decision in this case is in direct conflict with a decision of the Supreme Court of Michigan in *People v. Kevorkian*, 447 Mich. 436, 527 N.W.2d 714 (1994), *cert. denied*, 115 S. Ct. 1795 (1995). That case involved five consolidated proceedings, including appeals in several criminal prosecutions brought under Michigan's assisted suicide statute, and an appeal of a civil action brought by a group of terminally ill patients and medical professionals seeking a declaration that Michigan's assisted suicide statute was unconstitutional.

Similar to the Second Circuit, the Supreme Court of Michigan held that "the Due Process Clause of the federal constitution does not encompass a fundamental right to commit suicide, with or without assistance, and regardless of whether the would-be assistant is a physician." *Kevorkian*, 447 Mich. at 482, 527 N.W.2d at 733. However, flatly contrary to the Second Circuit's decision, the Michigan court stated that "persons who opt to discontinue life-sustaining medical treatment are not, in effect, committing suicide," *id.* at 482, 527 N.W.2d at 728, and expressly held:

> For reasons apparent in our analysis of the due process claims, we also reject the argument that Michigan's assisted suicide statute is invalid because it denies equal protection to terminally ill persons who want help in ending their lives, i.e., it denies them a right enjoyed by terminally ill persons who opt to forgo or discontinue life-sustaining medical treatment. As we explained, the two situations are not the same for purposes of constitutional analysis.

Kevorkian, 447 Mich. at 480 n.57, 527 N.W.2d at 732 n.57.[6]

The decision in this case is clearly in conflict with *Kevorkian*. Moreover, the reasoning employed by the Second Circuit in reaching its decision is fundamentally at odds with a recent *en banc* decision of the Ninth Circuit, *Compassion in Dying v. State of Washington*, 79 F.3d 790 (9th Cir. 1996) (en banc).[7] Brought by four doctors, three patients, and a nonprofit organization called Compassion In Dying, the Washington case presented the Ninth Circuit with what it termed "an extraordinarily important and difficult" issue: "whether a person who is terminally ill has a constitutionally-protected liberty interest in hastening . . . death" and if so, whether the State of Washington might "constitutionally restrict its exercise by banning a form of medical assistance that is frequently requested by terminally ill people who wish to die." *Compassion in Dying*, 79 F.3d at 793. Unlike the Second Circuit, which rejected the physicians' due process claim, the Ninth Circuit, sitting *en banc*, held that insofar as the

---

[6] Among the five consolidated cases included in the decision of the Supreme Court of Michigan is *People v. Kevorkian*, No. 93-11482, 1993 WL 603212 (Mich. Cir. Ct. Dec. 13, 1993), in which the equal protection issue was squarely and fully presented and addressed.

[7] Rule 35-3 of the Ninth Circuit's local rules provides that "[i]n appropriate cases, the Court may order a rehearing by the full court following a hearing or rehearing en banc." The Ninth Circuit is currently in the process of deliberating whether to order a rehearing by the full court following its *en banc* decision.

Washington statute prohibits physicians from prescribing life-ending medication for use by terminally ill, competent adults who wish to kill themselves, it violates the Due Process Clause of the Fourteenth Amendment. *Id.*[8]

Kevorkian, *Compassion in Dying*, and this case evidence the legal morass which courts and state legislatures across the country will enter unless the instant petition is granted to provide constitutional guidance from this Court.[9] If various jurisdictions are left in conflict, states encompassed in the Second Circuit, and perhaps the Ninth, may become unwilling meccas for those seeking to secure the assistance of a physician to commit suicide. This would occur, at least in New York, in stark contrast to its long-stated respect for the value of human life, without reference to its condition, and its historical

[8] The Ninth Circuit's *en banc* review declined to address the prior panel's rejection of equal protection arguments. *Compare Compassion in Dying*, 79 F.3d at 798 *with Compassion in Dying v. State of Washington*, 49 F.3d 586, 593 (9th Cir. 1995).

[9] Some thirty-three states have statutes which criminalize assisted suicide. Alaska, Alas. Stat. § 11.41.120(a)(2); Arizona, Ariz. Rev. Stat. Ann. § 13-1103(A)(3); Arkansas, Ark. Code Ann. § 5-10-104(a)(2); California, Cal. Penal Code § 401; Colorado, Colo. Rev. Stat. § 18-3-104(1)(b); Connecticut, Conn. Gen. Stat. Ann. § 53a-56(a)(2); Delaware, Del. Code Ann., tit. 11, § 645; Florida, Fla. Stat. Ann. § 782.08; Georgia, Ga. Code Ann. § 16-5-5(b); Hawaii, Hawaii Rev. Stat. § 707-702(1)(b); Illinois, 720 Ill. Comp. Stat. Ann. 5/12-31; Indiana, Ind. Stat. Ann. § 35-42-1-2.5; Kansas, Kan. Stat. Ann. § 21-3406; Kentucky, Ky. Rev. Stat. 216.302; Louisiana, La. Rev. Stat. Ann. § 14:32.12; Maine, Me. Rev. Stat. Ann., tit. 17-A, § 204; Michigan, Mich. Comp. Laws Ann. § 752.1027; Minnesota, Minn. Stat. Ann. § 609.215; Mississippi, Miss. Code Ann. § 97-3-49; Missouri, Mo. Rev. Stat. § 565.023; Montana, Mont. Code Ann. 45-5-105; Nebraska, Neb. Rev. Stat. § 28-307; New Hampshire, N.H. Rev. Stat. Ann. § 630:4; New Jersey, N.J. Stat. Ann. § 2C:11-6; New Mexico, N.M. Stat. Ann. § 30-2-4; New York, N.Y. Penal Law §§ 120.30 and 125.15(3); North Dakota, N.D. Cent. Code 12.1-16-04; Oklahoma, Okla. Stat. Ann., tit. 21, §§ 813 to 818; Pennsylvania, 18 Pa. Cons. Stat. Ann. § 2505; South Dakota, S.D. Cod. Laws Ann. §§ 22-16-37, 22-16-38; Tennessee, Tenn. Code Ann. § 39-13-216; Texas, Tex. Penal Code Ann. § 22.08; and Wisconsin, Wis. Stat. Ann. § 940.12.

refusal to grant legal sanction to the taking of human life through assisted suicide.

CONCLUSION

Wherefore, for all of the above reasons, petitioners ask that a writ of certiorari issue to review the judgment of the United States Court of Appeals for the Second Circuit in this matter.

Dated: New York, New York
May 15, 1996

APPENDIX

UNITED STATES COURT OF APPEALS

FOR THE SECOND CIRCUIT

No. 60—August Term, 1995

(Argued: September 1, 1995 Decided: April 2, 1996)

Docket No. 95-7028

TIMOTHY E. QUILL, M.D.; SAMUEL C. KLAGSBRUN, M.D.; and HOWARD A. GROSSMAN, M.D.,

Plaintiffs-Appellants,

—v.—

DENNIS C. VACCO, Attorney General of the State of New York; GEORGE E. PATAKI, Governor of the State of New York; ROBERT M. MORGENTHAU, District Attorney of New York County,

Defendants-Appellees.

Before:

MINER and CALABRESI, *Circuit Judges*, and POLLACK, *Senior District Judge*.*

---

* The Honorable Milton Pollack of the United States District Court for the Southern District of New York, sitting by designation.

Appeal from summary judgment for defendants entered in the United States District Court for the Southern District of New York (Griesa, Ch. J.) in action to declare unconstitutional two New York statutes penalizing assistance in suicide to extent that the statutes prohibit physicians from acceding to requests of terminally-ill, mentally competent patients for drugs to hasten death.

Affirmed in part and reversed in part.

Judge Calabresi concurs in a separate opinion.

KATHRYN L. TUCKER, Perkins Coie, Seattle, WA, and CARLA A. KERR, Hughes Hubbard & Reed, New York, NY (David J. Burman, Thomas L. Boeder, Kari Anne Smith, Perkins Coie, Seattle, WA, Leigh A. Roveda, Hughes Hubbard & Reed, New York, NY, of counsel), *for Plaintiffs-Appellants*.

MICHAEL POPKIN, Assistant Attorney General, New York, NY (Dennis C. Vacco, Attorney General of the State of New York, Victoria Graffeo, Solicitor General, Kathie Ann Whipple, Acting Bureau Chief, Litigation Bureau, Susan L. Watson, Assistant Attorney General, of counsel), *for Defendants-Appellees*.

MARC FRAZIER SCHOLL, Assistant District Attorney, New York, NY (Robert M. Morgenthau, District Attorney of New York County, Marc Dwyer, Assistant

District Attorney, of counsel), *for Defendant-Appellee Robert M. Morgenthau*.

(Michael L. Costello, New York State Catholic Conference, Albany, NY, Mark E. Chopko, Michael F. Moses, United States Catholic Conference, Washington, DC, of counsel), for United States Catholic Conference and New York State Catholic Conference as *amici curiae*.

(Michael Tierney, New York, NY, of counsel), for New York State Right to Life Committee, Inc. as *amicus curiae*.

(James Bopp, Jr., Richard E. Coleson, Bopp, Coleson & Bostrom, Terre Haute, IN, of counsel), for The National Right To Life Committee, Inc. as *amicus curiae*.

(Paul Benjamin Linton, Clarke D. Forsythe, Americans United for Life, Chicago, IL, of counsel), for Members of the New York State Legislature as *amici curiae*.

(Cameron Clark, Claudia L. Hammerman, New York, NY, of counsel), for Lambda Legal Defense and Education Fund, Inc., National Association of People with AIDS, Unitarian Universalist Association, Americans for Death with Dignity, Death with Dignity Education Center, Gray Panthers Project Fund, Hemlock Society, and Minna Barrett as *amici curiae*.

MINER, *Circuit Judge*.

Plaintiffs-appellants Timothy E. Quill, Samuel C. Klagsbrun and Howard A. Grossman appeal from a summary judgment entered in the United States District Court for the Southern District of New York (Griesa, Ch. J.) dismissing their 42 U.S.C. § 1983 action against defendants-appellees. The action was brought by plaintiffs-appellants, all of whom are physicians, to declare unconstitutional in part two New York statutes penalizing assistance in suicide. The physicians contend that each statute is invalid to the extent that it prohibits them from acceding to the requests of terminally-ill, mentally competent patients for help in hastening death. In granting summary judgment in favor of defendants-appellees, the district court considered and rejected challenges to the statutes predicated upon the Due Process and Equal Protection Clauses of the Fourteenth Amendment to the United States Constitution. *Quill v. Koppell*, 870 F. Supp. 78 (S.D.N.Y. 1994). We reverse in part, holding that physicians who are willing to do so may prescribe drugs to be self-administered by mentally competent patients who seek to end their lives during the final stages of a terminal illness.

BACKGROUND

The action giving rise to this appeal was commenced by a complaint filed on July 20, 1994. The plaintiffs named in that complaint were the three physicians who are the appellants here and three individuals then in the final stages of terminal illness: Jane Doe (who chose to conceal her actual identity), George A. Kingsley and William A. Barth. The sole defendant named in that complaint was G. Oliver Koppell, then the Attorney

General of the State of New York. He has been succeeded as Attorney General by Dennis C. Vacco, who has been substituted for him as an appellee on this appeal. According to the complaint, Jane Doe was a 76-year-old retired physical education instructor who was dying of thyroid cancer; Mr. Kingsley was a 48-year-old publishing executive suffering from AIDS; and Mr. Barth was a 28-year-old former fashion editor under treatment for AIDS. Each of these plaintiffs alleged that she or he had been advised and understood that she or he was in the terminal stage of a terminal illness and that there was no chance of recovery. Each sought to hasten death "in a certain and humane manner" and for that purpose sought "necessary medical assistance in the form of medications prescribed by [her or his] physician to be self-administered."

The physician plaintiffs alleged that they encountered, in the course of their medical practices, "mentally competent, terminally ill patients who request assistance in the voluntary self-termination of life." Many of these patients apparently "experience chronic, intractable pain and/or intolerable suffering" and seek to hasten their deaths for those reasons. Mr. Barth was one of the patients who sought the assistance of Dr. Grossman. Each of the physician plaintiffs has alleged that "[u]nder certain circumstances it would be consistent with the standards of [his] medical practice" to assist in hastening death by prescribing drugs for patients to self-administer for that purpose. The physicians alleged that they were unable to exercise their best professional judgment to prescribe the requested drugs, and the other plaintiffs alleged that they were unable to receive the requested drugs, because of the prohibitions contained in sections

125.15(3) and 120.30 of the New York Penal Law, all plaintiffs being residents of New York.

Section 125.15 of the New York Penal Law provides in pertinent part:

> A person is guilty of manslaughter in the second degree when:
>
> . . . .
>
> 3. He intentionally . . . aids another person to commit suicide.

A violation of this provision is classified as a class C felony. *Id.*

Section 120.30 of the New York Penal Law provides:

> A person is guilty of promoting a suicide attempt when he intentionally . . . aids another person to attempt suicide.

A violation of this provision is classified as a class E felony. *Id.*

Count I of the complaint included an allegation that "[t]he Fourteenth Amendment guarantees the liberty of mentally competent, terminally ill adults with no chance of recovery to make decisions about the end of their lives." It also included an allegation that

> [t]he Fourteenth Amendment guarantees the liberty of physicians to practice medicine consistent with their best professional judgment, including using their skills and powers to facilitate the exercise of the decision of competent, terminally ill adults to hasten inevitable death by prescribing suitable medications for the patient to self-administer for that purpose.

Count II of the complaint included an allegation that

> [t]he relevant portions of . . . the New York Penal Law deny the patient-plaintiffs and the patients of the physician-plaintiffs the equal protection of the law by denying them the right to choose to hasten inevitable death, while terminally ill persons whose treatment includes life support are able to exercise this choice with necessary medical assistance by directing termination of such treatment.

In their prayer for relief the plaintiffs requested judgment declaring the New York statutes complained of constitutionally invalid and therefore in violation of 42 U.S.C. § 1983 "as applied to physicians who assist mentally competent, terminally ill adults who choose to hasten inevitable death." Plaintiffs also sought an order permanently enjoining defendants from enforcing the statutes and an award of attorney's fees.

By order to show cause filed on September 16, 1994, the plaintiffs moved for a preliminary injunction to enjoin then-Attorney General Koppell "and all persons acting in concert and participation with him from enforcing New York Penal Law sections 125.15(3) and 120.30 against physicians who prescribe medications which mentally competent, terminally ill patients may use to hasten their impending deaths." A declaration by each of the plaintiffs was submitted in support of the application, although Jane Doe had died prior to the filing of the order to show cause. Plaintiffs Kingsley and Barth were then in the advanced stages of AIDS and therefore sought an immediate determination by the district court.

In her declaration, Jane Doe stated:

> I have a large cancerous tumor which is wrapped around the right carotid artery in my neck and is

collapsing my esophagus and invading my voice box. The tumor has significantly reduced my ability to swallow and prevents me from eating anything but very thin liquids in extremely small amounts. The cancer has metastasized to my plural [sic] cavity and it is painful to yawn or cough. . . . In early July 1994 I had the [feeding] tube implanted and have suffered serious problems as a result. . . . I take a variety of medications to manage the pain. . . . It is not possible for me to reduce my pain to an acceptable level of comfort and to retain an alert state. . . . At this time, it is clear to me, based on the advice of my doctors, that I am in the terminal phase of this disease. . . . At the point at which I can no longer endure the pain and suffering associated with my cancer, I want to have drugs available for the purpose of hastening my death in a humane and certain manner. I want to be able to discuss freely with my treating physician my intention of hastening my death through the consumption of drugs prescribed for that purpose.

Mr. Kingsley subscribed to a declaration that included the following:

> At this time I have almost no immune system function. . . . My first major illness associated with AIDS was cryptosporidiosis, a parasitic infection which caused me severe fevers and diarrhea and associated pain, suffering and exhaustion. . . . I also suffer from cytomegalovirus ("CMV") retinitis, an AIDS-related virus which attacks the retina and causes blindness. To date I have become almost completely blind in my left eye. I am at risk of losing my sight altogether from this condition. . . . I also suffer from toxoplasmosis, a parasitic infection which has caused lesions to develop on my brain. . . . I . . . take daily infusions of cytovene for the . . . retinitis condition. This medication, administered for an hour through a Hickman tube which is connected to an artery in my chest, prevents me from ever taking showers and makes simple routine functions burdensome. In addition, I inject my leg daily with neupogen to combat the deficient white cell count in my blood. The daily injection of this medication is extremely painful. . . . At this point it is clear to me, based on the advice of my doctors, that I am in the terminal phase of [AIDS]. . . . It is my desire that my physician prescribe suitable drugs for me to consume for the purpose of hastening my death when and if my suffering becomes intolerable.

In his declaration, Mr. Barth stated:

> In May 1992, I developed a Kaposi's sarcoma skin lesion. This was my first major illness associated with AIDS. I underwent radiation and chemotherapy to treat this cancer. . . . In September 1993, I was diagnosed with cytomegalovirus ("CMV") in my stomach and colon which caused severe diarrhea, fevers and wasting. . . . In February 1994, I was diagnosed with microsporidiosis, a parasitic infection for which there is effectively no treatment. . . . At approximately the same time, I contracted AIDS-related pneumonia. The pneumonia's infusion therapy treatment was so extremely toxic that I vomited with each infusion. . . . In March 1994, I was diagnosed with cryptosporidiosis, a parasitic infection which has caused severe diarrhea, sometimes producing 20 stools a day, extreme abdominal pain, nausea and additional significant wasting.

> I have begun to lose bowel control . . . . For each of these conditions I have undergone a variety of medical treatments, each of which has had significant adverse side effects. . . . While I have tolerated some [nightly intravenous] feedings, I am unwilling to accept this for an extended period of time. . . . I understand that there are no cures. . . . I can no longer endure the pain and suffering . . . and I want to have drugs available for the purpose of hastening my death.

A cross-motion for judgment on the pleadings was filed by Attorney General Koppell on October 11, 1994. Thereafter, on October 14, 1994, an amended complaint was filed by the three physicians and Mr. Kingsley naming as defendants Attorney General Koppell and New York State Governor Mario M. Cuomo. The counts of the complaint were the same as set forth in the original complaint, alleging violations of liberty interests guaranteed by the Fourteenth Amendment in Count I and violation of equal protection rights guaranteed by the Fourteenth Amendment in Count II. The prayer for relief remained the same as in the original complaint. Supplemental declarations in support of the plaintiff's motion for preliminary injunction also were filed on October 14, 1994. In their supplemental declarations, Doctors Klagsbrun and Grossman reiterated their desire "to prescribe drugs, if and when medically and psychiatrically appropriate, for such patients to self-administer at the time and place of their choice for the purpose of hastening their impending deaths."

In his supplemental declaration, Dr. Quill declared:

> The removal of a life support system that directly results in the patient's death requires the direct involvement by the doctor, as well as other medical personnel. When such patients are mentally competent, they are consciously choosing death as preferable to life under the circumstances that they are forced to live. Their doctors do a careful clinical assessment, including a full exploration of the patient's prognosis, mental competence to make such decisions, and the treatment alternatives to stopping treatment. It is legally and ethically permitted for physicians to actively assist patients to die who are dependent on life-sustaining treatments. . . . Unfortunately, some dying patients who are in agony that can no longer be relieved, yet are not dependent on life-sustaining treatment, have no such options under current legal restrictions. It seems unfair, discriminatory, and inhumane to deprive some dying patients of such vital choices because of arbitrary elements of their condition which determine whether they are on life-sustaining treatment that can be stopped.

Along with the supplemental declarations filed on October 14th, an original declaration in support of the motion was filed by Dr. Jack Froom, a physician and Professor of Family Medicine with substantial experience in detecting depression in primary care patients. He declared:

> Physicians can determine whether a patient's request to hasten death is rational and competent or motivated by depression or other mental illness or instability. Physicians currently make these determinations as to patient capacity to make end-of-life decisions with respect to orders not to resuscitate and refusal of life-sustaining treatment. . . . Terminally ill persons who seek to hasten death by con-

suming drugs need medical counseling regarding the type of drugs and the amount and manner in which they should be taken, as well as a prescription, which only a licensed medical doctor can provide. . . . Knowing what drug, in what amount, will hasten death for a particular patient, in light of the patient's medical condition and medication regimen, is a complex medical task. . . . It is not uncommon, in light of present legal constraints on physician assistance, that patients seeking to hasten their deaths try to do so without medical advice. . . . Very often, patients who survive a failed suicide attempt find themselves in worse condition than before the attempt. Brain damage, for example, is one result of failed suicide attempts.

A second amended complaint was filed on October 20, 1994. The parties, allegations and prayer for relief were the same as those contained in the first amended complaint, except that Robert M. Morgenthau, District Attorney of New York County, was added as a defendant in his official capacity. Both Dr. Grossman and Dr. Klagsbrun practice medicine in New York City, and Mr. Morgenthau is responsible for the prosecution of crimes occurring in New York County. The physician plaintiffs each filed second supplemental declarations on November 28, 1994, in support of the motion for a preliminary injunction. Each stated that he was currently treating mentally competent, terminally-ill patients who desired to hasten their deaths by self-administering drugs to be provided by the physicians "if and when medically and psychiatrically appropriate." These patients, according to the physicians, understood "their condition, diagnosis, and prognosis and wish[ed] to avoid prolonged suffering by hastening their deaths if and when their

suffering [became] intolerable." None of the three terminally-ill plaintiffs named in the original complaint survived to the date of the district court's decision.

The opinion of the district court was filed on December 16, 1994. The district court denied the motion for a preliminary injunction and granted the defendants' cross motion to dismiss the action, treating the cross motion as one for summary judgment "since the court has considered matters outside the pleadings—*i.e.*, declarations filed on the motion for preliminary injunction." *Quill*, 870 F. Supp. at 79. After finding that the action presented a justiciable case or controversy, the district court first addressed the due process issue. The court determined that physician assisted suicide could not be classified as a fundamental right within the meaning of the Constitution:

> The Supreme Court has described the considerations which are appropriate before there can be a declaration that rights "not readily identifiable in the Constitution's text" are deserving of constitutional protection. Such rights must be implicit in the concept of ordered liberty so that neither liberty nor justice would exist if they were sacrificed. The Supreme Court has also characterized such rights as those liberties that are deeply rooted in the nation's history and traditions.
>
> The trouble is that plaintiffs make no attempt to argue that physician assisted suicide, even in the case of terminally ill patients, has any historic recognition as a legal right.

Id. at 83 (internal citations omitted). Accordingly, the district court concluded "that the type of physician assisted suicide at issue in this case does not involve a

fundamental liberty interest protected by the Due Process Clause of the Fourteenth Amendment." *Id.* at 84.

Turning to the equal protection issue, the district court identified a reasonable and rational basis for the distinction drawn by New York law between the refusal of treatment at the hands of physicians and physician assisted suicide:

> [I]t is hardly unreasonable or irrational for the State to recognize a difference between allowing nature to take its course, even in the most severe situations, and intentionally using an artificial death-producing device. The State has obvious legitimate interests in preserving life, and in protecting vulnerable persons. The State has the further right to determine how these crucial interests are to be treated when the issue is posed as to whether a physician can assist a patient in committing suicide.

Id. at 84-85. Accordingly, the court held "that plaintiffs have not shown a violation of the Equal Protection Clause of the Fourteenth Amendment." *Id.* at 85.

DISCUSSION

I. Justiciability

As they did in the district court, the state defendants contend on appeal that this action does not present a justiciable case or controversy. We reject this contention.

In *Babbitt v. United Farm Workers Nat'l Union*, 442 U.S. 289 (1979), the Supreme Court was faced with a constitutional challenge to an Arizona farm labor statute. The Court stated that, when contesting the constitutionality of a state criminal statute, it is not necessary

that the plaintiff first expose himself to actual prosecution. *Id.* at 298. Rather,

> [w]hen the plaintiff has alleged an intention to engage in a course of conduct arguably affected with a constitutional interest, but proscribed by a statute, and there exists a credible threat of prosecution thereunder, he "should not be required to await and undergo a criminal prosecution as the sole means of seeking relief."

Id. (quoting *Doe v. Bolton*, 410 U.S. 179, 188 (1973)). The Court in *Doe* held that plaintiff physicians had presented a justiciable controversy despite the fact that none had been threatened with prosecution. 410 U.S. at 188. The law that the physicians challenged was a criminal statute that directly criminalized the physician's participation in abortion. Accordingly, a sufficiently concrete controversy was presented.

The same principles lead to the conclusion that there is a case or controversy at issue here. Dr. Quill has had a criminal proceeding instituted against him in the past, and the state nowhere disclaims an intent to repeat a prosecution in the event of further assisted suicides. The other two physician plaintiffs also face the threat of criminal prosecution. Like the physicians in *Doe*, they "should not be required to await and undergo a criminal prosecution as the sole means of seeking relief." Finally, under *Doe*, the physicians may raise the rights of their terminally-ill patients. *See id.*

Although District Attorney Morgenthau argues in his brief on appeal that appellants have not shown that they are in any jeopardy of prosecution in New York County, a recent indictment by a New York County grand jury

demonstrates the contrary. A newspaper report printed on December 15, 1995 disclosed the following:

> Yesterday, District Attorney Robert M. Morgenthau of Manhattan announced that a grand jury had indicted [George] Delury, an editor who lives on the Upper West Side, on manslaughter charges for helping his 52-year-old wife, Myrna Lebov, commit suicide last summer.

Carey Goldberg, *Suicide's Husband Is Indicted; Diary Records Pain of 2 Lives*, N.Y. Times, Dec. 15, 1995, at B1.[1] The physician plaintiffs have good reason to fear prosecution in New York County.

II. Substantive Due Process

Plaintiffs argue for a right to assisted suicide as a fundamental liberty under the substantive component of the Due Process Clause of the Fourteenth Amendment. This Clause assures the citizenry that any deprivation of life, liberty or property by a state will be attended by appropriate legal processes. However,

> despite the language of the Due Process Clause[ ] of the . . . Fourteenth Amendment[ ], which appears to focus only on the processes by which life, liberty, or property is taken, the cases are legion in which th[at] Clause[ ] ha[s] been interpreted to have substantive content, subsuming rights that to a great extent are immune from . . . state regulation or proscription. Among such cases are those recognizing rights that have little or no textual support in the constitutional language.

[1] On March 15, 1996, Delury pleaded guilty to second-degree attempted manslaughter. Pam Belluck, *Man Will Get Prison Term for Helping His Wife Kill Herself*, N.Y. Times, Mar. 16, 1996, at 23, 26.

Bowers v. Hardwick, 478 U.S. 186, 191 (1986).

Rights that have no textual support in the language of the Constitution but qualify for heightened judicial protection include fundamental liberties so "implicit in the concept of ordered liberty" that "neither liberty nor justice would exist if they were sacrificed." *Palko v. Connecticut*, 302 U.S. 319, 325-26 (1937). Fundamental liberties also have been described as those that are "deeply rooted in this Nation's history and tradition." *Moore v. City of East Cleveland*, 431 U.S. 494, 503 (1977); *see also Griswold v. Connecticut*, 381 U.S. 479, 506 (1965) (White, J., concurring). It is well settled that the state must not infringe fundamental liberty interests unless the infringement is narrowly tailored to serve a compelling state interest. *Reno v. Flores*, 113 S. Ct. 1439, 1447 (1993). The list of rights the Supreme Court has actually or impliedly identified as fundamental, and therefore qualified for heightened judicial protection, include the fundamental guarantees of the Bill of Rights as well as the following: freedom of association; the right to participate in the electoral process and to vote; the right to travel interstate; the right to fairness in the criminal process; the right to procedural fairness in regard to claims for governmental deprivations of life, liberty or property; and the right to privacy. 2 Ronald D. Rotunda & John E. Nowak, *Treatise on Constitutional Law* § 15.7, at 434-36 (2d ed. 1992). The right of privacy has been held to encompass personal decisions relating to marriage, procreation, family relationships, child rearing and education, contraception and abortion. *See Carey v. Population Servs. Int'l*, 431 U.S. 678, 684-85 (1977). While the Constitution does not, of course, include any explicit mention of the right of privacy, this right has been recognized as encompassed by the Fourteenth

Amendment's Due Process Clause. *Id.* at 684. Nevertheless, the Supreme Court has been reluctant to further expand this particular list of federal rights, and it would be most speculative for a lower court to do so. *See* Rotunda & Nowak, *Treatise on Constitutional Law*, *supra*, § 15.7, at 433-37.

In any event, the Supreme Court has drawn a line, albeit a shaky one, on the expansion of fundamental rights that are without support in the text of the Constitution. In *Bowers*, the Supreme Court framed the issue as "whether the Federal Constitution confers a fundamental right upon homosexuals to engage in sodomy and hence invalidates the laws of the many States that still make such conduct illegal and have done so for a very long time." 478 U.S. at 190. Holding that there was no fundamental right to engage in consensual sodomy, the Court noted that the statutes proscribing such conduct had "ancient roots." *Id.* at 192. The Court noted that sodomy was a common law criminal offense, forbidden by the laws of the original 13 states when they ratified the Bill of Rights, and that 25 states and the District of Columbia still penalize sodomy performed in private by consenting adults. *Id.* at 192-93.

As in *Bowers*, the statutes plaintiffs seek to declare unconstitutional here cannot be said to infringe upon any fundamental right or liberty. As in *Bowers*, the right contended for here cannot be considered so implicit in our understanding of ordered liberty that neither justice nor liberty would exist if it were sacrificed. Nor can it be said that the right to assisted suicide claimed by plaintiffs is deeply rooted in the nation's traditions and history. Indeed, the very opposite is true. The Common Law of England, as received by the American colonies, prohibited suicide and attempted suicide. *See* Thomas J.

Marzen et al., *Suicide: A Constitutional Right?*, 24 Duq. L. Rev. 1, 56-67 (1985). Although neither suicide nor attempted suicide is any longer a crime in the United States, 32 states, including New York, continue to make assisted suicide an offense. The New York State Task Force on Life and the Law, *When Death Is Sought: Assisted Suicide and Euthanasia in the Medical Context*, 55 (1994) ("*When Death Is Sought*"). Clearly, no "right" to assisted suicide ever has been recognized in any state in the United States. *See generally* Mark E. Chopko & Michael F. Moses, *Assisted Suicide: Still a Wonderful Life?*, 70 Notre Dame L. Rev. 519, 561 (1995); Yale Kamisar, *Are Laws against Assisted Suicide Unconstitutional?*, 23 Hastings Center Rep., May-June 1993, at 32.

In rejecting the due process-fundamental rights argument of the plaintiffs, we are mindful of the admonition of the Supreme Court:

> Nor are we inclined to take a more expansive view of our authority to discover new fundamental rights imbedded in the Due Process Clause. The Court is most vulnerable and comes nearest to illegitimacy when it deals with judge-made constitutional law having little or no cognizable roots in the language or design of the Constitution.

Bowers, 478 U.S. at 194. The right to assisted suicide finds no cognizable basis in the Constitution's language or design, even in the very limited cases of those competent persons who, in the final stages of terminal illness, seek the right to hasten death. We therefore decline the plaintiffs' invitation to identify a new fundamental right, in the absence of a clear direction from the Court whose precedents we are bound to follow. The limited

room for expansion of substantive due process rights and the reasons therefor have been clearly stated: "As a general matter, the Court has always been reluctant to expand the concept of substantive due process because guideposts for responsible decisionmaking in this unchartered area are scarce and open-ended." *Collins v. City of Harker Heights*, 503 U.S. 115, 125 (1992). Our position in the judicial hierarchy constrains us to be even more reluctant than the Court to undertake an expansive approach in this unchartered area.

III. Equal Protection

According to the Fourteenth Amendment, the equal protection of the laws cannot be denied by any State to any person within its jurisdiction. U.S. Const. amend. XIV, § 1. This constitutional guarantee simply requires the states to treat in a similar manner all individuals who are similarly situated. *See* 3 Rotunda & Nowak, *Treatise on Constitutional Law*, *supra*, § 18.2, at 7. But disparate treatment is not necessarily a denial of the equal protection guaranteed by the Constitution. The Supreme Court has described the wide discretion afforded to the states in establishing acceptable classifications:

> The Equal Protection Clause directs that "all persons similarly circumstanced shall be treated alike." But so too, "[t]he Constitution does not require things which are different in fact or opinion to be treated in law as though they were the same." The initial discretion to determine what is "different" and what is "the same" resides in the legislatures of the States. A legislature must have substantial latitude to establish classifications that roughly approximate the nature of the problem perceived, that accommodate competing concerns both public and

> private, and that account for limitations on the practical ability of the State to remedy every ill. In applying the Equal Protection Clause to most forms of state action, we thus seek only the assurance that the classification at issue bears some fair relationship to a legitimate public purpose.

Plyler v. Doe, 457 U.S. 202, 216 (1982) (internal citations omitted and alteration in original).

The general rule, then, is that state legislation carries a presumption of validity if the statutory classification is "rationally related to a legitimate state interest." *City of Cleburne v. Cleburne Living Ctr., Inc.*, 473 U.S. 432, 440 (1985). In *Cleburne*, the equal protection issue revolved around a zoning ordinance that required a special use permit for homes for the mentally retarded but not for other multiple-dwelling and care-giving facilities. The Supreme Court resolved the issue as follows:

> Because in our view the record does not reveal any rational basis for believing that the Featherston home [for the mentally retarded] would pose any special threat to the city's legitimate interests, we affirm the judgment below insofar as it holds the ordinance invalid as applied in this case.

Id. at 448. In arriving at this conclusion, the Court rejected the city's claims that the disparate classification was justified by the negative attitudes of property owners in the neighborhood of the proposed facility, the location of the facility across the street from a junior high school and on a 500-year flood plain, concerns about legal responsibility for actions that might be taken by the mentally retarded, or concerns about the size of the facility and the number of occupants. *Id.* at 448-50. The Court carefully examined each of these claims

before finding that there was no acceptable reason for the disparate classification in any of them.

Also found invalid under the Equal Protection Clause for failure to survive rational basis scrutiny was a New Mexico statute providing a partial exemption from the state's property tax for certain honorably discharged veterans. *Hooper v. Bernalillo County Assessor*, 472 U.S. 612 (1985). The exemption was limited to veterans who had served on active duty during the Vietnam War for at least 90 continuous days and were New Mexico residents before May 8, 1976. In finding the residence requirement invalid under the Equal Protection Clause, the Court analyzed the New Mexico statute in light of the following principles: "When a state distributes benefits unequally, the distinctions it makes are subject to scrutiny under the Equal Protection Clause of the Fourteenth Amendment. Generally, a law will survive that scrutiny if the distinction rationally furthers a legitimate state purpose." *Id.* at 618 (footnote omitted). The Court determined that the distinction made between veterans who arrived in the state prior to May 8, 1976 and those who arrived thereafter bore no rational relationship to the state's declared objectives of encouraging veterans to settle in the state and of rewarding citizens who resided in the state prior to the cut-off date for their military service. *Id.* at 619-20.

As to the first objective, the Court wrote:

> The distinction New Mexico makes between veterans who established residence before May 8, 1976, and those veterans who arrived in the State thereafter bears no rational relationship to one of the State's objectives—encouraging Vietnam veterans to move to New Mexico. The legislature set this eligibility date long after the triggering event

> occurred. The legislature cannot plausibly encourage veterans to move to the State by passing such retroactive legislation.

Id. at 619 (internal citation omitted). As to the second declared objective, the Court noted that a state court may legitimately compensate resident veterans for past services by providing various advantages, but that "the New Mexico statute's distinction between resident veterans is not rationally related to the State's asserted legislative goal." *Id.* at 621-22. The Court held:

> The State may not favor established residents over new residents based on the view that the State may take care of "its own," if such is defined by prior residence. Newcomers, by establishing bona fide residence in the State, become the State's "own" and may not be discriminated against solely on the basis of their arrival in the State after May 8, 1976.

Id. at 623. *See also Zobel v. Williams*, 457 U.S. 55 (1982) (holding that Alaska statute using length of residence as basis for distribution of oil reserve dividends violated Equal Protection Clause.)

While rational basis scrutiny governs judicial review of the constitutionality of legislation in the areas of social welfare and economics, *see Bowen v. Owens*, 476 U.S. 340, 345 (1986), strict scrutiny is the standard of review where a classification "impermissibly interferes with the exercise of a fundamental right or operates to the peculiar disadvantage of a suspect class," *Massachusetts Bd. of Retirement v. Murgia*, 427 U.S. 307, 312 (1976) (footnotes omitted). Suspect classes are those identified by race, alienage or national origin, *Cleburne*, 473 U.S. at 440, and fundamental rights are those explicitly or implicitly derived from the Constitution itself, *see*

San Antonio Indep. Sch. Dist. v. Rodriguez, 411 U.S. 1, 33-34 (1973). For the reasons described in Part II, *supra*, the New York statutes prohibiting assisted suicide during the terminal stages of illness do not impinge on any fundamental rights nor can it be said that they involve suspect classifications. Laws subject to strict scrutiny will survive such review only if they are suitably tailored to serve a compelling state interest. *Cleburne*, 473 U.S. at 440.

An intermediate level of scrutiny has been applied in analyzing certain equal protection guarantee violations. To pass this scrutiny, the classification must be substantially related to an important governmental objective. *Clark v. Jeter*, 486 U.S. 456, 461 (1988). This sort of examination has been applied to classifications based on sex or illegitimacy. *Id.*; *see also Kadrmas v. Dickinson Pub. Sch.*, 487 U.S. 450, 459 (1988); *Mississippi Univ. for Women v. Hogan*, 458 U.S. 718, 723-24 (1982). A heightened level of equal protection scrutiny also was applied in *Plyler*, where the Supreme Court struck down a Texas statute withholding from local school districts funding for the education of children not legally admitted into the United States. 457 U.S. at 202.

Applying the foregoing principles to the New York statutes criminalizing assisted suicide, it seems clear that: 1) the statutes in question fall within the category of social welfare legislation and therefore are subject to rational basis scrutiny upon judicial review; 2) New York law does not treat equally all competent persons who are in the final stages of fatal illness and wish to hasten their deaths; 3) the distinctions made by New York law with regard to such persons do not further any legitimate state purpose; and 4) accordingly, to the extent that the statutes in questions prohibit persons in

the final stages of terminal illness from having assistance in ending their lives by the use of self-administered, prescribed drugs, the statutes lack any rational basis and are violative of the Equal Protection Clause.

The right to refuse medical treatment long has been recognized in New York. In 1914 Judge Cardozo wrote that, under New York law, "[e]very human being of adult years and sound mind has a right to determine what shall be done with his own body." *Schloendorff v. Society of New York Hosp.*, 211 N.Y. 125, 129 (1914). In 1981, the New York Court of Appeals held that this right extended to the withdrawal of life-support systems. *In re Eichner* (decided with *In re Storar*), 52 N.Y.2d 363, *cert. denied*, 454 U.S. 858 1981). The *Eichner* case involved a terminally-ill, 83-year-old patient whose guardian ultimately was authorized to withdraw the patient's respirator. The Court of Appeals determined that the guardian had proved by clear and convincing evidence that the patient, prior to becoming incompetent due to illness, had consistently expressed his view that life should not be prolonged if there was no hope of recovery. *Id.* at 379-80. In *Storar*, the companion case to *Eichner*, the Court of Appeals determined that a profoundly retarded, terminally-ill patient was incapable of making a decision to terminate blood transfusions. There, the patient was incapable of making a reasoned decision, having never been competent at any time in his life. *Id.* at 380. In both these cases, the New York Court of Appeals recognized the right of a competent, terminally-ill patient to hasten his death upon proper proof of his desire to do so.

The Court of Appeals revisited the issue in *Rivers v. Katz*, 67 N.Y.2d 485 (1986) (establishing the right of mentally incompetent persons to refuse certain drugs). In

that case, the Court recognized the right to bring on death by refusing medical treatment not only as a "fundamental common-law right" but also as "coextensive with [a] patient's liberty interest protected by the due process clause of our State Constitution." *Id.* at 493. The following language was included in the opinion:

> In our system of a free government, where notions of individual autonomy and free choice are cherished, it is the individual who must have the final say in respect to decisions regarding his medical treatment in order to insure that the greatest possible protection is accorded his autonomy and freedom from unwanted interference with the furtherance of his own desires.

Id.

After these cases were decided, the New York legislature placed its imprimatur upon the right of competent citizens to hasten death by refusing medical treatment and by directing physicians to remove life-support systems already in place. In 1987, the legislature enacted Article 29-B of the New York Public Health Law, entitled "Orders Not to Resuscitate." N.Y. Pub. Health Law §§ 2960-79 (McKinney 1993). The Article provides that an "adult with capacity" may direct the issuance of an order not to resuscitate. § 2964. "Order not to resuscitate" is defined as "an order not to attempt cardiopulmonary resuscitation in the event a patient suffers cardiac or respiratory arrest." § 2961(17). "Cardiopulmonary resuscitation" is defined as "measures . . . to restore cardiac function or to support ventilation in the event of a cardiac or respiratory arrest." § 2961(4). An elaborate statutory scheme is in place, and it provides, among other things, for surrogate decision-making, § 2965, revocation of consent, § 2969, physician

review, § 2970, dispute mediation, § 2972, and judicial review, § 2973.

In 1990, the New York legislature enacted Article 29-C of the Public Health Law, entitled "Health Care Agents and Proxies." N.Y. Pub. Health Law §§ 2980-94 (McKinney 1993). This statute allows for a person to sign a health care proxy, § 2981, for the purpose of appointing an agent with "authority to make any and all health care decisions on the principal's behalf that the principal could make." § 2982(1). These decisions include those relating to the administration of artificial nutrition and hydration, provided the wishes of the principal are known to the agent. § 2982(2). The agent's decision is made "[a]fter consultation with a licensed physician, registered nurse, licensed clinical psychologist or certified social worker." *Id.* Accordingly, a patient has the right to hasten death by empowering an agent to require a physician to withdraw life-support systems. The proxy statute also presents a detailed scheme, with provisions for a determination that the principal lacks capacity to make health care decisions, for such a determination to be made only by the attending physician in consultation with another physician "[f]or a decision to withdraw or withhold life-sustaining treatment," § 2983, for provider's obligations, § 2984, for revocation, § 2985, and for special proceedings, § 2992, among other matters.

The concept that a competent person may order the removal of life-support systems found Supreme Court approval in *Cruzan v. Director, Missouri Dep't of Health*, 497 U.S. 261 (1990). There the Court upheld a determination of the Missouri Supreme Court that required proof by clear and convincing evidence of a patient's desire for the withdrawal of life-sustaining equipment.

The patient in that case, Nancy Cruzan, was in a persistent vegetative state as the result of injuries sustained in an automobile accident. Her parents sought court approval in the State of Missouri to terminate the artificial nutrition and hydration with which she was supplied at the state hospital where she was confined. The hospital employees refused to withdraw the life-support systems, without which Cruzan would suffer certain death. The trial court authorized the withdrawal after finding that Cruzan had expressed some years before to a housemate friend some thoughts that suggested she would not wish to live on a life-support system. The trial court also found that one in Cruzan's condition had a fundamental right to refuse death-prolonging procedures.

The Missouri Supreme Court, in reversing the trial court, refused to find a broad right of privacy in the state constitution that would support a right to refuse treatment. Moreover, that court doubted that such a right existed under the United States Constitution. It did identify a state policy in the Missouri Living Will Statute favoring the preservation of life and concluded that, in the absence of compliance with the statute's formalities or clear and convincing evidence of the patient's choice, no person could order the withdrawal of medical life-support services.

In affirming the Missouri Supreme Court, the United States Supreme Court stated: "The principle that a competent person has a constitutionally protected liberty interest in refusing unwanted medical treatment may be inferred from our prior decisions." *Id.* at 278. The Court noted that the inquiry is not ended by the identification of a liberty interest, because there also must be a balancing of the state interests and the individual's liberty interests before there can be a determination that con-

stitutional rights have been violated. *Id.* at 279. The Court all but made that determination in the course of the following analysis:

> Petitioners insist that under the general holdings of our cases, the forced administration of life-sustaining medical treatment, and even of artificially-delivered food and water essential to life, would implicate a competent person's liberty interest. Although we think the logic of the cases discussed above would embrace such a liberty interest, the dramatic consequences involved in refusal of such treatment would inform the inquiry as to whether the deprivation of that interest is constitutionally permissible. But for purposes of this case, we assume that the United States Constitution would grant a competent person a constitutionally protected right to refuse lifesaving hydration and nutrition.

Id.

The Court went on to find that Missouri allowed a surrogate to "act for the patient in electing to have hydration and nutrition withdrawn in such a way as to cause death," subject to "a procedural safeguard to assure that the action of the surrogate conforms as best it may to the wishes expressed by the patient while competent." *Id.* at 280. The Court then held that the procedural safeguard or requirement imposed by Missouri—the heightened evidentiary requirement that the incompetent's wishes be proved by clear and convincing evidence—was not forbidden by the United States Constitution. *Id.* at 280-82.

In view of the foregoing, it seems clear that New York does not treat similarly circumstanced persons alike: those in the final stages of terminal illness who are on

life-support systems are allowed to hasten their deaths by directing the removal of such systems; but those who are similarly situated, except for the previous attachment of life-sustaining equipment, are not allowed to hasten death by self-administering prescribed drugs. The district judge has identified "a difference between allowing nature to take its course, even in the most severe situations, and intentionally using an artificial death-producing device." *Quill*, 870 F. Supp. at 84. But Justice Scalia, for one, has remarked upon "the irrelevance of the action-inaction distinction," noting that "the cause of death in both cases is the suicide's conscious decision to 'pu[t] an end to his own existence.' " *Cruzan*, 497 U.S. at 296-297 (citations omitted and alteration in original) (Scalia, J., concurring). *See also* Note, *Physician-Assisted Suicide and the Right to Die with Assistance*, 105 Harv. L. Rev. 2021, 2028-31 (1992) (arguing that there is no distinction between assisted suicide and the withholding or withdrawal of treatment).

Indeed, there is nothing "natural" about causing death by means other than the original illness or its complications. The withdrawal of nutrition brings on death by starvation, the withdrawal of hydration brings on death by dehydration, and the withdrawal of ventilation brings about respiratory failure. By ordering the discontinuance of these artificial life-sustaining processes or refusing to accept them in the first place, a patient hastens his death by means that are not natural in any sense. It certainly cannot be said that the death that immediately ensues is the natural result of the progression of the disease or condition from which the patient suffers.

Moreover, the writing of a prescription to hasten death, after consultation with a patient, involves a far less active role for the physician than is required in

bringing about death through asphyxiation, starvation and/or dehydration. Withdrawal of life support requires physicians or those acting at their direction physically to remove equipment and, often, to administer palliative drugs which may themselves contribute to death. The ending of life by these means is nothing more nor less than assisted suicide. It simply cannot be said that those mentally competent, terminally-ill persons who seek to hasten death but whose treatment does not include life support are treated equally.

A finding of unequal treatment does not, of course, end the inquiry, unless it is determined that the inequality is not rationally related to some legitimate state interest. The burden is upon the plaintiffs to demonstrate irrationality. *See Kadrmas*, 487 U.S. at 463. At oral argument and in its brief, the state's contention has been that its principal interest is in preserving the life of all its citizens at all times and under all conditions. But what interest can the state possibly have in requiring the prolongation of a life that is all but ended? Surely, the state's interest lessens as the potential for life diminishes. *See In re Quinlan*, 70 N.J. 10, 41, *cert. denied*, 429 U.S. 922 (1976). And what business is it of the state to require the continuation of agony when the result is imminent and inevitable? What concern prompts the state to interfere with a mentally competent patient's "right to define [his] own concept of existence, of meaning, of the universe, and of the mystery of human life," *Planned Parenthood v. Casey*, 112 S. Ct. 2791, 2807 (1992), when the patient seeks to have drugs prescribed to end life during the final stages of a terminal illness? The greatly reduced interest of the state in preserving life compels the answer to these questions: "None."

A panel of the Ninth Circuit attempted to identify some state interests in reversing a district court decision holding unconstitutional a statute of the state of Washington criminalizing the promotion of a suicide attempt. *Compassion in Dying v. Washington*, 49 F.3d 586 (9th Cir. 1995).[2] The plaintiffs in the Washington case contended for physician-assisted suicide for the terminally-ill, but the panel majority found that the statute prohibiting suicide promotion furthered the following: the interest in denying to physicians "the role of killers of their patients"; the interest in avoiding psychological pressure upon the elderly and infirm to consent to death; the interest of preventing the exploitation of the poor and minorities; the interest in protecting handicapped persons against societal indifference; the interest in preventing the sort of abuse that "has occurred in the Netherlands where . . . legal guidelines have tacitly allowed assisted suicide or euthanasia in response to a repeated request from a suffering, competent patient." *Id.* at 592-93. The panel majority also raised a question relative to the lack of clear definition of the term "terminally ill." *Id.* at 593.

The New York statutes prohibiting assisted suicide, which are similar to the Washington statute, do not serve any of the state interests noted, in view of the statutory and common law schemes allowing suicide through the withdrawal of life-sustaining treatment. Physicians do not fulfill the role of "killer" by prescribing drugs to hasten death any more than they do by disconnecting life-support systems. Likewise, "psychological pressure" can be applied just as much upon the elderly and infirm

[2] On rehearing in banc, the Ninth Circuit vacated the decision of the panel and affirmed the decision of the district court. *Compassion in Dying v. Washington*, No. 94-35534, 1996 WL 94848 (9th Cir. Mar. 6, 1996) (in banc).

to consent to withdrawal of life-sustaining equipment as to take drugs to hasten death. There is no clear indication that there has been any problem in regard to the former, and there should be none as to the latter. In any event, the state of New York may establish rules and procedures to assure that all choices are free of such pressures. With respect to the protection of minorities, the poor and the non-mentally handicapped, it suffices to say that these classes of persons are entitled to treatment equal to that afforded to all those who now may hasten death by means of life-support withdrawal. In point of fact, these persons *themselves* are entitled to hasten death by requesting such withdrawal and should be free to do so by requesting appropriate medication to terminate life during the final stages of terminal illness.

As to the interest in avoiding abuse similar to that occurring in the Netherlands, it seems clear that some physicians there practice nonvoluntary euthanasia, although it is not legal to do so. *When Death Is Sought*, *supra*, at 133-34. The plaintiffs here do not argue for euthanasia[3] at all but for assisted suicide for terminally-ill, mentally competent patients, who would self-administer the lethal drugs. It is difficult to see how the relief the plaintiffs seek would lead to the abuses found in the Netherlands. Moreover, note should be taken of the fact that the Royal Dutch Medical Associ-

[3] There are those who use the terms "assisted suicide" and "euthanasia" interchangeably. *See* Patricia A. Unz, Note, *Euthanasia: A Constitutionally Protected Peaceful Death*, 37 N.Y.L. Sch. L. Rev. 439, 439 n.8 (1992). While euthanasia is derived from the Greek words meaning "good death," *id.* at 441, it seems clear that most states, including New York, make a distinction between the two acts. *See When Death Is Sought*, *supra*, at 63. In euthanasia, one causes the death of another by direct and intentional acts. *Id.* Accordingly, euthanasia falls within the definition of murder in New York. *See* N.Y. Penal Law § 125.25(1) (McKinney 1987).

ation recently adopted new guidelines for those physicians who choose to accede to the wishes of patients to hasten death. Under the new guidelines, patients must self-administer drugs whenever possible, and physicians must obtain a second opinion from another physician who has no relationship with the requesting physician or his patient. Marlise Simons, *Dutch Doctors to Tighten Rules on Mercy Killings*, N.Y. Times, Sept. 11, 1995, at A3.

Finally, it seems clear that most physicians would agree on the definition of "terminally ill," at least for the purpose of the relief that plaintiffs seek. The plaintiffs seek to hasten death only where a patient is in the "final stages" of "terminal illness," and it seems even more certain that physicians would agree on when this condition occurs. Physicians are accustomed to advising patients and their families in this regard and frequently do so when decisions are to be made regarding the furnishing or withdrawal of life-support systems. Again, New York may define that stage of illness with greater particularity, require the opinion of more than one physician or impose any other obligation upon patients and physicians who collaborate in hastening death.[4]

[4] For example, the state might take steps to assure the competence of prescribing physicians by imposing education and training qualifications, including pain management; it may require the establishment of local ethics committees as resources for physicians faced with questions relating to requests for lethal medications; it could specify the information to be furnished to the patient to ascertain that the patient's choice is a fully voluntary one; it might require consultations with other physicians for further diagnosis and prognosis in regard to the patient's illness, for psychiatric evaluation, and for evaluation of pain control possibilities; it may provide a time delay between a request for lethal medication and the prescription in order to allow a time for reflection; and it may suggest some sort of notification to the patient's family.

Recently, a group of physicians known as "Physicians for Mercy" proposed ten guidelines for doctor-assisted suicide. *Doctors Offer Some Support to Kevorkian: Urge 10 Guidelines in Assisting Suicide*, N.Y. Times, Dec. 5, 1995, at A21. These guidelines call for a physician who assists in suicide, called an "obitiatrist," to refer his patients to a psychiatrist, a specialist in the patient's specific illness, and, if necessary, a specialist in pain management, before acting at the behest of a mentally competent person with an incurable affliction. *Id.* "Physicians for Mercy" has decided to call the practice of physician assisted suicide "patholysis," a term coined by Dr. Jack Kevorkian, who has assisted in more than two dozen suicides. *Id.* However, Dr. Kevorkian's assistance has not been rendered exclusively to those beset by terminal illnesses. Bruce Fein, *The Right to Determine One's Exit from Life*, Wash. Times, Jan. 23, 1996, at A14.

The New York statutes criminalizing assisted suicide violate the Equal Protection Clause because, to the extent that they prohibit a physician from prescribing medications to be self-administered by a mentally competent, terminally-ill person in the final stages of his terminal illness, they are not rationally related to any legitimate state interest.

CONCLUSION

We reverse the judgment of the district court and remand for entry of judgment in favor of the plaintiffs in accordance with the foregoing. No costs are awarded to either side. *See* Fed. R. App. P. 39(a).

CALABRESI, *Circuit Judge*, concurring in the result:

The Court today strikes down the New York statutes prohibiting assisted suicide insofar as they apply to "terminally ill, mentally competent patients, who would self-administer drugs." It does so because it finds these statutes to be in violation of the Equal Protection Clause of the Fourteenth Amendment since they are not "ratio-

nally related to a legitimate state interest." *Ante* at 20 (citing *City of Cleburne v. Cleburne Living Ctr., Inc.*, 473 U.S. 432, 440 (1985)). At the same time, the Court declines to hold that these statutes violate the Due Process Clause of the Fourteenth Amendment, because "[t]he right to assisted suicide finds no cognizable basis in the Constitution's language or design." *Ante* at 18.

Recently the Ninth Circuit, sitting *en banc*, held that analogous laws violated the fundamental Due Process rights of terminally ill patients. *Compassion in Dying v. Washington*, No. 94-35534, 1996 WL 94848 (9th Cir. Mar. 6, 1996) (*en banc*). The Ninth Circuit recognized that Equal Protection arguments for invalidity were "not insubstantial," but did not discuss them in view of its Due Process holding. *Id.* at *39 n.139.

I agree with the Court that these statutes cannot stand. But I do not believe that the history of the statutes, and of New York's approach toward assisted suicide, requires us to make a final judgment under either Due Process or Equal Protection as to the validity of statutes prohibiting assisted suicide. What is not ready for decision ought not to be decided. I would therefore leave open the question of whether, if the state of New York were to enact new laws prohibiting assisted suicide (laws that either are less absolute in their application or are identical to those before us), such laws would stand or fall.

Accordingly, I join the Court's result, but write separately to explain my unwillingness to reach the ultimate Due Process and Equal Protection questions.

I. *A Bit of History*

There once was a time when the law and its judges were not called upon to make choices for human beings lying in the twilight between life and death. In the past, many of these decisions were left to individual doctors and their patients. Sometimes, easing of pain melded, not quite imperceptibly, into more. While doctors did not advertise their availability, there often was an understanding (perhaps unspoken), as patients entered into what usually were long-term relationships with physicians, that when the time came doctors would do what was expected of them. Laws prohibiting assisted suicide were on the books. But whether they were ever meant to apply to a treating physician, or whether such doctors were even slightly concerned about them, is unclear and lost in the shadows of time.[1] And despite a web of statutes, and doctors who, understandably, have become increasingly averse to taking risks and responsibilities, that tradition undoubtedly continues today. As the majority demonstrates, however, this fact is not a prescription for judicial silence. *Ante* at 13-15. We must, therefore,

[1] *See* NEW YORK STATE TASK FORCE ON LIFE AND THE LAW, WHEN DEATH IS SOUGHT: ASSISTED SUICIDE AND EUTHANASIA IN THE MEDICAL CONTEXT 57 (1994) ("No person has been convicted in New York State of manslaughter for intentionally aiding or causing a suicide. . . . The reluctance to bring such cases no doubt rests in part on the degree of public sympathy [such cases] often arouse, and the resulting difficulty of securing an indictment and conviction."); *Compassion in Dying*, 1996 WL 94848, at *17 (footnotes omitted) ("[T]he mere presence of statutes criminalizing assisting in a suicide does not necessarily indicate societal disapproval. That is especially true when such laws are seldom, if ever, enforced. There is no reported American case of criminal punishment being meted out to a doctor for helping a patient hasten his own death. . . . Running beneath the official history of legal condemnation of physician-assisted suicide is a strong undercurrent of a time-honored but hidden practice of physicians helping terminally ill patients to hasten their deaths.").

address petitioners' claim that New York's laws are invalid.

The statutes at issue were born in another age. New York enacted its first prohibition of assisted suicide in 1828. The statute punished any individual who assisted another in committing "self-murder" for first-degree manslaughter. Act of Dec. 10, 1828, ch. 20, 4 1828 N.Y. Laws 19 (codified at N.Y. Rev. Stat. pt. 4, ch. 1, tit. 2, art. 1, § 7 (1829)). This prohibition was tied to the crime of suicide, described by one contemporary New York Court as a "criminal act of self-destruction." *Breasted v. Farmers' Loan & Trust Co.*, 4 Hill 73, 75 (Sup. Ct. 1843), *aff'd*, 8 N.Y. 299 (1853).

English authorities had long declared suicide to be murder. *See* 3 EDWARD COKE, INSTITUTES OF THE LAWS OF ENGLAND 54 (London, E. & R. Brooke 1797) (1644); 1 MATTHEW HALE, PLEAS OF THE CROWN 411-18 (London, E. & R. Nutt 1736) (1680); 4 WILLIAM BLACKSTONE, COMMENTARIES ON THE LAWS OF ENGLAND *189 (1769); 3 JAMES FITZJAMES STEPHEN, HISTORY OF THE CRIMINAL LAW OF ENGLAND 104 (1869); William E. Mikell, *Is Suicide Murder?*, 3 COLUM. L. REV. 379, 391 (1903) ("[W]hatever may have been the law before Bracton's time . . . suicide is murder in English law."). And the leading American case echoed these English authorities. *See Commonwealth v. Bowen*, 13 Mass. 356 (1816). In that case, Chief Justice Parker instructed the jury: "Self-destruction is doubtless a crime of awful turpitude; it is considered in the eye of the law of equal heinousness with the murder of one by another. In this offence, it is true the actual murderer escapes punishment; for the very commission of the crime, which the the [sic] law would otherwise punish with its utmost rigor, puts the offender beyond the reach of its

infliction. And in this he is distinguished from other murderers. But his punishment is as severe as the nature of the case will admit; his body is buried in infamy, and in England his property is forfeited to the King." *Commonwealth v. Mink*, 123 Mass. 422, 428 (1877) (reprinting Parker's jury instructions in *Bowen*). *Mink* itself, written by Chief Justice Gray, found that "any attempt to commit" suicide is "unlawful and criminal." *Id.* at 429.

Four years after *Mink*, however, the New York Legislature revised the Penal Code. The new code provided that an intentional *attempt* to commit suicide was a felony with a maximum penalty of two years' imprisonment. Act of July 26, 1881, ch. 676, §§ 174, 178, 3 1881 N.Y. Laws 42-43. But while the Code declared suicide itself to be "a grave public wrong," it imposed no forfeiture because of "the impossibility of reaching the successful perpetrator." *Id.* § 173. The 1881 statute, echoing the earlier 1828 provision, punished assisting a successful suicide as manslaughter in the first degree. *Id.* § 175. The Code also punished assistance in attempted suicide as an unspecified felony. *Id.* § 176.

Whatever may have been the case in other jurisdictions,[2] the 1828 and 1881 statutes prohibited all attempts to assist in a suicide on the theory that such behavior created accessory liability. Thus, because attempted suicide was a crime, assisting in the commission of suicide was also a crime. And the titles of the sections of the 1881 statute manifest these derivative origins; section 175 prohibited "*Aiding* suicide" and section 176 prohibited "*Abetting* an attempt at suicide." *Id.* (emphasis added).[3]

---

[2] *See Compassion in Dying*, 1996 WL 94848, at *48-*49 (Beezer, J., dissenting).

[3] The 1937 New York Report of the Law Revision Commission explicitly found that "[t]he history of the [abetting and advising suicide] pro-

Whether these laws applied to a doctor who eased or hastened the death of a terminally ill patient is, of course, quite another matter, and one on which the evidence is scant.[4]

The 1881 scheme was altered in 1919 when the prohibition against attempted suicide (originally found in sections 174 and 178) was removed. Act of May 5, 1919, ch. 414, § 1, 2 1919 N.Y. Laws 1193. The Legislature, nevertheless, left in place the declaration of suicide as a "grave public wrong." *See Hundert v. Commercial Travelers Mut. Accident Ass'n of Am.*, 244 A.D. 459, 460, 279 N.Y.S. 555, 556 (1st Dep't 1935) (per curiam) ("[S]uicide, although recognized as a grave public wrong, is not a crime."). And the prohibition of assisting suicide also remained on the books. But we have found no case in which a physician aiding a person who wished to commit suicide was, in fact, penalized in New York after 1919.

In 1965, the Legislature took the next step and deleted the declaration that suicide was a "grave public wrong."[5]

---

vision is traceable into the ancient common law when a suicide or *felo de se* was guilty of a crime punishable by forfeiture of his goods and chattels. One who encouraged or aided him was guilty as an accessory to the crime of 'self-murder'. . . ." STATE OF NEW YORK, REPORT OF THE LAW REVISION COMMISSION FOR 1937, at 830 (1937).

4 *See supra* note 1.

5 The 1965 Act did provide that "[a] person acting under a reasonable belief that another person is about to commit suicide or to inflict serious physical injury upon himself may use physical force upon such person to the extent that he reasonably believes it necessary to thwart such result." Act of July 20, 1965, ch. 1030, 1965 N.Y. Laws 2355 (codified at N.Y. Penal Law § 35.10(4)). *See Von Holden v. Chapman*, 87 A.D.2d 66, 68, 450 N.Y.S.2d 623, 626 (4th Dep't 1982) (upholding order authorizing forced feeding of John Lennon's murderer, Mark David Chapman, to prevent Chapman from starving himself to death because "[t]he preservation of life has a high social value in our culture").

It, however, left in place redrafted versions of sections 175 and 176 of the 1881 Code, stating: "A person is guilty of manslaughter in the second degree when . . . [h]e intentionally causes or aids another person to commit suicide," § 125.15(3), and, "[a] person is guilty of promoting a suicide attempt when he intentionally causes or aids another person to attempt suicide," § 120.30.[6]

The years since 1965 have brought further erosion in the bases for prohibiting assisted suicide with respect to terminally ill persons. Thus, in 1981, the New York Court of Appeals declared that "a doctor cannot be held to have violated his legal or professional responsibilities when he honors the right of a competent adult patient to decline medical treatment." *In re Storar*, 52 N.Y.2d 363, 377, 420 N.E.2d 64, 71, 438 N.Y.S.2d 266, 273, *cert. denied*, 454 U.S. 858 (1981). The court applied this principle both to the withdrawal of life-support and to the refusal of blood transfusions. *Id.* at 379-80. Furthermore, in 1986, the court stated: "In our system of a free government, where notions of individual autonomy and free choice are cherished, it is the individual who must have the final say in respect to decisions regarding his medical treatment . . . ." *Rivers v. Katz*, 67 N.Y.2d 485,

---

6 Why the legislature left the prohibition of assisted suicide in the law, and whether it thought about the issue at all is hard to say. The 1937 Law Revision Report had, in a sense, presaged the event when it said that since New York had removed "all stigma [of suicide] as a crime" and that "[s]ince liability as an accessory could no longer hinge upon the crime of a principal, it was necessary to define it as a substantive offense." REPORT OF THE LAW REVISION COMMISSION, *supra* note 3, at 831. The Commission seemed to have been concerned primarily with those who talked others into killing themselves. It noted the important difference between aiding someone who had a mind-set to commit suicide and the "more dangerous" person "working upon the mind of a susceptible person to induce suicide," *id.* at 832.

493, 495 N.E.2d 337, 341, 504 N.Y.S.2d 74, 78 (1986). Lower courts, understandably, followed suit. *See Delio v. Westchester County Medical Ctr.*, 129 A.D.2d 1, 516 N.Y.S.2d 677 (2d Dep't 1987) ("[T]he common-law right of self determination with respect to one's body also forms the foundation for a competent adult patient's right to refuse life-sustaining treatment even if the effect is to hasten death . . . .").

The New York Legislature itself acted accordingly. In the 1987 Orders Not to Resuscitate Act, it provided that an "adult with capacity" may create an "order not to resuscitate" in the event the patient "suffers cardiac or respiratory arrest." Act of Aug. 7, 1987, ch. 818, § 1, 1987 N.Y. Laws 3140 (codified as amended at N.Y. Pub. Health Law, §§ 2960-2979 (McKinney 1993 & Supp. 1996)). In the 1990 Health Care Agents and Proxies Act, it went further and permitted a competent person to designate an agent who has "authority to make any and all health care decisions on the principal's behalf that the principal could make." Act of July 22, 1990, ch. 752, § 2, 1990 N.Y. Laws 1538 (codified as amended at N.Y. Pub. Health Law § 2982(1) (McKinney 1993)). The statute explicitly stated that choices regarding the withdrawal of artificial nutrition and hydration are within the purview of a health care agent when the wishes of the principal are reasonably known to the agent. N.Y. Pub. Health Law § 2982(2).[7]

[7] The 1990 Act provided the following caution: "This article is not intended to permit or promote suicide, assisted suicide, or euthanasia; accordingly, nothing herein shall be construed to permit an agent to consent to any act or omission to which the principal could not consent under law." N.Y. Pub. Health Law § 2989(3). The full significance of this section is not clear. It understandably limited the agent to doing those acts to which the principal, on whose behalf the agent is acting, could consent. It also seemed to leave in place the *status quo* both as to those acts, like suicide, which were no longer crimes and those, like assisted suicide, which nominally were. But the section did not go further, as New York claims in a letter brief where it says, citing § 2989(3), that "New York's legislature expressly rejected permitting physician assisted suicide." Section 2989(3) did not speak to this any more than it spoke to the legality of suicide.

Later, in 1994, the New York Task Force on Life and the Law, a group organized in 1985 at the request of Governor Cuomo and composed of doctors, bioethicists, and religious leaders, among others, prepared a report on the question. The report, in effect, said leave things as they are: permit suicide and attempted suicide, recognize the right of competent terminally ill patients—either on their own or through agents—to order the ceasing of nutrition and hydration and the withdrawal of life support systems, but do not alter the law to permit what petitioners seek today. NEW YORK STATE TASK FORCE ON LIFE AND THE LAW, WHEN DEATH IS SOUGHT: ASSISTED SUICIDE AND EUTHANASIA IN THE MEDICAL CONTEXT 142-46 (1994). The Legislature received the report and, not surprisingly, took no action, then or since.

From this historical survey, I conclude that 1) what petitioners seek is nominally still forbidden by New York statutes; 2) the bases of these statutes have been deeply eroded over the last hundred and fifty years; and 3) few of their foundations remain in place today.

Specifically:

• The original reason for the statutes—criminalizing conduct that aided or abetted other crimes—is long since gone.

• The distinction that has evolved over the years between conduct currently permitted (suicide, and aiding someone who wishes to die to do so by removing

hydration, feeding, and life support systems) and conduct still prohibited (giving a competent, terminally ill patient lethal drugs, which he or she can self-administer) is tenuous at best.[8]

• The Legislature—for many, many years—has not taken any recognizably affirmative step reaffirming the prohibition of what petitioners seek.

• The enforcement of the laws themselves has fallen into virtual desuetude—not so much as to render the case before us nonjusticiable, but enough to cast doubt on whether, in a case like that which the petitioners present, a prosecutor would prosecute or a jury would convict. And this fact by itself inevitably raises doubts about the current support for these laws.[9]

II. *Constitutional Doubts*

In the case of ordinary legislation none of this would matter much. We regularly uphold laws whose original reason has vanished, whose fit with the rest of the legal system is dubious, whose enforcement is virtually nil, and whose continued presence on the books seems as much due to the strong inertial force that the framers of our constitutions gave to the *status quo* as to any current

---

8 *See ante* at 29-34 (the majority opinion's powerful discussion of the weakness of the distinction).

9 We note in passing that a jury in Michigan recently acquitted Dr. Jack Kevorkian after he argued (despite his earlier, quite explicit, publicity and statements) that all he was doing was ending pain. *See* Todd Nissen, *Kevorkian Found Not Guilty in Assisted Suicide Trial*, Reuters, Mar. 8, 1996. We note also that Iowa has just enacted a law forbidding assisted suicide and that this law does not prohibit "the responsible actions of a licensed health professional to administer pain medication to a patient with a terminal illness." *See Gov. Branstad Signs Bill Outlawing Assisted Suicide*, BNA Health Care Daily, Mar. 5, 1996.

majoritarian support. In a different context, I have argued that courts have used subterfuges and aggressive interpretations to rid the system of such laws. *See* GUIDO CALABRESI, A COMMON LAW FOR THE AGE OF STATUTES 163-66, 172-77 (1982). But I have also criticized such judicial action, at least in the absence of express legislative sanction. *See id.; Taber v. Maine*, 67 F.3d 1029, 1039 (2d Cir. 1995).

When legislation comes close to violating fundamental substantive constitutional rights or to running counter to the requirements of Equal Protection, however, there is, as I hope to demonstrate, a long tradition of constitutional holdings that inertia will not do. In such instances, courts have asserted the right to strike down statutes and, before ruling on the ultimate validity of that legislation, to demand a present and positive acknowledgment of the values that the legislators wish to further through the legislation in issue. And so it is to an examination of the substantive constitutional dubiety of the laws before us that I now turn.

There can be no doubt that the statutes at issue come close—at the very least—to infringing fundamental Due Process rights and to doing so in ways that are also suspect under the antidiscrimination principles of the Equal Protection Clause. While differing in emphasis, the various opinions of the Supreme Court in *Cruzan v. Director, Missouri Department of Health*, 497 U.S. 261 (1990), and in *Planned Parenthood v. Casey*, 505 U.S. 833 (1992), as well as the *en banc* opinion of the Ninth Circuit in *Companion in Dying*, and the strongly argued majority opinion in this case, make that abundantly clear.

In *Cruzan*, the Court examined whether guardians could order withdrawal of an incompetent patient's life support when, contrary to the requirements of the State of Missouri, there was not clear and convincing proof of the patient's wish to have life support withdrawn. In deciding that the guardians could not so order, the majority opinion noted that "[t]he principle that a competent person has a constitutionally protected liberty interest in refusing unwanted medical treatment may be inferred from our prior decisions." 497 U.S. at 278. It went on to describe the decision to withdraw life support as "deeply personal" and noted that "[i]t cannot be disputed that the Due Process Clause protects an interest in life as well as an interest in refusing life-sustaining medical treatment." *Id.* at 281.

Various Justices expanded on this theme. Justice O'Connor, concurring, wrote, "I agree that a protected liberty interest in refusing unwanted medical treatment may be inferred from our prior decisions, see *ante*, at 278-79, and that the refusal of artificially delivered food and water is encompassed within that liberty interest. See *ante*, at 279." *Id.* at 287. She then added, "Requiring a competent adult to endure such procedures against her will burdens the patient's liberty, dignity, and freedom to determine the course of her own treatment. Accordingly, the liberty guaranteed by the Due Process Clause must protect, if it protects anything, an individual's deeply personal decision to reject medical treatment, including the artificial delivery of food and water." *Id.* at 289. Justice Brennan, joined by Justices Marshall and Blackmun, dissenting, made a similar point: "Dying is personal. And it is profound. For many, the thought of an ignoble end, steeped in decay, is abhorrent. A quiet, proud death, bodily integrity intact, is a matter of extreme consequence." *Id.* at 310-11. In turn, Justice Stevens, also dissenting, powerfully noted: "Choices about death touch the core of liberty. Our duty, and the concomitant freedom, to come to terms with the conditions of our own mortality are undoubtedly 'so rooted in the traditions and conscience of our people as to be ranked as fundamental . . . .' " *Id.* at 343.

Even Justice Scalia, who was the only member of the Court to find that no liberty interest was implicated, recognized that such issues touch the essence of our humanity. He argued that the Constitution was silent on the question of whether one had a liberty interest in refusing life support, and that such a right could not be found in our history and tradition. *Id.* at 293-96 (Scalia, J., concurring). He then went on to say: "Are there, then, no reasonable and humane limits that ought not to be exceeded in requiring an individual to preserve his own life? There obviously are, but they are not set forth in the Due Process Clause. What assures us that those limits will not be exceeded is the same constitutional guarantee that is the source of most of our protection—what protects us, for example, from being assessed a tax of 100% of our income above the subsistence level, from being forbidden to drive cars, or from being required to send our children to school for 10 hours a day, none of which horribles are categorically prohibited by the Constitution. Our salvation is the Equal Protection Clause, which requires the democratic majority to accept for themselves and their loved ones what they impose on you and me." *Id.* at 300. Significantly, as the majority today points out, Justice Scalia also made clear that he recognized no sensible difference between assisted suicide (of the sort involved in the case before us) and assisted removal of life support and feeding tubes.

"[T]he cause of death in both cases is the suicide's conscious decision to 'pu[t] an end to his own existence.' " *Id.* at 295-97 (Scalia, J., concurring).

Although the Court in *Cruzan* did not ultimately decide whether a patient had a constitutionally protected right to die, the majority opinion clearly recognized that any infringement of such a liberty interest was at least constitutionally suspect.[10] It said, "Petitioners insist that under the general holdings of our cases, the forced administration of life-sustaining medical treatment, and even of artificially delivered food and water essential to life, would implicate a competent person's liberty interest. Although we think the logic of the cases discussed above would embrace such a liberty interest, the dramatic consequences involved in refusal of such treatment would inform the inquiry as to whether the deprivation of that interest is constitutionally permissible. But for purposes of this case, we assume that the United States Constitution would grant a competent person a constitutionally protected right to refuse lifesaving hydration and nutrition." *Id.* at 279.

What is more, the Court in *Cruzan* did not merely "assume" that a liberty interest in refusing life-sustaining medical treatment existed. It found that a prohibition of life-support termination would deprive a patient of that liberty interest. In doing so, the Court noted that

[10] Both Justices O'Connor and Scalia joined Chief Justice Rehnquist's opinion, making it an opinion for the Court. Their own concurring opinions, however, gave significantly different glosses to the Court's opinion. *See Cruzan*, 497 U.S. at 287 (O'Connor, J., concurring) ("As the Court notes, the liberty interest in refusing medical treatment flows from decisions involving the State's invasions into the body. See *ante*, at 278-279"); *id.* at 293 (Scalia, J. concurring) ("While I agree with the Court's analysis today, and therefore join in its opinion, I would have preferred that we announce, clearly and promptly, that the federal courts have no business in this field . . . .").

"determining that a person has a 'liberty interest' under the Due Process Clause does not end the inquiry," and that "whether respondent's constitutional rights have been violated must be determined by balancing his liberty interests against the relevant state interests." *Id.* at 279 (internal quotation marks and citation omitted). It then "assumed" that when a patient's liberty interest was balanced against Missouri's interest in life, the balance would come out in favor of the patient.

Cruzan never actually struck this balance, of course, because the Court found that Missouri could insist on strong evidentiary requirements to ensure that Cruzan wanted to die, since "the Due Process Clause protects an interest in life as well as an interest in refusing life-sustaining medical treatment," *id.* at 281. But this in no way undermines *Cruzan*'s holding that in determining whether a patient has a constitutional right to die, we are required to "balance" the consequences of the state's prohibition of life-support termination against the state's interest in preserving life. *Id.* at 279.

Cruzan, therefore, teaches us that statutes that interfere with an individual's decision to terminate life are suspect under the Due Process Clause. The right to act on that decision is one that may or may not receive ultimate constitutional protection, however, depending on the power of the state's interests and the clarity with which those interests are expressed. Moreover, as Justice Scalia in his concurrence points out, the Equal Protection Clause also requires courts to examine whether such statutes apply equally to "you and me"—regardless of whether the prohibited activity interferes with a fundamental right or disadvantages a suspect class.

Like *Cruzan*, *Casey* suggests that New York's assisted suicide statutes are of doubtful constitutionality. In

Casey, the Court noted that "[o]ur law affords constitutional protection to personal decisions relating to marriage, procreation, contraception, family relationships, child rearing, and education" and that "the Constitution places limits on a State's right to interfere with a person's most basic decisions about . . . bodily integrity." 505 U.S. at 851, 849. In this respect, *Casey* borrowed from Justice Harlan's formulation in *Poe v. Ullman*, 367 U.S. 497, 543 (1961) (Harlan, J., dissenting), 505 U.S. at 848-49, and defined liberty interests to include choices at the core of human existence. Following Harlan, it stated: "These matters, involving the most intimate and personal choices a person may make in a lifetime, choices central to personal dignity and autonomy, are central to the liberty protected by the Fourteenth Amendment. At the heart of liberty is the right to define one's own concept of existence . . . . Beliefs about these matters could not define the attributes of personhood were they formed under compulsion of the State." *Id.* at 851.

Today's majority and the Ninth Circuit, *en banc*, in *Compassion in Dying*, go further than the Supreme Court did in *Cruzan* and *Casey*. These circuits—the first to rule on the matter—hold that laws prohibiting physicians from assisting suicide in some circumstances actually violate the Constitution. The majority does so because it can see no valid Equal Protection difference between the so-called "passive" assistance that New York allows and the "active" assistance that New York purports to forbid. The Ninth Circuit, instead, finds a violation of a fundamental Due Process right.[11]

[11] And some distinguished scholars agree. *See, e.g.*, Jed Rubenfeld, *The Right of Privacy*, 102 HARV. L. REV. 737, 794-95 (1989) ("If the decision to live or die is said to be so fundamental to a person that the state may not make it for him, then it is difficult to see on what plausible ground the right to make this decision could be granted to those on life support but denied to all other individuals."). There are, of course, distinguished scholars who disagree. *See, e.g.*, Yale Kamisar, *Against Assisted Suicide—Even a Very Limited Form*, 72 DETROIT MERCY L. REV. 735, 753-60 (1995).

In light of these opinions, I believe that it cannot be denied that the laws here involved, whether tested by Due Process or by Equal Protection, are highly suspect. It is also the case, however, that neither *Cruzan*, nor *Casey*, nor the language of our Constitution, nor our constitutional tradition clearly makes these laws invalid. What, then, should be done?

III. *The Constitutional Remand*

I contend that when a law is neither plainly unconstitutional (because in derogation of one of the express clauses of our fundamental charter or, for that matter, of the more general clauses, as these have been interpreted in our constitutional history and traditions), nor plainly constitutional, the courts ought not to decide the ultimate validity of that law without current and clearly expressed statements, by the people or by their elected officials, of the state interests involved. It is my further contention, that, absent such statements, the courts have frequently struck down such laws, while leaving open the possibility of reconsideration if appropriate statements were subsequently made.

Thus, in *Kent v. Dulles*, 357 U.S. 116, 129 (1958), in striking down a State Department directive limiting citizens' passport rights, the Supreme Court, said: "Where activities or enjoyment, natural and often necessary to the well-being of an American citizen, such as travel, are involved, we will construe narrowly all delegated powers that curtail or dilute them. We hesitate to find in this broad generalized power an authority to trench so heav-

ily on the rights of the citizen. . . . Thus we do not reach the question of constitutionality. We only conclude that § 1185 and § 211a do not delegate to the Secretary the kind of authority exercised here." And in *Greene v. McElroy,* 360 U.S. 474 (1959), in voiding a loyalty-security program that did not provide for confrontation of witnesses, the Court stated: "[Legislative and executive decisions] must be made explicitly not only to assure that individuals are not deprived of cherished rights under procedures not actually authorized, but also because explicit action, especially in areas of doubtful constitutionality, requires careful and purposeful consideration by those responsible for enacting and implementing our laws." *Id.* at 507 (citation omitted)

The same view was expressed even by the great constitutional absolutist, Justice Hugo L. Black. In *Barenblatt v. United States,* 360 U.S. 109 (1959), in dissent, he argued that the authority of the House UnAmerican Activities Committee to investigate communism in education should be limited, "[f]or we are dealing here with governmental procedures which the Court itself admits reach to the very fringes of congressional power. In such cases more is required of legislatures than a vague delegation to be filled in later by mute acquiescence." *Id.* at 139-40 (footnote omitted).[12]

While these earlier cases leaned in part on statutory interpretation or on broad readings of doctrines such as

[12] The Court's opinion in *Kent* and Justice Black's dissent in *Barenblatt* relied in part on a pair of delegation opinions by Chief Justice Hughes dating from the 1930s. These were treated as using a similar approach because, in the 1930s, the statutes at issue were at the fringes of congressional power under the Commerce Clause. *See Kent*, 357 U.S. at 129 (citing *Panama Refining Co. v. Ryan,* 293 U.S. 388, 420-30 (1935)); *Barenblatt*, 360 U.S. at 140 n.7 (Black, J., dissenting) (citing *Panama Refining* and *A.L.A. Schechter Poultry Corp. v. United States*, 295 U.S. 495 (1935)).

delegation and vagueness, more recent opinions have applied constitutional remands directly.[13] In *Califano v. Goldfarb,* 430 U.S. 199 (1977), for example, Justice Stevens provided the swing vote in the Court's five-to-four decision that the Social Security Act's grant of special benefits to widows was in violation of Equal Protection. He found that the law discriminated "against a group of males [and] is merely the accidental byproduct of a traditional way of thinking about females." *Id.* at 233 (Stevens, J., concurring). Significantly, he went on to say that "[p]erhaps an actual, considered legislative choice would be sufficient to allow this statute to be upheld, but that is a question I would reserve until such a choice has been made." *Id.* at 223 n.9.[14]

[13] Interpretation to avoid constitutional questions and undue delegation have proven particularly useful to the Supreme Court as ways of sending back for a second look federal statutes that came close to infringing fundamental rights. These devices, however, are either not available or are problematic when the statute that skates close to a constitutional line is a state law, since both what can and cannot be delegated within a state and how a state statute should be interpreted are paradigmatic issues of state law. *Compare Sweezy v. New Hampshire*, 354 U.S. 234, 254 (1957) (plurality opinion applying a concept akin to undue delegation to find that "[t]he lack of any indications that the legislature wanted the information the Attorney General attempted to elicit from petitioner must be treated as the absence of authority. It follows that the use of the contempt power . . . was not in accordance with . . . due process") *with id.* at 257 (Frankfurter, J., concurring in the result) (disagreeing with plurality on this issue because "whether the Attorney General of New Hampshire acted within the scope of the authority given him by the state legislature is a matter for the decision of the courts of that State, as it is for the federal courts to determine whether an agency to which Congress has delegated power has acted within the confines of its mandate"). In such circumstances, a reconsideration can occur at the behest of a federal court only if that court is willing impose a constitutional remand directly. *See infra* (discussion of *Thompson v. Oklahoma*, 487 U.S. 815 (1988), and *Abele v. Markle*, 342 F. Supp. 800 (D. Conn. 1972)).

[14] The other four votes in the majority held that the statute was an invalid discrimination against women. *Califano*, 430 U.S. at 217 (plurality opinion).

The powerful, and telling, concurring opinion by Justice O'Connor in *Thompson v. Oklahoma*, 487 U.S. 815 (1988), which provided the fifth vote to strike down state death penalty laws applicable to minors less than sixteen years of age, did the same thing. The fact that such laws were on the books in many states did not suffice to meet the strictures of the Cruel and Unusual Punishment Clause. The laws may have been there inadvertently or as a result of inertia, and many state legislatures seemed not to have realized that children could be executed under their statutes. Such laws, moreover, were virtually never enforced against minors under sixteen. Hence, the Justice reasoned, they were invalid. But if states reenacted them, consciously and clearly, the Court would then have to consider whether the statutes could actually meet the Clause's requirements. *Id.* at 857 (O'Connor, J., concurring in the judgment).

Perhaps the most dramatic instance of this constitutional remand, or second look, approach occurred in our own Circuit, in a case bearing many similarities to the one before us today. In *Abele v. Markle*, 342 F. Supp. 800 (D. Conn. 1972) ("*Abele I*"), a three-judge district court was asked to examine the constitutionality of a Connecticut statute that banned abortion. Circuit Judge J. Edward Lumbard found the statute to be unconstitutional for reasons later echoed by the Supreme Court in *Roe v. Wade*, 410 U.S. 113 (1973). District Judge T. Emmet Clarie found no violation of due process for reasons akin to those adverted to in today's majority opinion. The key vote was by then-District Judge Jon Newman.

In his landmark opinion, now-Chief Judge Newman found that the Connecticut statute had been passed in 1860 to protect the health of pregnant women, and that

this aim was no longer applicable in 1972 because childbirth endangered a woman's life more than abortion did. *Id.* at 807-09 (Newman, J., concurring). Yet he recognized that other valid grounds for the statute might exist, including, perhaps, the protection of unborn life (*Roe v. Wade* had not yet been decided). Newman pointed out, however, that the statute was not passed to protect unborn life. "If the Connecticut legislature had made [such] a judgment," Newman mused, "the constitutionality of such laws would pose a legal question of extreme difficulty . . . ." *Id.* at 810. Because "that legislative determination has not been shown to have been made," Newman found it "inappropriate to decide the constitutional issue that would be posed" if the Legislature in fact passed a law designed to protect human life. *Id.* And since the statute before him, whatever its basis, raised strong constitutional doubts, Newman nullified the law while explicitly leaving the Legislature free to reconsider the issue.

Judge Newman's opinion is, of course, not binding on us. But it remains an important beacon suggesting what is the correct approach in extremely difficult cases in which neither the Supreme Court, nor constitutional language or tradition, gives clear guidance. It tells us how to deal with situations in which the state interests that might support such statutes can only be inferred from legislative inaction or from long-abandoned legislative motives.

Today, Timothy Quill takes the place of Janice Abele in challenging another statute of nineteenth-century origin. As with the Connecticut abortion law, the rationale for the New York assisted-suicide prohibition has eroded with the passage of time. In the nineteenth century, both suicide and attempted suicide were crimes and assisting

in those crimes was, derivatively, a crime as well. But suicide and attempted suicide are no longer crimes. Nevertheless, the prohibitions on assisted suicide might serve other valid ends. It is possible, for example, to imagine a state in which such statutes were part of an overall approach to the preservation of life that was so all-encompassing that the laws' validity might be upheld despite their infringement of important libertarian individual rights. Our Constitution gives us no more complete dominion over our bodies than it does over our property. *See, e.g., Schmerber v. California*, 384 U.S. 757 (1966) (holding that a state may, over a suspect's protest, have a physician extract blood from a person suspected of drunk driving). In other words, our Constitution does not enact the bodily equivalent of Herbert Spencer's Social Statics. *Cf. Lochner v. New York*, 198 U.S. 45, 75 (1905) (Holmes, J., dissenting). But there is no sign that such an overall "culture of life" reigns in New York State—quite the contrary.

Well before *Roe v. Wade*, New York enacted one of the most permissive abortion laws in the country. *See Roe*, 410 U.S. 113, 147-48 & n.41 (1973). New York recently reenacted the death penalty. *See* Act of Mar. 7, 1995, ch. 1, § 2, 1995 N.Y. Laws 1 (McKinney's) (codified at N.Y. Penal Law § 60.06 (McKinney's Supp. 1996)). As far as I know, no New York Legislature has seriously considered requiring individuals to give their blood, bone marrow or other organs, to keep those who need transplants alive. Indeed, such an idea would strike many as bizarre science fiction. Nearer to hand, the right to demand to die, as and when one wishes, has been recognized in New York for all those on feeding or hydration tubes or on other life support devices. All this the majority opinion demonstrates beyond peradventure.

Various *amici* for the respondents argue that the New York assisted suicide laws consciously adopt their particular vision of what life and death should be. *Amicus* United States Catholic Conference, for example, insists that suicide is antithetical to freedom, that it is not voluntary and that it is linked to psychiatric illness. But there is no reason to believe that New York has accepted these arguments. If it had, one would expect that New York would prohibit attempted suicide and that it would, for example, aggressively discourage suicide by the terminally ill, through legislative declarations defining it to be a "grave public wrong" or through some other means.

Other *amici* contend that the difference between what they call "active" assisted suicide (making lethal drugs available to those terminally ill who would self-administer them) and what they call "passive" behavior (actively removing life supports or feeding tubes, on demand, so that the patient may die) is fundamental. Even if I were to accept the distinction in the face of the powerful arguments made against it both by the majority today and by Justice Scalia in his *Cruzan* concurrence, there is no reason to believe that New York has consciously made such a judgment. Certainly New York has never enacted a law based on a reasoned defense of the difference.

The Attorney General of New York contends that its Legislature has, in fact, made just such a distinction by its inaction, by its failure to remove the prohibitions before us today. It left these in place after the prohibition on what could be called "passive" assisted suicide had been abrogated. Leaving aside the difficulties involved in arguing that legislative *inaction* should be given the *same* weight as legislative *action* in supporting the view that medical *action* and medical *inaction* are funda-

mentally *different*, the argument will not do. As the majority points out, we have not been given any clear statements of possible interests that the state actually believes would be served by the distinction. In their absence, how can we say that the distinction, which is anything but obvious, and which results in severe harm to the ability of some, but not all, individuals to determine crucial life and death choices for themselves, is mandated by the state's fundamental needs? And if the state does not affirmatively tell us what it wishes to put on the other side of the scale, how can we make the balance required by *Cruzan* come out any way but in favor of an individual's freedom to choose between life and death? Whether under Equal Protection, or Due Process, then, the absence of a recent, affirmative, lucid and unmistakable statement of why the state wishes to interfere with what has been held by the Supreme Court to be a significant individual right, dooms these statutes.

I take no position on what I would hold were such an affirmative statement forthcoming from the state of New York. In the wake of *Furman v. Georgia*, 408 U.S. 238, 239-40 (1972) (per curiam), which in effect sent all of the then-existing death penalty laws back for a second look by the states, the Supreme Court (rightly or wrongly) upheld most of the somewhat modified and subsequently enacted death penalty laws. *See Gregg v. Georgia*, 428 U.S. 153, 179-81 (1976) (plurality opinion). Conversely, one month after Judge Newman's concurrence in *Abele I*, Connecticut enacted a new anti-abortion law that was based on protecting the life of the fetus. Pub. Act No. 1, 1972 Conn. Acts 593 (May Spec. Sess.) (codified at Conn. Gen. Stat. § 53-30(a)-(b)). And the same panel that had decided *Abele I* (rightly or

wrongly) declared the new law unconstitutional.[15] Either result is possible after a second look in which the state affirms laws that it previously had allowed to remain in force through passivity or inertia.[16] What I do say is that no court need or ought to make ultimate and immensely difficult constitutional decisions unless it knows that the state's elected representatives and executives—having been made to go, as it were, before the people—assert through their actions (not their inactions) that they really want and are prepared to defend laws that are constitutionally suspect.

It is different when the Constitution speaks clearly. When a law violates the plain mandates of the text, history, or structure of the Constitution, no second look is warranted or appropriate. That law *must* fall. Laws that violate the core of the First Amendment and the core of the Takings Clause are but two examples. When that is not the case, when the Constitution and its history do not clearly render a statute invalid, when its validity depends instead, in part, on the strength of the state interests at

---

15 *See Abele v. Markle*, 351 F. Supp. 224, 232 (D. Conn. 1972) ("*Abele II*"). Then-District Judge Newman's opinion noted that, "for the author of this opinion," the Legislature's new "statement of legislative purpose makes the issue posed . . . quite different from the issue raised by the challenge to the prior statutes. . . . A statute of this sort, as I previously indicated [in *Abele I*], 342 F. Supp. at 810 and 811 n.18, poses a far more difficult question, one that I did not believe should be decided unless such a statute was enacted." *Id.* at 226 n.4. Judge Newman's opinion was joined by Judge Lumbard, while Judge Clarie dissented. The Supreme Court subsequently vacated the decision in light of *Roe*, 410 U.S. 951 (1973), and remanded the case to the district court. On remand, the same three judges declared the law unconstitutional. *Abele v. Markle*, 369 F. Supp. 807, 809 (D. Conn. 1973) (per curiam).

16 Sometimes, of course, a legislature will not reenact a statute that has been remanded to it, or will reenact it with modifications and limits sufficient to avoid any serious constitutional challenge.

stake, then a second look is not only appropriate, it is, in my view, usually required.

Without a second look by the people, courts are liable to err in either direction. They may uphold and thereby validate[17] (as they all too often have[18]) the infringement of rights upon which the states did not truly wish to encroach. Conversely, they may, ultimately and definitively, strike down laws, believing that the state interests involved are minor, when in fact these interests turn out to be highly significant.[19]

In the end, a constitutional remand does no more than this: It tells the legislatures and executives of the various states, and of the federal government as well, that if they wish to regulate conduct that, if not protected by our Constitution, is very close to being protected, they must do so clearly and openly. They must, in other words, face the consequences of their decision before the people.[20] Unless they do this, they cannot expect courts

17 *See* CHARLES L. BLACK, JR., THE PEOPLE AND THE COURT: JUDICIAL REVIEW IN A DEMOCRACY 52 (1960) ("[T]he Court, through its history, has acted as the legitimator of the government. In a very real sense, the Government of the United States is based on the opinions of the Supreme Court.").

18 *See* Guido Calabresi, *The Supreme Court, 1990 Term—Foreword: Antidiscrimination and Constitutional Accountability (What the Bork-Brennan Debate Ignores)*, 105 HARV. L. REV. 80, 143-45 (1991).

19 *See* Harry Wellington, *Common Law Rules and Constitutional Double Standards: Some Notes on Adjudication*, 83 YALE L.J. 221 (1973); Alexander Bickel & Harry Wellington, *Legislative Purpose and the Judicial Process: The* Lincoln Mills *Case*, 71 HARV. L. REV. 1 (1957); Alexander Bickel, *The Supreme Court, 1960 Term—Foreword: The Passive Virtues*, 75 HARV. L. REV. 40 (1961).

20 In this respect, the notion of a constitutional remand may respond to some of the concerns expressed by the dissenters in *Companion in Dying*. *See Compassion in Dying*, 1996 WL 94848, at *60 (Beezer, J. dissenting) ("Whether the charitable or uncharitable characterization [of physician-assisted suicide] ultimately prevails is a question that must be

to tell them whether what they may or may not actually wish to enact is constitutionally permitted.

IV. *Conclusion*

For all of the above reasons, I do not reach the merits in this case—merits that are, as Judge Newman said of those that he also did not reach in *Abele v. Markle*, "of extreme difficulty." 342 F. Supp. at 810. What, after all, are we to make of Margaret Mead's statement, cited in one of the *amicus* briefs, that we should beware of giving those who have the power to heal the right to kill, since anthropologically speaking the distinction between the two is relatively new in our cultures? It is certainly worth pondering. But how does it help us to distinguish between giving doctors the right to remove life support systems and the right of the terminally ill to demand lethal drugs from the same doctors? And how is one to weigh petitioners' claim that if doctors are not allowed to give patients lethal drugs for self-administration, those patients will be forced to commit suicide, legally,

resolved by the people through deliberative decisionmaking in the voting booth . . . This issue we, the courts, need not—and should not—decide. . . . To declare a constitutional right to physician-assisted suicide would be to impose upon the nation a repeal of local laws."); *id.* at 61 (Fernandez, J., dissenting) ("Like so many other issues, it is one 'for the people to decide.' Our Constitution leaves it to them; it is they and their representatives who must grapple with the riddle and solve it.") (citation omitted); *id.* at 61 (Kleinfeld, J., dissenting) ("The Founding Fathers did not establish the United States as a democratic republic so that elected officials would decide trivia, while all great questions would be decided by the judiciary. . . . That an issue is important does not mean that the people, through their democratically elected representatives, do not have the power to decide it."). *See also* 1 BRUCE ACKERMAN, WE THE PEOPLE: FOUNDATIONS (1991); CAN. CONST. (Constitution Act, 1982), pt. I (Canadian Charter of Rights and Freedoms) § 33 (containing the *Non-Obstante* Clause that permits legislature to abrogate rights, but only if the legislature explicitly decides to do so).

in far more horrendous ways—by hanging, shooting, or gassing themselves? These methods, petitioners assert, are plausibly more dangerous to society and devastating to survivors. But is it really the case that terminally ill patients would take such measures? And which way would it cut, if they did not? These questions, moreover, hardly begin to approach the human tragedies, and the deeply held beliefs, that the issues we would have to decide would require us to explore. No. Unless New York forces us to face such choices head on, by asserting its interest in the prohibitions before us, we should not do so. And this New York has not done.

I would hold that, on the current legislative record, New York's prohibitions on assisted suicide violate both the Equal Protection and Due Process Clauses of the Fourteenth Amendment of the United States Constitution to the extent that these laws are interpreted to prohibit a physician from prescribing lethal drugs to be self-administered by a mentally competent, terminally ill person in the final stages of that terminal illness. I would, however, take no position on whether such prohibitions, or other more finely drawn ones, might be valid, under either or both clauses of the United States Constitution, were New York to reenact them while articulating the reasons for the distinctions it makes in the laws, and expressing the grounds for the prohibitions themselves. I therefore concur in the result reached by the Court.

UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF NEW YORK

No. 94 CIV. 5321 (TPG)

TIMOTHY E. QUILL, M.D.; SAMUEL C. KLAGSBRUN, M.D; and HOWARD A. GROSSMAN, M.D.,

Plaintiffs,

—against—

G. OLIVER KOPPELL, Attorney General of the State of New York; MARIO M. CUOMO, Governor of the State of New York; and ROBERT M. MORGENTHAU, District Attorney of New York County,

Defendants.

Amicus Curiae

GRIESA, *Chief Judge*

New York law makes it a crime to aid a person in committing suicide, or in attempting to commit suicide. Plaintiffs urge that these provisions violate the United States Constitution, to the extent that they apply to situations where a physician aids the commission of suicide by a mentally competent, terminally ill adult wishing to avoid continued severe suffering, by prescribing a death-producing drug which the patient takes. Plaintiffs claim that a person has a constitutional right to terminate his life under these circumstances, and that a physician has a corresponding constitutional right not to be prosecuted for aiding a patient in the exercise of the patient's right.

Plaintiffs move for a preliminary injunction against the enforcement of the relevant statutes, §§ 125.15(3) and 120.30 of the New York Penal Law, to the extent they apply to physicians who give the kind of assistance described above. Defendants oppose plaintiffs' motion and cross-move for judgment on the pleadings dismissing the action.

Plaintiffs' motion for preliminary injunction is denied. Defendants' cross-motion to dismiss the action is granted. The motion to dismiss will be treated as one for summary judgment since the court has considered matters outside the pleadings—*i.e.*, declarations filed on the motion for preliminary injunction. There is no dispute on the essential facts and the issues presented are ones of law.

The Parties

The action was commenced on July 20, 1994. The original complaint named three physician plaintiffs, Timothy E. Quill, Samuel C. Klagsbrun, and Howard A. Grossman. There were also three patient plaintiffs who asserted that they were terminally ill and wished to have the assistance of physicians in committing suicide. All three of the patient plaintiffs have now died, leaving only the three physician plaintiffs.

The original complaint named only the Attorney General of the State of New York as a defendant. However, it was argued that the Attorney General was not the proper defendant because he was not responsible for prosecutions under the criminal laws of the State. The complaint has now been amended to add as defendants Governor Mario M. Cuomo and New York County District Attorney Robert M. Morgenthau. There is no longer any question about the fact that there are sufficient defendants present to allow the issues in the case to be litigated.

Amicus curiae briefs in opposition to plaintiffs' position have been filed by the New York State Catholic Conference and the Legal Center for the Defense of Life.

The Relevant Record

The Original Complaint

The original complaint of July 20, 1994 contained, among other things, allegations that the three patient plaintiffs were mentally competent adults; that they were in the terminal stages of fatal illnesses; that they faced progressive loss of bodily function and integrity as well as increasing suffering; and that they desired medical assistance in the form of medications prescribed by physicians to be self-administered for the purpose of hastening death.

As to the three physician plaintiffs, the complaint alleged that, in the regular course of their medical practice, they

treated terminally ill patients who requested assistance in the voluntary self-termination of life; that under certain circumstances it would be consistent with the standards of these physicians to prescribe medications to such patients which would cause death, since without such medical assistance these patients could not hasten their deaths in a certain and humane manner.

The original complaint alleged that the patient plaintiffs have a constitutional right under these circumstances to terminate their lives with this type of medical assistance; and that since the New York Penal Law makes it a crime to render such assistance, these provisions violate the constitutional rights of both the patient plaintiffs and the physician plaintiffs, specifically rights under the Due Process and Equal Protection Clauses of the Fourteenth Amendment.

Amendments to the Complaint

An amended complaint was filed on October 14, 1994. By this time, two of the three patient plaintiffs had died. The allegations about the remaining patient plaintiff were carried over into the amended complaint, as were the claims of the physician plaintiffs.

The second amended complaint was filed October 20, 1994. It was essentially the same as the previous complaint except for naming New York County District Attorney Robert M. Morgenthau as a defendant.

Subsequently, the third patient plaintiff died, thus leaving the three physicians as the only plaintiffs.

An answer was filed in August 1994 to the original complaint denying that plaintiffs have any valid claim. No amended answers were filed responding to the amended complaints, but the court deems the original answer to be a sufficient denial of plaintiffs' claims.

Declarations Filed on Motion For Preliminary Injunction

The motion for preliminary injunction was filed on September 16, 1994. In support of the motion, each of the three patient plaintiffs submitted declarations which confirmed the allegations in the complaint and added details about their diseased conditions and suffering.

The three physician plaintiffs have submitted declarations affirming their belief that proper and humane medical practice should include the ability to prescribe medication which will enable a patient to commit suicide under the circumstances described in this case.

A declaration by Quill also describes the following incident. In 1990 he treated a terminally ill patient, who feared a lingering death and who apprised Quill that she would act on her own to hasten death if he refused to assist her to do so. Quill made barbiturates available to the patient, which she could use to induce sleep, but which she could also take to end her life by an overdose at the point she desired to do so. She agreed to meet with Quill prior to taking any overdose. The patient reached the point where she desired to end her life. She met with Quill "to insure that all alternatives had been explored," after which she took the overdose and died. Quill was not present at the time of death. Subsequently, Quill wrote an article in the New England Journal of Medicine describing these events. This led to what Quill describes as a "very public criminal investigation" in New York State, and presentation to a grand jury. Quill testified before the grand jury, as did other witnesses. The grand jury did not indict.

The other two physician plaintiffs, Klagsbrun and Grossman, describe in their declarations specific incidents when terminally ill patients wished assistance in hastening death. Each doctor asserts that he refrained from rendering such assistance because of possible prosecution under the New York statutes.

The Statutes

Section 125.15(3) of the New York Penal Law provides in relevant part:

> A person is guilty of manslaughter in the second degree when:
>
> . . .
>
> 3. He intentionally . . . aids another person to commit suicide.

Section 120.30 provides:

> A person is guilty of promoting a suicide attempt when he intentionally . . . aids another person to attempt suicide.

Violation of either statute is a felony.

Plaintiffs are not seeking to strike down these statutes in their entirety. Plaintiffs claim that the statutes are unconstitutional only insofar as they apply to the type of physician assisted suicide at issue in this case. Both plaintiffs and defendants agree that, if a physician renders the type of assistance described here, he will violate § 125.15(3) where actual death by suicide occurs, and § 120.30 where the patient attempts to commit suicide and fails.

DISCUSSION

Justiciability

Defendants assert that there is no justiciable case or controversy as required by Article III of the Constitution. According to defendants, plaintiffs show nothing more than a speculative possibility of prosecution, rather than any actual threat of prosecution.

The court does not agree with these assertions. The relevant law is well set forth in *Babbitt v. United Farm Workers Nat'l Union*, 442 U.S. 289 (1979). There the Supreme Court dealt

with a constitutional challenge to certain Arizona agricultural labor regulations. The case was brought by a union and parties connected with the union. The Court held that certain of the plaintiffs' claims were justiciable and certain were not. The Court stated that when contesting the constitutionality of a criminal statute it is not necessary that the plaintiff first expose himself to actual prosecution. When the plaintiff has alleged an intention to engage in a course of conduct arguably affected with a constitutional interest, but proscribed by a statute, and there exists a credible threat of prosecution, a sufficient controversy is presented. On the other hand, where there are no fears of prosecution except those which are imaginary or speculative, there is no basis for federal court action. "Abstract questions" are not justicible. *Id.* at 297-99.

In *Babbitt* the Court upheld federal jurisdiction over claims where (1) the plaintiffs asserted both the intention and the constitutional right to engage in conduct which would violate the regulations, and (2) the state had not disavowed the intention of imposing criminal penalties. Thus the plaintiffs were "not without some reason in fearing prosecution," and the positions of the parties were "sufficiently adverse" to present a proper case. *Id.* at 302-3.

As to the claims in *Babbitt* held not to be justiciable, the Court found that it was uncertain whether the particular activities involved would actually give rise to a problem under the regulations. The factual pattern which might develop was unclear. *Id.* at 303-4.

Another instructive case is *Doe v. Bolton*, 410 U.S. 179 (1973). This was a companion abortion case to *Roe v. Wade*, 410 U.S. 113 (1973). In *Doe*, the plaintiffs challenged the Georgia anti-abortion statute. The Court held, among other things, that the claim of the physician plaintiffs presented a justiciable controversy. This was true despite the fact that none of them had been prosecuted or threatened with prosecution. The Court pointed out, 410 U.S. at 188:

> The physician is the one against whom these criminal statutes directly operate in the event he procures an abortion that does not meet the statutory exceptions and conditions. The physician-appellants, therefore, assert a sufficiently direct threat of personal detriment. They should not be required to await and undergo a criminal prosecution as the sole means of seeking relief.

On the basis of these authorities, the court holds that the instant case presents a justiciable controversy under Article III of the Constitution. The three physician plaintiffs seek to carry on activities which they contend are within their constitutional rights and which would violate the New York Penal Law. This is not a case about some activity in which a plaintiff might possibly engage and which might create a hypothetical issue of criminal liability. The physician plaintiffs credibly assert that they have had cases and continue to have cases in which their services are urgently sought to assist in the commission of suicide in the way described in this case. As to whether there is a threat of prosecution for so assisting, there has been the grand jury proceeding about plaintiff Quill. Although no indictment was returned, the State has by no means disavowed the intention of acting against physicians in future cases. Indeed, the State has in the present action vigorously defended its right to apply the statutes to such conduct. Thus, there is a credible threat of prosecution giving rise to sufficiently adverse positions so that a justiciable controversy exists. What is presented here is no mere abstract question.

This is particularly true since the issue of physician assisted suicide is being pressed by segments of the medical community and has sparked sharp public debate. It is most unlikely that the conduct at issue in this case would be ignored by the law enforcement authorities.

It is appropriate to note that the primary right claimed is that of the patient—*i.e.*, the right to decide to terminate one's life and to do so by suicide. However, if such a constitutional right resides in the patient, then there would be a corresponding constitutional right of the physician not to be prosecuted for assisting in the exercise of the patient's con-

stitutional right. The physician plaintiffs in the present case have standing to raise the whole range of issues—both as to the patient's asserted right to terminate his life and the physician's right to be free from prosecution for rendering assistance. *See Doe*, 410 U.S. at 188.

The Due Process Issue

The Fourteenth Amendment provides that no state may "deprive any person of life, liberty, or property, without due process of law." It is now established that there are certain subjects which are so fundamental to personal liberty that governmental invasion is either entirely prohibited or sharply limited. One recent articulation of this concept by the Supreme Court, which is strongly relied upon by plaintiffs, is contained in the plurality opinion in *Planned Parenthood v. Casey*, 112 S.Ct. 2791, 2807 (1992).

> Our law affords constitutional protection to personal decisions relating to marriage, procreation, contraception, family-relationships, child rearing, and education. . . . These matters, involving the most intimate and personal choices a person may make in a lifetime, choices central to personal dignity and autonomy, are central to the liberty protected by the Fourteenth Amendment. At the heart of liberty is the right to define one's own concept of existence, of meaning, of the universe, and of the mystery of human life. Beliefs about these matters could not define the attributes of personhood were they formed under compulsion of the State.

Casey confirmed the holding in *Roe v. Wade* that the Fourteenth Amendment protects a woman's decision to abort a pregnancy in the pre-viability stage.

Plaintiffs also rely on the Supreme Court decision in *Cruzan v. Director Missouri Dep't of Health*, 497 U.S. 261 (1990). In that case a woman suffered an accident, after which she could only be kept alive by artificial feeding and hydration. She lost her cognitive faculties, and apparently had no possibility of recovery. Her parents desired to have the life-sustaining apparatus withdrawn. The Supreme Court of Missouri held that it was necessary, before such a step could be taken, to show by clear and convincing evidence that the injured woman would have desired withdrawal of the medical devices, and further held that such evidence was lacking.

Although the United States Supreme Court, in reviewing the case, did not provide a single convenient statement of the question before it, a fair summary of the issues would appear to be whether the injured woman had a constitutional right requiring the hospital to withdraw life-sustaining treatment; whether this right could be exercised on behalf of the woman by her parents; and whether the exercise of this right was unduly hampered by the evidence rule imposed by the state court. In approaching these questions the Supreme Court stated:

> The principle that a competent person has a constitutionally protected liberty interest in refusing unwanted medical treatment may be inferred from our prior decisions.

Id. at 278. The Court went on to discuss the specific issue of whether this general right to refuse treatment would apply where such refusal might lead to death.

> Petitioners insist that under the general holdings of our cases, the forced administration of life-sustaining medical treatment, and even of artificially delivered food and water essential to life, would implicate a competent person's liberty interest. Although we think the logic of the cases discussed above would embrace such a liberty interest, the dramatic consequences involved in refusal of such treatment would inform the inquiry as to whether the deprivation of that interest is constitutionally permissible. But for purposes of this case, we assume that the United States Constitution would grant a competent

person a constitutionally protected right to refuse life-saving hydration and nutrition.

Id. at 279. Thus, the Court stopped short of actually deciding that there is a constitutional right to terminate medical treatment necessary to sustain life, although the Court *assumed* the existence of such a right for the purpose of going on to the other issues in the case. As to these, the Court held that the state had the power to require evidence of the patient's wishes rather than allowing the decision solely at the behest of family members, and that the state could properly require proof of the patient's wishes by clear and convincing evidence.

Plaintiffs in the present case argue that the reasoning and holdings of the Supreme Court in *Roe* and *Casey* are broad enough to establish that there is a fundamental right on the part of a terminally ill patient to decide to end his life, and to do so with the type of assistance described in this case. Plaintiffs also interpret the *Cruzan* decision as being tantamount to a holding that a terminally ill person has a constitutional right to require the withdrawal of life-sustaining treatment. Plaintiffs argue that it follows inevitably that there is a constitutional right of physician assisted suicide under the circumstances and in the manner at issue here.

Plaintiffs' reading of these cases is too broad. The Supreme Court has been careful to explain that the abortion cases, and other related decisions on procreation and child rearing, are not intended to lead automatically to the recognition of other fundamental rights on different subjects. *See, e.g., Bowers v. Hardwick*, 478 U.S. 186, 191 (1986); *Paris Adult Theatre I v. Slaton*, 413 U.S. 49, 68, n.15 (1973). With regard to *Cruzan*, as already described, the Court did not actually make the holding upon which plaintiffs seek to rely. In any event, it would appear clear that suicide has a sufficiently different legal significance from requesting withdrawal of treatment so that a fundamental right to suicide cannot be implied from *Cruzan*.

The Supreme Court has described the considerations which are appropriate before there can be a declaration that rights

"not readily identifiable in the Constitution's text" are deserving of constitutional protection. *See Bowers*, 478 U.S. at 191. Such rights must be implicit in the concept of ordered liberty so that neither liberty nor justice would exist if they were sacrificed. The Supreme Court has also characterized such rights as those liberties that are deeply rooted in the nation's history and traditions. *Id.* at 191-92. *See also Moore v. East Cleveland*, 431 U.S. 494, 503 (1977).

The trouble is that plaintiffs make no attempt to argue that physician assisted suicide, even in the case of terminally ill patients, has any historic recognition as a legal right. The history of the treatment of suicide by the law has been dealt with in a number of recent studies. *See, e.g.*, Thomas J. Marzen et al., *Suicide: A Constitutional Right?*, 24 Duquesne L. Rev. 1, 17-100 (1986); Note, *Physician-Assisted Suicide and New York Law*, 57 Alb. L. Rev. 819, 824-32 (1994); The New York State Task Force on Life and The Law, *When Death is Sought: Assisted Suicide and Euthanasia in the Medical Context*, 54-56 (1994). Justice Scalia's concurring opinion in *Cruzan*, 497 U.S. at 294-95, also contains a useful historical summary.

Suicide was a crime under English common law, even if the motive was to avoid suffering and illness. Obviously, no punishment could be inflicted upon the deceased, but sanctions were imposed by way of forfeiture of property and ignominious burial. The American colonies apparently adopted this common law rule, but it has been gradually abandoned so that no state in this country now criminalizes suicide or attempted suicide. However, as Justice Scalia states, this change in the law resulted from a desire "to spare the innocent family and not to legitimatize the act." *Cruzan*, 497 U.S. at 294.

As to assisting suicide, the majority of states in this country have long imposed criminal penalties on one who aids another in committing suicide. *See Cruzan*, 497 U.S. at 280 (majority opinion). The Model Penal Code, adopted by the American Law Institute, provides that it is a crime to assist a suicide. *Model Penal Code* § 210.5(2) and comment at 100 (American Law Institute 1980). The comment states:

> Self destruction is surely not conduct to be encouraged or taken lightly. The fact that penal sanctions will prove ineffective to deter the suicide itself does not mean that the criminal law is equally powerless to influence the behavior of those who would aid or induce another to take his own life. Moreover, in principle it would seem that the interests in the sanctity of life that are represented by the criminal homicide laws are threatened by one who expresses a willingness to participate in taking the life of another, even though the act may be accomplished with the consent, or at the request of the suicide victim.

Plaintiffs are, of course, suggesting a limited form of physician assisted suicide. But plaintiffs have pointed to nothing in the historical record to indicate that even this form of assisted suicide has been given any kind of sanction in our legal history which would help establish it as a constitutional right.

For these reasons, the court holds that the type of physician assisted suicide at issue in this case does not involve a fundamental liberty interest protected by the Due Process Clause of the Fourteenth Amendment.

The Equal Protection Issue

Plaintiffs contend that even if there is no fundamental right to engage in assisting a patient's suicide under the Due Process Clause, they should prevail under the Equal Protection Clause. Their argument proceeds thus. It is established under New York law that a competent person may refuse medical treatment, even if the withdrawal of such treatment will result in death. *See, e.g., Rivers v. Katz*, 67 N.Y.2d 485, 493, 504 N.Y.S.2d 74, 78, 495 N.E.2d 337 (1986); *In Re Storar*, 52 N.Y.2d 363, 438 N.Y.S.2d 266, 420 N.E.2d 64 (1981); *Schloendorff v. Soc'y of N.Y. Hosp.*, 211 N.Y. 125, 129, 105 N.E. 92, 93 (1914).

Plaintiffs further argue that such refusal of treatment is essentially the same thing as committing suicide with the advice of a physician. Plaintiffs urge that for the State to sanction one course of conduct and criminalize the other involves discrimination which violates the Equal Protection Clause of the Fourteenth Amendment.

The issue is whether the distinction drawn by New York law has a reasonable and rational basis. *Dandridge v. Williams*, 397 U.S. 471, 485, 487 (1969). To certain ways of thinking, there may appear to be little difference between refusing treatment in the case of a terminally ill person and taking a dose of medication which leads to death. But to another way of thinking there is a very great difference. In any event, it is hardly unreasonable or irrational for the State to recognize a difference between allowing nature to take its course, even in the most severe situations, and intentionally using an artificial death-producing device. The State has obvious legitimate interests in preserving life, and in protecting vulnerable persons. The State has the further right to determine how these crucial interests are to be treated when the issue is posed as to whether a physician can assist a patient in committing suicide. Clearly in the present public debate there are sincere and conscientious advocates for and against the concept of physician assisted suicide. Under the United States Constitution and the federal system it establishes, the resolution of this issue is left to the normal democratic processes within the State.

For these reasons the court holds that plaintiffs have not shown a violation of the Equal Protection Clause of the Fourteenth Amendment.

It should be noted that one federal district court has taken a view contrary to what is expressed in this opinion as to both the due process and the equal protection issues. *Compassion in Dying v. Washington*, 850 F. Supp. 1455 (W.D. Wash. 1994). That ruling is on appeal to the Ninth Circuit.

CONCLUSION

Plaintiffs' motion for a preliminary injunction is denied. Defendants' motion to dismiss, treated as a motion for summary judgment, is granted, and the action is dismissed.

SO ORDERED.

QUESTION PRESENTED

Should this Court grant certiorari to decide whether the Fourteenth Amendment's Equal Protection Clause is violated by New York laws that permit only one class of mentally competent, terminally ill patients to choose to hasten death with medical assistance — those on life support — when there is no conflict among federal courts or between a federal court and a state court of last resort on this issue, when the law continues to be developed by the lower courts, and when the court below properly applied equal protection principles?

IN THE

Supreme Court of the United States

OCTOBER TERM 1996

No. 95-1858

DENNIS C. VACCO, Attorney General of the State of New York; GEORGE E. PATAKI, Governor of the State of New York, and ROBERT M. MORGENTHAU, District Attorney of New York County,

Petitioners,

v.

TIMOTHY E. QUILL, M.D.; SAMUEL KLAGSBRUN, M.D.; and HOWARD A. GROSSMAN, M.D.,

Respondents.

ON PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT

OPPOSITION TO PETITION FOR A WRIT OF CERTIORARI

STATEMENT OF THE CASE

This case challenges New York's statutes prohibiting assisted suicide as violative of the Fourteenth Amendment's guarantees of equal protection and liberty. Respondents assert that mentally competent, terminally ill adults have a protected liberty interest in choosing to hasten death in a certain, humane and dignified manner. This right necessarily entails medical assistance. Further, respondents allege that the challenged New York laws, which prohibit physicians from

prescribing medications that can be self-administered by mentally competent, terminally ill citizens of New York who wish to hasten impending death, but permit physicians to assist New York citizens in their choice to hasten death if they are dependent upon life support, violate the Equal Protection Clause of the Fourteenth Amendment.

FACTUAL BACKGROUND

I. RESPONDENT DOCTORS AND THEIR PATIENTS

Respondents Quill, Klagsbrun, and Grossman are New York doctors who regularly care for terminally ill patients. Each of these doctors encounters cases in which his professional responsibilities dictate that he honor competent, terminally ill patients' requests for prescription medication to hasten death:

> It is my professional judgment that the decision of such a patient to shorten the period of suffering before inevitable death can be rational, and on rare occasion my professional obligation to relieve suffering would dictate that I assist such a patient in hastening his or her death when palliative care becomes ineffective or unacceptable if the patient so chooses.

JA 39 (Declaration of Dr. Quill); *accord* JA 59 (Dr. Klagsbrun); JA 73 (Dr. Grossman).

Each of these doctors has refused to honor such requests for fear of criminal prosecution under sections 125.15(3) and 120.30 of the New York Penal Law. These sections criminalize the assistance of a physician in committing or attempting suicide, although neither suicide nor attempted suicide is criminalized, and the term "suicide" is not defined. Dr. Quill

was investigated by a New York grand jury for one instance where he did render assistance. JA 39-42.

The original plaintiffs included three individuals then in the final stages of terminal illness: Jane Doe, George A. Kingsley, and William A. Barth. Ms. Doe was a 76-year-old retired physical education instructor who was being strangled to death by a large cancerous tumor that had wrapped around her right carotid artery and was slowly collapsing her esophagus. JA 12, 93-95. Mr. Kingsley was a 48-year-old publishing executive suffering from a number of AIDS-related diseases, including cryptosporidiosis (a parasitic infection causing severe fevers and diarrhea), cytomegalovirus retinitis (a virus that attacks the retina and causes blindness), and toxoplasmosis (a parasitic infection causing lesions on the brain). JA 12, 86-88. Mr. Barth was a 28-year-old former fashion editor suffering from several AIDS-related diseases, including Kaposi's sarcoma skin lesions, cytomegalovirus of the stomach and colon, microsporidiosis, AIDS-related pneumonia, and cryptosporidiosis. JA 13, 82-84.

Ms. Doe, Mr. Kingsley, and Mr. Barth — mentally competent adults in the final stages of terminal illness — sought to alleviate their suffering and hasten death by self-administering drugs prescribed by their physicians. JA 12-13, 84-85, 88-90, 96-97. They died before the district court issued its ruling. Petition for Writ of Certiorari at 3 n.1.

Respondents continue to assert the constitutional claims of their other terminally ill patients. JA 15-17, 141-43, 154-56. *See Doe v. Bolton*, 410 U.S. 179, 187-89 (1973).

II. THE ASSISTANCE SOUGHT BELOW VS. THE ASSISTANCE NEW YORK PERMITS

Dr. Quill has substantial experience assisting patients to die through disconnection of life support and infusion with

medications, a means of hastening death explicitly authorized by New York law. These authorized practices are indistinguishable from the class of physician-assisted suicides prohibited by New York's penal statute. JA 104, 107-08, 116. First, both begin with careful clinical assessment of the patient's prognosis, mental competence and treatment alternatives:

> The removal of a life support system that directly results in the patient's death requires the direct involvement by the doctor, as well as other medical personnel. When such patients are mentally competent, they are consciously choosing death as preferable to life under the circumstances that they are forced to live. Their doctors do a careful clinical assessment, including a full exploration of the patient's prognosis, mental competence to make such decisions, and the treatment alternatives to stopping treatment.
>
> * * *
>
> Once [the patients] are fully informed of their alternatives, and are sure they want the respirator removed even if it will result in their death, they then have the right to have treatment discontinued.

JA 104-05. Doctors are able to determine whether a patient's request to hasten death is rational and competent, or instead is motivated by depression or other mental illness or insanity, and New York practitioners currently make these determinations with respect to orders not to resuscitate and refusal of life-sustaining treatment. JA 114, 116.

Second, like legally prescribed methods, legally proscribed methods require affirmative steps by the patient's doctor:

> At a practical level, *the doctor must take several actions* to carry out the patient's desire. The doctor must *turn off the breathing machine*, *disconnect the machine* from the tube that goes to the patient's lungs, and then *remove the tube* from the patient's lungs. These patients must be carefully monitored after the respirator is withdrawn.

JA 105 (emphasis added).

Third, both methods involve prescribing medication that hastens death. When a respirator is removed, "the doctor usually must also give morphine or barbiturates to ameliorate the patient's sensation of suffocation." *Id.* When hydration and nutrition devices are withdrawn, powerful sedatives are administered. JA 106. Under either circumstance, the medications can and do contribute to death.

> These medications [morphine and barbiturates] must often be used in doses that contribute to the patient's death by suppressing their respiratory drive.

JA 105. *See* JA 106 (patients treated "with sedatives that hasten the patient's death").

III. THE LOWER COURTS' DECISIONS

Respondents concur in the third and fourth paragraphs of petitioners' Statement of the Case, describing the rulings below.

REASONS FOR DENYING THE PETITION

I. THERE IS NO CONFLICT AMONG THE LOWER COURTS

A. There Is No Conflict Between Federal Circuits

The Second Circuit unanimously ruled that New York's law prohibiting assisted suicide violates the Equal Protection Clause because it "does not treat equally all competent persons who are in the final stages of fatal illness and wish to hasten their deaths," and distinctions made with respect to such persons "do not further any legitimate state purpose." *Quill v. Vacco*, 80 F.3d 716, 727 (2d Cir. 1996).

The reasoning of the Ninth Circuit, the only other federal appellate court to consider the matter, is squarely consistent with that of the Second Circuit. The Ninth Circuit concluded that there is no "ethical or constitutionally cognizable" basis upon which to distinguish between physician assistance in hastening death by the act of prescribing medications for that purpose and the act of withdrawing or withholding life support. *Compassion In Dying v. Washington*, 79 F.3d 790, 821-24 (9th Cir. 1996) (en banc). Thus, there is no conflict among the federal appellate courts that have considered the issue of physician assistance in dying.

Recognizing this, petitioners instead assert that the Second Circuit decision is "fundamentally at odds" with that of the Ninth Circuit. Petition for Writ of Certiorari at 15. The Second Circuit's reasoning is "at odds" with the Ninth Circuit's only insofar as the Second Circuit felt constrained to recognize previously unidentified liberty interests. *Quill*, 80 F.3d at 723-25. To the extent there is a conflict between the Second Circuit and the Ninth Circuit on the liberty claim, that is not the basis of petitioners' request for relief. Petitioners prevailed on that issue in the ruling they seek to bring before

this Court for review. Moreover, petitioners' statement of the Questions Presented makes clear that they seek review only of the equal protection analysis.

B. There Is No Conflict Between a Federal Court and a State Court of Last Resort

Petitioners' representation that a conflict exists between the Second Circuit decision and that of a state court of last resort also is inaccurate. The Michigan Supreme Court, which reviewed Michigan's statute prohibiting physician-assisted suicide, was presented only with a Fourteenth Amendment liberty claim, and its holding is limited to that claim. *People v. Kevorkian*, 527 N.W.2d 714, 724, 733 (Mich. 1994) ("We would hold that the Due Process Clause of the federal constitution does not encompass a fundamental right to commit suicide, with or without assistance, and regardless of whether the would-be assistant is a physician."), *cert. denied*, 115 S. Ct. 1795 (1995). The court's footnote reference to the Equal Protection Clause, cited by petitioners at page 15, comprises the Michigan Supreme Court's entire equal protection discussion and is dicta.[1]

Moreover, the Second Circuit's equal protection ruling is based upon a finding that the State of New York, in both statutory and common law, has disavowed an absolute commitment to preserving life. *Quill*, 80 F.3d at 727-29. Thus, the ruling is based on the particulars of New York's statutory and common law and cannot give rise to a conflict,

---

[1] In tacit acknowledgment of the absence of any true conflict between the Second Circuit and the Michigan Supreme Court, petitioners cite to a Michigan state trial court decision in which petitioners claim the equal protection claim was "squarely and fully presented." Petition for Writ of Certiorari at 15 n.6. Even if correct, a trial court decision does not create a conflict worthy of this Court's attention. Supreme Court Rule 10.1(a).

even if the Michigan Supreme Court had been presented with an equal protection claim based upon Michigan statutory and common law. The Second Circuit decision turns entirely upon the law of New York and how that state has chosen to empower its citizens in making end-of-life decisions.

At the time the Michigan Supreme Court ruled, Michigan's statutory law was less protective of patient choice than that of New York. For instance, Michigan had not yet enacted a measure permitting the execution of a "do-not-resuscitate order." Even Michigan's 1996 law permitting such orders imposes more obstacles to patient choice than the analogous law in New York. *Compare* 1996 Mi. ALS 193; 1996 Mi. P.A. 193; 1995 Mi. SB 452 § 2(e) (requiring execution of order in writing and permitting compliance with a patient's order only "in a setting outside of a hospital, a nursing home, or a mental health facility") *with* N.Y. Pub. Health Law § 2964(2) (permitting consent to order orally during hospitalization, or in writing prior to or during hospitalization). Michigan's statute governing health care proxies is also more onerous than that of New York. *Compare* Mich. Comp. Laws § 700.496(9)(e) (requiring "clear and convincing" expression of patient's desire to forego life sustaining medical treatment) *with* N.Y. Pub. Health Law § 2982(2) (requiring only that patient's wishes regarding artificial nutrition and hydration be reasonably known or knowable). Thus, were an equal protection analysis conducted of Michigan's statute prohibiting assisted suicide, the conclusion might have been different than that reached by the Second Circuit with respect to New York's law.

Finally, the statute reviewed by the Michigan Supreme Court has expired by its own terms. Mich. Comp. Laws § 752.1027. Thus, even if the Michigan Supreme Court's ruling did present a conflict, that conflict has evaporated. This was recognized by the State of Michigan in its opposition to a petition for writ of certiorari. *Hobbins v. Michigan*, No. 94-

1473 (Oct. Term 1994), Brief for Respondent in Opposition at 13 ("The challenged statute no longer exists. In these circumstances, an order declaring its unconstitutionality and enjoining its enforcement would be meaningless.").

II. REVIEW BY THIS COURT AT THIS TIME IS PREMATURE

Issues surrounding patient choice and physician assistance in hastening death continue to be reviewed by lower courts. For example, respondents are aware that at least one case raising similar issues is pending. *McIver v. Krischer*, CL96-1504AF, Palm Beach Circuit Court, 15th Judicial Circuit, Florida. This suggests that this Court should defer considering these issues at this time.

Sound principles of judicial restraint also counsel against granting review at this time. *See, e.g., McCray v. New York*, 461 U.S. 961, 963 (1983) (certiorari denied where issue requires "further study" in lower courts "before it is addressed by this Court"); *Gilliard v. Mississippi*, 464 U.S. 867, 869 (1983) (Marshall, J., dissent from denial of certiorari to "those of my colleagues who agree with me that . . . these cases present important constitutional questions, but believe that this Court should postpone consideration of the issue until more state supreme courts and federal circuits have experimented with substantive and procedural solutions to the problem"); *California ex. rel. Cooper v. Mitchell Bros.' Santa Ana Theater*, 454 U.S. 90, 98 (1981) (Stevens, J., dissenting from grant of certiorari on grounds of traditional practice of avoiding premature adjudication of constitutional principles).[2]

---

[2] Denial of review at this time, of course, would suggest no expression upon the merits of the case. *See, e.g., Maryland v. Baltimore Radio*

III. THE SECOND CIRCUIT CORRECTLY DECIDED THAT NEW YORK PENAL LAW SECTIONS 125.15(3) AND 120.30 DENY EQUAL PROTECTION

In addition to the lack of conflict and prematurity factors disfavoring review at this time, review is also unnecessary because the decision below is correct.

This petition is limited to challenging the application of the rational basis standard in an equal protection analysis of New York's laws governing end-of-life decisions.[3] New York law grants a high degree of patient autonomy over end-of-life decisions. For example, New York permits otherwise healthy people with life expectancies of many decades to refuse life-saving treatment and allows patients to delegate by proxy to others a decision to bring about their death by altering their medical treatment. The record here shows no rational basis for distinguishing the cases of mentally competent, terminally ill patients who seek to end their suffering through self-administered prescription drugs from all the other cases in which New York statutory and common law grants patient autonomy over end-of-life decisions. Petitioners' argument that the writing of a prescription constitutes "active" physician assistance as compared to the "passive" posture involved in withdrawing treatment, such as a respirator or feeding tube, is not supported by the record. In fact, the withdrawal of life support typically involves a whole course of treatment, sometimes lasting days or weeks, which includes the administration of medications, such as morphine, that

---

Show, Inc., 338 U.S. 912, 919 (1950); *United States v. Carver*, 260 U.S. 482, 490 (1923).

[3] To the extent that the Second Circuit erred in its analysis, it was by utilizing the lowest standard of review, rather than the heightened standard of review appropriate given the existence of a protected liberty interest.

themselves hasten death. In these circumstances, the petition presents no question warranting this Court's review.

A. New York Law Grants Broad Patient Autonomy Over End-of-Life Decisions

New York's statutory and common law already expressly authorizes patients to make end-of-life decisions with physician assistance in circumstances far less compelling than those here.

New York statutes concerning orders not to resuscitate and health care proxies specifically permit patients to direct their physicians to assist them to die. The New York Public Health Law pertaining to orders not to resuscitate provides that a patient's attending physician must either issue the order or object and transfer the patient to another physician, or submit the matter to dispute mediation. N.Y. Pub. Health Law § 2964(2). The patient need not be terminally ill in order to request an order not to resuscitate. *Id.* §§ 2964(1), 2964(3). When a surrogate is making medical decisions for a patient lacking capacity, the surrogate may request an order not to resuscitate not only if the patient is terminally ill, but also if the patient is permanently unconscious, if resuscitation would be medically futile, or if "resuscitation would impose an extraordinary burden on the patient in light of the patient's medical condition and the expected outcome of resuscitation for the patient." *Id.* § 2965(3)(c)(iv). Section 2976 of the New York Public Health Law suggests that state courts may issue orders not to resuscitate even in circumstances other than those explicitly authorized by the statute.

Under provisions pertaining to health care proxies, a competent principal may appoint a health care agent to make medical decisions for the principal in the event of incapacity according to the "principal's wishes" or the "principal's best interests." *Id.* §§ 2981(1)(b), 2982(2). The agent may make

all decisions regarding life-sustaining treatment except those decisions concerning unascertained wishes regarding artificial hydration and nutrition. There is no requirement that an adult be terminally ill when the decision to request assistance to die is embodied in the proxy or implemented by the agent.

In addition to the rights granted in these statutes, New York common law grants broad rights of patient autonomy. The New York Court of Appeals, quoting Justice Cardozo's view that every human being "'of adult years and sound mind has a right to determine what shall be done with his own body,'" has held:

> In our system of a free government, where notions of individual autonomy and free choice are cherished, *it is the individual who must have the final say* in respect to decisions regarding his medical treatment in order *to insure that the greatest possible protection is accorded his autonomy and freedom* from unwanted interference with the furtherance of his own desires.

Rivers v. Katz, 495 N.E.2d 337, 341 (N.Y. 1986) (recognizing the right of patients to refuse psychotropic medication) (emphasis added) (quoting *Schloendorff v. Society of N.Y. Hosp.*, 105 N.E. 92, 93 (N.Y. 1914)).

The patients for whose benefit this action was brought are all:

(1) mentally competent

(2) terminally ill patients

(3) wishing to receive physician assistance through the prescription of drugs that

(4) the patients may choose

(5) to self-administer

(6) to hasten their own deaths.

An analysis of how New York has treated these characteristics in other contexts shows that there is no basis for distinguishing the patients herein from other New York citizens who are granted autonomy over end-of-life decisions.

1. Mental Competence

New York's Public Health Law affirmatively presumes that patients have the mental capacity to make end-of-life decisions. With respect to orders not to resuscitate, the Public Health Law provides that every adult "shall be presumed" to have capacity to make a decision regarding resuscitation. N.Y. Pub. Health Law § 2963(1). A patient has capacity so long as he or she has

> the ability to understand and appreciate the nature and consequences of an order not to resuscitate, including the benefits and disadvantages of such an order, and to reach an informed decision regarding the order.

Id. § 2961(3). Similarly, an adult "shall be presumed competent" to make a health care proxy. *Id.* § 2980(3).

Petitioners seek to justify the Penal Law subsections at issue here by presuming that terminally ill patients are depressed or vulnerable. This is an impermissible presumption under equal protection analysis. New York otherwise erects very high barriers to the determination that patients are anything other than fully competent. The statutes pertaining to orders not to resuscitate do not permit a presumption of lack of capacity. *See id.* § 2963(1). Indeed, while one physician is required to confirm that an adult has capacity to consent to an

order, two physicians must concur in a determination that an adult lacks capacity. *Id.* § 2963(3)(a).

The claim that respondents' patients are any more subject to pressure from "uncaring relatives" or physicians "with their own agendas" than the patients empowered by the statutes governing orders not to resuscitate and health care proxies has no support in the record; the disparity in protections afforded these two categories of patients is insupportable under the Equal Protection Clause.

In light of current New York law that presumes patient capacity to make end-of-life decisions, the Second Circuit correctly concluded that the State has no rational basis to presume that the mentally competent patients in question here lack capacity to make end-of-life decisions.

2. Terminal Illness

Petitioners' argument that the Second Circuit left unanswered "the question of whether 'terminal illness' is always readily and accurately identifiable and precisely when, and by what definition a patient should be deemed terminally ill," Petition for Writ of Certiorari at 12, is nonsense given that New York has already defined "terminal condition" by statute.[4] Moreover, the Second Circuit recognized that "New York may define [terminal] illness with more particularity." *Quill*, 80 F.3d at 731.

---

[4] The Public Health Law defines a "terminal condition" as "an illness or injury from which there is no recovery, and which reasonably can be expected to cause death within one year." N.Y. Pub. Health Law § 2961(23). Federal health insurance laws define the term similarly. *See, e.g.*, 42 U.S.C. 1395x(dd)(3)(A).

New York itself places the very real rights of patients above all abstract "state interests." The right to hasten death in New York extends even to individuals who may fully recuperate following treatment, a significantly less compelling circumstance than that in which respondents' patients find themselves. For instance, a patient in New York may consent to an invasive medical procedure, be capable of full and immediate recuperation, and still have the common law right to refuse routine treatment necessary for survival.[5]

3. Physician Assistance in the Form of Prescriptions

Under New York law, medical advice and prescriptions constitute medical services to which a mentally competent, adult patient may consent, and "the consent of *no other person* shall be necessary." N.Y. Pub. Health Law § 2504(1) (emphasis added). Patients in New York hospitals are protected as follows:

> Every patient's civil and religious liberties, including the right to independent personal decisions and *knowledge of available choices*, shall not be infringed and the facility *shall en-*

---

[5] The New York Court of Appeals held in *Fosmire v. Nicoleau*, 551 N.E.2d 77, 80-81 (N.Y. 1990), that a competent adult's common law "right . . . to determine the course of his or her own medical treatment" included the right of a healthy young mother to decline blood transfusions following delivery of a child by cesarean section. *Accord Erickson v. Dilgard*, 252 N.Y.S.2d 705, 706 (N.Y. Sup. Ct. 1962) (competent, informed adult may refuse blood transfusion after amputation because he "has the final say . . . in a system of government which gives the greatest possible protection to the individual in the furtherance of his own desires"). Thus the law currently allows essentially healthy patients, with substantial life to preserve, the right to bleed to death under a physician's care.

courage and assist in the fullest possible exercise of these rights.

Id. § 2803-c(3)(a) (emphasis added). In addition, every patient has the right to receive full information about his or her medical condition and to private physician consultations and treatment. *Id.* §§ 2803-c(3)(b), 2803-c(3)(e).

Physicians already prescribe medications that "contribute to" or "hasten" the patient's death in the course of assisting patients disconnected from life support to die. JA 105-06. These physicians are protected both by statute and by the common law. Furthermore, physicians have the right to abstain from assistance under the current law, as they will in any end-of-life scenario.

4. Patient Choice

New York has already decided that the State's interests most appropriately lie with patient choice, and acknowledges that end-of-life decisions involve consideration of the patient's religious and moral beliefs and the patient's best interests. N.Y. Pub. Health Law §§ 2965(3)(a), 2973(1), 2976(1). *See id.* § 2803-c(3).

In addition, the State's courts have concluded that New York's common law "right of self determination" provides the foundation for a competent adult patient's right to control his or her medical treatment even if the effect is to hasten death. *Rivers*, 495 N.E.2d at 341 (N.Y. 1986); *Delio v. Westchester County Medical Ctr.*, 516 N.Y.S.2d 677, 691-93 (N.Y. App. Div. 1983).

There can be no dispute that the State has given the widest latitude to a patient's right to choose the course of his or her own treatment.

5. Self-Administration of Drugs

Disconnecting life support equipment and providing medication contributing to death is in no way distinguishable from the assistance sought here.

Removal of life support requires health care professionals to participate actively in and monitor the process of dying. As Dr. Quill described it, to carry out a patient's desire for removal of life support, the doctor must take "several actions." JA 105. He must (1) turn off the breathing machine, (2) disconnect the machine from the tube that goes to the patient's lungs, (3) remove the tube from the patient's lungs, (4) give morphine or barbiturates, sometimes in continuous infusions and "in doses that contribute to the patient's death," and (5) provide ongoing monitoring. JA 105-06. Physicians "actively and openly assist [patients] to die," and that active participation "often includ[es] medical interventions that contribute to an earlier death." JA 107. *See Cruzan v. Director, Mo. Dep't of Health*, 497 U.S. 261, 296-97 (1990) (Scalia, J., concurring) (noting "irrelevance of action-inaction distinction").[6]

Petitioners' characterization of death by removal of life support as "natural" is belied by the reality of the process of dehydrating or suffocating to death over an excruciating period of days or weeks. The patient for whom removal of a respirator or feeding tube remains as the only option for a "natural" death has reached that point only after experiencing numerous profoundly unnatural treatments. *See* JA 115. *See* Howard Brody, *Assisted Death — A Compassionate*

---

[6] Petitioners have not and cannot identify any controlling authority to the contrary. Other than Justice Scalia's view that there is no distinction between so-called "active" and "passive" assistance, this Court has not expressed its view on this issue.

Response to a Medical Failure, 327 New Eng. J. Med. 1384, 1385 (1992) (medical technology has "extended the patient's life and resulted in the complications that have brought the patient to the present state of suffering" and set them up "for what many consider an unacceptable way of dying"); *see generally* Betty Rollin, *Last Wish* (1985) (describing mother's death from cancer).

In *Brophy v. New England Sinai Hospital, Inc.*, 497 N.E.2d 626, 641 n.2 (Mass. 1986), the dissent described the result of a physician disconnecting a gastronomy tube through which the patient had received nutrition and hydration:

> Removal of the G tube would likely create various effects from the lack of hydration and nutrition, leading ultimately to death. Brophy's mouth would dry out and become caked or coated with thick material. His lips would become parched and cracked. His tongue would swell, and might crack. His eyes would recede back into their orbits and his cheeks would become hollow. The lining of his nose might crack and cause his nose to bleed. His skin would hang loose on his body and become dry and scaly. His urine would become highly concentrated, leading to burning of the bladder. The lining of his stomach would dry out and he would experience dry heaves and vomiting. His body temperature would become very high. His brain cells would dry out, causing convulsions. His respiratory tract would dry out, and the thick secretions that would result could plug his lungs and cause death. At some point within five days to three weeks his major organs, including his lungs, heart, and brain, would give out and he would die. *The [trial] judge found that death by dehydration is extremely painful and uncomfortable for a human being.* The judge could not rule out the possibility that Paul Brophy could experience pain in such a scenario. *Paul Brophy's attending physician described death by dehydration as cruel and violent.*

(Emphasis added) (Lynch, J., dissenting). *See* JA 106 (the process of dehydrating, starving, losing control of mental and physical capacities, experiencing organ failure, passing into unconsciousness and dying with the help of medical personnel may take seven to 10 days or more). Other forms of withholding treatment are no more "natural." *See* JA 105 ("Since respiratory failure can be one of the most excruciating and frightening deaths possible, the doctor must also give morphine or barbiturates to ameliorate the patient's sensation of suffocation."); Helga Kuhse, *The Case for Active Voluntary Euthanasia*, 14 Law, Med. & Health Care 145, 147 (1986) (respiratory death involves "conscious air hunger," "gasping, an increased breathing rate, a panicked feeling of inability to get air in or out;" in death from withholding of dialysis, the patient remains conscious and experiences nausea, vomiting of blood and convulsions).

The only difference between allowing a dying patient to take a lethal dose of medication to hasten impending death and removing equipment and infusing medication during a prolonged period before death ensues is that the former is more humane. JA 107.

6. Hastening One's Own Death

In *Cruzan*, this Court acknowledged that a patient may direct the removal of life support with the intent of "caus[ing] her death." 497 U.S. at 267-68, 278. Other courts similarly acknowledge that a state interest in the prevention of irrational self-destruction is not at issue in reviewing a

competent, rational decision to direct the removal of life support when death is imminent. *Superintendent of Belchertown State Sch. v. Saikewicz*, 370 N.E.2d 417, 426 n.11 (Mass. 1977).

The State of New York permits patients to choose to hasten death in such extensive circumstances as to leave no room for denying that choice to other mentally competent, terminally ill adults. In *Fosmire* the New York Court of Appeals determined that a young mother had a common law right to bleed to death by refusing blood transfusions, despite the fact that she had consented to a cesarean section.[7] 551 N.E.2d 77.

Moreover, New York draws a distinction between the State's interest in a private decision that injures the public and a private decision that affects only the person making the decision.

> The State has a well-recognized interest in protecting and preserving the lives of its citizens. . . . In these instances [of withdrawal of treatment], it has been noted, a distinction should be drawn between the State's interest in protecting the lives of its citizens from injuries by third parties, and injuries resulting from the individual's own actions. When the individual's conduct threatens injury to others, the State's interest is manifest and the State can generally be expected to intervene. But the State rarely

---

[7] Certainly a physical condition that results from informed consent to surgery should be considered "self-inflicted" to a much greater extent than a terminal illness. Similarly, a patient suffering from a terminal illness does not "want to die" any more than, or even as much as, a woman who chooses to bleed to death because of religious convictions.

> acts to protect individuals from themselves, indicating that the State's interest is less substantial when there is little or no risk of direct injury to the public. This is consistent with the primary function of the State to preserve and promote liberty and the personal autonomy of the individual. In many if not most instances the State stays its hand and permits fully competent adults to engage in conduct or make personal decisions which pose risks to their lives or health.

Id. at 81 (citations omitted). After *Fosmire*, the State simply cannot justify a blanket prohibition of a private decision that "injures" only the person making the decision. Indeed, the option of a humane, hastened death confers a benefit, not an "injury," to patients making this profoundly personal choice.

B. The Challenged Laws Deny Equal Protection

The Equal Protection Clause prohibits the State of New York from treating similarly situated individuals differently. *Plyler v. Doe*, 457 U.S. 202, 216 (1982); *F.S. Royster Guano Co. v. Virginia*, 253 U.S. 412, 415 (1920). Classifications drawn by state law must be rationally related to a legitimate state interest. *Romer v. Evans*, 64 U.S.L.W. 4353, 4357, 1996 U.S. LEXIS 3245 at **25-26 (May 20, 1996) ("finding it impossible to credit" Colorado's assertion that a state constitutional amendment prohibiting preferential status for homosexuals protected the freedom of association and other liberties of landlords, employers and others with personal or religious objections to homosexuality, or that the amendment would conserve state resources for use in fighting discrimination against other groups); *City of Cleburne v. Cleburne Living Ctr., Inc.*, 473 U.S. 432, 440 (1985) (city failed to provide rational reasons why facilities for the mentally retarded would warrant zoning treatment distinct from the

treatment afforded facilities inhabited by fraternities, sororities, and other multiple dwelling facilities).

Applying these principles, the Second Circuit correctly decided that New York Penal Law sections 125.15(3) and 120.30 violate the Equal Protection Clause because the distinction New York draws between competent, terminally ill patients whose treatment involves life-sustaining equipment and those whose treatment does not involve such equipment is not rationally related to any legitimate state interest.[8]

CONCLUSION

For these reasons, the Petition for Writ of Certiorari should be denied.

---

[8] In addition, the decision below can be affirmed on the alternative constitutional basis argued below, namely, the Fourteenth Amendment's guarantee of liberty. *See, e.g., Granfinanciera, S.A. v. Nordberg*, 492 U.S. 33, 38-39 (1989); *Washington v. Yakima Indian Nation*, 439 U.S. 463, 476 n.20 (1979).

ON PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT

REPLY TO BRIEF IN OPPOSITION TO PETITION FOR A WRIT OF CERTIORARI

I

THE SECOND CIRCUIT'S UNPRECEDENTED CONCLUSION THAT ASSISTED SUICIDE AND REFUSAL OF LIFE-PROLONGING TREATMENT ARE CONSTITUTIONALLY INDISTINGUISHABLE WARRANTS DEFINITIVE EXAMINATION BY THIS COURT

The central strategy of respondents' brief in opposition to the petition for certiorari is to conflate an analysis under the Due Process Clause with the elements of the asserted equal protection claim, and to hinge the whole on euphemistic language which seeks to obscure the essential differences between refusing life-prolonging medical treatment and committing suicide. Because, respondents argue, New York recognizes "broad patient autonomy," including in certain circumstances the so-called right to "hasten death," the State must be viewed as having "disavowed an absolute commitment to preserving life" (Opposition, p. 7) such that, as a matter of equal protection, the right to physician assisted suicide must accompany and coexist with the right to refuse life-prolonging medical treatment.

Unquestionably, the centerpiece of the Second Circuit's decision is its conclusion that there is no legal difference between the determination to refuse or withdraw artificial life support (an act which by no means suggests the refusal or withdrawal of further medical care), and the determination to seek a physician's assistance in killing oneself. Significantly, respondents do not challenge the historical overview of assisted suicide provided in the petition for certiorari (Petition, p. 6-9). That overview indicates that the conclusion of the court below is without merit, and that indeed, the Second Circuit has rewritten New York's law in the absence of any legitimate constitutional claim, something the federal courts may not do.

As respondents suggest, New York recognizes the common law right of a competent adult patient to decline medical treatment. *Matter of Storar*, 52 N.Y.2d 363, 377, 420 N.E.2d 64, 71, *cert. denied*, 454 U.S. 858 (1981). However, this common law right cannot be characterized as one to "hasten death." To the contrary, in the very case that articulated the right, the New York Court of Appeals also stated that "[t]he State has a legitimate interest in protecting the lives of its citizens. . . . It may, by statute, prohibit them from engaging in specified activities, including medical procedures which are inherently hazardous to their lives." *Id.* at 377, 420 N.E.2d at 71. In *Matter of Eichner*, decided with *Storar*, the Court again stated:

> In other cases the State may be able to assert additional interests, such as, prevention of suicide or, perhaps, protection of minor children or dependents. Those concerns are inapplicable here. Brother Fox's condition [a permanent vegetative state] was not self-inflicted.

Id. at 377 n.6, 420 N.E.2d at 71 n.6.

The right to refuse medical treatment, the New York Court of Appeals has made clear, is not an overnight creation, but rather is the result of long-established common law principles. *Id.* at 376-77, 420 N.E.2d at 71. As demonstrated in the petition for certiorari (Petition, p. 6), the common law pedigree of the prohibition against assisted suicide is as well or better established, dating from colonial times. The simultaneous existence of the common law right and the common law prohibition indicates what common sense likewise suggests—that refusal of treatment and assisted suicide are not identical. They are, in this Court's terms, "things which are different in fact," *Plyler v. Doe*, 457 U.S. 202, 216 (1982), and that one is permitted does not mean, as a matter of constitutional law, that the other must be permitted as well.

The Second Circuit's failure to distinguish legally between refusal of treatment and assisted suicide, a failure now urged

upon this Court by respondents, is unprecedented, and indeed is in stark conflict with the conclusion reached by New York's highest state court as well as other state courts of last resort which have visited the issue. *See, e.g., Matter of Fosmire v. Nicoleau*, 75 N.Y.2d 218, 227, 551 N.E.2d 77, 82 (1980) ("merely declining medical care, even essential treatment, is not considered a suicidal act"); *In re Browning*, 568 So.2d 4, 14 (Fla. 1990) ("suicide is not an issue when . . . the discontinuation of life support 'in fact will merely result in . . . death, if at all, from natural causes' ") (citation omitted); *Rasmussen v. Fleming*, 154 Ariz. 207, 218, 741 P.2d 674, 685 (1987) ("[a]sserting the right to refuse medical treatment is not tantamount to committing suicide"); *In re Gardner*, 534 A.2d 947, 955-56 (Me. 1987) (the "decision not to receive [medical] procedures, far from constituting suicide, is a choice to allow to take its course the natural dying process"); *In re Conroy*, 98 N.J. 321, 350-51, 486 A.2d 1209, 1224 (1985) ("declining life-sustaining medical treatment may not properly be viewed as an attempt to commit suicide"). *Accord Van Holden v. Chapman*, 87 A.D.2d 66, 70, 450 N.Y.S.2d 623, 627 (4th Dep't 1982) ("[e]ven superficial comparison of the right to decline medical treatment with the right to take one's life illustrates their essential dissimilarity").[1]

[1] The Second Circuit's finding of no significant distinction between refusal or withdrawal of artificial life support and suicide is a clear departure from the thinking of New York's Legislature as well as its highest court. This is evidenced by, among other things, New York Public Health Law § 2989(3), which, as part of the statutory provision on health care agents and proxies adopted by the Legislature in 1990, unequivocally states: "This article is not intended to permit or promote suicide, assisted suicide, or euthanasia." N.Y. Pub. Health Law § 2989(3) (McKinney 1993). *See also* New York State Task Force on Life and the Law, *Do Not Resuscitate Orders: The Proposed Legislation and Report of the New York State Task Force on Life and the Law*, at v (April 1986) (indicating a presumption in favor of life in that "[t]he [DNR] legislation explicitly affirms the presumption under existing law that all patients in the event of cardiac or respiratory arrest consent to the provision of CPR").

In light of the foregoing, it is difficult to credit respondents' blithe assertion that review is "unnecessary because the decision below is correct" (Opposition, p. 10). The reasoning of the decision below is unprecedented, and whether or not this Court would view it as correct, it undoubtedly presents questions of fundamental importance, something which respondents at no point deny.[2]

It is equally difficult to credit respondents' perfunctory argument that "review by this Court at this time is premature" (Opposition, p. 9). The Second Circuit and the Ninth Circuit, constituting two of the most populous circuits in the nation, have each grappled with the issue of physician assisted suicide, the Ninth Circuit in three separate opinions. *See Compassion in Dying v. Washington*, 49 F.3d 586 (9th Cir. 1995) (reversing district court), *rev'd*, 79 F.3d 790 (9th Cir. 1996) (en banc) (reversing prior panel's decision and affirming district court), *reh'g en banc denied*, 1996 WL 315922 (9th Cir. June 12, 1996) (en banc) (rejecting sua sponte request of active judge for rehearing en banc).[3] A significant number of

[2] Nor can respondents successfully argue against a grant of review on the claimed basis that a physician's decision to prescribe lethal drugs to a terminally ill patient is a private matter in which the State has no right to intervene (Opposition, pp. 15-16, 20). State regulation of physician conduct is an essential feature of medical care. *See, e.g.*, N.Y. Educ. Law § 6530(3) (McKinney Supp. 1994) (authorizing discipline of physicians). In the context of the prescription and administration of powerful drugs, this Court has held that "the State has broad police powers in regulating the administration of drugs by the health professions," and has observed that "the State no doubt could prohibit entirely the use of particular Schedule II drugs." *Whalen v. Roe*, 429 U.S. 589, 603 & n.30 (1977) (upholding New York's triplicate prescription system for dispensing controlled substances). *See also People v. Privitera*, 23 Cal.3d 697, 705, 591 P.2d 919, 923 (concluding that "the state has the power to ban a drug with a recognized medical use because of its potential for abuse"), *cert. denied*, 444 U.S. 949 (1979).

[3] In this regard, it is noteworthy that the Ninth Circuit's analysis on this issue is fundamentally at odds with that of the Second Circuit. *See Cipollone v. Liggett Group, Inc.*, 505 U.S. 504, 508-09 & n. 2 (1992) (certiorari granted and dispute characterized as a "conflict" where numer-

state courts of last resort have addressed the legal distinction between suicide and withdrawal of life support. *See supra*. *See also People v. Kevorkian*, 447 Mich. 436, 482, 527 N.W.2d 714, 733 (1994), *cert. denied*, 115 S.Ct. 1795 (1995); *DeGrella ex rel. Parrent v. Elston*, 858 S.W.2d 698, 707 (Ky. 1993); *In re P.V.W.*, 424 So.2d 1015, 1022 (La. 1982); *In re Quinlan*, 70 N.J. 10, 43, 355 A.2d 647, 665, *cert. denied*, 429 U.S. 922 (1976). This is simply not a case where "further study" is warranted to avoid "premature adjudication of constitutional principles" (Opposition, p. 9). To the contrary, the life and death issues involved cry out for a definitive examination by this Court.

II

THE DECISION BELOW CONFLICTS WITH A DECISION OF THE SUPREME COURT OF MICHIGAN

As demonstrated in the petition for certiorari (Petition, pp. 14-15), the Second Circuit's decision conflicts with the decision of the Supreme Court of Michigan in *People v. Kevorkian*, 447 Mich. 436, 527 N.W.2d 714 (1994), *cert. denied*, 115 S.Ct. 1795 (1995). Nothing respondents offer in their brief (Opposition, pp. 7-9) vitiates this conflict. The Michigan Supreme Court's conclusion that the asserted equal protection right to assisted suicide cannot be derived from the acknowledged "right enjoyed by terminally ill persons who opt to forgo or discontinue life-sustaining medical treatment" because "the two situations are not the same for purposes of constitutional analysis," *id.* at 480 n. 57, 527 N.W.2d at 732 n. 57, is a holding rather than the dictum respondents claim it to be, and of course conflicts with the Second Circuit's opposite conclusion.[4] *See generally Washington v. Yakima Indian*

ous courts "agreed with [the] analysis of the Third Circuit, which differed from the analysis of the Supreme Court of New Jersey").

[4] Additionally, the suggestion that any conflict with the Michigan court's holding has "evaporated" with the expiration of the Michigan statute (Opposition, p. 8) ignores the very underpinnings of the Court's decision, which are independent of the statute itself, and which were applied equally to the common law challenges raised. Indeed, quoting Justice Jackson, Justice Boyle of the Michigan Supreme Court noted that "a judicial decision has a force of its own. 'The principle then lies about like a loaded weapon . . . . Every repetition imbeds that principle more deeply in our law' . . . ." *Kevorkian*, 447 Mich at 502, 527 N.W.2d at 742 (Boyle, J., concurring in part and dissenting in part). *See also id.* at 477, 527 N.W.2d at 730 (analyzing the constitutional issue in terms of "evolution of tradition" and "historical precepts").

Nation, 439 U.S. 463, 467-68 n.5 (1978) (review undertaken in a case in which the district court rejected the constitutional claims but the circuit court did not reach the question of whether the application of the challenged statute deprived it of equal protection of the laws).

Nor can respondents plausibly contend (Opposition, p. 8) that the *Kevorkian* decision depends on the fact that "[a]t the time the Michigan Supreme Court ruled, Michigan's statutory law was less protective" than that of New York, such that in Michigan there was no disparity between the treatment of those who sought to refuse care and those who sought assisted suicide. The *Kevorkian* decision itself establishes that respondents are incorrect on this point. In Michigan, as in New York, there is and was a right, rooted in the common law, to refuse or discontinue medical treatment. *See Kevorkian*, 447 Mich. at 466-474, 527 N.W.2d at 726-729. The equal protection analysis conducted by the Michigan court did not, as respondents suggest (Opposition, p. 8), turn on a careful examination of the "obstacles to patient choice" presented by the Michigan common law. Rather, the court simply acknowledged that there is a right to refuse or discontinue life-sustaining medical treatment and concluded, for both due process and equal protection purposes:

> that persons who opt to discontinue life-sustaining medical treatment are not, in effect, committing suicide. There is a difference between choosing a natural death summoned by an uninvited illness or calamity, and delib-

erately seeking to terminate one's life by resorting to death-inducing measures unrelated to the natural process of dying.

Id. at 472-73, 527 N.W.2d at 728-29.

The Michigan Supreme Court, in other words, squarely held that refusal of treatment and assisted suicide "are not the same for purposes of constitutional [equal protection] analysis." *Id.* at 480 n.57, 527 N.W.2d at 732 n.57. The court below held precisely the opposite. The conflict is inescapable and only this Court can resolve it.

CONCLUSION

FOR THE FOREGOING REASONS, THE PETITION FOR A WRIT OF CERTIORARI SHOULD BE GRANTED.

MOTION FOR LEAVE TO FILE BRIEF *AMICI CURIAE*

Pursuant to Rule 37.2 of the Rules of this Court, the United States Catholic Conference, New York Catholic Conference, Washington State Catholic Conference, Oregon Catholic Conference, California Catholic Conference, Michigan Catholic Conference, Christian Life Commission of the Southern Baptist Convention, National Association of Evangelicals, The Lutheran Church-Missouri Synod, and Christian Legal Society respectfully move for leave to file the accompanying brief *amici curiae* on behalf of the petitioners, Dennis C. Vacco, *et al.*, whose written consent has been provided to the Clerk of the Court. The respondents, Timothy Quill, *et al.*, refused to consent to the filing of this brief.

In support of its motion, these amici state:

1. The United States Catholic Conference is a nonprofit corporation organized under the laws of the District of Columbia. Its members are the active Catholic Bishops in the United States. The Bishops of New York, Washington, Oregon, California, and Michigan are also members of the State Catholic Conferences of those respective states. The Conferences are vehicles through which the Bishops speak cooperatively and collegially on matters affecting the Catholic Church and its people. The Conferences advocate and promote the pastoral teaching of the Church on diverse issues, including the protection of human rights and the sanctity and dignity of human life. Each of the Conferences has been active in supporting state laws that protect persons from deadly self-inflicted harm. Roman Catholicism is the largest religious denomination in the United States, with over 60 million members in this country.

2. The Christian Life Commission is the moral concerns and public policy agency for the Southern Baptist Convention, the nation's largest Protestant denomination, with over 15.2 million members in over 38,000 autonomous local churches. The Commission is charged with addressing public policies affecting the sanctity of human life.

3. The National Association of Evangelicals ("NAE") is a nonprofit association of evangelical Christian denominations, churches, organizations, institutions and individuals. It includes some 42,500 churches from 75 denominations, and 300 parachurch ministries. NAE has joined in this and many other *amicus* briefs in the defense of human rights, including the right to life.

4. The Lutheran Church-Missouri Synod is the second-largest Lutheran denomination in the United States. It has about 6,000 member congregations and about 2.6 million individual members. In 1995, as a result of their deeply held religious beliefs on the sanctity of life, the congregations of the Synod passed a resolution expressing the Synod's objection "to medical personnel having any part in actively inducing death, even at the patient's request." The Synod resoived "to speak against any attempt to legalize physician-assisted suicide. . . ."

5. Founded in 1961, the Christian Legal Society ("CLS") is a nonprofit association of 4,700 Christian attorneys, law professors, and law students with chapters in every state and at 85 law schools. CLS's legal advocacy and information arm, the Center for Law and Religious Freedom, advocates for the protection of religious exercise and the sanctity of human life in federal and state courts nationwide.

6. This is a case of extraordinary national importance. The United States Court of Appeals for the Second Circuit below concluded that the Equal Protection Clause prevents New York from uniformly enforcing its criminal laws that prohibit intentionally aiding another to commit or attempt suicide. The finding that some class of citizens—in this case, the "terminally ill" in the "final stages" of their illness—are not protected under the homicide laws flies in the face of the very constitutional provision upon which the Second Circuit purported to ground its decision. This case involves not only a question of historic importance, but literally means life or death for some of the Nation's most vulnerable citizens. No issue could be more serious. No dispute could be more deserving of a full airing of all views.

7. The amici speak from religious traditions and recognize the dignity and sanctity of each human person. Because of this perspective, these traditions speak uniquely to a number of ethical, moral, and legal distinctions that are central to the outcome of this case, distinctions that were obscured by the court below. These traditions also speak powerfully about the Nation's proper role in caring compassionately for those afflicted with terminal illness.

WHEREFORE, the amici respectfully request that this Court grant their motion and permit them to file the accompanying brief *amici curiae* in support of the petitioners.

Respectfully submitted,

IN THE

Supreme Court of the United States

OCTOBER TERM, 1995

No. 95-1858

DENNIS C. VACCO, Attorney General of the State of New York; GEORGE E. PATAKI, Governor of the State of New York; and ROBERT M. MORGENTHAU, District Attorney of New York County,

Petitioners,

v.

TIMOTHY QUILL, M.D.; SAMUEL C. KLAGSBRUN, M.D.; and HOWARD A. GROSSMAN, M.D.,

Respondents.

On Petition for Writ of Certiorari to the United States Court of Appeals for the Second Circuit

---

BRIEF *AMICI CURIAE* OF THE UNITED STATES CATHOLIC CONFERENCE; NEW YORK CATHOLIC CONFERENCE; WASHINGTON STATE CATHOLIC CONFERENCE; OREGON CATHOLIC CONFERENCE; CALIFORNIA CATHOLIC CONFERENCE; MICHIGAN CATHOLIC CONFERENCE; CHRISTIAN LIFE COMMISSION OF THE SOUTHERN BAPTIST CONVENTION; NATIONAL ASSOCIATION OF EVANGELICALS; THE LUTHERAN CHURCH-MISSOURI SYNOD; AND CHRISTIAN LEGAL SOCIETY IN SUPPORT OF PETITIONERS

INTEREST OF AMICI

The amici, representatives of various religious communities in the United States, unite here for the common

purpose of calling this Court's attention to a decision of singular moment in the development of constitutional law. The United States Court of Appeals for the Second Circuit ruled below that the Equal Protection Clause forbids a state to protect all persons, equally, from being assisted by others to inflict deadly harm upon themselves. No longer, the Second Circuit ruled, can our society uniformly prohibit one person from enabling another person to take his or her life. In reaching this shocking conclusion, the Second Circuit obliterated a distinction recognized for centuries in life, law, and morality: the distinction between letting nature take its course for a dying patient (which is everywhere permitted), and intervening in that course by intentionally providing a person with a lethal agent to cause death (which is a form of homicide in New York and most other states). Our laws have always condemned acts of deadly harm directed against others. The Second Circuit's extraordinary uprooting of this long-recognized proscription demands the attention of this Court, which is called upon to preserve a basic precept of American life and government—*that no one may take the life of another even if asked.*

Individual statements of interest follow.

The United States Catholic Conference is a nonprofit corporation organized under the laws of the District of Columbia. Its members are the active Catholic Bishops in the United States. The Bishops of New York, Washington, Oregon, California, and Michigan are also members of the State Catholic Conferences of those respective states. The Conferences are vehicles through which the Bishops speak cooperatively and collegially on matters affecting the Catholic Church and its people. The Conferences advocate and promote the pastoral teaching of the Church on diverse issues, including the protection of human rights and the sanctity and dignity of human life. Each of the Conferences has been active in supporting state laws that protect persons from deadly self-inflicted harm. Roman Catholicism is the largest religious denomination in the United States, with over 60 million members in this country.

The Christian Life Commission is the moral concerns and public policy agency for the Southern Baptist Convention, the nation's largest Protestant denomination, with over 15.2 million members in over 38,000 autonomous local churches. The Commission is charged with addressing public policies affecting the sanctity of human life.

The National Association of Evangelicals ("NAE") is a nonprofit association of evangelical Christian denominations, churches, organizations, institutions and individuals. It includes some 42,500 churches from 75 denominations, and 300 parachurch ministries. NAE has joined in this and many other *amicus* briefs in the defense of human rights, including the right to life.

The Lutheran Church-Missouri Synod is the second-largest Lutheran denomination in the United States. It has about 6,000 member congregations and about 2.6 million individual members. In 1995, as a result of their deeply held religious beliefs on the sanctity of life, the congregations of the Synod passed a resolution expressing the Synod's objection "to medical personnel having any part in actively inducing death, even at the patient's request." The Synod resolved "to speak against any attempt to legalize physician-assisted suicide. . . ."

Founded in 1961, the Christian Legal Society ("CLS") is a nonprofit association of 4,700 Christian attorneys, law professors, and law students with chapters in every state and at 85 law schools. CLS's legal advocacy and information arm, the Center for Law and Religious Freedom, advocates for the protection of religious exercise and the sanctity of human life in federal and state courts nationwide.

SUMMARY OF ARGUMENT

The petition for writ of certiorari seeks review of a decision that is as chilling as it is without foundation in law. The Second Circuit held below that New York homicide laws that prohibit intentionally aiding another to commit or attempt suicide may *not* be applied to everyone, equally, under the Equal Protection Clause. This extraordinary and unprecedented ruling—that "terminally ill persons" in the "final stages" of their illness, as a class, constitutionally must be *excluded* from the mandatory protection of these laws—ignores the very principle of equal protection upon which the court purported to ground its decision. The criminal law applies to *everyone*.

This case is not about withdrawing or refusing medical treatment so that nature may take its course. It is about providing the terminally ill with a death-producing agent for the express purpose of causing death. The Court of Appeals erroneously concluded that the Constitution forbids States to recognize a difference between the two. Thus, the Second Circuit cast aside as "irrational" a distinction that has achieved nearly universal recognition in the common law, statutory law, the medical profession, and countless court decisions. Indeed, in 1994, a Task Force appointed by the Governor of New York cited the distinction between declining medical treatment and administering a lethal agent with the intentional purpose of causing death, as one of many reasons for retaining the State's laws prohibiting assisted suicide.

The Second Circuit's decision, if uncorrected, will have deadly consequences for people who are already marginalized in our society. The poor, the elderly, members of minorities, and those without access to medical care—these are the ones who will be killed, the Task Force found, if the prohibition against assisted suicide is lifted. It is a grave injustice to rob any person of the protections against deadly harm that are extended to all others under the criminal law. Indeed, withholding such protections

is an injustice of unspeakable magnitude, for it leads to the literal destruction of the very lives that government is charged with protecting.

This case must be heard. The decision below must be reversed.

ARGUMENT

We seek the intervention of this Court to answer what without exaggeration, may be the most profound and far-reaching federal constitutional question ever to have demanded its attention. Although we Americans differ in many ways, each of us ultimately will face death, our own and that of loved ones. This case raises the question whether a centuries-old tradition—a tradition that dictates that *we will not take the life of another even if asked*—should be abandoned at the behest of a small, determined group of advocates who persist in claiming that our Constitution includes a right to obtain from another the means of committing an act of deadly, self-inflicted violence. So far these advocates have persuaded two courts—the court below [1] and the United States Court of Appeals for the Ninth Circuit [2]—to rule in their favor on distinctly different grounds.[3] Both decisions require action by this Court to correct the errors below.

---

[1] *Quill v. Vacco*, 80 F.3d 716 (2d Cir. 1996).

[2] *Compassion in Dying v. Washington*, 79 F.3d 790 (9th Cir. 1996) (mandate stayed). We are informed that a petition for writ of certiorari is to be filed shortly.

[3] There is, in fact, a three-way conflict between *Quill* and other cases that have addressed the issue of assisted suicide. The Ninth Circuit in *Compassion in Dying* held that the "terminally ill" have a due process right to assisted suicide. 79 F.3d at 793-94, 838. The Second Circuit in *Quill* rejected an asserted due process right to assisted suicide, 80 F.3d at 723-25, but held that those in the "final stages" of a "terminal illness" have an equal protection right to assisted suicide. *Id.* at 731. Michigan's highest court held in *People v. Kevorkian*, 527 N.W.2d 714 (Mich. 1994), *cert. denied*, 115 S. Ct. 1795 (1995), that there is neither a due process nor

Neither the text nor the history of the Constitution, nor any of this Court's decisions, embraces a "right to hasten death" requiring states to provide selective, status-dependent "exceptions" to general prohibitions against taking the life of another. That any court believes otherwise is sufficient reason to grant the pending petition for writ of certiorari. For sound legal, factual, and moral reasons, including the extraordinary and unprecedented breadth of the decision below, this Court must grant the petition and give this matter full consideration.

I. THE EQUAL PROTECTION CLAUSE DOES NOT REQUIRE UNEQUAL APPLICATION OF THE HOMICIDE LAWS

The New York homicide laws struck down in this case protect all persons, equally, from being aided and encouraged to inflict deadly harm upon themselves. N.Y. Penal Law § 125.15 (intentionally aiding another to commit suicide is a felony); N.Y. Penal Law § 120.30 (intentionally aiding another to attempt suicide is a felony). The Second Circuit concluded that the Equal Protection Clause prevents New York from applying sections 125.15 and 120.30 equally to all citizens. This startling conclusion—that the Equal Protection Clause actually requires radically unequal application of a criminal law depending on the health status of the intended victim—ignores the very principle of equal protection upon which the court purported to ground its decision. Clearly New York may uniformly enforce laws that prohibit one person from providing others with the means of taking their own lives. The opinion below challenges the fundamental principle that criminal laws, including those struck down in this case, are meant to protect everyone.

---

equal protection right to assisted suicide. A federal district judge has held that an Oregon law excluding the terminally ill from criminal and civil protections against assisted suicide violates the Equal Protection Clause. *Lee v. Oregon*, 891 F. Supp. 1429 (D. Or. 1995), *on appeal*, Nos. 95-35804, -35805, -35854, -35948, -35949 (9th Cir.).

This Court should consider at the outset the dark import of the ruling below. The New York statutes at issue prevent what the law has always and everywhere allowed a state to prevent: conduct facilitating the direct taking of another person's life. This is not a case about withdrawing or refusing futile or unwanted medical treatment. This is a case about deliberately and intentionally giving people a lethal agent to make them die.

The court below reached its result because it presumed incorrectly the existence of a "right to hasten death." Having framed the issue in this fashion, it was an overly simplistic, albeit dramatic, leap for the court below to say, for equal protection purposes, that there is no distinction between causing someone to die from suicide and allowing someone to die by withdrawing life-saving medical treatment since both result in "hastening death." *Quill*, 80 F.3d at 729. Framing the issue in this fashion, however, obliterates a crucial distinction that the law and medical practice have always recognized. As this Court has made plain in its due process jurisprudence, the framing of the issue and the description of the asserted right are of extreme importance in deciding a case.[4] By presuming that there exists a "right to hasten death," without analysis and without taking into account any of the analytical steps prescribed by this Court for identifying non-textual rights,[5] the court below created the very legal error which requires the intervention of this Court now.[6]

---

[4] *Planned Parenthood v. Casey*, 505 U.S. 833, 847-48 (1992); *Michael H. v. Gerald D.*, 491 U.S. 110, 118-30 (1989).

[5] Constitutional protection is accorded to those non-textual interests "deeply rooted in this Nation's history and tradition," *Moore v. City of East Cleveland*, 431 U.S. 494, 503 (1977), or which are "implicit" in the very "concept of ordered liberty." *Palko v. Connecticut*, 302 U.S. 319, 325-28 (1937).

[6] There is no "right to hasten death." Intentionally hastening death is a homicide even if the victim would have died soon from some other cause.

Constitutional rights, moreover, are defined by their application and factual context. Decisions of this Court prove time and again

Far from promoting equal protection of the law, the decision of the Second Circuit represents a direct attack on the fundamental equality and dignity of each and every human life, including "terminally ill" persons in the "final stages" of their illness,[7] whom the Second Circuit singled out for disparate treatment.

Ours has always been a society that "strongly affirms the sanctity of life." *Furman v. Georgia*, 408 U.S. 238, 286 (1972) (Brennan, J., concurring). The Fourteenth Amendment guarantees this fundamental value by requiring equal protection of the criminal law and by denying states the power to "deprive any person of life . . . without due process of law." To hold that the Constitution gives one class of persons a special "right" to enlist others in obtaining a lethal agent to end their own lives represents a judgment that some lives are no longer worth protecting. Any branch of government that would adjudge some lives no longer worth protecting threatens human life and liberty.

II. THERE IS A PROFOUND DISTINCTION BETWEEN WITHDRAWING MEDICAL TREATMENT AND ASSISTING IN A SUICIDE

The Second Circuit's inherently contradictory conclusion that the Equal Protection Clause forbids New York to protect all New York citizens against deadly self-

---

that interests for which constitutional protection is sought "cannot be described merely at the level of philosophic abstraction. . . ." Mark E. Chopko & Michael F. Moses, *Assisted Suicide: Still A Wonderful Life?*, 70 Notre Dame L. Rev. 519, 559 (1995). There is a "right to marry," for example, but no right to marry one's blood relatives. There is a "right to direct the upbringing of one's children," but no right to expose them to deadly harm.

[7] In its opinion, the Second Circuit provided no definition of either "terminally ill" or "final stages," claiming that these are well understood. Yet, as the Ninth Circuit noted in *Compassion in Dying v. Washington*, there are 41 state laws providing widely different definitions of "terminal" illness. 79 F.3d at 818 & n.77.

inflicted harm might have been avoided had that court not obliterated a distinction that has been recognized for centuries in life, law, and morality. It is the distinction between letting nature take its course, on the one hand, and intervening in that course, on the other hand, by intentionally administering a lethal agent to cause the death of another person.[8] Indeed, the claim that there is no constitutionally permissible distinction between refusing medical treatment and deliberate killing ignores the very distinction upon which the right to refuse medical treatment was grounded in the first instance. *Matter of Quinlan*, 355 A.2d 647, 665 (N.J. 1976) ("We would see . . . a real distinction between the self-infliction of deadly harm and a self-determination against artificial life support . . . in the face of irreversible, painful and certain imminent death"), *cert. denied sub nom. Garger v. New Jersey*, 429 U.S. 922 (1976).[9] Cases adhering to this crucial distinction are legion.[10] The distinction is also

---

[8] The Second Circuit, while seeing no constitutionally relevant distinction between refusing medical treatment and assisted suicide, purported to limit the right to assisted suicide to the terminally ill. The right to refuse medical treatment, however, is not limited to the terminally ill. *Cruzan v. Director, Missouri Dep't of Health*, 497 U.S. 261, 269 (1990).

[9] Even the common law origin of the right to refuse unwanted medical treatment illustrates how radically different it is from an affirmative act of homicide or suicide. The right to refuse medical treatment is rooted in the common law right to be free of unwanted bodily contact. *Cruzan*, 497 U.S. at 269. From a physician's standpoint, the patient's "right" to decline treatment is a *limitation* on the doctor's power. Indeed, a doctor commits a battery if he or she treats a patient without the patient's consent. The common law, by contrast, has never granted a physician the power deliberately to cause death.

[10] *See, e.g., Matter of Storar*, 420 N.E.2d 64, 71 n.6 (N.Y. App.) (distinguishing a natural death from self-inflicted killing), *cert. denied*, 454 U.S. 858 (1981); *Barber v. Superior Court*, 195 Cal. Rptr. 484, 487 (Cal. App. 1983) ("Euthanasia, of course, is neither justifiable nor excusable in California"); *Superintendent of Belchertown v. Saikewicz*, 370 N.E.2d 417, 426 n.11 (Mass. 1977) (distin-

recognized in state living will statutes.[11]

Decisions to refuse treatment are "legally and ethically distinct" from decisions to administer "a lethal agent with the intentional purpose of terminating life." American Bar Association, Commission on Legal Problems of the Elderly, Memorandum of Jan. 17, 1992, *reprinted in* 8 Issues L. & Med. 117, 118 (Summer 1992). Assisted suicide "involves not letting the patient die, but making the patient die. . . ." Stephen L. Carter, *The Culture of Disbelief: How American Law and Politics Trivialize Religious Devotion* 236 (1993). The American Medical Association recognizes a "fundamental difference between refusing life-sustaining treatment and demanding a life-ending treatment." AMA Council on Ethical and Judi-

guishing a "competent, rational decision to refuse treatment when death is inevitable" from an act of intentional self-destruction; *Bartling v. Superior Court*, 209 Cal. Rptr. 220, 225-26 (Cal. App. 1984) (suicide is distinguishable from death from natural causes which results from disconnecting a respirator from a comatose, terminally ill patient); *Matter of Conroy*, 486 A.2d 1209, 1224 (N.J. 1985) (declining life-sustaining medical treatment is distinguishable from suicide because it "merely allows the disease to take its natural course; if death were eventually to occur, it would be the result, primarily, of the underlying disease, and not the result of a self-inflicted injury"); *Bouvia v. Superior Court*, 225 Cal. Rptr. 297, 306 (Cal. App. 1986) (a "decision to allow nature to take its course is not equivalent to an election to commit suicide with . . . parties aiding and abetting therein"); *Brophy v. New England Sinai Hospital*, 497 N.E.2d 626, 635 n.29, 638 (Mass. 1986) ("the law does not permit suicide," which is distinguishable from the decision to remove life-sustaining treatment from a patient who is in a persistent vegetative state and unlikely to regain cognitive functioning); *Donaldson v. Van de Kamp*, 4 Cal.Rptr.2d 59, 63 (Cal. App. 1992) ("Here there are no life-prolonging measures to be discontinued. Instead, a third person will simply kill [the plaintiff]"). *See also* Edward R. Grant & Paul Benjamin Linton, *Relief or Reproach?: Euthanasia Rights in the Wake of Measure 16*, 74 Oregon L. Rev. 449, 465-66 n.59 (1995) (citing additional cases).

[11] Alan D. Lieberson, *Advance Medical Directives* 93, 317-18 (1992).

cial Affairs, *Report 1-93-8*, at 2.[12] To restate the AMA position:

> When a life-sustaining treatment is declined, the patient dies primarily because of an underlying disease. The illness is simply allowed to take its natural course. With assisted suicide, however, death is hastened by the taking of a lethal drug or other agent. Although a physician cannot force a patient to accept a treatment against the patient's will, even if the treatment is life-sustaining, it does not follow that a physician ought to provide a lethal agent to the patient. The inability of physicians to prevent death does not imply that physicians are free to help cause death.

Id. Elimination of this distinction by the court below overrides the medical profession's own "unqualified opposition to physician-assisted suicide." Brian McCormick, *Continued Opposition: House Refuses to Open Door on Physician-Assisted Suicide*, Am. Med. News, Dec. 20, 1993, at 7. In simple terms, in the case of termination of medical treatment, it is the underlying pathology that prevails—the inability to breathe or eat or swallow. In a "suicide," it is the administration of a lethal agent that deliberately disrupts that course. Because so much of the common law is based on issues of intent, ignoring such distinctions, as the court did below, fundamentally alters this most basic protection and puts at risk every life at one of its most vulnerable stages.

Like the AMA, ABA, and countless courts, New York knows (and argued below) that there is a material difference between terminating medical treatment and assisting

[12] Individual health care professionals understand the difference as well, with 87% of physicians and nurses in a recent study agreeing that "to allow patients to die by forgoing or stopping treatment is ethically different from assisting in their suicide." Mildred Z. Solomon, *et al.*, *Decisions Near the End of Life: Professional Views on Life-Sustaining Treatments*, 83 Am. J. of Pub. Health 14, 17-18 (Jan. 1993).

in a suicide. In 1994, the 25-member Task Force on Life and the Law appointed by the Governor of New York concluded that the distinction was one of many reasons for retaining the existing New York ban on assisted suicide. The Task Force wrote:

> As . . . courts have recognized, the fact that the refusal of treatment and suicide may both lead to death does not mean that they implicate identical constitutional concerns. The imposition of life-sustaining medical treatment against a patient's will requires a direct invasion of bodily integrity and, in some cases, the use of physical restraints, both of which are flatly inconsistent with society's basic conception of personal dignity. . . . It is this right against intrusion—not a general right to control the timing and manner of death—that forms the basis of the constitutional right to refuse life-sustaining treatment. Restrictions on suicide, by contrast, entail no such intrusions, but simply prevent individuals from intervening in the natural process of dying.

New York State Task Force on Life and the Law, *When Death Is Sought: Assisted Suicide and Euthanasia in the Medical Context* 71 (1994).

Contrary to the Second Circuit's opinion, *Cruzan v. Director, Missouri Department of Health*, 497 U.S. 261 (1990), does not dictate a different result. In *Cruzan*, this Court held that a state may require clear and convincing evidence of a comatose patient's wishes before allowing discontinuation of artificially provided nutrition and hydration at the direction of a surrogate. This Court, in *Cruzan*, never endorsed the administration of a lethal agent under the guise of a right intentionally to "hasten death." Rather, *Cruzan* (a) involved the discontinuance of an allegedly intrusive and burdensome medical treatment, (b) upheld the State's interest in preserving the patient's life (regardless of its alleged "quality") as against the wishes of those who sought to discontinue

treatment,[13] and (c) protected the exercise of the right against a possible erroneous determination by allowing a State to require particularly strong proof of the patient's wishes.

III. THIS CASE RAISES FUNDAMENTAL QUESTIONS ABOUT THE ROLE AND RULE OF LAW IN THIS SOCIETY

The purported right to have one person provide another with a lethal agent to take his or her own life is often described as a matter of personal autonomy—unlimited, exclusive self-determination. Such limitless autonomy threatens the way we order ourselves as a democratic society.

In this society, law has always been a guide and regulator. It is about *ordered* liberty. *Palko v. Connecticut*, 302 U.S. 319, 325 (1937). The law has always acted to restrain personal choices that harm persons or the common good. Because we are a society that "strongly affirms the sanctity of life,"[14] we Americans have not endorsed demands to assist those who would make seemingly personal choices that diminish their own lives or the common good. For example, this Court has never held that the Constitution gives a person an absolute right to do with one's body as he or she pleases. *Roe v. Wade*, 410 U.S. 113, 154 (1973) (refusing to recognize such a right). Thus, a person has a right to refuse medical treatment, but no right to refuse vaccination from contagious diseases. *Jacobson v. Massachusetts*, 197 U.S. 11, 26-27 (1905) (rejecting autonomy right in favor of common good). "The state statute books are replete with constitutionally unchallenged laws against prostitution, suicide, voluntary self-mutilation, brutalizing 'bare fist' prize

---

[13] States legitimately may assert "an unqualified interest in the preservation of human life. . . ." *Cruzan*, 497 U.S. at 282.

[14] *Furman v. Georgia*, 408 U.S. 238, 286 (1972) (Brennan, J., concurring).

fights, and duels, although these crimes may only directly involve 'consenting adults.'" *Paris Adult Theatre I v. Slaton*, 413 U.S. 49, 68 n.15 (1973). The choice of a spouse is perhaps the deepest and most intimate of personal choices. Yet that choice too is limited by concerns for the common good, expressed in limitations based on affinity, consanguinity, and gender. In each of these instances, the claims of an individual are balanced against, and sometimes subordinated to, the common good.

For many reasons, the common good argues strongly against physician-assisted suicide. We need to ask—and this Court needs to confront—the larger consequences for education, economic reform, the eradication of poverty, discrimination, and other ills of society if we foster the attitude that, in the face of seemingly intractable difficulties, it is not only an individual's right to surrender but to enlist others to provide the means to end his or her life. It has been predicted that the poor, the elderly, minorities, and women [16] are more likely to be encouraged to "request aid" in dying (or have it requested "for" them by surrogates) than any other class. If pain and suffering are consequences of the failure of available medical care to respond fully to clinical depression or pain, then those most likely to suffer (and thus be tempted to choose suicide) are those for whom quality health care is the exception rather than the rule, or for whom adequate health care is altogether an illusion. The poor, the elderly, the isolated, minorities, the disabled, and women will disproportionally feel the impact of a social system that will now be built around a "right to hasten death." It was for this reason, among others, that the diverse members of the New York State Task Force on Life and the Law unanimously rejected the view that the

[16] Sidney Callahan, *A Feminist Case Against Self-Determined Dying in Assisted Suicide and Euthanasia*, 1 Studies in Pro Life Feminism 303-317 (Fall 1995).

State's prohibition against assisted suicide should be altered in any way:

> No matter how carefully any guidelines are framed, assisted suicide and euthanasia will be practiced through the prism of social inequality and bias that characterizes the delivery of services in all segments of our society, including health care. The practices will pose the greatest risks to those who are poor, elderly, members of a minority group, or without access to good medical care.

New York State Task Force on Life and the Law, *supra* at xiii.

This case asks plainly how constitutional law and constitutional principle can and should develop over the foreseeable future. It asks whether the rule of law, which traditionally has prevented people from enlisting others to carry out self-destructive impulses, may crumble in the face of some newly-minted claim of unbridled autonomy. It asks whether traditional and valued distinctions in the law and in medical practice must give way to these new claims of autonomy—claims which are self-contradictory, for they destroy the very person whose freedom they claim to maximize. At bottom, this case asks whether the kind of society we are to become will reflect our deepest values or none at all. Some argue that the time for euthanasia has arrived simply because our society lacks the will to stop it. On the contrary, these amici vigorously stand against it because it runs counter to our nature and the common good. Our society is made richer through the lives and well-being of all.

CONCLUSION

For the foregoing reasons of law and policy, this Court should grant the petition for certiorari filed by the Attorney General of the State of New York, Governor of New York, and District Attorney of New York County, and set this case for argument. The judgment of the Second Circuit should be reversed.

MOTION OF AGUDATH ISRAEL OF AMERICA FOR LEAVE TO FILE BRIEF AMICUS CURIAE

Pursuant to Rule 37 of the Rules of this Court, Agudath Israel of America respectfully moves for leave to file the accompanying brief *amicus curiae* in the above-captioned case.

Agudath Israel is a 74-year old national Orthodox Jewish movement with a deep and abiding interest in issues that touch upon the sanctity of human life -- and, therefore, on the moral tenor of our contemporary society. This case implicates some of the most profound issues of our time. As described more fully in the accompanying proposed brief, Agudath Israel views the decision below with deep

concern and believes that it deserves the Court's urgent attention.

Agudath Israel submits that it would bring to this case a perspective not currently before the Court. The accompanying proposed brief advances an argument not fully developed in the petition: the extent to which constitutionalizing a right to assisted suicide, particularly on equal protection grounds, is likely to have an extremely broad impact in a variety of contexts. In addition, as more fully discussed in the "Interest of the Amicus Curiae" section of the accompanying proposed brief, Agudath Israel approaches the issues raised by this case from its unique perspective of classical Jewish thinking.

Counsel for petitioners have consented, in writing, to Agudath Israel's filing a brief as *amicus curiae*. Counsel for respondents, however, has withheld such consent. Hence the need for this motion.

For the reasons stated above, Agudath Israel respectfully urges the Court to grant this motion for leave to file the accompanying brief *amicus curiae* in support of petitioners.

Respectfully submitted,

BRIEF OF AGUDATH ISRAEL OF AMERICA AS AMICUS CURIAE IN SUPPORT OF THE PETITION

INTEREST OF THE AMICUS CURIAE

Agudath Israel of America, a national grassroots Orthodox Jewish movement founded in 1922, is deeply concerned about the ruling below and the broader

implications it holds for the future, and joins petitioners in urging the Court to grant a writ of certiorari.

Informed by classical Jewish tradition which teaches that all human life is sacred, and possessed of the firm view that laws and judicial rulings that undermine the sanctity of human life send a message that is profoundly dangerous for all of society, Agudath Israel speaks out frequently, in a variety of legal policy settings, on a broad panoply of issues that arise at the onset and conclusion of the human life cycle. In this court, for example, Agudath Israel has submitted briefs as *amicus curiae* in the abortion rights cases of *Webster* v. *Reproductive Health Services* (decision reported at 492 U.S. 490 (1989)) and *Planned Parenthood* v. *Casey* (decision reported at 505 U.S. 833 (1992)); and -- more directly relevant to the issues involved in the instant case -- in the "right to die" case of *Cruzan* v. *Director, Missouri Department of Health* (decision reported at 497 U.S. 261 (1990)). Agudath Israel has also testified before the New York State legislature, as well as the New York State Task Force on Life and the Law, on the several statutes and statutory proposals discussed in the body of this brief, all of which are profoundly implicated by the decision below.

Agudath Israel's interest in the issue of physician assisted suicide is especially keen. It is a basic principle of Jewish law and ethics that "[m]an does not possess absolute title to his life or body." J.D. Bleich, *The Quinlan Case: A Jewish Perspective*, reprinted in *Jewish Bioethics* 266, 270 (Hebrew Publishing Co. 1979). Agudath Israel believes that recognition of that teaching, as expressed in the historical disapprobation of suicide and euthanasia, has served as one of the pillars of civilized societies throughout

the generations. That pillar is now in peril.

It is yet another principle of Jewish law and ethics that a doctor's role is to provide healing, not to hasten death. I. Jakobovits, *Regarding the Law Whether it is Permitted to Hasten the End of a Terminal Patient in Great Pain*, 31 *Ha-pardes* 29 (1956). Doctors who assist in the commission of suicide, even when motivated by the most humane of concerns, exceed the bounds of their own mandate and undermine public confidence in the medical profession. Agudath Israel views with considerable alarm the transformation of the physician's calling envisioned by the decision below.

Moreover, as representatives of a people whose numbers were decimated little more than half-a-century ago by a society that "progressed" from its "enlightened" practices of "mercy killing" to the mass slaughter of millions of human beings deemed physically or racially "inferior," Agudath Israel is particularly sensitive to the legal assignment of diminished levels of life protection based on diminished levels of life "quality". The dangers of such an assignment are well articulated by Siegler & Weisbard, *Against the Emerging Stream: Should Fluids and Nutritional Support be Discontinued?*, 145 Archives of Internal Medicine 130-31 (1985):

> "We have witnessed too much history to disregard how easily a society may disvalue the lives of the 'unproductive.' The 'angel of mercy' can become the fanatic, bringing the 'comfort' of death to some who do not clearly want it, then to others who 'would really be better off dead,' and finally, to

classes of 'undesirable persons,' which might include the terminally ill, the permanently unconscious, the severely senile, the pleasantly senile, the retarded, the incurably or chronically ill, and perhaps, the aged. . . . In the current environment, it may well prove convenient - and all too easy - to move from recognition of an individual's 'right to die' (to us, an unfortunate phrasing in the first instance) to a climate enforcing a 'duty to die.'"

ARGUMENT

LEFT INTACT, THE DECISIONS OF THE COURT BELOW AND OF THE NINTH CIRCUIT IN *COMPASSION IN DYING* ARE LIKELY TO LEAD TO A BROAD EXPANSION OF THE RIGHT TO ASSISTED SUICIDE AND EUTHANASIA

Earlier this year, within the space of one month, two federal circuit courts -- the Ninth Circuit in *Compassion in Dying* v. *State of Washington*, 79 F.3d 790 (9th Cir., March 6, 1996) (en banc), and the Second Circuit in the decision below, *Quill* v. *Vacco*, 80 F.3d 716 (2d Cir., April 2, 1996) -- found as-applied constitutional infirmities in Washington and New York state statutes that make it a crime to "aid" another individual in committing or attempting to commit suicide. The two rulings reached similar (though not identical) bottom lines, but arrived at their destinations through different constitutional routes.

The Ninth Circuit found a due process "liberty interest in choosing the time and manner of one's death," 79 F.3d at 798; and determined, in the context of "competent, terminally ill adults who wish to hasten their deaths by obtaining medication prescribed by their doctors," that such due process liberty interest outweighed any countervailing interest asserted by the state. *Id.* at 838. The Second Circuit, in contrast, rejected the notion that there is any fundamental due process right to assisted suicide. 80 F.3d at 723-25. Instead, it relied on the equal protection clause in holding that physicians are constitutionally permitted to "prescribe drugs to be self-administered by mentally competent adults who seek to end their lives during the final stages of a terminal illness." *Id.*

at 718. Such persons, reasoned the court, are "similarly circumstanced" to final-stage terminally ill patients who enjoy the statutory and common law right to hasten their death by authorizing termination of life support, *id.* at 729; and, the court concluded, there is no legitimate state interest rationally served by distinguishing between the two categories. *Id.* at 730-31.

Both grounds of decision, Agudath Israel submits, are wrong. The better of the legal argument, we believe, is with the dissenting judges in the Ninth Circuit *en banc* decision (79 F.2d at 839 (Beezer, J.), 857 (Fernandez, J.) & 857 (Kleinfeld, J.)); with the Ninth Circuit's earlier panel opinion in *Compassion in Dying* v. *State of Washington,* 49 F.3d 585 (9th Cir. 1995); and with the Michigan Supreme Court in *People* v. *Kevorkian,* 447 Mich. 436 (1994), *cert. denied* 115 S. Ct. 1795 (1995).

Aside from being bad law, the rulings of the Ninth and Second Circuits are profoundly dangerous. Left intact, they are likely to lead to a broad expansion of the right to assisted suicide and euthanasia, far beyond the narrow confines of the particular contexts in which they arose. This is especially so, as demonstrated *infra*, with respect to the equal protection doctrine enunciated in the Second Circuit below.

Implications of the Ninth Circuit's Due Process Liberty Interest Analysis

The Ninth Circuit's *en banc* holding is itself broader than one might at first blush imagine: it encompasses, at least in Washington State, not only the decisions of persons who are terminally ill as that term is typically understood,

but also of persons who are in an irreversible coma or a persistent vegetative state, 79 F.3d at 831 & n.117; and also the decisions of duly appointed surrogate decision makers, *id.* at 832 n. 120. Moreover, as the court itself acknowledged, the logic of its due process analysis might well lead to active euthanasia for terminally ill patients:

> "We do not dispute the dissent's contention that the prescription of lethal medication by physicians for use by terminally ill patients who wish to die does not constitute a clear point of demarcation between permissible and impermissible medical conduct. We agree that it may be difficult to make a principled distinction between physician-assisted suicide and the provision to terminally ill patients of other forms of life-ending medical assistance, such as the administration of drugs by a physician. We recognize that in some instances, the patient may be unable to self-administer the drugs and that administration by the physician, or a person acting under his direction or control, may be the only way the patient may be able to receive them." 79 F.3d at 831 (footnote omitted).

Slippery though the Ninth Circuit slope may be, its incline is likely not to be quite so steep. For, as the court pointed out, the due process constitutional claim of a patient seeking suicide assistance will be determined, like all substantive due process claims, by weighing the strength of the various competing interests present in any given circumstance. The court's painstaking calibration of those competing interests led it to its bottom line determination: "The liberty interest at issue here...in the case of the terminally ill, is at its peak. Conversely, the state interests,

while equally important in the abstract, are for the most part at a low point here." 79 F.3d at 837. While Agudath Israel believes that the Ninth Circuit incorrectly undervalued the state's interest in preserving the life of even terminally ill persons -- "a State may properly decline to make judgments about the 'quality' of life that a particular individual may enjoy, and simply assert an unqualified interest in the preservation of human life," *Cruzan* v. *Director, Missouri Dept. of Health*, 497 U.S. 261, 282 (1990) -- there is at least some basis to take comfort that the due process balancing framework will enable courts, in cases involving non-terminal patients, where the balance of competing interests tips in favor of the state, to draw the line: "So far down the slope, but no farther."

Implications of the Second Circuit's Equal Protection Analysis

The equal protection framework embraced by the Second Circuit, in contrast, would appear to include no such breaking mechanism. Once one accepts the court's conclusion that there is no meaningful distinction between assisted suicide and withholding or withdrawal of life-sustaining treatment, so that a patient who seeks termination of life support and a patient who seeks poison are "similarly circumstanced persons" who must be treated identically unless the state can demonstrate that treating them differently rationally advances a legitimate state interest, 80 F.3d at 729; and once one accepts the Second Circuit's additional conclusion that no such rational basis of distinction exists when the two persons are in the final stages of terminal illness, *id.* 730-31 -- there is no readily apparent logical way of drawing lines anywhere along the slope.

In concluding that the prohibition against assisted suicide, as applied to final-stage terminally ill patients, violates the equal protection clause, the Second Circuit posed a series of dramatic questions, and an equally dramatic answer:

> "But what interest can the state possibly have in requiring the prolongation of a life that is all but ended? Surely, the state's interest lessens as the potential for life diminishes... And what business is it of the state to require the continuation of agony when the result is imminent and inevitable? What concern prompts the state to interfere with a mentally competent patient's 'right to define [his] own concept of existence, of meaning, of the universe, and of the mystery of human life,' [citation omitted], when the patient seeks to have drugs prescribed to end life during the final stages of a terminal illness? The greatly reduced interest of the state in preserving life compels the answer to these questions: 'None.'" 80 F.3d at 729-30.

The questions are indeed dramatic, and so is the response -- but they are also highly misleading. For they imply that the equal protection analysis would be different in cases where the state's interest in preserving life would be stronger than the Second Circuit deems it to be at the final stages of terminal illness. In fact, however, it should make no equal protection difference whatsoever how far along the patient's terminal illness has progressed, or even whether he is terminally ill altogether.

The relevant equal protection inquiry here is *not* how strong the state's interest is in preserving life in any given

context, but whether treating "similarly circumstanced" persons differently -- in the Second Circuit's view, those who refuse life sustaining treatment and those who seek poison -- is rationally related to a legitimate state interest. As the Court stated in *Hooper* v. *Bernalillo County Assessor*, 472 U.S. 612 (1985): "When a state distributes benefits unequally, the distinctions it makes are subject to scrutiny under the Equal Protection Clause of the Fourteenth Amendment. Generally, a law will survive that scrutiny if *the distinction* rationally furthers a legitimate state purpose." *Id.* at 618 (footnote omitted; emphasis added). If "[t]he ending of life by [withdrawal of life support] is nothing more nor less than assisted suicide," 80 F.3d. at 729, and if the disparate treatment cannot be constitutionally justified when the two similarly circumstanced individuals are in the final stages of terminal illness, it is difficult to see why the disparate treatment can be justified when the two similarly circumstanced individuals suffer from an entirely curable disease.

The implication of the Second Circuit's ruling, therefore, is that *wherever* the law permits an individual to forgo life support, equal protection demands that it also permit him to request a lethal prescription. That implication is nothing less than staggering, and merits this Court's careful scrutiny.

Consider the body of New York law implicated most directly by the ruling below. The right of competent persons to decline or discontinue life-sustaining medical intervention was first established at common law in *Schloendorf* v. *Society of New York Hospital*, 211 N.Y. 125, 129 (1914), where Judge Cardozo enunciated the basic doctrine of personal autonomy in medical decision-making:

"[E]very human being of adult years and sound mind has a right to determine what shall be done with his body; and a surgeon who performs an operation without his patient's consent commits an assault, for which he is liable in damages." *In re Storar*, 52 N.Y. 363, 376-77, *cert. denied*, 454 U.S. 858 (1981), makes clear that the common law right of personal autonomy includes the right to refuse treatment necessary to preserve one's life. The New York courts have not limited such right to patients who are terminally ill -- certainly not to patients who are in the final stages of their terminal illness. Given the Second Circuit's rejection of any distinction between refusing life support and requesting poison, if a young patient with a good prognosis for recovery enjoys the common law right to refuse a life-saving operation, should he not also enjoy the right to a lethal prescription?

The same question will apply when a third party is legally authorized to make a decision on an incapacitated patient's behalf. Under New York common law, "the right to decline treatment is personal and...could not be exercised by a third party when the patient is unable to do so" unless there is "clear and convincing evidence" that the incapacitated patient would have refused life support. *Matter of Westchester County Medical Center*, 72 N.Y. 2d 517, 528-29 (1988). New York's legislature, however, has started moving away from the "clear and convincing evidence" standard. Most notably, in 1990, a statute was enacted empowering a duly designated health care agent to make virtually any life-and-death treatment decision on behalf of his incapacitated principal, irrespective of the principal's medical condition or prognosis. Such decisions are to be made on the basis of the principal's wishes; or, where the principal's wishes "are not reasonably known and

cannot with reasonable diligence be ascertained," on the basis of the principal's "best interests." N.Y. Public Health Law § 2982 (McKinney's 1993). And, currently pending in the state legislature is proposed new legislation developed by the New York State Task Force on Life and the Law, S. 5020 / A.6791, which would empower surrogates -- third parties appointed by the *law*, not by the *patient* -- to make decisions under certain medical circumstances to refuse life-sustaining treatment where the patient's "best interests" would be so served. The Second Circuit's equal protection analysis, it would seem, should empower such agents or third party surrogates to ask that the patient be provided with poison as well, so long as they deem it to be in the patient's "best interests."

There is yet one other noteworthy aspect of New York law: the legal obligation of an individual health care provider to carry out the instructions of patients and their duly appointed health care agents; or, if doing so would violate the provider's religious beliefs or sincerely held moral convictions, to cooperate in facilitating transfer of the patient to another medical practitioner who is prepared to carry out such wishes. N.Y. Public Health Law § 2984 (McKinney's 1993). If a doctor has religious beliefs or moral convictions that preclude him from helping the patient commit suicide, ought not equal protection require his cooperation in transferring the patient to a doctor who has no such qualms?

New York is not atypical in its recognition of a patient's right to decline life-sustaining interventions, either personally or through an agent or surrogate; if anything, New York's common law takes a harder line in insisting on clear and convincing evidence of an incapacitated patient's

wishes. See *Cruzan* v. *Director, Missouri Dept. of Health*, *supra*. If the Second Circuit's ruling is permitted to stand, its impact will be widespread, profound -- and, in our view, devastating.

CONCLUSION

The constitution can be a powerful engine of social change -- for better, and for worse. As Agudath Israel sees it, the Ninth Circuit's application of due process to the question of assisted suicide, and even more so the Second Circuit's application of equal protection, are examples of constitutionalism at its most dangerous.

For the reasons stated in the petition, and the additional reasons set forth herein, Agudath Israel of America respectfully urges the Court to grant a writ of certiorari and clarify the limits of constitutional moral revolution.

MOTION FOR LEAVE TO FILE BRIEF *AMICI CURIAE* ON BEHALF OF SEVEN PRESENT AND FORMER COMMISSIONERS OF THE UNITED STATES COMMISSION ON CIVIL RIGHTS AND A FORMER CHAIRMAN OF THE EQUAL EMPLOYMENT OPPORTUNITY COMMISSION IN SUPPORT OF PETITIONERS

Seven current and former Commissioners of the United States Commission on Civil Rights ("Civil Rights Commission") Carl A. Anderson, Robert P. George, Constance Horner, Russell G. Redenbaugh, William B. Allen, Esther Gonzalez-Arroyo Buckley, and Robert A. Destro ("Commissioners") hereby request, pursuant to Rules 21.2(b) and 37.2 of the Rules of this Court, leave to file the accompanying brief as

amici curiae in support of petitioners. These Commissioners are joined as *amici* by Evan J. Kemp, Jr., a former Chairman of the Equal Employment Opportunity Commission, who throughout his life and career has sought to defend the rights of handicapped people and ensure their full integration into society. *Amici* have obtained consent from petitioners' counsel to file this brief.[1] Counsel for respondents, however, refused to grant consent.

The Commissioners take this action in their individual capacities and not on behalf of the Civil Rights Commission itself. As a matter of policy, the Civil Rights Commission does not assume the role of *amicus curiae*. The named Commissioners, however, mindful of the historical achievements of the Commission, are motivated by their dedication to its ideals and believe that they can offer a useful perspective on the issues in this case.

Created as a part of the Civil Rights Act of 1957, the Civil Rights Commission has played a crucial -- and controversial -- role in our nation's efforts to assure equal protection before the law. *See* 42 U.S.C. § 1975c(2-3) (1983). From the beginning, its primary function has been to investigate facts and to make recommendations concerning the need to revise laws and regulations which deal with equal protection. *Id.* Since 1957, it has served as a bellwether, charting the direction of needed advances in civil rights and sounding the alarm when civil rights are threatened.

In keeping with its mandate, the Civil Rights Commission and its commissioners have individually and collectively braved great political and personal odds to bring attention to civil rights problems ignored or poorly understood by both courts and policy makers. The first commissioners were subjected to physical threats, and their confirmation hearings

---

[1] Letters of consent from petitioners' counsel have been filed with the Clerk of the Court.

even included questions concerning payment of funeral expenses should they be killed in the line of duty. In the 1970s, the Civil Rights Commission conducted some of the earliest public debates over the concept of "structural racism" and the implications of that concept on the direction of civil rights enforcement policy. In the early 1980s, several *amici* were on the cutting edge of debates concerning the scope and direction of affirmative action programs of the sort this Court invalidated in *Adarand Constructors, Inc. v. Pena*, ___ U.S. ___, 115 S.Ct. 2097, (1995), and held extensive hearings designed to foster debate over programs which might be developed as acceptable substitutes.

The case at bar has grave implications for an issue which has long been of great concern, both to the Civil Rights Commission itself, and to *amici* -- medical discrimination against racial minorities and persons with disabilities. At the urging of several of the Commissioners, the Civil Rights Commission held extensive hearings on discrimination against persons with disabilities in our nation's health care system. *See* United States Commission on Civil Rights, *Medical Discrimination Against Children With Disabilities* (1989). At those hearings, assurances were given that effective safeguards existed to protect against violation of the rights of the subject patients. As the Civil Rights Commission's report shows only too well, however, the temptations to undervalue the right of those patients are strong, and the vaunted safeguards sadly inadequate.

In the case at bar, *amici* see cause for similar misgivings. In their judgment, the legal right to physician-assisted suicide recognized by the Second Circuit is misconceived, and they have no confidence that, once created, any safeguards can be crafted sufficient to restrain it. *Amici* are concerned that the decision of the Court of Appeals does not adequately consider the substantive threat to the lives of the poor, persons with disabilities, and racial minorities, and others who have historically suffered discrimination in the provision of health services.

Amici thus believe that they offer a strong and unique perspective on this case as *amici curiae* which will assist this Court in evaluating the opinion of the United States Court of Appeals for the Second Circuit in *Quill v. Vacco*, 80 F.3d 716 (2d Cir. 1996) and deciding whether to grant the requested writ of certiorari.

QUESTIONS PRESENTED

1. Should this Court grant certiorari to settle the question of whether, under the Equal Protection Clause of the Fourteenth Amendment to the United States Constitution, a state retains a legitimate interest in prohibiting physician assisted suicide while allowing terminally ill, mentally competent patients to refuse artificial life support?
2. Should this Court grant certiorari to resolve a conflict between the United States Court of Appeals for the Second Circuit and a state court of last resort on the issue of whether the Equal Protection Clause prohibits the states from banning physician assisted suicide?

On Petition for a Writ of Certiorari to the United States Court of Appeals for the Second Circuit

MOTION FOR LEAVE TO FILE BRIEF *AMICI CURIAE* AND BRIEF ON BEHALF OF SEVEN PRESENT AND FORMER COMMISSIONERS OF THE UNITED STATES COMMISSION ON CIVIL RIGHTS AND A FORMER CHAIRMAN OF THE EQUAL EMPLOYMENT OPPORTUNITY COMMISSION IN SUPPORT OF PETITIONERS

INTEREST OF *AMICI CURIAE*

Carl A. Anderson, Robert P. George, Constance Horner, Russell G. Redenbaugh, present Commissioners of the United States Commission on Civil Rights ("Civil Rights Commission"), William B. Allen, Esther Gonzalez-Arroyo Buckley, Robert A. Destro, former Commissioners of the Civil Rights

Commission, and Evan J. Kemp, Jr., former Chairman of the Equal Employment Opportunity Commission, respectfully submit this brief as *amici curiae* in support of petitioner. The interest of these individuals as *amici curiae* is fully set forth in the Motion for Leave File Brief as *Amici Curiae*, printed herewith *ante*.

SUMMARY OF ARGUMENT

Amici are deeply concerned about the implications of the newly-discovered right to physician-assisted suicide for the civil rights of the poor, persons with disabilities, and racial minorities. Based on their experience in striving to protect the civil rights of all Americans, *amici* find little comfort in the Second Circuit's express limitation of that right to competent, terminally ill adults or in its assurance that adequate safeguards can be crafted to prevent the abuse of that right. In their estimation, physician-assisted suicide, by its intrinsic nature and the reasoning offered in defense of its decriminalization, contains the seeds of both its expansion and its abuse. The Court of Appeals' decision should be reviewed by this Court and reversed because of that decision's fundamental illogic, its lack of sound constitutional or legal foundation, and its usurpation of a field of decision-making properly reserved to a state's citizens and their elected lawmakers. In addition, there is ample justification for New York's criminalization of all assisted suicide in the rational judgment that any exception to a thorough prohibition (such as an acceptance of physician-assisted suicide in certain instances) would pose an unacceptable risk to its citizens' lives, health, and access to uncompromised medical care -- a risk that can only be heightened in the case of the most vulnerable members of society.

REASONS FOR GRANTING THE PETITION

I. THE SECOND CIRCUIT'S EQUAL PROTECTION ANALYSIS FAILS TO RECOGNIZE SEVERAL RATIONAL BASES FOR NEW YORK'S DECISION TO PROHIBIT ASSISTED SUICIDE GENERALLY, INCLUDING PHYSICIAN-ASSISTED SUICIDE.

The Second Circuit recognized that, to pass muster under the applicable equal protection analysis, New York's law against assisted suicide (as applied to assistance from any source, including physicians) need only possess a rational basis. *Quill v. Vacco*, 80 F.3d 716, 725-727 (2d Cir. 1996). *Amici* suggest that, among the many rational justifications for New York's law, are (1) protecting its most vulnerable citizens, (2) preserving the integrity of the medical profession, and (3) guarding against the potential for abuse that would accompany any less sweeping prohibition.

a. The Second Circuit's Decision Does Not Adequately Consider the Threat Posed By Physician-Assisted Suicide to the Poor, Persons with Disabilities, and Racial Minorities Who Historically Have Suffered Discrimination in the Provision of Medical Services.

The Court of Appeals ignored as a rational basis for New York's law prohibiting assisted suicide, the State's desire to protect its most vulnerable citizens from the most extreme consequences of medical exploitation or neglect. To the contrary, the court's concern with such persons was not that their deaths might be encouraged or unduly facilitated by the medical establishment, but that they might not have sufficient access to the right to embrace suicide: "[W]ith respect to the protection of minorities, the poor and the non-mentally handicapped, it suffices to say that these classes of persons are entitled to treatment equal to that afforded to all those who now

may hasten death by means of life-support withdrawal". *Quill v. Vacco*, 80 F.3d 716, 730 (2d Cir. 1996). *Amici* respectfully submit that this conclusion reflects an inadequate awareness of the history of discrimination in the provision of medical services to the poor, persons with disabilities, and racial minorities. Moreover, *amici* suggest that the Court of Appeals' partial invalidation of New York Penal Law Sections 125.15(3) and 120.30 poses an unprecedented threat of exploitation in the delivery of health care.

In reviewing the specific issue of physician-assisted suicide, the New York State Task Force on Life and the Law ("New York State Task Force"), convened in 1985 by Governor Mario Cuomo, rejected the proposed repeal or amendment of the New York law on assisted suicide for precisely this reason. It's conclusion could not be any clearer or more deliberate:

> [I]t must be recognized that assisted suicide and euthanasia will be practiced through the prism of social inequality and prejudice that characterizes the delivery of services in all segments of society including health care. Those who will be most vulnerable to abuse, error, or indifference are the poor, minorities, and those who are least educated and least empowered. This risk does not reflect a judgment that physicians are more prejudiced or influenced by race and class than the rest of society -- only that they are not exempt from the prejudices manifest in other areas of our collective life.
>
> While our society aspires to eradicate discrimination . . . we consistently fall short of our goal. The costs of this failure with assisted suicide and euthanasia would be extreme. Nor is there any reason to believe that the practices, whatever safeguards are erected, will be unaffected by the broader social and medical context in which they will be operating. This assumption is naive and unsupportable.

New York State Task Force on Life, *When Death is Sought: Assisted Suicide and Euthanasia in the Medical Context* (May 1994).

Amici agree entirely with this conclusion of the New York State Task Force. Indeed, this conclusion is strikingly consistent with findings of the Civil Rights Commission itself in its multi-year study of discrimination in the provision of medical services to children born with severe disabilities. *See* United States Commission on Civil Rights, *Medical Discrimination Against Children with Disabilities* (1989). (For the convenience of the Court several copies of this report have been lodged with the Clerk.) The Civil Rights Commission found that "[a] significantly high incidence of medical discrimination against children with disabilities exists that is part of a much larger pattern of medical care discrimination against people with disabilities." *Id.* at 8. In addition, the Civil Rights Commission reported that:

> The grounds typically advanced to support denial of lifesaving medical treatment or food and fluids are based on erroneous judgments concerning the quality of life of a person with a disability or on social judgments that such a person's continued existence will impose an "unacceptable" burden on his or her family or on the Nation as a whole. These judgments are often grounded in misinformation, inaccurate stereotypes, and negative attitudes about people with disabilities.

Id. at 12. Although *amici* realize that certain circumstances of disabled patients denied medical services at the beginning of life may differ from circumstances pertaining to disabled, or other, patients facing life-and-death decisions at the end of life, nonetheless, like the New York Task Force, *amici* respectfully suggest that it is "naive and unsupportable" to suppose that decisions affecting physician-assisted suicide would not be subject to the same pressures and attitudes.

Amici assert that the context in which such decisions will be made cannot be separated from the historic reality of unequal health care and the health status of minorities in American society. In 1984, Secretary of Health and Human Services Margaret Heckler established a departmental Task Force on Black and Minority Health to conduct the first comprehensive review of national minority health issues compiled into one federal report. *See* United States Department of Health and Human Services, *Report of the Secretary's Task Force on Black and Minority Health* (August 1985). This report stated that:

> Despite the unprecedented explosion in scientific knowledge and the phenomenal capacity of medicine to diagnose, treat, and cure disease, Blacks, Hispanics, Native Americans, and those of Asian/Pacific Islander heritage have not benefited fully or equitably from the fruits of science or from those systems responsible for translating and using health sciences technology.

Id. at 1. The report continued that there has been "steady improvement in overall health status, while at the same time, persistent, significant health inequities exist for minority Americans." *Id.* at 2. What Secretary Heckler, in issuing this report, called this "tragic dilemma" remains with us still.

Perhaps it should be acknowledged, in light of the Second Circuit's inability to perceive any possible distinction between suicide and decisions of a patient to forego or discontinue life-supporting medical treatment, that, in the sphere of life support decisions, as well, the poor, persons with disabilites, and racial minorities face disparate treatment. That problem, too, entails issues of the deprivation of civil rights and needs to be addressed. But the persistence of serious risks in one sphere is a poor reason to strike down effective protections already existing in another sphere. Such an action makes as little sense as demolishing fire houses and police

stations in affluent suburbs, in the name of equal treatment, because there may be insufficient fire and police protection in the inner city.

Given the tragic vulnerability of the poor, persons with disabilites, and racial minorities to medical exploitation and neglect, the Second Circuit erred in failing to perceive the protection of these citizens as a rational basis for New York's decision to ban all assisted suicide.

b. The Second Circuit Has Created Dangerous Dual Roles for Physicians -- to Promote Life and Health on Some Occasions and to Act Deliberately to Bring About Death on Others

Our nation faces difficult choices today with regard to the provision of medical care. Many of those choices derive from the interplay between the high costs of various medical procedures and the limited resources which many patients can command. There are strong and disturbing tendencies to allow full compassionate care to gravitate toward dollars, insurance companies to court the healthy and avoid the sick, and persons with diminished physical or mental capacities to be considered imprudent destinations for the allocation of more than minimal medical resources.

The young, the old, the sick, persons with disabilites, the poor, and racial minorities are dependent now more than ever before on the high ethical standards of medical professionals. In the absence of such high standards, the physical and mental impairments experienced by such persons when they are in dire need of medical care (compounded by age-related inabilities to act aggressively in their own defense) are likely to subject them to the devaluation of their incommensurable worth as human beings. Doctors and nurses must be the champions of last resort of many who lack any other advocates.

The Second Circuit has now accepted the proposition that patients themselves can rationally conclude that their

physically or mentally diminished lives are no longer worth living and be entitled to a physician's assistance in committing suicide. If such conclusions are deemed rational when made by one person about himself, they cannot be considered any less rational when made about others. Whatever the medical factors may be that are deemed to justify suicide, they can be perceived by third parties and used to justify a decision for death, whether or not the patient may concur.

This poses a dreadful danger of infecting physicians' attitudes, in both subtle and less subtle ways. *Amici* see ample evidence of a pre-existing propensity in some doctors to be negatively influenced by various defects and disabilities in their treatment decisions, as reflected in the Civil Rights Commission's 1989 report *Medical Discrimination Against Children with Disabilities*, *supra*. Involving doctors both as accessories in acts of suicide and as evaluators of the rationality of patients' suicide decisions seems likely to exacerbate the danger of more doctors drifting away from a pure and strict allegiance to the ancient Hippocratic Oath. Instead, we are likely to see doctors becoming more inclined (as well-educated professionals prone to value highly their own judgments) to reach their own conclusions about which cases appropriately call for the exercise of their skill as healers and which for their unique legally conferred authority to grant final surcease. Even if there is no dramatic embrace of non-voluntary euthanasia, there is bound to be a dangerous tug in that direction as habits of mind and practice change.

In the judgment of *amici*, states are wholly justified in refusing to countenance anything which contributes to the dilution or contamination of a physician's single-minded devotion to fostering the life and health of his patients.

c. The Second Circuit Has Refused to Recognize New York's Right to Command the Broad Proscription of Conduct Which It Deems So Susceptible of Abuse as to Be Intolerable.

Amici believe that a state can rationally and legitimately conclude that some activities involve such serious harms and possess so great and unavoidable a potential for abuse that they should be prohibited absolutely. Thus, statutory rape laws certainly run counter to the fact that there may be individual cases where, say, a 14- or 15-year-old can and does grant knowing consent to sexual relations. *See e.g.*, Model Penal Code §§ 213.3(1)(a) and 213.4(6) (1974). But many states have decided that sexual abuse of minors is so harmful, and recognition of a limited sphere of permitted sexual relations with minors so susceptible of abuse, that they will prohibit such relations categorically.

Amici suggest that intentionally causing the death of a human being (including inciting or assisting a person to cause his own death) should be viewed in much the same way. The harm could not be greater (whether or not it is desired -- but then a desire in minors for sexual activity is not unheard of); and the potential for abuse is enormous. Even under a regime in which no opinion or authorization but a patient's own is given any weight, many pressures -- economic, professional, familial -- can be brought to bear to influence the patient's choice. Consider even the very slightest pressure imaginable. Why should any patient be made to feel that, by declining to embrace suicide during a terminal illness, he is behaving one whit more selfishly or less rationally than a supposedly more enlightened or ethically up-to-date patient?

But the panoply of pressures which can confidently be expected extends much further. The opinion of one's doctor, worry over financially or emotionally burdening one's loved ones, the pride of acting as rational and unsuperstitious persons are said to act, these are just a few of the pressures which are bound to infect and distort the system of logical and

autonomous decision-making that the Second Circuit envisions.

The situation will be even worse, of course, with the inevitable expansion of the "right" created by the Court of Appeals. Having concluded that it is inhumane to prohibit a competent and conscious adult patient facing a terminal illness from obtaining immediate release from pain and a diminished life, will the Second Circuit, or other courts, long insist that infant, incompetent, or unconscious patients be condemned to such suffering, simply because they are powerless to make the "rational" decision for themselves? Similarly, will the courts deny self-induced but assisted death to rational persons eager to embrace it, just because they are not terminally ill, or perhaps not even ill at all? And even before the courts act, will individual doctors, nurses, hospitals, parents, and spouses not be tempted (as some surely have been in the past, though without the greater encouragement and protection of a declared constitutional right to assisted suicide) to "push the envelope" of euthanasia, so to speak, in many ways.

The classic cautionary example of this downward progression can be found in the experience of the Netherlands. In the mid-1980s, Dutch courts created exceptions to criminal statutes prohibiting both assisted suicide and euthanasia to permit doctors to engage in both practices, though with the assurance that only consenting patients would "enjoy" these "rights." This regime of toleration of voluntary euthanasia then led fairly quickly to non-voluntary euthanasia, first de facto, and now more or less de jure. Incontrovertible evidence exists that, as a result of abuse by individual family members and physicians, many thousands of Dutch citizens have been killed without their consent. *See* John Keown, *Euthanasia in the Netherlands: Sliding Down the Slippery Slope? in Euthanasia Examined: Ethical, Clinical and Legal Perspectives* (1995); John Keown, *Further Reflections on Euthanasia in the Netherlands in the Light of the Remmelink Report and the Van Der Maas Survey*, in *Euthanasia, Clinical Practice and*

the Law (Luke Gormally, ed., 1994). All too predictably, the victims of this downward progression have disproportionately been the most vulnerable members of Dutch society. American legislators who are concerned about protecting the rights of the poor, persons with disabilities, racial minorities, the very young and very old, the sick, the incompetent, and other "at risk" members of our society have ample reason to resist pressures to follow the Netherlands in taking that first step onto this treacherously slippery slope.

Amici, therefore, emphatically do not share the Second Circuit's view that "[i]t is difficult to see how the relief the plaintiffs seek would lead to the abuses found in the Netherlands." *Quill v. Vacco*, 80 F.3d at 730-731. It was exactly such relief that was the starting point in Holland. Under such circumstances, inevitably, it will be persons with disabilities who will be most at risk from the misguided compassion of their relatives and physicians. Their quality of life will be estimated, sadly but resignedly, and in many cases a decision made that a quality so limited cannot justify the prolongation of suffering. Assurances of strict safeguards notwithstanding, the ultimate destination of the trail blazed by the Second Circuit cannot be in doubt.

Moreover, even a passionate believer in the possibility of rigorous safeguards cannot deny that reliance on them entails serious risks. And with that modest recognition, *amici* suggest, there can be no justification for the Second Circuit's conclusion that a state cannot rationally decide to prohibit absolutely an activity with such grave inherent dangers and such high susceptibility of abuse.

II. THE SECOND CIRCUIT'S EQUAL PROTECTION ANALYSIS IS BASED ON A FAULTY LOGICAL EQUATION BETWEEN THE REFUSAL OF MEDICAL TREATMENT AND SUICIDE, HAS NO SOUND BASIS IN CONSTITUTIONAL PRECEDENT, AND UNWISELY ATTEMPTS TO REMOVE FROM DEBATE AND LEGISLATIVE RESOLUTION AN IMPORTANT AND CONTROVERSIAL PUBLIC POLICY ISSUE.

Amici believe that the special contribution which they can offer to the Court's consideration of this case derives from their experience and judgment in protecting the civil rights of all Americans, and especially of those most at risk for violation of their civil rights. In Part I of this brief, *amici* have attempted to present the arguments focused most directly on these concerns, which they feel they have a particular competence to make. Petitioners, and other *amici,* can ably analyze the serious flaws of logic and law and the lack of due regard for the legislative judgment of the people of New York which inform the Second Circuit's opinion. However, *amici* feel obliged to touch briefly on a few of these considerations insofar as they have important, if more indirect, implications for the adequate protection of civil rights.

The foundation of the Second Circuit's reasoning was that no valid distinction can be drawn between a terminally ill patient refusing to commence or continue life-supporting medical treatment and a terminally ill patient choosing to commit suicide. *Quill v. Vacco,* 80 F.3d at 729. The court did not demonstrate this as a conclusion as much as assert it as an incontrovertible proposition. Indeed, the Court of Appeals seemed to have prejudged this issue and to have selected a vocabulary consciously designed to obscure the differences between fundamentally unlike things. It created an artificial likeness between rejecting medical treatment and committing suicide by using the vague and misleading terminology that

each involves a decision to "hasten death." In more straightforward language, the former case entails a choice not to prolong life; the latter entails a choice to cause death.

For centuries, individual thinkers and whole societies have drawn crucial distinctions between all sorts of acts which result in the death of the actor -- from martyrdom in witness to cherished beliefs, heroism in battle, and risking deadly danger to save the lives of others, on the one hand, to the foolhardy commission of great risks for frivolous reasons and the deliberate embrace of death in suicide, on the other hand. Such thinkers and societies have had no trouble in seeing a profound difference between self-killing -- acting to achieve death as one's end and purpose -- and accepting either the inevitability or a high risk of death as a foreseeable consequence of acting to achieve some other end.

The Second Circuit's refusal to see any meaningful distinction between declining medical care and embracing suicide runs counter to the conclusions of unnumbered societies which have had no problem perceiving such a distinction and to a similar long tradition of philosophical reflection by thinkers embracing a wide array of philosophical and moral viewpoints. E.g., Germain Grisez and Joseph Boyle, *Life and Death with Liberty and Justice,* 407-422 (1979) (*see specifically,* Chapter 12, *Moral Responsibilities Toward Human Life,* including the analyses "Suicide and Causing One's Own Death," "Active Euthanasia: Voluntary and Non-Voluntary," "Omissions, Killing and Letting Die," and "Non-Treatment and Refusal of Treatment"); David Novak, *Law and Theology in Judaism,* 100ff (2d Ser. 1976); Yale Kamisar, *Some Non-Religious Views Against Proposed "Mercy Killing" Legislation,* 42 Minn. L. Rev. 969 (1958).

Recently in the United Kingdom, the Select Committee on Medical Ethics of the House of Lords considered carefully "the ethical, legal, and clinical implications of a person's right to withhold consent to life-prolonging treatment" and related

issues of physician-assisted suicide and voluntary euthanasia. The Select Committee's unanimous report affirmed the crucial importance of the very distinctions which the Second Circuit dismissed as meaningless. *Report of the Select Committee on Medical Ethics* (January 1994), *passim*.

While "strongly endors[ing] the right of the competent patient to refuse consent to any medical treatment," the Select Committee concluded that such refusal "is far removed from the right to request assistance in dying." *Id.* at 48. The Select Committee noted the powerful emotional sympathy which anyone must feel for the plight of the desperately ill and appreciated the pain, physical deterioration, disfigurement, and other burdens which they can suffer and which understandably can make them, and their loved ones, long for "a peaceful and easy death." *Id.* These are, of course, the very circumstances which the Second Circuit described in such detail and which seemed to color its views so strongly. *Quill v. Vacco*, 80 F.3d at 720-721. But the Select Committee ultimately concluded that even the combination of such sympathetic considerations and the arguments advanced by proponents of physician-assisted suicide were not:

> . . . sufficient reason to weaken society's prohibition of intentional killing. That prohibition is the cornerstone of law and of social relationships. It protects each one of us impartially, embodying the belief that all are equal. We do not wish that protection to be diminished and we therefore recommend that there should be no change in the law to permit euthanasia.
>
> * * *
>
> One reason for this conclusion is that we do not think it possible to set secure limits on voluntary euthanasia. Some witnesses told us that to legalise voluntary euthanasia was a discrete step which need have no other consequences. But as we said in our

> introduction, issues of life and death do not lend themselves to clear definition, and without that it would not be possible to frame adequate safeguards against non-voluntary euthanasia if voluntary euthanasia were to be legalised. It would be next to impossible to ensure that all acts of euthanasia were truly voluntary, and that any liberalisation of the law was not abused. Moreover to create an exception to the general prohibition of intentional killing would inevitably open the way to its further erosion whether by design, by inadvertence, or by the human tendency to test the limits of any regulation. These dangers are such that we believe that any decriminalisation of voluntary euthanasia would give rise to more, and more grave, problems than those it sought to address.
>
> * * *
>
> We are also concerned that vulnerable people -- the elderly, lonely, sick or distressed -- would feel pressure, whether real or imagined, to request early death. We accept that, for the most part, requests resulting from such pressure or from remediable depressive illness would be identified as such by doctors and managed appropriately. Nevertheless we believe that the message which society sends to vulnerable and disadvantaged people should not, however obliquely, encourage them to seek death, but should assure them of our care and support in life.

Report of the Select Committee at 48-49.

Amici submit that the Select Committee's exceptionally thoughtful consideration of these issues casts a withering light on the Second Circuit's analysis, so very different in depth, quality, and conclusion.

What the Second Circuit's opinion lacks in logical persuasiveness it scarcely makes up in legal analysis. The court cited no precedent for its decision, understandably, since it asserted that "no 'right' to assisted suicide ever has been recognized in any state in the United States." *Quill v. Vacco*, 80 F.3d at 724.[1] However, the court did offer an extended discussion of *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261, 110 S.Ct. 2841 (1990), in justification of its contention that physician-assisted suicide cannot be distinguished from refusal of medical treatment. But there the State of Missouri clearly "recognized a right to refuse treatment embodied in the common law doctrine of informed consent," and it just as clearly joined the majority of states in criminalizing assistance in suicide. *Id.* at 268, 280. Still, this Court in *Cruzan* saw no occasion to comment on any glaring logical inconsistency in noting these two policies of the State (though the case, admittedly, involved the different issue of the standard of proof required to demonstrate a comatose patient's wish to forgo life-sustaining food and water, artificially administered), observing rather that there could be "no gainsaying" Missouri's "interest in the protection and preservation of human life," in furtherance of which it could "properly decline to make judgments about the 'quality of life' that a particular individual may enjoy, and simply assert an unqualified interest in the preservation of human life." *Id.* at 282. *Amici* therefore suggest that *Cruzan* is odd authority for the Second Circuit to cite in support of its conclusion that a state cannot draw rational distinctions between the refusal of medical treatment and assisted suicide.

---

[1] It should be noted, however, that the Eleventh Circuit's *en banc* declaration of a substantive due process liberty interest in physician-assisted suicide had preceded the Second Circuit's decision in *Quill v. Vacco* by only a brief interval. *Compassion in Dying v. Washington*, 49 F.3d 586 (9th Cir. 1995), *rev'd* 79 F.3d 790 (1996) (en banc).

Finally, the Second Circuit deserves criticism for the rashness with which it snatched the issue of physician-assisted suicide from its proper place in the realm of public debate and legislative evaluation and presumed to settle it by declaring a hitherto unrecognized constitutional right. Such intemperate action by the judicial branch has several undesirable effects. It prevents important and controversial issues of public policy from being adequately developed in the give-and-take of the open marketplace of ideas. It deprives the people of their right to reach an ultimate resolution of such issues through the democratic institutions created for that purpose. And, insidiously, it lessens the respect of citizens for the judicial branch of government and fosters an unfortunate perception of the federal courts as elitist bodies where unelected judges enshrine their personal predilections as binding law.

CONCLUSION

Wherefore, for the reasons stated above, *amici* ask that the writ of certiorari prayed for by petitioners should issue.

QUESTION PRESENTED FOR REVIEW

Whether New York's prohibition of assisted suicide violates the Equal Protection Clause of the Fourteenth Amendment to the United States Constitution.

TABLE OF CONTENTS

Page

I. INTEREST OF THE AMICI CURIAE 1

II. REASONS FOR GRANTING THE WRIT 2

A. Certiorari Should be Granted To Establish That A Decision by the People of a State to Prohibit Assisted Suicide Does Not Violate the Equal Protection Clause of the Fourteenth Amendment 6

1. The Withdrawal of Life-Sustaining Treatment Is Not the Equivalent of Suicide or Assisted Suicide, and Thus, New York's Prohibition of Assisted Suicide Does Not Create Any Class of Similarly Situated Persons 7

2. New York's Prohibition of Assisted Suicide Is Rationally Related to Numerous Important Governmental Objectives 11

B. Certiorari Should be Granted to Reaffirm the Essential Role of the States in our Federal System and the Power of the People to Directly Govern Their Own Affairs 17

III. CONCLUSION 20

I. INTEREST OF THE AMICI CURIAE

The case below represents a return to an era, long since past, when the principles of federalism were all but eliminated by the mistaken notion that the Fourteenth Amendment authorizes courts to substitute their judgment for that of the States in matters of economic and social welfare. In an opinion which significantly departs from this Court's present-day equal protection jurisprudence, the Second Circuit has declared that New York's prohibition of assisted suicide violates the Equal Protection Clause of the Fourteenth Amendment to the extent that it prohibits a physician from prescribing a lethal dose of medication for self-administration by a mentally-competent, terminally ill patient in the final stages of his or her illness. *Quill v. Vacco*, 80 F.3d 716, 731 (2d Cir. 1996) (hereinafter "*Quill*"). In so holding, the Second Circuit found that New York's prohibition of assisted suicide did not further, and thus was not rationally related to, ***any*** legitimate state interest. *Quill, supra*, 80 F.3d at 729-731.

More troubling than the serious flaws in the Court's analysis is the impact of its holding. If allowed to stand, the Second Circuit's opinion will precipitate a fundamental change in the long-standing policies of a majority of States to prevent suicide and assisted suicide. "[A]ll states provide for the involuntary commitment of persons who may harm themselves as the result of mental illness, and a number of states allow the use of nondeadly force to thwart suicide attempts." *People v. Kevorkian*, 447 Mich. 436, 479, 527 N.W.2d 714, 732 (1994) (footnote omitted), *cert. denied*, 115 S.Ct. 1795 (1995). A majority of States impose criminal penalties on those who assist another to commit suicide. As Justice Scalia has observed, " . . . American law has always accorded the State the power to prevent, by force if necessary, suicide . . . " *Cruzan v. Director, Missouri Dept. of Public Health*, 497 U.S. 261, 293 (1990) (Scalia J., concurring). However, if allowed to stand, the Second Circuit's holding will invalidate New York's prohibition of assisted suicide and, at the same time, provide authority for equal protection challenges to similar state statutes across the Nation.

The protection and preservation of human life is, without question, the quintessential duty and responsibility of the sovereign States in our federal system of government. The power of the States to fulfill this most important of responsibilities, through the exercise of the police power, is likewise unquestionable.[1] Indeed, as Justice Harlan observed in his famous dissent in *Lochner v. New York*, "[a]ll the cases agree that . . . [the States' police] power extends at least to the protection of the lives, the health, and the safety of the public against the injurious exercise by any citizen of his own rights." *Lochner v. New York*, 198 U.S. 45, 65 (1905) (Harlan, J., dissenting).

At stake in this case are, first and foremost, the lives of the people, both those who wish to die, and those who wish to live no matter what their circumstances. Also at stake is the sovereign power of the States to protect and preserve those lives *without* a federal requirement that the State " . . . make judgments about the 'quality' of life that a particular individual may enjoy, . . . " *Cruzan v. Director, Missouri Dept. of Public Health*, 497 U.S. 261, 282 (1990). The resolution of this question will arguably affect more lives than any case which this Court will confront in the foreseeable future. It will also determine whether "the States *as States* have [any] legitimate interests which the National Government is bound to respect even though its laws are supreme." *Garcia v. San Antonio Metro.*, 469 U.S. 528, 581 (1985) (O'Connor, J., dissenting) (italics original, citation omitted, insert added).

II. REASONS FOR GRANTING THE WRIT

The question presented in this case is whether New York's prohibition of assisted suicide violates the Equal Protection Clause of the Fourteenth Amendment. The resolution of this question will have profound implications for the continued viability of the essential role of the States in our federal system

---

[1] "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people." U.S. Const. amend. X.

of government. In *San Antonio School District v. Rodriguez*, this Court cautioned that:

> "It must be remembered . . . that every claim arising under the Equal Protection Clause has implications for the relationship between national and state power under our federal system. Questions of federalism are always inherent in the process of determining whether a State's laws are to be accorded the traditional presumption of constitutionality, or are to be subjected instead to rigorous judicial scrutiny. While '[t]he maintenance of the principles of federalism is a foremost consideration in interpreting any of the pertinent constitutional provisions under which this Court examines state action,' it would be difficult to imagine a case having a greater potential impact on our federal system than the one now before us, in which we are urged to abrogate systems of financing public education presently in existence in virtually every State." *San Antonio School District v. Rodriguez*, 411 U.S. 1, 44 (1973) (footnote omitted).

Twenty-three years after this Court decided *San Antonio School District v. Rodriguez*, " . . . a case having a greater potential impact on our federal system . . . " has arrived – a case in which prohibitions of assisted suicide presently in existence in the vast majority of States are at stake.[2] *Id.*

---

[2] At least forty States, Puerto Rico and the Virgin Islands, impose criminal penalties on those who assist another to commit suicide. The following states and territories have statutes which impose criminal penalties for aiding, assisting, causing, or promoting suicide: Alaska Stat., § 11.41.120(a)(2); Ariz. Rev. Stat. Ann., § 13-1103(A)(3); Ark. Stat. Ann., § 5-10-104(a)(2); Cal. Pen. Code, § 401; Colo. Rev. Stat., § 18-3-104(1)(b); Conn. Gen. Stat., § 53a-56(a)(2); Del. Code Ann., tit. 11, § 645; Fla. Stat. Ann., § 782.08; Ga. Code Ann. § 16-5-5(b); Ill. Comp. Stat. ch. 720, 5/12-31; Ind. Stat. Ann., § 35-42-1-2.5(b); Ia. Code, §§ 707A.1, 707A.2 and 707A.3, as amended by Acts of the 76th General Assembly, 1996 Session; Kan. Stat. Ann., § 21-3406; Ky. Rev. Stat., § 216:302; La. Rev. Stat., § 14:32.12; Me. Rev. Stat. Ann., tit. 17-A, § 204; Minn. Stat. Ann., § 609.215; Miss. Code Ann., § 97-3-49; Mo. Ann. Stat.,

Perhaps the best evidence of its potential impact on the Nation is the sheer number of conflicts created by the Second Circuit's opinion. In *Quill*, the Second Circuit declared that New York's statutes prohibiting assisted suicide violate the Equal Protection Clause of the Fourteenth Amendment. *Quill, supra*, 80 F.3d at 731. That holding conflicts squarely with the recent holding of the Michigan Supreme Court in *People v. Kevorkian*.[3] In addition, the rationale utilized by the Second Circuit in rendering its holding directly conflicts with numerous state court opinions. The centerpiece of the Second Circuit's opinion is unquestionably its conclusion that terminally ill persons on life support who wish to "hasten their deaths" by directing the withdrawal of such systems are similarly situated with others who wish to "hasten death by self-

§ 565.023(1)(2); Mont. Code Ann., § 45-5-105; Neb. Rev. Stat., § 28-307; N.H. Rev. Stat. Ann., § 630:4; N.J. Stat. Ann., § 2C:11-6; N.M. Stat. Ann., § 30-2-4; N.Y. Penal Law, §§ 120.30, 125.15(3); N.D. Cent. Code, § 12.1-16-04; Okla. Stat. Ann., tit. 21, §§ 813-818; 18 Pa. Cons. Stat. Ann., § 2505; P.R. Laws Ann., tit. 33, § 4009; S.D. Codified Laws Ann., § 22-16-37; Tenn. Code Ann., § 39-13-216; Tex. Penal Code Ann., § 22.08; V.I. Code Ann., tit. 14, § 2141; Wash. Rev. Code Ann., § 9A.36.060; and Wis. Stat. Ann., § 940.12. The following states have statutes which impose criminal penalties for negligent homicide which are broad enough to encompass aiding, assisting, causing or promoting suicide: Ala. Code, § 13A-6-1; and Wyo. Stat., § 6-2-107. The following states impose criminal penalties by case law for assisting a suicide: *Commonwealth v. Mink*, 123 Mass. 422, 428-429 (Mass. 1877); *People v. Kevorkian*, 447 Mich. 436, 527 N.W.2d 714 (Mich. 1994); *Blackburn v. State*, 23 Ohio St. 146, 163 (Ohio 1872); *State v. Jones*, 86 S.C. 17, 67 S.E. 160, 165 (S.C. 1910); and *State v. Willis*, 121 S.E.2d 854 (N.C. 1961).

[3] *People v. Kevorkian*, 447 Mich. 436, 480 n. 57, 527 N.W.2d 714, 732 n. 57 (1994) ("For reasons apparent in our analysis of the due process claims, we also reject the argument that Michigan's assisted suicide statute is invalid because it denies equal protection to terminally ill persons who want help in ending their lives, i.e., it denies them a right enjoyed by terminally ill persons who opt to forgo or discontinue life-sustaining medical treatment. As we explained, the two situations are not the same for purposes of constitutional analysis."), *cert. denied*, 115 S.Ct. 1795 (1995).

administering prescribed drugs."[4] *Quill, supra*, 80 F.3d at 729. However, " . . . those courts that have found a right to refuse to begin or to continue life-sustaining medical treatment have done so only after concluding that such refusal is wholly different from the act of suicide."[5] Numerous state legislatures have likewise recognized this fundamental distinction.[6] Finally, in *Cruzan v. Director, Missouri Dept. of Public Health*, 497

[4] At the threshold, it should be recognized that there is a danger in using euphemistic language such as "hastening death" when referring to the act of suicide. Such language, which is often utilized by proponents of assisted suicide, has a tendency to obfuscate the reality of the important questions which end-of-life cases generally present. *See People v. Kevorkian*, 447 Mich. 436, 464 n. 27, 527 N.W.2d 714, 725 n. 27 (1994), *cert. denied*, 115 S.Ct. 1795 (1995), and *Cruzan v. Harmon*, 760 S.W.2d 408, 412 (Mo. banc 1988), *aff'd sub nom. Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261 (1990).

[5] *People v. Kevorkian*, 447 Mich. 436, 480, 527 N.W.2d 714, 732 (1994) (footnote omitted), *cert. denied*, 115 S.Ct. 1795 (1995). *See, e.g., Von Holden v. Chapman*, 87 A.D.2d 66, 450 N.Y.S.2d 623, 627 (1982) ("essential dissimilarity" between right to decline medical treatment and any right to end one's life); *In re Conroy*, 98 N.J. 321, 351, 486 A.2d 1209, 1224 (1985); *Bouvia v. Superior Court*, 179 Cal.App.3d 1127, 1145, 225 Cal.Rptr. 297, 306 (1986); *Bartling v. Superior Court*, 163 Cal.App.3d 186, 196, 209 Cal.Rptr. 220, 225-226 (1984); *People v. Adams*, 216 Cal.App.3d 1431, 1440, 265 Cal.Rptr. 568, 573-574 (1990); *Donaldson v. Lungren*, 2 Cal.App.4th 1614, 1619-1623, 4 Cal.Rptr.2d 59, 61-64 (1992) and cases cited therein; *Thor v. Superior Court*, 5 Cal.4th 725, 742, 21 Cal.Rptr.2d 357, 367-368 (1993); *DeGrella v. Elston*, 858 S.W.2d 698, 706-707 (Ky. 1993). *Cf. In re Quinlan*, 70 N.J. 10, 51-52 and n. 9, 355 A.2d 647, 669-670 and n. 9 (neither attempted nor aiding suicide implicated in circumstances similar to those presented), *cert. denied*, 429 U.S. 922 (1976). *See also* Thomas J. Marzen, et al., *Suicide: A Constitutional Right?*, 24 Duq. L. Rev. 1, 10 n. 34 (1985), and cases cited therein.

[6] *See* Thomas J. Marzen, *"Out, Out Brief Candle": Constitutionally Prescribed Suicide for the Terminally Ill*, 21 Hastings Constitutional Law Quarterly, No. 3, 799, 806 n. 25 (1994) (" . . . legislatures that have codified the right to refuse treatment in the same legislation reject any affirmative act to end life."), *citing* natural death/living will statutes of forty States.

U.S. 261 (1990), this Court "assume[d] that the United States Constitution would grant a competent person a constitutionally protected right to refuse lifesaving hydration and nutrition" but, at the same time, recognized Missouri's important interest in the protection and preservation of human life, noting that "the majority of States in this country have laws imposing criminal penalties on one who assists another to commit suicide." *Cruzan, supra*, 497 U.S. at 279-280 (footnote omitted). Plainly, the majority in *Cruzan* had no difficulty at all distinguishing the withdrawal of life-sustaining treatment, on the one hand, and the act of suicide, on the other.

Notwithstanding this overwhelming authority to the contrary, the Second Circuit erroneously concluded that the two situations are indistinguishable. *Quill, supra*, 80 F.3d at 729. As will be seen, the Second Circuit's failure to make this critical distinction infected its constitutional analysis, contributed to its misplaced reliance on right-to-refuse treatment cases, and led directly to its ultimate erroneous conclusion. The conflicts created by the Second Circuit's opinion, involving an issue of such exceptional and profound nationwide importance, can only be resolved – indeed, must be resolved – by the final authoritative voice of this Court.

A. Certiorari Should be Granted To Establish That A Decision by the People of a State to Prohibit Assisted Suicide Does Not Violate the Equal Protection Clause of the Fourteenth Amendment

The Equal Protection Clause of the Fourteenth Amendment provides that no State shall " . . . deny to any person within its jurisdiction the equal protection of the laws." U.S. Const. amend. XIV, § 1. It is well-settled that:

> "Unless a statute provokes strict judicial scrutiny because it interferes with a fundamental right or discriminates against a suspect class, it will ordinarily survive an equal protection attack so long as the challenged classification is rationally related to a legitimate governmental purpose." *Kadrmas v. Dickinson Public Schools*, 487 U.S. 450, 457-458 (1988) (internal quotes and citations omitted).

The Second Circuit correctly found that New York's statutes prohibiting assisted suicide neither impinge upon fundamental rights nor create suspect classifications and, accordingly, that the rational basis standard of review applied. *Quill, supra*, 80 F.3d at 726-727. However, it failed to properly apply that standard in accordance with the clear precedents of this Court. Simply put, while the Second Circuit invoked rational basis language, that was not the standard it applied.

1. The Withdrawal of Life-Sustaining Treatment Is Not the Equivalent of Suicide or Assisted Suicide, and Thus, New York's Prohibition of Assisted Suicide Does Not Create Any Class of Similarly Situated Persons

"The first prerequisite to a meritorious claim under the equal protection clause is a showing that the state has adopted a classification that affects two or more *similarly situated* groups in an unequal manner." *In re Eric J.*, 25 Cal.3d 522, 530, 159 Cal.Rptr. 317, 320 (1979) (italics original, citation and footnote omitted). However, as a review of the challenged statutes plainly reveals, that cannot possibly be established here.

Section 125.15 of the New York Penal Law provides, in pertinent part, that "[a] person is guilty of manslaughter in the second degree when: . . . [h]e intentionally . . . aids another person to commit suicide." Violation of section 125.15 has been designated a class C felony. *Id.* Section 120.30 of the New York Penal Law provides that "[a] person is guilty of promoting a suicide attempt when he intentionally . . . aids another person to attempt suicide." Violation of section 120.30 has been designated a class E felony. *Id.*

Both statutes clearly apply to all persons and, thus, on their face, create no classifications at all. Both statutes prohibit all persons from performing specific *acts*, *i.e.*, aiding another to attempt or commit suicide.[7] Thus, to the extent that New

---

[7] Neither statute has been applied in this case, *i.e.*, none of the respondents have been charged with any violation of section 125.15 or

York law classifies at all, the classification is clearly neutral. "[T]he Fourteenth Amendment guarantees equal laws, not equal results." *Personnel Administrator of Massachusetts v. Feeney*, 442 U.S. 256, 273 (1979). In *Quill*, the Second Circuit found a classification created not by the terms of the challenged statutes, or by their application in a particular case, but rather based on its conclusion that the withdrawal of life-sustaining treatment is the equivalent of the act of suicide. Thus, under the Second Circuit's reasoning, terminally ill persons who request the withdrawal of life-sustaining treatment are similarly situated with other persons who wish to commit suicide and assisted suicide. *Quill, supra*, 80 F.3d at 729. However, in addition to being contrary to the overwhelming weight of authority cited above, even the authorities cited by the Second Circuit do not support this conclusion.

The Second Circuit cited *Matter of Storar* and *Eichner v. Dillon* (decided together), 52 N.Y.2d 363, 420 N.E.2d 64, *cert. denied*, 454 U.S. 858 (1981), for the proposition that:

> "In both these cases, the New York Court of Appeals recognized the right of a competent, terminally-ill patient to hasten his death upon proper proof of his desire to do so." *Quill, supra*, 80 F.3d at 727.

Storar and *Eichner*, however, are both right to refuse treatment cases. The phrase "hasten his death" incorrectly implies that the New York Court of Appeals approved not only the right to refuse unwanted medical treatment, but also the act of suicide. It did not. Moreover, in relying on these cases, the Second Circuit ignored the far more relevant part of the majority opinion which recognized that:

> "The State has a legitimate interest in protecting the lives of its citizens. . . . It may, by statute, prohibit them from engaging in specified activities, including medical procedures which are inherently hazardous

---

120.30. While a grand jury proceeding was instituted against one of the respondents, Dr. Quill, no indictment was returned. *Quill v. Koppell*, 870 F.Supp. 78, 82 (S.D.N.Y. 1994), *aff'd in part and rev'd in part sub nom. Quill v. Vacco*, 80 F.3d 716 (2d Cir. 1996).

> to their lives (*Roe v. Wade, supra*, 410 U.S. pp. 150, 154, 93 S.Ct. pp. 725, 727)." *Matter of Storar*, 52 N.Y.2d 363, 377, 420 N.E.2d 64, 71, *cert. denied*, 454 U.S. 858 (1981).

Furthermore, a review of the majority opinion reveals even more evidence that the New York Court of Appeals did not impliedly approve of suicide (*i.e.*, "hastening death"). First, the New York Court of Appeals specifically noted that the State's interest in preventing suicide was *not* implicated in the *Eichner* case. *Matter of Storar, supra*, 52 N.Y.2d at 377 n. 6. Second, recognizing the need for judicial restraint, the majority found it unnecessary to address the dissent's endorsement of a limited form of passive euthanasia. *Matter of Storar, supra*, 52 N.Y.2d at 370 n. 2. In view of the foregoing, the Second Circuit's reliance on *Storar* and *Eichner* was clearly misplaced.

The Second Circuit also relied on *Rivers v. Katz*, 67 N.Y.2d 485, 495 N.E.2d 337 (1986), for the proposition that the New York Court of Appeals had

> " . . . recognized the right to bring on death by refusing medical treatment not only as a fundamental common-law right but also as coextensive with [a] patient's liberty interest protected by the due process clause of our State Constitution." *Quill, supra*, 80 F.3d at 727 (internal quotes and citation omitted, insert original).

Again, this is incorrect. In *Rivers*, the New York Court of Appeals did not mention any "right to bring on death", a phrase which again implies approval of the act of suicide. Rather, the right which the court recognized, as evidenced from the text of the opinion itself, was *the right to refuse unwanted medical treatment*. *Rivers, supra*, 67 N.Y.2d at 493.

The Second Circuit also relied on both Article 29-B of New York Public Health Law, entitled "Orders Not to Resuscitate", sections 2960-2979, and Article 29-C, entitled "Health Care Agents and Proxies", sections 2980-2994, for the proposition that:

> " . . . the New York legislature [has] placed its imprimatur upon the right of competent citizens to hasten death by refusing medical treatment and by

> directing physicians to remove life-support systems already in place." *Quill, supra*, 80 F.3d at 727.

Again, this is incorrect. As a review of these statutes plainly reveals, the New York legislature did not recognize any right to "hasten death", rather, it recognized the right to refuse medical treatment.[8] Moreover, in relying on these statutes, the Second Circuit ignored the far more relevant statute, *i.e.*, New York Public Health Law, Article 29-C, § 2989(3), which specifically provides that:

> "This article is not intended to permit or promote suicide, assisted suicide, or euthanasia; accordingly, nothing herein shall be construed to permit an agent to consent to any act or omission to which the principal could not consent under law."

This statute directly contradicts the Second Circuit's contention that the New York legislature has either expressly or impliedly approved of suicide or assisted suicide. Plainly, it has not. In summary, none of the New York authorities discussed above support the contention that the State of New York has recognized a right to commit suicide or, as the Second Circuit phrased it, a right to "hasten death". Rather, what the State of New York has recognized is the right to refuse unwanted medical treatment, regardless of the consequences of that refusal.

The final authority relied upon by the Second Circuit in its effort to equate the withdrawal of life-sustaining treatment with the act of suicide is this Court's opinion in *Cruzan v. Director, Missouri Dept. of Public Health*, 497 U.S. 261 (1990). However, like its reliance on New York law, that reliance is entirely misplaced. While the Second Circuit discussed several portions of the *Cruzan* opinion at length, it ignored the far more relevant portion of the opinion for present purposes, *i.e.*, the recognition by the majority that even in the face of a right to refuse medical treatment, the States may

---

[8] *See, e.g.*, New York Public Health Law, Article 29-B, § 2964 (recognizing right of adult with capacity to consent to an order not to resuscitate), and Article 29-C, § 2981 (allowing for appointment of an agent "to make health care decisions on the principal's behalf").

properly assert important interests in the protection and preservation of human life, and in the prevention of both suicide and assisted suicide. *Cruzan, supra*, 497 U.S. at 280.

In *Cruzan*, this Court also discussed the underpinnings of the right to refuse medical treatment, *i.e.*: (1) the right of bodily integrity, and (2) "[t]he logical corollary of the doctrine of informed consent . . . the right not to consent, that is, to refuse treatment." *Cruzan, supra*, 497 U.S. at 269 and 270. When a terminally ill person accepts life-sustaining treatment, he or she is authorizing the invasion of bodily integrity which necessarily accompanies such treatment. The fact that such persons must sacrifice their bodily integrity in order to live plainly demonstrates they are not similarly situated with any other class. Furthermore, "[a] person may refuse life-sustaining medical treatment *because* the treatment itself is a violation of bodily integrity." *People v. Kevorkian*, 447 Mich. 436, 480 n. 59, 527 N.W.2d 714, 732 n. 59 (1994), *cert. denied*, 115 S.Ct. 1795 (1995) (emphasis added).

In sharp contrast, suicide and assisted suicide do not implicate either the right of bodily integrity or the right not to consent, *i.e.*, the right to refuse unwanted medical treatment. Simply stated, suicide and assisted suicide are so significantly different from the withdrawal or withholding of unwanted medical treatment, and its legal underpinnings, that a person exercising the right to refuse such treatment cannot be considered similarly situated with a person seeking to commit suicide or assisted suicide. The two situations simply are not the same for constitutional purposes. "The Constitution does not require things which are different in fact or opinion to be treated in law as though they were the same." *Tigner v. Texas*, 310 U.S. 141, 147 (1940).

2. New York's Prohibition of Assisted Suicide Is Rationally Related to Numerous Important Governmental Objectives

Review under the rational basis standard " . . . is the most relaxed and tolerant form of judicial scrutiny under the Equal Protection Clause." *Dallas v. Stanglin*, 490 U.S. 19, 26 (1989).

In discussing the rational basis standard in *McGowan v. Maryland*, the Court stated that:

> "Although no precise formula has been developed, the Court has held that the Fourteenth Amendment permits the States a wide scope of discretion in enacting laws which affect some groups of citizens differently than others. The constitutional safeguard is offended only if the classification rests on grounds wholly irrelevant to the achievement of the State's objective. State legislatures are presumed to have acted within their constitutional power despite the fact that, in practice, their laws result in some inequality. A statutory discrimination will not be set aside if any state of facts reasonably may be conceived to justify it." *McGowan v. Maryland*, 366 U.S. 420, 425-426 (1961). See also *Dandridge v. Williams*, 397 U.S. 471, 485 (1970).

As Justice Stewart observed in his concurring opinion in *San Antonio School District v. Rodriguez*, 411 U.S. 1, 60 (1973), "[t]his doctrine is no more than a specific application of one of the first principles of constitutional adjudication – the basic presumption of constitutional validity of a duly enacted state or federal law. [citation omitted]" Thus, under the rational basis standard, legislation is first presumed valid and then, shielded by that presumption, tested to determine if the classification it creates is rationally related to a legitimate state interest.[9]

In discussing this presumption in *Quill*, however, the Second Circuit stated "[t]he general rule . . . is that state legislation carries a presumption of validity **if** the statutory classification is 'rationally related to a legitimate state interest.' [citation omitted]" *Quill, supra*, 80 F.3d at 725 (emphasis added). This is incorrect. The existence of the presumption of validity is not conditioned upon a subsequent finding of rational relationship; rather, the presumption *precedes* application

---

[9] *See City of Cleburne v. Cleburne Living Ctr., Inc.*, 473 U.S. 432, 440 (1985) ("The general rule is that legislation is presumed to be valid and will be sustained if the classification drawn by the statute is rationally related to a legitimate state interest. [citations omitted]").

of the standard itself. The Second Circuit's apparent failure to accord New York's statutes the presumption of validity to which they are entitled may provide at least some explanation why the Court utilized such a strict, skeptical, means-end analysis to review the challenged statutes.

While the Second Circuit did identify several important state interests implicated by New York's prohibition of assisted suicide, it went on to conclude that:

> "The New York statutes prohibiting assisted suicide, which are similar to the Washington statute, do not serve any of the state interests noted, *in view of the statutory and common law schemes allowing suicide through the withdrawal of life-sustaining treatment.*" *Quill, supra*, 80 F.3d at 730 (italics added).

This holding, like its misidentification of a similarly situated class, is based on the Second Circuit's failure to differentiate between the withdrawal of life-sustaining treatment and the act of suicide. Once this recurrent error is removed from the analysis, however, it immediately becomes clear that New York's prohibition of assisted suicide directly furthers, and thus is rationally related to, several important state interests. Those interests include, but are not limited to: (1) the protection and preservation of human life;[10] (2) the prevention of suicide;[11] (3) preventing the fraud, errors and abuse which would

---

[15] *Quill, supra*, 80 F.3d at 730, *citing Compassion in Dying v. State of Washington*, 49 F.3d 586, 592-593 (9th Cir. 1995), *superseded by* 79 F.3d 790 (9th Cir. 1996).

[16] *Application of President & Directors of Georgetown College, Inc.*, 118 U.S.App.D.C. 80, 331 F.2d 1000, 1008 (1964), *cert. denied*, 377 U.S. 978 (1964). *See also Bartling v. Superior Court*, 163 Cal.App.3d 186, 195 n. 6, 209 Cal.Rptr. 220, 225 n. 6 (1984).

The Second Circuit's application of the rational basis standard was further flawed by its improper insertion of quality-of-life considerations into its analysis which it used to discount the State's important interest in the protection and preservation of human life. *Quill, supra*, 80 F.3d at 729-730. Such quality-of-life considerations are directly contrary to this Court's holding in *Cruzan* that:

> "[W]e think a State may properly decline to make judgments about the 'quality' of life that a particular individual may enjoy, and simply assert an unqualified interest in the preservation of human life to be weighed against the constitutionally protected interests of the individual." *Cruzan v. Director, Missouri Dept. of Public Health*, 497 U.S. 261, 282 (1990).

The dangers inherent in using such quality-of-life considerations are well-recognized. "Were quality of life at issue, persons with all manner of handicaps might find the state seeking to terminate their lives." *Cruzan v. Harmon*, 760 S.W.2d 408, 420 (Mo. banc 1988), *aff'd sub nom. Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261 (1990). Such an analysis also disregards the irrefutable principle that all lives, from beginning to end and irrespective of physical or mental condition, are under the full protection of the law.

> "The life of those to whom life has become a burden – of those who are hopelessly diseased or fatally wounded – nay, even the lives of criminals condemned to death, are under the protection of the law, equally as the lives of those who are in the full tide of life's enjoyment, and anxious to continue to live." *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261, 295 (1990) (Scalia, J., concurring), *citing Blackburn v. State*, 23 Ohio St. 146, 163 (1873).

In discounting the State's important interest in the protection and preservation of human life, the Second Circuit also cited this Court's opinion in *Planned Parenthood v. Casey*, 505 U.S. 833 (1992). That citation was particularly surprising in that *Casey* itself reaffirms the States' " . . .

legitimate interests from the outset of the pregnancy in protecting the health of the woman and the life of the fetus that may become a child." *Casey, supra*, 505 U.S. at 846. Nevertheless, the Second Circuit relied on *Casey* when posing the following rhetorical question:

> "What concern prompts the state to interfere with a mentally competent patient's 'right to define [his] own concept of existence, of meaning, of the universe, and of the mystery of human life,' *Planned Parenthood v. Casey*, 505 U.S. 833, 851, 112 S.Ct. 2791, 2807, 120 L.Ed.2d 674 (1992), when the patient seeks to have drugs prescribed to end life during the final stages of a terminal illness? The greatly reduced interest of the state is preserving life compels the answer to these questions: 'None.' " *Quill, supra*, 80 F.3d at 730.

There are at least two fundamental flaws in the Second Circuit's reliance on *Casey* for this proposition. First, it is well-settled that "[i]t is not the province of this Court to create substantive constitutional rights in the name of guaranteeing equal protection of the laws." *San Antonio School District v. Rodriguez*, 411 U.S. 1, 33 (1973). That, however, was precisely what the Second Circuit did in this case. Within the liberty interest described by this Court in *Casey*, the Second Circuit has created a new right "to have drugs prescribed to end life during the final stages of a terminal illness". *Quill, supra*, 80 F.3d at 730. Second, this is precisely the sort of "unlimited right to do with one's body as one pleases" which this Court has consistently and soundly rejected. *See Roe v. Wade*, 410 U.S. 113, 154 (1973); *Bowers v. Hardwick*, 478 U.S. 186, 191 (1986); and *Paris Adult Theatre I v. Slaton*, 413 U.S. 49, 68 (1973), *citing, inter alia*, constitutionally unchallenged laws against suicide.

Finally, in *Quill*, the Second Circuit suggested that New York could achieve its objective of avoiding undue influence on the elderly and infirm to choose death by " . . . establish[ing] rules and procedures to assure that all choices [to commit assisted suicide] are free of such pressures." *Quill, supra*, 80 F.3d at 730 (inserts added). With respect to the definition of "terminal illness", the Second Circuit suggested:

> "Again, New York may define that stage of illness with greater particularity, require the opinion of more than one physician or impose any other obligation upon patients and physicians who collaborate in hastening death. [footnote omitted]" *Quill, supra*, 80 F.3d at 731.

In the footnote which accompanies the quoted text, the Second Circuit went on to suggest numerous other ways in which the State of New York could achieve its objectives but still allow assisted suicide. *Quill, supra*, 80 F.3d at 731 n. 4. However, this same argument was rejected by the Court in *Dallas v. Stanglin*, 490 U.S. 19 (1989), and, as in that case, demonstrates a " . . . missapprehen[sion] of the nature of rational-basis scrutiny, which is the most relaxed and tolerant form of judicial scrutiny under the Equal Protection Clause." *Dallas, supra*, 490 U.S. at 26-27. The fact that a State may, if it chooses, seek to achieve its legitimate objectives through other means does not, in any way, establish that the means actually selected are either irrational or arbitrary. Indeed, as this Court observed with respect to the problems of financing and managing a statewide public school system:

> "The very complexity of the problems . . . suggests that there will be more than one constitutionally permissible method of solving them, and that, within the limits of rationality, the legislature's efforts to tackle the problems should be entitled to respect." *San Antonio School District v. Rodriguez*, 411 U.S. 1, 42 (1973) (internal quotes and citation omitted).

B. Certiorari Should be Granted to Reaffirm the Essential Role of the States in our Federal System and the Power of the People to Directly Govern Their Own Affairs

With the ever-increasing power of medical science to prolong life, even in the face of what would otherwise be terminal illness, the States have had to strike a balance between the rights of the individual and the demands of

organized society. That balance is grounded in the States' recognition of their responsibility to protect both individual rights and, at the same time, the lives of those who wish to live no matter what their circumstances. In striking that balance, the States have drawn a line between an individual's "right to be let alone",[17] on the one hand, and intentionally killing oneself, with or without assistance, on the other. That balance, now a national consensus, is represented by statutes in a majority of states which both codify an individual's right to refuse unwanted medical treatment and, in the same legislation, reject any affirmative act to end life. The exercise of the right to refuse life-sustaining medical treatment permits an individual to determine, at least to some extent, when he or she will die. The exercise of this right does not, however, condemn such an individual to suffer either an undignified death or excruciating pain. Rather, at the same time an individual elects to forego life-sustaining treatment, he or she may choose to accept palliative care which will help insure both a dignified death and well-controlled symptoms.[18]

Whether this balance should be abandoned and the line redrawn to permit an individual to commit suicide without state interference, and then redrawn yet again to permit assisted suicide, is a matter appropriately left for the people to decide, through their duly elected representatives or by

---

[17] *Olmstead v. United States*, 277 U.S. 438, 478 (1928) (Brandeis, J., dissenting), *overruled by Katz v. United States*, 389 U.S. 347, 352-353 (1967).

[18] Palliative care is designed to relieve distressing symptoms in dying patients and includes measures to alleviate pain and suffering, together with the provision of emotional, social and spiritual support for the patient. The Hastings Center, *Guidelines on the Termination of Life-Sustaining Treatment and the Care of the Dying*, 71-73 (1987). *See also*, American Medical Association, Council on Ethical and Judicial Affairs, *Code of Medical Ethics Reports*, Vol. V, No. 2 (July 1994), Report 59, *Physician-Assisted Suicide*, 269, 272-273 (describing advances in hospice care).

initiative ballot.[19] The principles of federalism embodied in our Constitution require no less. Simply put, as Justice Scalia noted in the right to refuse treatment context, " . . . the federal courts have no business in this field . . . " *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261, 293 (1990) (Scalia, J., concurring). In addition, as the Missouri Supreme Court has observed, the courts are simply not an appropriate forum for resolution of broad questions of public policy.

> "Broad policy questions bearing on life and death issues are more properly addressed by representative assemblies. These have vast fact and opinion gathering and synthesizing powers unavailable to courts; the exercise of these powers is particularly appropriate where issues invoke the concerns of medicine, ethics, morality, philosophy, theology and law. Assuming change is appropriate, this issue demands a comprehensive resolution which courts cannot provide." *Cruzan v. Harmon*, 760 S.W.2d 408, 426 (Mo. banc 1988), *aff'd sub nom. Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261 (1990).

As the States continue to grapple with the difficult questions presented by the ever-increasing ability of medical technology to prolong life, the corresponding need to allow the States to serve as laboratories for change becomes paramount. Indeed, as this Court has recognized, "[t]he science of government . . . is the science of experiment, . . . " *Garcia v. San Antonio Metro.*, 469 U.S. 528, 546 (1985) (citation and internal quotes omitted).

> "To stay experimentation in things social and economic is a grave responsibility. Denial of the right to experiment may be fraught with serious consequences to the Nation. It is one of the happy incidents of the federal system that a single courageous State may, if its citizens choose, serve as a laboratory; and try novel social and economic

---

[19] *See People v. Kevorkian*, 447 Mich. 436, 481-482, 527 N.W.2d 714, 733 (1994), *cert. denied*, 115 S.Ct. 1795 (1995), and *Donaldson v. Lungren*, 2 Cal.App.4th 1614, 1623, 4 Cal.Rptr.2d 59, 64 (1992).

> experiments without risk to the rest of the country. . . . " *New State Ice Co. v. Liebmann*, 285 U.S. 262, 311 (1932) (Brandeis, J., dissenting).

If allowed to stand, the Second Circuit's opinion in *Quill* will effectively extinguish the power of the States to continue to serve as laboratories for change on an issue that arguably will affect more lives than any other issue the States will face in the foreseeable future. If allowed to stand, it will also " . . . invite[] an unelected federal judiciary to make decisions about which state policies it favors and which ones it dislikes." *Garcia v. San Antonio Metro.*, 469 U.S. 528, 546 (1985). At the same time, it will " . . . relegate the States to precisely the trivial role that opponents of the Constitution feared they would occupy." *Garcia, supra*, 469 U.S. at 575 (Powell, J., dissenting) (footnote omitted).

> "The Founding Fathers did not establish the United States as a democratic republic so that elected officials would decide trivia, while all great questions would be decided by the judiciary." *Compassion in Dying v. State of Washington*, 79 F.3d 790, 858 (9th Cir. 1996) (Kleinfeld, C.J., dissenting).

III. CONCLUSION

For all the foregoing reasons, amici States respectfully request that the Court grant certiorari in this case.

Respectfully submitted,

On Petition for a Writ of Certiorari to the United States Court of Appeals for the Second Circuit

---

MOTION FOR LEAVE TO FILE BRIEF AMICUS CURIAE

The Catholic Medical Association ("CMA") respectfully moves this Court for leave to file a brief *amicus curiae* in support of Petitioners. Petitioners have consented to the filing of this brief. Respondents, however, have refused consent, thus necessitating the filing of this motion.

The CMA is a non-profit, public service organization founded in 1932. The CMA promotes the principles of Roman Catholic medical ethics in science and in the practice of medicine. The CMA includes more than one thousand physicians and coordinates the activities of more than 80 regional Catholic physicians' guilds in the United States and Canada.

BEST AVAILABLE COPY

Since 1932, the CMA has published *The Linacre Quarterly*, a leading scholarly journal on biomedical ethics. The CMA's companion Linacre Institute routinely produces studies on important medical and moral issues. The CMA also serves as a resource for the medical community, holding annual conferences where scholars and health care professionals meet and interact.

The CMA, as a potential *amicus curiae* before this Court, would contribute its professional and ethical perspective on physicians and their role in treating the terminally ill. Since its inception, the CMA has brought the practical experience and scholarly expertise of its members to bear on important societal issues. The CMA wishes to share with this Court the insights of the scholars and physicians that are its practicing members.

In addition to its own experience, the CMA hopes to inform the Court of a central theme in Catholic medical ethics, the distinction between meeting death with peace and dying at one's own hand.

For decades, Catholic religious and medical leaders have differentiated between suicide and the withdrawal of life support. In rejecting such a distinction, the Second Circuit broke from a venerable historical tradition. As a unique part of that tradition, the CMA asks for the opportunity to be heard.

The motion of the CMA for leave to file the accompanying brief *amicus curiae* in support of Petitioners should be granted.

Respectfully submitted,

JOSEPH J. FRANK

In the Supreme Court of the United States

OCTOBER TERM, 1995

No. 95-1858

DENNIS C. VACCO, Attorney General of the State of New York, GEORGE E. PATAKI, Governor of the State of New York, ROBERT M. MORGENTHAU, District Attorney of New York County,

Petitioners,

v.

TIMOTHY E. QUILL, M.D., SAMUEL C. KLAGSBRUN, M.D., and HOWARD A. GROSSMAN, M.D.,

Respondents.

On Petition for a Writ of Certiorari to the United States Court of Appeals for the Second Circuit

BRIEF AMICUS CURIAE OF CATHOLIC MEDICAL ASSOCIATION IN SUPPORT OF PETITIONERS

INTEREST OF THE AMICUS CURIAE

The Catholic Medical Association ("CMA") is a national organization of Roman Catholic physicians and scholars. As more fully set forth in its motion for leave to file this brief, the CMA seeks to assist this Court by presenting the considered experience of its members, who practice daily in the field of medical ethics.

REASONS FOR GRANTING THE PETITION

"I will give no deadly medicine to anyone if asked, nor suggest any such counsel" [1]
Hippocrates of Cos
c. 410 B.C.

"Physician assisted suicide is fundamentally incompatible with the physician's role as healer" [2]
American Medical Association
1994 A.D.

From the dawn of the healing art until the present, physicians have been asked to heal rather than to kill, to save lives rather than to end them. Societies throughout history, including our own, have recognized life and its protection as an unqualified good,[3] indeed, as *the* good from which other societal goods derive.[4] Physicians serve society by maintaining life, by healing patients who request their help, and by promoting health, which is fundamental to the enjoyment of so many of life's virtues. Conversely, American society has always condemned physicians who stray from the healing path, who use their knowledge to harm, or who depart from their role as guardians of society's interest in life.[5]

[1] Hippocrates, *The Oath* (W.H.S. Jones trans., Loeb Classical Library 1923).

[2] American Medical Ass'n, *Code of Medical Ethics* § 2.211 (1994).

[3] Society's unqualified commitment to life runs throughout traditional jurisprudence. In *Blackburn v. State*, 23 Ohio St. 146, 163 (1872), for example, the Ohio Supreme Court observed that:

> The life of those to whom life has become a burden—of those who are hopelessly diseased or fatally wounded—nay, even the lives of criminals condemned to death, are under the protection of the law, equally as the lives of those who are in the full tide of life's enjoyment, and anxious to continue to live.

Accord, 4 William Blackstone, *Commentaries on the Law of England* *189 ("[t]he suicide is guilty of [an offense] against the King, who hath an interest in the preservation of all his subjects"). Similarly, this Court has acknowledged the constitutionality of such a fundamental choice for life:

> We think a State may properly decline to make judgments about the "quality" of life that a particular individual may enjoy, and simply assert an unqualified interest in the preservation of human life . . . .

Cruzan v. Director, Missouri Dep't of Health, 497 U.S. 261, 282 (1990).

[4] Pope John Paul II, Encyclical Letter *Evangelium Vitae* ¶ 66 (March 25, 1995) (noting that life is God's gift and that suicide is a rejection of that gift; *accord*, 1 William Blackstone, *Commentaries on the Laws of England* *125 ("[l]ife is the immediate gift of God, a right inherent by nature in every individual").

On April 2, 1996, the Second Circuit departed from that tradition. Invoking an equal protection analysis, the court below held that there is no distinction between assisted suicide and the withholding or withdrawal of treatment. Pet. App. 30a-31a. The court then invalidated New York's statutory distinction between assisted suicide and the withdrawal of life support, holding that it is "not rationally related to any legitimate state interest." *Id.* at 35a.

New York now seeks review of that decision. In support, the CMA notes that the decision below directly conflicts with: (1) eighteen state supreme courts that have distinguished between assisted suicide and the withdrawal of life support; (2) the overwhelming consensus of the medical community that assisting suicide and withdrawing life support fundamentally differ; (3) this Court's decision in *Cruzan* that States may constitutionally assert an unqualified interest in life; and (4) the Michigan Supreme Court's decision in *People v. Kevorkian* [6] that prohibitions against physician-assisted suicide advance legitimate state interests.

In addition, the difficulties with the decision below are illustrated by a comparison between it and the Ninth

[5] *See, e.g., United States v. Brandt (the Medical Case)*, II Trials of War Criminals Before the Nuremberg Military Tribunals Under Control Council Law No. 10, at 181 (1949); *see also United States v. Stanley*, 483 U.S. 669, 710 (1987) (O'Connor, J., concurring in part and dissenting in part).

Circuit's recent decision in *Compassion in Dying v. Washington*.[7] Although the Ninth Circuit's decision also invalidates a state law prohibiting assistance in suicide, the court's opinion and the opinion below each reject the rationale adopted by the other. The Ninth Circuit rejects the equal protection approach followed by the court below, and instead announces a substantive due process right to physician-assisted suicide. 79 F.3d at 816. The court below, by contrast, rejects any such due process right but then invalidates the New York statutes on equal protection grounds. Pet. App. 19a, 30a-35a. This disagreement is not surprising, because both decisions lack a proper constitutional foundation.

Review is needed now to dispel the notion, advanced by courts of appeals in two of the nation's most populous circuits, that the States are constitutionally powerless to prohibit physicians and others from promoting or assisting in suicide. Such dangerous precedents should not be permitted to percolate any further in the lower federal courts without review by this Court.

CERTIORARI SHOULD BE GRANTED TO ESTABLISH THAT A STATE MAY PROHIBIT ASSISTED SUICIDE CONSISTENT WITH THE EQUAL PROTECTION CLAUSE OF THE FOURTEENTH AMENDMENT.

While the Equal Protection Clause requires that "all persons similarly circumstanced should be treated alike, . . . [t]he Constitution does not require things which are different in fact or opinion to be treated in law as though they were the same." *Plyler v. Doe*, 457 U.S. 202, 216

[7] 79 F.3d 790 (9th Cir. 1996) (en banc), *modified*, 1996 WL 294445 (9th Cir. May 28, 1996). The Ninth Circuit's decision in *Compassion in Dying* became final on May 29, 1996. Earlier, the court of appeals, on its own motion, directed the parties to submit supplemental briefs on whether the case should be reheard en banc before all twenty-eight judges of the Ninth Circuit. On May 29, the court decided not to conduct such a hearing. On June 10, 1996, this Court stayed the Ninth Circuit's mandate, pending the timely filing and disposition of a petition for certiorari.

(1982) (internal quotations and citations omitted). Instead, disparate treatment will normally pass equal protection scrutiny if the statutory classification is "rationally related to a legitimate state interest." *City of Cleburne v. Cleburne Living Ctr.*, 473 U.S. 432, 440 (1985).

In addressing Respondents' equal protection challenge, the court of appeals asked first whether the New York statutes at issue provide disparate treatment to similarly situated groups and then, having answered that question in the affirmative, whether the alleged "inequality" is rationally related to a legitimate state interest. Pet. App. 20a-35a. Although it is far from clear that this Court's decisions mandate such a two-step inquiry (rather than a more direct examination of whether a statutory classification is supported by a rational basis), the more fundamental problem with the court of appeals' decision is that it answers incorrectly both questions posed, and appears to apply a more stringent level of constitutional scrutiny, even while paying lip service to the "rational basis" test. As New York observes, "[t]he Second Circuit's decision creates an ill-defined new substantive constitutional right, brought forth in the name of equal protection . . . ." Pet. 13-14. This Court has previously rejected such misuse of the Equal Protection Clause, stating that "[i]t is not the province of this Court to create substantive constitutional rights in the name of guaranteeing equal protection of the laws." *San Antonio Indep. Sch. Dist. v. Rodriguez*, 411 U.S. 1, 33 (1973).

A. Assisted Suicide Is Not The Same As The Withdrawal Of Life Support.

The moral, civil, and common law has always regarded the refusal or withdrawal of medical treatment as fundamentally different from suicide.[8] There is, moreover, an

[8] *See* Yale Kamisar, *Against Assisted Suicide—Even a Very Limited Form*, 72 U. Det. Mercy L. Rev. 735, 753-60 (1995); Thomas J.

obvious common-sense basis for this distinction. Declining or discontinuing medical intervention so as to allow the natural order to proceed and death to come when it will is qualitatively different from prescribing or administering toxic chemicals so as to cause death by unnatural means. Yet, with the stroke of a pen, the court of appeals has chosen to equate suicide with the decision of some patients not to artificially extend their lives through medical technology. The equivalence postulated by the court of appeals is illusory.

The Second Circuit invalidated two statutes: New York Penal Law § 125.15 and New York Penal Law § 120.30 (McKinney 1995). Section 125.15 provides that "[a] person is guilty of manslaughter in the second degree when: . . . [h]e intentionally . . . aids another person to commit suicide." Section 120.30 provides that "[a] person is guilty of promoting a suicide attempt when he intentionally . . . aids another person to attempt suicide."

The court of appeals began its equal protection analysis by concluding that Sections 125.15 and 120.30 treat terminally ill patients on life support differently from anyone else. How the court arrived at this conclusion, however, remains a mystery. Neither statute creates any facial classification. Instead, each merely prohibits particular conduct (*i.e.*, assisting another to commit or to attempt suicide).[9] The court purportedly discovered a surreptitious classification when it read New York's living will statute in conjunction with New York's prohibitions against assisted suicide. Pet. App. 26a-27a. Contrary to the court's view, however, neither the living will statute nor any of the other authorities cited supports a conclusion

---

Marzen et al., *Suicide: A Constitutional Right?* 24 Duq. L. Rev. 1, 9-13 (1985).

[9] No record evidence suggests that either statute has been applied to disadvantage any group. Indeed, none of the parties has been prosecuted under either statute. Pet. App. 71a.

that New York has recognized a general right of its citizens to "hasten death."

The court of appeals cited the companion cases of *In re Storar*[10] and *Eichner v. Dillon* for the proposition that "the New York Court of Appeals [has] recognized the right of a competent, terminally ill patient to hasten his death upon proper proof of his desire to do so." Pet. App. 25a. An examination of *Storar* and *Eichner*, however, shows that both cases discuss the right to refuse medical treatment rather than any right to "hasten death." Indeed, the New York Court of Appeals expressly stated that:

> the State has a legitimate interest in protecting the lives of its citizens. . . . It may, by statute, prohibit them from engaging in specified activities, including medical procedures which are inherently hazardous to their lives.

52 N.Y.2d at 377, 420 N.E.2d at 71, 438 N.Y.S.2d at 273. The *Eichner* Court also observed that the State's interest in preventing suicide is not implicated in the withdrawal of life support.[11]

---

[10] 52 N.Y.2d 363, 420 N.E.2d 64, 438 N.Y.S.2d 266, *cert. denied*, 454 U.S. 858 (1981).

[11] 52 N.Y.2d at 377 n.6, 420 N.E.2d at 71 n.6, 438 N.Y.S.2d at 273 n.6 ("[i]n other cases the State may be able to assert additional interests, such as, prevention of suicide or, perhaps, protection of minor children or dependents. Those concerns are inapplicable here. Brother Fox's condition was not self-inflicted").

Eichner involved two members of a Roman Catholic order, Father Eichner and Brother Fox. Brother Fox was in a permanent vegetative state and dependent on a respirator. Father Eichner, Fox's religious superior and legal guardian, sought to have the respirator withdrawn. The Second Circuit's reliance on *Eichner* is particularly misplaced. Certainly Father Eichner was not asking for permission to assist in Brother Fox's suicide. It would have been morally reprehensible to him as a Catholic priest to do so.

The Second Circuit also invoked *Rivers v. Katz*[12] for the proposition that New York has recognized a right to hasten death. Pet. App. 25a-26a. Like *Storar* and *Eichner*, however, *Rivers* involved the right to refuse unwanted medical treatment.[13]

Nor do New York's living will statutes[14] establish any general right of New York citizens to hasten death. Instead, they merely codify the common law right to refuse medical treatment.[15] Indeed, the New York legislature itself drew a sharp distinction between suicide and the withdrawal of life support when it provided that:

> [t]his article is not intended to permit or promote suicide, assisted suicide, or euthanasia; accordingly, nothing herein shall be construed to permit an agent to consent to any act or omission to which the principal could not consent under law.

New York Public Health Law § 2989 (1995).

1. *The Opinion Below Conflicts With The Decisions Of Eighteen State Courts Of Last Resort.*

New York is not alone in recognizing the distinction between assisted suicide and withdrawal of life support. In equating the two (Pet. App. 31a), the Second Circuit

[12] 67 N.Y.2d 485, 495 N.E.2d 337, 504 N.Y.S.2d 74 (1986).

[13] 67 N.Y.2d at 493, 495 N.E.2d at 341, 504 N.Y.S.2d at 78 ("[i]n *Storar*, we recognized that a patient's right to determine the course of his medical treatment was paramount to what might otherwise be the doctor's obligation to provide medical care, and that the right of a competent adult to refuse medical treatment must be honored, even though the recommended treatment may be beneficial or even necessary to preserve the patient's life").

[14] New York Public Health Law art. 29-B, §§ 2960-79; New York Public Health Law art. 29-C, §§ 2980-94.

[15] *See, e.g.*, New York Public Health Law § 2964 (recognizing right of adult with capacity to consent to an order not to resuscitate), and § 2981 (allowing for appointment of an agent "to make health care decisions on principal's behalf").

placed itself into direct conflict with at least eighteen state courts of last resort. The relevant state court decisions are listed in Appendix A.

In considering whether different groups are similarly situated for equal protection purposes, this Court has often relied on "common-sense proposition[s]" regarding the relative characteristics of the persons involved. *See, e.g., Vance v. Bradley*, 440 U.S. 93, 112 (1979) (relying on "the common-sense proposition that aging—almost by definition—inevitably wears us all down"). At least eighteen state courts have similarly drawn a common-sense distinction between forgoing life support and committing suicide.

The legal distinction between suicide and the withdrawal of life support was clearly appreciated by the New Jersey Supreme Court in *In re Quinlan*, 70 N.J. 10, 43, 355 A.2d 647, 665, *cert. denied*, 429 U.S. 922 (1976). In *Quinlan*, the guardians of a young comatose woman sought permission to withdraw the artificial means of life support that were keeping her alive. Faced with the argument that such a course would amount to suicide or homicide, the New Jersey Supreme Court responded that it "would see a real distinction between the self-infliction of deadly harm and a self determination against artificial life support or radical surgery, in the face of irreversible, painful and certain imminent death." 70 N.J. at 43, 355 A.2d at 665. The court further observed that "there would be no criminal homicide" in removing Ms. Quinlan's ventilator because her "ensuing death would not be homicide but rather expiration from existing natural causes." 70 N.J. at 51, 355 A.2d at 669-70.

The New Jersey Supreme Court later addressed assisted suicide and the withdrawal of life support in *In Re Conroy*, 98 N.J. 321, 486 A.2d 1209 (1985). This time the court squarely held that "declining life-sustaining medical treatment may not properly be viewed as an attempt to commit suicide." 98 N.J. at 350-51, 486 A.2d at 1224.

With medical science's increasing ability to sustain life through artificial means, state statutes allowing individuals to express their willingness to forgo such means of life support have proliferated. All 50 states and the District of Columbia have enacted living will statutes distinguishing the withdrawal of life support from assisted suicide. These statutes are listed in Appendix B. Against the background of such laws, other state courts have followed *Quinlan*'s lead. The Arizona Supreme Court, for example, specifically ruled that "[a]sserting the right to refuse medical treatment is not tantamount to committing suicide." *Rasmussen v. Fleming*, 154 Ariz. 207, 218, 741 P.2d 674, 685 (1987).

Likewise, in *De Grella ex rel. Parrent v. Elston*, the Kentucky Supreme Court contrasted " '[m]ercy killing' and 'euthanasia' or any other 'affirmative or deliberate act to end life' [which] are fundamental violations of the common law," with "withdrawal of nutrition and hydration from a person . . . in a persistent vegetative state . . . [which] is medically recognized as fitting the definition of 'permit[ing] the natural process of dying' . . . ." 858 S.W.2d 698, 707 (Ky. 1993). The New York Court of Appeals has embraced the same distinction. *See Fosmire v. Nicoleau*, 75 N.Y.2d 218, 227, 551 N.E.2d 77, 82, 551 N.Y.S.2d 876, 881 (1990) ("merely declining medical care, even essential treatment, is not considered a suicidal act").[16]

Quinlan's progeny have often confronted fundamental state law questions in drawing their distinction between withdrawing life support on the one hand and suicide or euthanasia on the other. The Louisiana State Constitution, for example, includes an explicit prohibition against euthanasia. La. Const. art. I, § 20 ("No law shall subject any person to euthanasia . . . ."). Nevertheless, the Louisiana Supreme Court has drawn a principled distinc-

[16] For a comprehensive study of New York's historic opposition to assisted suicide, see John A. Alesandro, *Comment: Physician-Assisted Suicide and New York Law*, 57 Alb. L. Rev. 820 (1994).

tion between euthanasia and withdrawing life support. *See In re P.V.W.*, 424 So.2d 1015, 1022 (La. 1982) (holding that "[t]hese extraordinary means of preserving a person's 'existence' in an irreversible vegetative coma have little to do with the continuation or the ending of 'life', and removal of such systems under highly restricted circumstances cannot reasonably be construed as violative of the constitutional prohibition against euthanasia").

Not only do the States agree that withdrawal of life support differs from suicide, but they generally agree on why this is so. Beginning with *Quinlan*, state courts have consistently held that when life support is removed, the patient's preexisting condition, and not the removal of the life support, is the legal cause of death. *See, e.g., Quinlan*, 70 N.J. at 51, 355 A.2d at 669-70. By contrast, the person who ingests a lethal substance causes his own death; there is no preexisting condition to blame. Following such reasoning, the Florida Supreme Court held that "suicide is not an issue when . . . the discontinuance of life support 'in fact will merely result in [the patient's] death, if at all, from natural causes.' " *In re Browning*, 568 So.2d 4, 14 (Fla. 1990) (citation omitted). The Maine Supreme Court agreed that a patient's "decision to live without artificial life-sustaining procedures would not constitute suicide since the grievous injuries resulting in his present condition were not self-inflicted. . . . His decision not to receive [medical procedures], far from constituting suicide, is a choice to allow to take its course the natural dying process set in moion by his physiological inability to chew or swallow." *In re Gardner*, 534 A.2d 947, 955-56 (Me. 1987) (citations omitted). Finally, the Washington Supreme Court expressly disassociated itself from an endorsement of suicide or euthanasia, though finding that a patient has a right to withhold medical or artificial life support devices. The court reasoned that "in none of these cases can the withholding of life sustaining devices be deemed the cause of [the patient's] death. The cause of her death

will be [the] disease." *In re Grant*, 109 Wash. 2d 545, 563-64, 747 P.2d 445, 455-56 (1987), *modified on other grounds*, 757 P.2d 534 (Wash. 1988); *accord*, *In re Colyer*, 99 Wash. 2d 114, 123, 660 P.2d 738, 743 (1983).

The Second Circuit apparently misunderstood this causation analysis, which turns on the fundamental tort law distinction between cause in fact and legal or proximate cause. Although withdrawal of life support may be the "but for" cause of a patient's death, the law has long recognized a valid distinction between cause in fact and proximate or "responsible" cause. *See, e.g.*, W. Page Keeton et al., *Prosser and Keeton on the Law of Torts* § 42, at 273 (5th ed. 1984). Although in both instances an act of the doctor or the patient may be the "but for" cause of the patient's death, in suicide the act will also be the proximate cause. From any common-sense perspective, it is not irrational to say that a person who either refuses life support or requests that it be withdrawn dies from his preexisting condition, while the person who ingests deadly medicine dies at his own hand. That is why state court after state court has rejected the equivalence asserted by the court below between suicide and withdrawing life support. In the words of the Wisconsin Supreme Court, "No one can dispute that the withdrawal of treatment, especially artificial feeding, will result in the death of a patient. However, it is equally indisputable that the result is the natural death of the body," *In re L.W.*, 167 Wis. 2d 53, 81, 482 N.W.2d 60, 71 (1992); *see also* 167 Wis. 2d at 92, 482 N.W.2d at 75 ("[r]efusing medical treatment is not suicide").

2. *The Opinion Below Conflicts With The Overwhelming Consensus Of The Medical Community.*

The medical community has traditionally drawn a sharp distinction between physician-assisted suicide and withdrawing the means of life support. As the American Medical Association, for example, has observed:

> [t]he withdrawing or withholding of life-sustaining treatment is not inherently contrary to the principles of beneficence and nonmalficence [*sic*]. The physician is obligated only to offer sound medical treatment and to refrain from providing treatments that are detrimental, on balance, to the patient's well-being. When a physician withholds or withdraws a treatment on the request of a patient, he or she has fulfilled the obligation to offer sound treatment to the patient. The obligation to offer treatment does not include an obligation to impose treatment on an unwilling patient. In addition, the physician is not providing a harmful treatment. Withdrawing or withholding is not a treatment, but the forgoing of a treatment.

AMA Council on Ethical and Judicial Affairs, *Code of Medical Ethics: Current Opinions* (1994). Similarly, the President's Commission for the Study of Ethical Problems in Medicine and Biomedical & Behavioral Research, has commented that:

> [a]lthough competent patients . . . have the legal and ethical authority to forgo some or all care, this does not mean that patients may insist on particular treatments. The care available from health care professionals is generally limited to what is consistent with [professional standards].

President's Commission for the Study of Ethical Problems in Medicine and Biomedical & Behavioral Research, *Deciding to Forgo Life-Sustaining Treatment* 44 (1982).

For decades, medical, ethical, and religious leaders have drawn distinctions between suicide and the withdrawal of increasingly invasive treatment options. Pope Pius XII, for example, concluded in 1957 that physicians, consistent with a patient's wishes, could ethically withdraw a respirator under certain circumstances.[17] Pope

---

[17] Pope Pius XII, *The Prolongation of Life, reprinted in* L'Osservator Romano, Nov. 25-26, 1957; *accord*, Sacred Congregation for the

Pius reasoned that, in such circumstances, death would result not from the removal of the respirator, but from the underlying condition or illness.

Significantly, against the accumulated wisdom of the medical, ethical, and religious communities, the Second Circuit failed to cite even one medical organization or text supporting its conclusion that withdrawing life support is the equivalent of assisted suicide. Instead, the court relied on a student law review note for this proposition.[18]

The consensus of the courts and the medical community is clear: Refusing medical treatment and ingesting toxic drugs are not the same. As this Court observed in *Cruzan*, the right to refuse medical treatment emerges from the right to bodily integrity and a corollary of the doctrine of informed consent (*i.e.*, the right to withhold consent). 497 U.S. at 269-70. Refusing life support, or

---

Doctrine of the Faith, *Declaration on Euthanasia* 12 (Boston: Daughters of St. Paul 1980); *see also* Pope John Paul II, Encyclical Letter *Evangelium Vitae* ¶ 65 (March 25, 1995) ("[e]uthanasia must be distinguished from the decision to forgo so-called 'aggressive medical treatment' . . . . To forgo extraordinary or disproportionate means is not the equivalent of suicide or euthanasia").

[18] Pet. App. 30a (*citing* Note, *Physician-Assisted Suicide and the Right to Die with Assistance*, 105 Harv. L. Rev. 2021, 2028-31 (1992)). The court also cited Justice Scalia's concurrence in *Cruzan* for the "irrelevance of the action-inaction distinction." *See* 497 U.S. at 296-97. The court failed to recognize, however, that Justice Scalia's remark was made in the course of an opinion in which he urged that the Constitution does not provide any basis for disturbing legislative choices in this area. Although Justice Scalia saw the "action-inaction distinction" as an inadequate ground for overturning, under the Fourteenth Amendment, Missouri's decision not to permit the termination of life support for an unconscious patient, he readily acknowledged that the distinction "has some bearing upon the legislative judgment of what ought to be prevented as suicide . . . ." Justice Scalia thus endorsed a state legislature's prerogative to draw precisely the kind of distinction that the court of appeals in this case declared nonexistent.

indeed any medical treatment, thus involves the right to be free from bodily invasion and the right to consent to the medical treatment one receives. *Id.*[19] Such rights are not in any way implicated in a patient's request for toxic drugs.

B. States Have Legitimate Interests In Prohibiting Assisted Suicide.

Even if this Court were to determine that New York's statutory scheme classifies similarly situated groups, that scheme should still be upheld because it is rationally related to a legitimate government interest. Review under the rational basis standard "is the most relaxed and tolerant form of judicial scrutiny under the Equal Protection Clause." *Dallas v. Stanglin*, 490 U.S. 19, 26 (1989). In discussing rational basis scrutiny, this Court has stated that:

> the Fourteenth Amendment permits the States a wide scope of discretion in enacting laws which affect some groups of citizens differently than others. The constitutional safeguard is offended only if the classification rests on grounds wholly irrelevant to the achievement of the State's objective. State legislatures are presumed to have acted within their constitutional power despite the fact that, in practice, their laws result in some inequality. A statutory discrimination will not be set aside if any state of facts reasonably may be conceived to justify it.

McGowan v. Maryland, 366 U.S. 420, 425-26 (1961).

Under rational basis scrutiny, therefore, legislation is presumed valid. *Cleburne*, 473 U.S. at 440 "[t]he general rule is that legislation is presumed to be valid and will be sustained if the classification drawn by the statute

---

[19] *People v. Kevorkian*, 527 N.W.2d at 732 n.59 (patients "may refuse life-sustaining medical treatment because the treatment itself is a violation of bodily integrity").

BEST AVAILABLE COPY

is rationally related to a legitimate state interest"). Only if such legislation is irrational will the Court invalidate it. *Kadrmas v. Dickinson Pub. Sch.*, 487 U.S. 450, 462 (1988) ("social and economic legislation . . . carries with it a presumption of rationality that can only be overcome by a clear showing of arbitrariness and irrationality").

The court below, however, stated that "[t]he general rule . . . is that state legislation carries a presumption of validity *if* the statutory classification is 'rationally related to a legitimate state interest.'" Pet. App. 21a (citation omitted; emphasis supplied). This precisely reverses the proper principles of equal protection review. The presumption of validity does not depend on the outcome of the constitutional scrutiny; rather it is the premise from which that scrutiny is to proceed. In any event, the court of appeals was wrong in concluding that states lack a legitimate governmental interest in prohibiting physician-assisted suicide.

The court of appeals' application of the rational basis standard appears to have been distorted by the court's improper consideration of quality of life issues. The court used those considerations to discount the State's important interest in the protection and preservation of human life. Pet. App. 31a ("[s]urely the state's interest lessens as the potential for life diminishes"). The Second Circuit's conclusion that government's interest in life must be adjusted to take into account an assessment—ultimately, a judicial assessment—of the quality of that life directly conflicts with this Court's holding in *Cruzan*:

> We think a State may properly decline to make judgments about the "quality" of life that a particular individual may enjoy, and simply assert an unqualified interest in the preservation of human life . . . .

497 U.S. at 282. As the Supreme Court of Missouri said, in the decision affirmed by this Court in *Cruzan*,

> the state's interest is not in quality of life. The state's interest is an unqualified interest in life. In striking the balance between a patient's right to refuse treatment or her right to privacy and the state's interest in life, we may not arbitrarily discount either side of the equation to reach a result which we find desirable.

Cruzan v. Harmon, 760 S.W.2d 408, 422 (Mo. 1988) (en banc).

Disregarding this point, the court of appeals ignored the State's interest in protecting all citizens and proceeded instead as if the only relevant state interest is one that varies with the subjective quality of life. The court thus implicitly denied that all lives remain under the full protection of the law. This simply cannot be reconciled with *Cruzan*. As Justice Scalia observed in his concurrence in that case,

> [t]he life of those to whom life has become a burden—of those who are hopelessly diseased or fatally wounded—nay, even the lives of criminals condemned to death, are under the protection of the law, equally as the lives of those who are in the full tide of life's enjoyment, and anxious to continue to live.

497 U.S. at 295 (Scalia, J., concurring), *quoting Blackburn v. State*, 23 Ohio St. 146, 163 (1873).

The Second Circuit's opinion also conflicts with the Michigan Supreme Court's opinion in *People v. Kevorkian*. The Michigan court there observed that:

> [the same state] interests in the sancity of life that are represented by the criminal homicide laws *are threatened by one who expresses a willingness in taking the life of another, even though the act may be accomplished with the consent, or at the request, of the suicide victim.*

447 Mich. at 488 n.68, 527 N.W.2d at 736 n.68 (emphasis supplied). Although the court then went on to

question the severity of murder prosecutions of assisted suicide, the court viewed as undeniable the existence of some legitimate government interest in protecting all citizens.[21]

The fact that most states criminalize assisted suicide supports the conclusion that government has a legitimate interest in regulating such activity. At least forty-one States, Puerto Rico, and the Virgin Islands impose criminal penalties on those who assist another to commit suicide. The relevant statutes and decisions are listed in Appendix C. As Justice Scalia observed in *Cruzan*, "American law has always accorded the State the power to prevent, by force if necessary, suicide . . . ." 497 U.S. at 293 (Scalia, J., concurring). Indeed, all fifty States have involuntary commitment statutes seeking to prevent suicide through the confinement of those who pose a danger to themselves.[22] If the States constitutionally may confine someone who poses a suicide threat, then surely the States may prevent the same person from obtaining a physician's aid in carrying out the threat.

In his concurrence below, Judge Calabresi seems to suggest that government interests fade over time and that the New York legislature needs to take "affirmative step[s] reaffirming the prohibition." Pet. App. 44a. This is, to put it mildly, a dubious basis for constitutional adjudication. In any event, New York has done precisely what Judge Calabresi asks.

New York periodically calls together a task force to discuss bio-medical issues. Convened by the Governor, it

---

[21] The New York legislature has opted to punish assisted suicide as manslaughter rather than murder. New York Penal Law § 125.15 (McKinney 1995).

[22] *People v. Kevorkian*, 447 Mich. 436, 479, 527 N.W.2d 714, 732 (1994) ("all states provide for the involuntary commitment of persons who may harm themselves as the result of mental illness, and a number of states allow the use of non-deadly force to thwart suicide attempts").

brings together legislative, legal, and ethical experts to re-examine the State's interest in various such issues. In one of its most recent sessions, the Task Force concluded that:

> [a]ssisted suicide would carry us into new terrain. . . . We believe that the practices would be profoundly dangerous for large segments of the population, especially in light of the widespread failure of American medicine to treat pain adequately or to diagnose and treat depression in many cases. The risks would extend to all individuals who are ill. They would be most severe for those whose autonomy and well-being are already compromised by poverty, lack of access to good medical care, or membership in a stigmatized social group. The risks of legalizing assisted suicide and euthanasia for these individuals . . . are likely to be extraordinary.

New York State Task Force on Life and the Law, *Life Sustaining Treatment: Making Decisions and Appointing a Health Care Agent* vii-viii (July 1987).

CONCLUSION

The petition for a writ of certiorari should be granted.

Respectfully submitted,

Pl. 1980); *In re Fiori*, 438 Pa. Super. 610, 619, 652 A.2d 1350, 1354 (1995) (en banc), *aff'd*, 673 A.2d 905 (Pa. 1996).

APPENDIX B

The state living will statutes that distinguish between withdrawal of life support and assisted suicide include the following:

Ala. Code § 22-8A-10 (1995)
Alaska Stat. § 18.12.080(f) (1995)
Ariz. Rev. Stat. Ann. § 36-3210 (1995)
Ark. Code Ann. § 20-17-210(g) (Michie 1995)
Cal. Health & Safety Code § 7191.5(g) (West 1995)
Colo. Rev. Stat. Ann. § 15-18-112(1) (West 1995)
Conn. Gen. Stat. Ann. § 19a-575 (West 1995)
Del. Code Ann. tit. 16, § 2507 (1995)
D.C. Code Ann. § 6-2430 (1995)
D.C. Code Ann. § 21-2212 (1995) (durable power of attorney for health care)
Fla. Stat. Ann. § 765.309(1) (West 1995)
Ga. Code Ann. § 31-32-9 (1995)
Ga. Code Ann. § 31-36-2 (1995) (durable power of attorney for health care)
Haw. Rev. Stat. § 327D-13 (1995)
Idaho Code § 39-161(1) (1995) (do not resuscitate orders)
Ill. Comp. Stat. ch. 755, para. 35/9(f) (Smith-Hurd 1995)
Ill. Comp. Stat. ch. 755, para. 40/50 (Smith-Hurd 1995) (durable power of attorney for health care)
Ind. Code Ann. § 16-36-4-19 (West 1995)
Ind. Code Ann. § 16-36-1-13 (West 1995) (durable power of attorney for health care)
Iowa Code Ann. § 144A.11.6 (West 1995)
Iowa Code Ann. § 144B.12.2 (West 1995) (durable power of attorney for health care)
Kan. Stat. Ann. § 65-28,109 (1995)
Ky. Rev. Stat. Ann. § 311.637 (Michie/Bobs-Merrill 1995)
La. Rev. Stat. Ann. § 1299.58.10 (West 1995)
Me. Rev. Stat. Ann. tit. 18-A, § 5-813 (West 1995)

Md. Code Ann., Health-Gen. § 5-611 (1995)
Mass. Gen. Laws Ann. ch. 201D, § 12 (West 1995) (durable power of attorney for health care)
Mich. Comp. Laws Ann. § 700.496(20) (West 1995) (durable power of attorney for health care)
Minn. Stat. Ann. § 145B.14 (West 1995)
Miss. Code Ann. § 41-41-117(2) (1993)
Mo. Ann. Stat. § 459.059(5) (Vernon 1995)
Mont. Code Ann. § 50-9-205(7) (1995)
Neb. Rev. Stat. § 20-412(7) (1995)
Nev. Rev. Stat. § 449.670(2) (1993)
N.H. Rev. Stat. Ann. § 137-H:10(II) (1995)
N.J. Stat. Ann. § 26:2H-54(e) (West 1995)
N.M. Stat. Ann. § 24-7-8 (Michie 1996)
N.Y. Pub. Health Law § 2989(3) (McKinney 1995) (durable power of attorney for health care)
N.C. Gen. Stat. § 90-320(b) (1995)
N.D. Cent. Code § 23-06.4-01 (1995)
N.D. Cent. Code § 23-06.5-01 (1995) (durable power of attorney for health care)
Ohio Rev. Code Ann. § 2133.12(d) (Baldwin 1996)
Okla. Stat. Ann. tit. 63, § 3101.12(g) (West 1995)
Or. Rev. Stat. § 127.570 (1995)
20 Pa. Cons. Stat. Ann. § 5402(b) (1995)
R.I. Gen. Laws § 23-4.11-10(f) (1955)
R.I. Gen. Laws § 23-4.10-9(f) (1995) (durable power of attorney for health care)
S.C. Code Ann. § 44-77-130 (Law. Co-op. 1993)
S.D. Codified Laws Ann. § 34-12D-20 (1996)
Tenn. Code Ann. § 32-11-110 (1995)
Tex. Health & Safety Code Ann. § 672.020 (West 1995)
Utah Code Ann. § 75-2-1118 (1995)
Vt. Stat. Ann. tit. 18, § 5260 (1995)
Va. Code Ann. § 54.1-2990 (Michie 1995)
Wash. Rev. Code Ann. § 70.122.100 (West 1995)
W. Va. Code § 16-30-10 (1995)

Wis. Stat. Ann. § 154.11(6) (West 1995)
Wyo. Stat. § 35-22-109 (1995)
Wyo. Stat. § 3-5-211 (1995) (durable power of attorney for health care).

APPENDIX C

The following thirty-seven states and territories have statutes that impose criminal penalties for assisting a suicide:

Alaska Stat. § 11.41.120(a)(2) (1995)
Ariz. Rev. Stat. Ann § 13-1103(A)(3) (1995)
Ark. Code Ann. § 5-10-104(a)(2) (Michie 1995)
Cal. Penal Code § 401 (West 1995)
Colo. Rev. Stat. § 18-3-104(1)(b) (West 1995)
Conn. Gen. Stat. Ann. § 53a-56(a)(2) (West 1995)
Del. Code Ann. tit. 11, § 645 (1995)
Fla. Stat. Ann. § 782.08 (West 1995)
Ga. Code Ann. § 16-5-5(b) (1995)
Haw. Rev. Stat. § 707-702 (1995)
Ill. Comp. Stat. ch. 720, para. 5/12-31 (Smith Hurd 1995)
Ind. Code Ann. § 35-42-1-2.5(b) (West 1995)
Iowa Code Ann. §§ 707A.2, 707A.3 (1996)
Kan. Stat. Ann. § 21-3406 (1995)
Ky. Rev. Stat. Ann. § 216.302 (Baldwin 1995)
La. Rev. Stat. Ann. § 14:32.12 (West 1995)
Me. Rev. Stat. Ann. tit. 17-A, § 204 (West 1995)
Mich. Comp. Laws Ann. § 752.1027 (West 1995)
Minn. Stat. Ann. § 609.215 (West 1995)
Miss. Code Ann. § 97-3-49 (1993)
Mo. Ann. Stat. § 565.023(1)(2) (Vernon 1995)
Mont. Code Ann. § 45-5-105 (1993)
Neb. Rev. Stat. § 28-307 (1995)
N.H. Rev. Stat. Ann. § 630:4 (1995)
N.J. Stat. Ann. § 2C:11-6 (West 1995)
N.M. Stat. Ann. § 30-2-4 (Michie 1995)
N.Y. Penal Law § 120.30 (McKinney 1995)
N.Y. Penal Law § 125.15 (McKinney 1995)
N.D. Cent. Code § 12.1-16-04 (1955)
Okla. Stat. Ann. tit. 21, § 813 (West 1995)
Or. Rev. Stat. § 163.125(b) (1995)

18 Pa. Cons. Stat. Ann. § 2505 (1995)
P.R. Laws Ann. tit. 33, § 4009 (1990)
S.D. Codified Laws Ann. § 22-16-37 (1996)
Tenn. Code Ann. § 39-13-216 (1995)
Tex. Penal Code Ann. § 22.08 (West 1995)
V.I. Code Ann. tit. 14, § 2141 (1994)
Wash. Rev. Code Ann. § 9A.36.060 (West 1995)
Wis. Stat. Ann. § 940.12(West 1995).

The following two states have negligent homicide statutes broad enough to penalize assisting a suicide: Ala. Code § 13A-6-4 (1995); and Wyo. Stat. § 6-2-107 (1995).

The following five states have case law authorizing the imposition of criminal penalties for assisting a suicide: *McMahan v. State*, 168 Ala. 70, 53 So. 89 (1910); *Commonwealth v. Bowen*, 13 Mass. 356 (1816); *State v. Willis*, 255 N.C. 473, 121 S.E.2d 854 (1961); *Blackburn v. State*, 23 Ohio St. 146 (1872); and *State v. Jones*, 86 S.C. 17, 67 S.E. 160 (1910).

NO. 95-1858

DENNIS C. VACCO, Attorney General of the State of New York; GEORGE E. PATAKI, Governor of the State of New York; and ROBERT M. MORGENTHAU, District Attorney of New York County,

Petitioners,

v.

TIMOTHY E. QUILL, M.D.; SAMUEL KLAGSBRUN, M.D.; and HOWARD A. GROSSMAN, M.D.,

Respondents.

ON PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT

RESPONDENTS' OPPOSITION TO MOTIONS TO FILE BRIEFS AMICUS CURIAE

Respondents oppose the motions for leave to file briefs amicus curiae submitted by the United States Catholic Conference, et al., the Catholic Medical Association, Agudeth Israel of America, and Seven Present and Former Commissioners of the Commission on Civil Rights and a Former Chairman of the Equal Employment Opportunity Commission on the grounds that these amici fail to meet the directives of Supreme Court Rule 37.1.

Rule 37.1 makes plain that amicus curiae briefs are appropriate only when they bring relevant matter to the attention of the Court that has not already been brought to its attention by the parties. The briefs proposed by amici do not serve this purpose and therefore burden the Court. *See id.* Accordingly, after amici advised respondents of the arguments they intended to make to the Court, respondents denied consent to amici participation at this stage of proceedings. When the consent of all parties has not been obtained at the certiorari stage, a motion for leave to file an amicus curiae brief is disfavored. Supreme Court Rule 37.2(b).

Petitioners have already addressed at length the issues briefed by amici. For instance, several amici restate petitioners' position that the decision below conflicts with other courts in a manner that warrants this Court's review. Each of the amicus briefs also repeats views fully discussed by petitioners regarding purported distinctions between alternative methods of hastening death. This redundancy is burdensome to the Court and is disfavored by the rules governing amicus participation.

The amici moving to participate at this stage of proceedings are, with a single exception, religious organizations. The questions regarding end-of-life decisions implicated in this case are clearly of interest to religious organizations; so too are questions relating to the beginning of life. However, religious teachings cannot be permitted to affect the decisions of this Court. As stated in *Planned Parenthood v. Casey*, 112 S. Ct. 2791, 2806 (1992), the Court's "obligation is to define the liberty of all, not mandate [its] own moral code."

For the foregoing reasons, respondents submit that the motions for leave to file briefs amicus curiae should be denied.

Attorneys for Respondents

Pursuant to Supreme Court Rule 15.7, Respondents submit this supplemental brief in response to the brief submitted by several states as amici curiae. *Brief of Amici Curiae States of California, et al.*[1]

I. THE AMICUS BRIEF FAILS TO MEET THE STANDARD FOR AN AMICUS SUBMITTAL

The amicus brief fails to meet the standard set forth in Supreme Court Rule 37.1, which requires that amicus briefs bring to the attention of the Court relevant matter that has not already been brought to its attention by the parties. Petitioners have already addressed at length the issues briefed by these amici. Respondents have addressed each argument in their opposition brief and will not restate these arguments here, but will simply respond to two points raised by amici.

II. AMICI'S FEDERALISM ARGUMENT IS MISGUIDED

Amici contend that the decision below offends principles of federalism. Amici Br. at 17. This argument is misguided. Where constitutional rights are infringed by state legislative action, it is the duty of the judiciary to intervene and protect such rights.[2] *See, e.g., Schweiker v. Wilson*, 450 U.S. 221, 230 (1981) (where the democratic process impinges on constitutional rights, "the judiciary then has a duty to intervene in the democratic process"); *Marshall Field & Co. v.*

---

[1] The amicus brief presents the views of less than one-third of the states. The vast majority of states do not urge that review be granted.

[2] A recent, cogent refutation of the flawed federalism argument advanced by the states is set forth in R. Dworkin's *Freedom's Law* (Harvard University Press 1996).

Clark, 143 U.S. 649, 670 (1892) (recognizing "duty of this court, from the performance of which it may not shrink, to give full effect to the provisions of the Constitution"); *Marbury v. Madison*, 5 U.S. (1 Cranch) 137 (1803).

Moreover, rather than usurping the states' role, the decision below respects the proper role of the state in regulating physician assisted dying. The Second Circuit's analysis relies on basic equal protection principles in ruling that New York, having passed legislation permitting physician assisted death in a variety of circumstances, cannot deny physician assistance in the narrow circumstances presented here. That is, having granted the right to medically assisted death to its dying citizens, New York cannot constitutionally deny some dying citizens an equivalent exercise of that right.

States that have granted and continue to grant the right to physician assistance in dying are free to, and indeed should, develop regulatory schemes addressing physician assisted death. Current state laws pertaining to living wills and health proxies begin to do just that. Far from ignoring states' autonomy in this area, the decision below explicitly acknowledges that states will continue to play an important role in regulating physician assisted dying. *Quill v. Vacco*, 80 F.3d 716, 731 (2d Cir. 1996).

States cannot reasonably claim ignorance with regard to what further regulatory schemes might be appropriate. Proposed schemes abound in both legal and medical literature. *E.g.*, Charles Baron et al., *A Model State Act to Authorize and Regulate Physician-Assisted Suicide*, 33 Harvard J. on Legis. 1 (Winter 1996); Timothy E. Quill, *Care of the Hopelessly Ill: Proposed Clinical Criteria for Physician-Assisted Suicide*, 327 N. Eng. J. Med. 1380 (1992); N.Y. A.B. 6333, 219th Leg., 2d Sess. (1995).

III. STATE POLICE POWER DOES NOT TRUMP THE EQUAL PROTECTION CLAUSE

Contrary to amici's argument, the police power of states does not trump states' obligation to remain within the bounds of the Equal Protection Clause. Here, the police power does not extend to disallowing a dignified death to an arbitrary subgroup of dying citizens.

Historically, in every case in which a state has sought to constrain equal rights and liberties of individuals, the state has defended its action as within its police power. This was true where individuals sought desegregation of schools, *Brown v. Board of Education*, 347 U.S. 483 (1954), where individuals desired access to contraceptives, *Griswold v. Connecticut*, 381 U.S. 479 (1965), where individuals of different races sought to marry, *Loving v. Virginia*, 385 U.S. 986 (1966), where women sought access to abortion services, *Roe v. Wade*, 410 U.S. 113 (1973), and where families sought to arrange the composition of their homes, *Moore v. City of East Cleveland*, 431 U.S. 494 (1977). The state's argument in support of its power to act in the context of this case is far weaker than in many of the cases where this Court has determined that the police power is not as expansive as the state urged. As the Court below recognized, the proper scope of state action is limited to reasonable regulation designed to protect legitimate state interests.

COMPLAINT FOR DECLARATORY JUDGMENT AND INJUNCTIVE RELIEF

Plaintiffs, for their complaint, allege:

PARTIES

1. Jane Doe is a mentally competent, terminally ill adult who resides in Oceanside, New York.

2. George A. Kingsley is a mentally competent, terminally ill adult who resides in New York City.

3. William A. Barth is a mentally competent, terminally ill adult who resides in New York City.

4. Howard A. Grossman, M.D., is a physician licensed in the State of New York who practices internal medicine, primarily treating patients with AIDS, in New York City. Dr. Grossman sues on his own behalf and on behalf of his mentally competent, terminally ill patients.

5. Samuel C. Klagsbrun, M.D., is a physician licensed in the State of New York who practices psychiatry in New York City and Katonah, New York. Dr. Klagsbrun sues on his own behalf and on behalf of his mentally competent, terminally ill patients.

6. Timothy E. Quill, M.D., is a physician licensed in the State of New York who practices internal medicine in Rochester, New York. Dr. Quill sues on his own behalf and on behalf of his mentally competent, terminally ill patients.

7. G. Oliver Koppell, the Attorney General of the State of New York, is the chief law enforcement officer of the State of New York and acts under color of the law in enforcing the New York Penal Law. He is sued in his official capacity and as a representative of all law enforcement officers in the State.

JURISDICTION AND VENUE

8. Plaintiffs bring this action pursuant to 42 U.S.C. § 1983 to redress the deprivation of rights guaranteed by the Fourteenth Amendment to the Constitution of the United States. Plaintiffs seek a declaratory judgment pursuant to the Federal Declaratory Judgments Act, 28 U.S.C. §§ 2201 and 2202, and appropriate injunctive relief. The jurisdiction of this Court is invoked pursuant to 42 U.S.C. § 1983 and 28 U.S.C. §§ 1331 and 1343(a)(3).

9. Venue is properly laid in the Southern District of New York pursuant to 28 U.S.C. § 1391(b).

NATURE OF THE ACTION

10. This action seeks a declaratory judgment that the portions of the New York Penal Law sections criminalizing assisted suicide are unconstitutional as applied to physicians who assist mentally competent, terminally ill adults who choose to hasten inevitable death. This action also seeks appropriate injunctive relief. The sections of the Penal Law provide, in relevant part, that it is a class C felony to intentionally aid another person to commit suicide (N.Y. Penal Law § 125.15(3)), and a class E felony to promote a suicide attempt by intentionally aiding another person to attempt suicide (N.Y. Penal Law § 120.30). By criminalizing physician assistance in these circumstances, the New York Penal Law prevents mentally competent, terminally ill adults from exercising the right to choose to hasten inevitable death and thus avoid continued suffering and a lingering, painful death. These portions of sections 125.15(3) and 120.30 deny individuals the liberty and privacy to decide what to do with their own bodies and forces them to endure pain, anguish, and loss of dignity.

FACTUAL ALLEGATIONS COMMON TO ALL CLAIMS FOR RELIEF

11. Jane Doe is a 76-year-old retired physical education instructor who is dying of thyroid cancer. Jane Doe has been advised and understands that her illness is a terminal one, that she is in the terminal phase of her disease, and that there is no chance of recovery. Jane Doe is fully aware of the ravages the disease wreaks and the prospect she faces of progressive loss of bodily function and integrity and increasing pain and suffering. Jane Doe seeks necessary medical assistance in the form of medications prescribed by her physician to be self-administered for the purpose of hastening her death. Without such assistance Jane Doe cannot hasten her death in a certain and humane manner.

12. George A. Kingsley is a 48-year-old publishing industry executive who is suffering from AIDS. Mr. Kingsley has been advised and understands that his illness is a terminal one, that he is in the terminal phase of his disease, and that there is no chance of recovery. Mr. Kingsley is fully aware of the ravages the disease wreaks and the prospect he faces of progressive loss of bodily function and integrity and increasing pain and suffering. Mr. Kingsley seeks necessary medical assistance in the form of medications prescribed by his physician to be self-administered for the purpose of hastening his death. Without such assistance Mr. Kingsley cannot hasten his death in a certain and humane manner.

13. William A. Barth is a 28-year-old former fashion editor who is suffering from AIDS. Mr. Barth has been advised and understands that his illness is a terminal one, that he is in the terminal phase of the disease, and that there is no chance for recovery. Mr. Barth is fully aware of the ravages the disease wreaks and the prospect he faces of progressive loss of bodily function and integrity and increasing pain and suffering. Mr. Barth seeks necessary medical assistance in the form of medications prescribed by his physician and a plaintiff herein, Dr. Howard A. Grossman, to be self-administered for the purpose of hastening his death. Without such assistance Mr. Barth cannot hasten his death in a certain and humane manner.

14. There are mentally competent, terminally ill adults in New York, some of whom would decide to hasten their deaths with physician assistance if such a choice were available to them.

15. In the regular course of Dr. Howard A. Grossman's medical practice, Dr. Grossman treats patients who are terminally ill and experience chronic, intractable pain and/or intolerable suffering. Also in the regular course of his medical practice, Dr. Grossman encounters mentally competent, terminally ill patients who request assistance in the voluntary self-termination of life. Under certain circumstances it would be consistent with the standards of Dr. Grossman's medical practice to assist these patients, including plaintiff William A. Barth, in their decision to hasten death through the prescription of medications. Without such medical assistance these patients cannot hasten their deaths in a certain and humane manner. Sections 125.15(3) and 120.30 of the New York Penal Law prevent Dr. Grossman from exercising his best professional judgment to prescribe medications to these patients in dosages that would enable them to act to hasten their own deaths.

16. In the regular course of Dr. Samuel C. Klagsbrun's medical practice, Dr. Klagsbrun treats patients who are terminally ill and experience chronic, intractable pain and/or intolerable suffering. Also in the regular course of his medical practice, Dr. Klagsbrun encounters mentally competent, terminally ill patients who request assistance in the voluntary self-termination of life. Under certain circumstances it would be consistent with the standards of Dr. Klagsbrun's medical practice to assist these patients in their decision to hasten death through the prescription of medications. Without such medical assistance these patients cannot hasten their deaths in

a certain and humane manner. Sections 125.15(3) and 120.30 of the New York Penal Law prevent Dr. Klagsbrun from exercising his best professional judgment to prescribe medications to these patients in dosages that would enable them to act to hasten their own deaths.

17. In the regular course of Dr. Timothy E. Quill's medical practice, Dr. Quill treats patients who are terminally ill and experience chronic, intractable pain and/or intolerable suffering. Also in the regular course of his medical practice, Dr. Quill occasionally encounters mentally competent, terminally ill patients who request assistance in the voluntary self-termination of life. Under certain circumstances it would be consistent with the standards of Dr. Quill's medical practice to assist these patients in their decision to hasten death through the prescription of medications. Without such medical assistance these patients cannot hasten their deaths in a certain and humane manner. Sections 125.15(3) and 120.30 of the New York Penal Law deter Mr. Quill from exercising his best professional judgment to prescribe medications to these patients in dosages that would enable them to act to hasten their own deaths.

CLAIMS FOR RELIEF

COUNT I

(Violations of Liberty Guaranteed
by Fourteenth Amendment)

18. Plaintiffs repeat and reallege paragraphs 1 through 17 of their Complaint.

19. The Fourteenth Amendment guarantees the liberty of mentally competent, terminally ill adults with no chance of recovery to make decisions about the end of their lives, including the right to choose to hasten inevitable death with suitable physician-prescribed drugs and thereby avoid pain

and suffering. The right to make this choice is a fundamental right and is entitled to the strongest degree of constitutional protection.

20. The Fourteenth Amendment guarantees the liberty of physicians to practice medicine consistent with their best professional judgment, including using their skills and powers to facilitate the exercise of the decision of competent, terminally ill adults to hasten inevitable death by prescribing suitable medications for the patient to self-administer for that purpose.

21. Plaintiffs have no adequate remedy at law and face imminent and irreparable loss of their rights. By reason of these violations of their constitutional rights, plaintiffs are entitled to declaratory judgment and injunctive relief against the enforcement of the relevant portions of sections 125.15(3) and 120.30 of the New York Penal Law.

COUNT II

(Violation of Equal Protection Guaranteed
by Fourteenth Amendment)

22. Plaintiffs repeat and reallege paragraphs 1 through 17 of their Complaint.

23. The Fourteenth Amendment guarantees patient-plaintiffs Jane Doe, George A. Kingsley and William A. Barth, and the mentally competent, terminally ill patients of physician-plaintiffs Timothy E. Quill, Samuel C. Klagsbrun and Howard A. Grossman, equal protection under the law of the State of New York. The relevant portions of sections 125.15(3) and 120.30 of the New York Penal Law deny the patient-plaintiffs and the patients of the physician-plaintiffs the equal protection of the law by denying them the right to choose to hasten inevitable death, while terminally ill persons whose treatment includes life support are able to exercise this choice with necessary medical assistance by directing termination of such treatment.

24. Patient-plaintiffs Jane Doe, George A. Kingsley and William A. Barth, and the mentally competent, terminally ill patients of physician-plaintiffs Timothy E. Quill, Samuel C. Klagsbrun and Howard A. Grossman, have no adequate remedy at law and face imminent and irreparable loss of their rights. By reason of these violations of their constitutional rights, patient-plaintiffs and the patients of the physician-plaintiffs are entitled to declaratory judgment and injunctive relief against the enforcement of the relevant portions of sections 125.15(3) and 120.30 of the New York Penal Law.

PRAYER FOR RELIEF

WHEREFORE, plaintiffs request that this Court grant the following relief:

(1) A declaration that the relevant portions of sections 125.15(3) and 120.30 of the New York Penal Law are invalid under the Constitution of the United States as applied to physicians who assist mentally competent, terminally ill adults who choose to hasten inevitable death, and thus violate 42 U.S.C. section 1983.

(2) An order permanently enjoining defendant, and all who act in concert with him, from enforcing the relevant portions of sections 125.15(3) and 120.30 of the New York Penal Law as applied to physicians who assist mentally competent, terminally ill adults who choose to hasten inevitable death.

(3) An award of plaintiffs' costs, expenses, and reasonable attorneys' fees pursuant to 42 U.S.C. section 1988.

(4) Such other and further relief as the Court deems just and proper.

UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF NEW YORK

---

94 Civ. 5321 (TPG)

TIMOTHY E. QUILL, M.D., *et al.*,

Plaintiffs,

—against—

G. OLIVER KOPPELL, Attorney General of the State of New York,

Defendant.

ANSWER AND AFFIRMATIVE DEFENSES

Defendant G. Oliver Koppell, by and through counsel, answers plaintiff's complaint, as follows:

1. Denies knowledge or information sufficient to form a belief as to the truth of the allegations set forth in paragraphs 1, 2, 3, 4, 5 and 6 of the complaint.

2. In response to paragraph 7 of the complaint, admits that G. Oliver Koppell is the Attorney General of the State of New York and respectfully refers the Court to Section 63 of the New York State Executive Law for a description of his duties and responsibilities.

3. Paragraph 8 of the complaint states legal conclusions to which no responsive pleading is required. The Court is

respectfully referred to the statutes cited therein for their contents.

4. Denies the allegations contained in paragraph 10 of the complaint and respectfully refers the Court to the statutes cited therein for their contents.

5. Denies knowledge or information sufficient to form a belief as to the truth of the allegations set forth in paragraphs 11, 12, 13, 14, 15, 16, and 17 of the complaint.

6. In response to paragraph 18 of the complaint, repeats and realleges his answers to paragraphs 1 through 17 of the complaint and incorporates them by reference.

7. Denies the allegations contained in paragraphs 19, 20, and 21 of the complaint.

8. In response to paragraph 22 of the complaint, repeats and realleges his answers to paragraphs 1 through 17 of the complaint and incorporates them by reference.

9. Denies the allegations contained in paragraphs 23 and 24 of the complaint.

FIRST AFFIRMATIVE DEFENSE

10. The complaint fails in whole or in part to state a claim upon which relief can be granted.

SECOND AFFIRMATIVE DEFENSE

11. This action is barred in whole or in part by the Eleventh Amendment to the United States Constitution.

12. The Court lacks jurisdiction over the subject matter.

THIRD AFFIRMATIVE DEFENSE

18. This action does not present a case or controversy under Article III of the Constitution of the United States.

FOURTH AFFIRMATIVE DEFENSE

19. The issue presented is a non-justiciable political question.

WHEREFORE, defendant respectfully demands that the Court enter judgment dismissing the complaint with prejudice.

Order to Show Cause

Upon the application of plaintiffs and the accompanying declarations of plaintiffs TIMOTHY E. QUILL, M.D., sworn to on August 26, 1994, SAMUEL C. KLAGSBRUN, M.D., sworn to on August 31, 1994, HOWARD A. GROSSMAN, M.D., sworn to on September 7, 1994, JANE DOE, sworn to on July 28, 1994, GEORGE A. KINGSLEY sworn to on September 13, 1994, WILLIAM A. BARTH, sworn to on September 1, 1994, and the affidavit of CARLA A. KERR, ESQ., sworn to on September 15, 1994, also upon the summons and complaint, and memorandum of law submitted herewith, and upon all prior pleadings and proceedings herein, it is hereby

ORDERED that defendant G. OLIVER KOPPEL show cause before this Court on the 27th day of September, 1994, at 10:00 o'clock a.m., or soon thereafter as counsel may be heard, at the United States Courthouse, Foley Square, New York, New York 10007, in Room 1506, why a preliminary injunction should not be issued pursuant to Rule 65 of the Federal Rules of Civil Procedure enjoining defendant, his officers, agents, servants, employees, attorneys, successors in office and all others acting under his authority, control, direction, permission or license, and all persons acting in concert and participation with him from enforcing New York Penal Law sections 125.15(3) and 120.30 against physicians who prescribe medications which mentally competent, terminally ill patients may use to hasten their impending deaths;

IT IS FURTHER ORDERED, that no undertaking be filed by the plaintiffs since it does not appear that any damages may be suffered or sustained by any party who is found to be wrongfully enjoined;

IT IS FURTHER ORDERED, that service of this order to show cause together with a copy of the papers submitted in support hereof upon defendant on or before September 16, 1994 at

1:00 o'clock, p.m., shall be deemed sufficient service as to defendant;

IT IS FURTHER ORDERED, that defendant shall serve, by hand, any affidavits, exhibits and/or memorandum of law in opposition upon plaintiffs attorneys on or before September 23, 1994 at 5 o'clock p.m.;

IT IS FURTHER ORDERED, that plaintiffs shall serve any reply affidavits, exhibits and/or memoranda upon defendant on or before September 26, 1994.

AFFIDAVIT OF CARLA A. KERR, ESQ. IN SUPPORT OF PLAINTIFFS' MOTION FOR A PRELIMINARY INJUNCTION

CARLA A. KERR, ESQ. declares:

1. I am associated with the law firm of Hughes Hubbard & Reed which, along with Perkins Coie, is counsel for plaintiffs Timothy E. Quill, M.D., Samuel C. Klagsbrun, M.D., Howard A. Grossman, M.D., Jane Doe, George A. Kingsley, and William A. Barth in the above-captioned action. I am duly admitted to practice before this Court and am fully familiar with the facts and circumstances surrounding this action.

2. I submit this declaration in support of plaintiffs' motion for a preliminary injunction enjoining defendant G. Oliver Koppell from enforcing New York Penal Law sections 125.15(3) and 120.30, which prohibit aiding in a suicide and aiding in a suicide attempt, against physicians who prescribe drugs that suffering, terminally ill patients request to hasten their own impending deaths.

3. Plaintiff Jane Doe was a terminally ill, competent adult who suffered from the effects of the advanced stages of cancer. She died subsequent to the commencement of this action. However, her supporting declaration accompanies this motion. Ms. Doe's signature, in her true name, has been redacted from the Court's copy of the declaration to preserve her privacy. The original signed declaration is maintained in the law offices of Hughes Hubbard & Reed. Due to the advanced stages of AIDS suffered by plaintiffs George A. Kingsley and William A. Barth at this time, we respectfully request that the Court grant the relief sought immediately.

4. Plaintiffs Timothy E. Quill, M.D., Samuel C. Klagsbrun, M.D. and Howard A. Grossman, M.D., all licensed physicians who specialize in the treatment of the terminally ill, submit

their declarations and bring this motion on behalf of themselves and their terminally ill patients.

5. The accompanying declarations of the patient plaintiffs evidence the pain and suffering that plaintiffs are forced to endure prior to their deaths because of enforcement of the subject Penal Law provisions. Additionally, the declarations of the physician plaintiffs reflect both their inability to fulfill their professional responsibilities as a result of the Penal Law as well as the suffering of their patients whose interests they assert herein.

6. New York Penal Law section 125.15 provides in pertinent part:

> A person is guilty of manslaughter in the second degree when:
>
> . . .
>
> 3) He intentionally . . . aids another person to commit suicide.
>
> Manslaughter in the second degree is a class C felony.

7. New York Penal Law section 120.30 provides in pertinent part:

> A person is guilty of promoting a suicide attempt when he intentionally . . . aids another person to attempt suicide.
>
> Promoting a suicide attempt is E felony.

The Penal Law does not criminalize suicide or the attempt to commit suicide, and suicide is not defined by statute.

8. As fully set forth in the accompanying memorandum of law in support of plaintiffs' motion, Penal Law sections 125.15(3) and 120.30 are unconstitutional as applied to physician assistance in dying because the sections intrude upon an individual's fundamental rights to liberty and equal protection which are guaranteed by the Fourteenth Amendment. The

Court in *Planned Parenthood v. Casey*, 112 S. Ct. 2791, 2807 (1992), found that the Constitution affords protection to "personal decisions relating to marriage, procreation, contraception, family relationships, child rearing, and education" because they are among the matters "fundamentally affecting a person." Likewise, in *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 241, 278 (1990), the Court stated that "a State's interest in the protection of life falls short of justifying any plenary override of individual liberty claims." The Court in *Cruzan* also acknowledged that "a competent person has a constitutionally protected liberty interest in refusing unwanted medical treatment" and in that manner causing his or her own death. *Id.* at 278, 267-68. Thus, the Constitution, supported by the interpretations of the Supreme Court, protects the decision of a mentally competent, terminally ill adult to hasten death with physician assistance. Defendants therefore, must be enjoined from enforcing the subject Penal Law provisions against plaintiffs George Kingsley's and William A. Barth's personal decisions as to whether to hasten their inevitable deaths.

9. The subject sections of the Penal Law also violate the Equal Protection Clause because the sections criminalize the same conduct sanctioned by New York statutory and common law. New York permits individuals, through health care agencies and proxies established while competent, to make all personal health care decisions in the event of incapacity. As fully briefed in plaintiffs' accompanying memorandum of law, relevant case law supports an individual's right to refuse medical treatment, thereby hastening death. This right is considered a "fundamental common-law right" that is "coextensive with the patient's liberty interest protected by the due process clause of our state Constitution." *Rivers v. Katz*, 67 N.Y.2d 485, 493, 504 N.Y.2d 74, 495 N.E.2d 337 (1986). Thus, the Penal Law sections which criminalize physician-assisted hastening of death for the terminally ill prevent one group from receiving the very same protection afforded another group of similarly-situated individuals.

10. The irreparable harm suffered by plaintiffs is clear. The terminally ill plaintiffs have suffered, and in the cases of plaintiffs Kingsley and Barth continue to suffer, both physically and emotionally as outlined in their supporting declarations. Unless this Court issues an injunction, Mr. Kingsley's and Mr. Barth's suffering will increase until they eventually succumb to their disease and the physician plaintiffs will be forced to violate their professional obligations or be subject to criminal prosecution. Likewise absent this issuance of an injunction, the terminally ill patients, on whose behalfs the physician plaintiffs bring this action, will also be prevented from exercising their constitutionally protected right.

11. For the aforementioned reasons, and as discussed in plaintiffs' supporting memorandum of law, plaintiffs have a likelihood of success on the merits.

12. Plaintiffs have no adequate remedy at law.

13. No prior application has been made for the relief requested herein.

DECLARATION OF TIMOTHY E. QUILL, M.D.

Timothy E. Quill, M.D. declares:

1. I am a plaintiff in this matter, am competent to testify and do so of my own personal knowledge.

2. I am a medical doctor specializing in General Internal Medicine and am a Primary Care Internist. I am licensed to practice medicine in the State of New York.

3. I received my medical education at the University of Rochester School of Medicine, graduating in 1976.

4. From 1976 through 1979, I served a residency in Primary Care Internal Medicine with the University of Rochester.

5. I then served a two-year Medical Psychiatric Liaison Fellowship at the University of Rochester School of Medicine.

6. In the 1980–1981 academic year, I served as Senior Instructor in Medicine and Psychiatry at the University of Rochester School of Medicine.

7. From 1981 through 1988, I served as Clinical Assistant Professor of Medicine and Psychiatry at the University of Rochester School of Medicine; in 1982 I received the Clinical Faculty Teaching Award of the Associated Hospitals Program; in 1984 I was the recipient of the Frederick W. Anderson Teaching Award of the Genesee Hospital.

8. From 1981 through 1988, I served as the Medical Director of the Genesee Region Home Care Home Hospice Program.

9. From 1988 through 1989, I served as Assistant Professor of Medicine and Psychiatry at the University of Rochester School of Medicine.

10. From 1990 through 1993, I served as an Associate Professor in Medicine and Psychiatry.

11. In 1994 I was promoted to Professor of Medicine and Psychiatry.

12. From 1989 to the present, I have served as Associate Chief of Medicine at the Genesee Hospital in Rochester, New York. I am also the Director of the Program for Biopsychosocial Studies at the University of Rochester and the Director of a Fellowship in Advanced Biopsychosocial Studies.

13. I am Board Certified by the American Board of Internal Medicine; I am a Fellow of the American College of Physicians; I am a member of Alpha Omega Alpha Society; I am a Diplomat of the National Board of Medical Examiners; I am a member of the Society of General Internal Medicine; I am a member of the Steering Committee, and a senior facilitator for the American Academy on Physician and Patient.

14. I have frequently served as a lecturer, visiting professor, seminar leader, workshop organizer and group facilitator on the subjects of medical interviewing, doctor-patient relationship, psychosomatic medicine and end of life decision making at medical schools, universities, colleges and public forums.

15. I have authored numerous articles, book chapters, and a book on the subjects outlined above, with a recent focus on end-of-life decision making. My full curriculum vitae is attached hereto as Exhibit A.

16. As a Primary Care Internist I treat patients with a wide variety of medical conditions. Some of these conditions include terminal illnesses such as metastatic cancer, AIDS, and end-stage pulmonary disease. As the primary care physician for a patient suffering from any terminal illness, I maintain a trusting relationship with such a patient even though that patient may also be seeing a specialist. I am committed to working with my patients to the end of their lives, no matter what course their illness takes.

17. Patients dying of cancer, AIDS, end-stage pulmonary disease and other terminal illnesses can sometimes experience a steady deterioration of functional ability, intractable pain, fatigue, other unrelievable physical symptoms (nausea, vomiting, shortness of breath, foul-smelling wounds) and mental anguish.

18. At a certain point in the progression of these illnesses there are no further curative treatment options that have a reasonable chance of success. The main goal of treatment under these circumstances is to treat complications, relieve symptoms and maintain personal integrity until death inevitably comes.

19. When effective disease controlling or curing treatments are not available, a variety of care options to maximize the patients' well-being and comfort are available, often under the auspices of a hospice program. I was a hospice medical director for eight years, and believe wholeheartedly in the efficacy and appropriateness of hospice methods and philosophy as the standard of care for dying patients.

20. However, at a certain point in the course of these progressive, terminal diseases, some patients are not able to be kept comfortable while maintaining a clear consciousness; the amount of pain medication necessary to resolve their pain causes loss of mental alertness and sometimes consciousness. Thus, some patients face the choice of enduring intractable pain or surrendering an alert mental state. Many patients will choose one or the other of these options; however some patients do not want to end their ways either wracked with pain or in a drug-induced stupor.

21. Furthermore, other terminally ill patients develop unrelievable physical symptoms such as intractable nausea and vomiting, shortness of breath, foul-smelling wounds and other symptoms. Sometimes these symptoms are also unrelievable short of being sedated to unconsciousness, which some patients find unacceptable.

22. For some terminally ill patients, concerns regarding physical symptoms are secondary to their mental anguish over their helplessness, and loss of independence, physical integrity, dignity and autonomy. Some patients feel as if they are disintegrating as a person, and wish for death as the only way to preserve their integrity.

23. I occasionally encounter mentally competent, terminally ill patients who understand their condition, diagnosis, and prognosis and wish to avoid prolonged suffering by hastening their deaths. These patients either lack any means to hasten their deaths or have access only to methods that have significant risk of failure and increased anguish and pain.

24. It is my professional judgment that the decision of such a patient to shorten the period of suffering before inevitable death can be rational, and on rare occasion my professional obligation to relieve suffering would dictate that I assist such a patient in hastening his or her death when palliative care becomes ineffective or unacceptable if the patient so chooses.

25. Under the statutes prohibiting assisted suicide, my fulfillment of this professional responsibility exposes, and has in the past exposed, me to criminal investigation and/or prosecution. These statutes deter me from treating these patients as I believe I should and deprive my patients of their freedom to choose this type of medical care.

26. I recently had an experience where, in my professional judgment, a terminally ill patient of mine who intentionally chose to hasten her death was making a fully informed, rational decision and my professional responsibility required that I provide medical advice and assistance:

a. In 1990 a patient who had been in my care for 8 years developed acute leukemia. Instead of choosing aggressive medical intervention (chemotherapy, total body irradiation, and bone marrow transplantation) with only a 25 percent chance of cure and multiple, severe adverse side effects, "Diane" chose to spend the time

that she had remaining at home with her family and friends. After ensuring that she was fully informed about what she was giving up, she was offered hospice care to make the most of her remaining life and to ensure that she was kept as comfortable and symptom free as possible. While "Diane" appreciated the benefits of hospice, she feared a lingering death. She wanted to live until her suffering became intolerable, and then she wanted to die as quickly and painlessly as possible. She made it clear that she would act on her own to hasten her death when that point was reached if I refused to assist her in dying and that she would be preoccupied about how to achieve this until she had a fail-safe way out.

b. After extensive discussions with "Diane" and her family, it was my medical judgment that she was making a rational decision to forego treatment and that her desire to hasten her death at the point at which her suffering became intolerable also was rational. I believed "Diane" needed to know that physician-assisted death would be available in order to enjoy her remaining time with her family and friends. I therefore made barbiturates available to "Diane" which she could use to enable sleep, but which she could also take to end her life if all other avenues to relieve her suffering had been exhausted. She agreed to meet with me prior to taking an overdose to ensure that all alternatives had been considered.

c. "Diane" lived for three months after receiving the prescription, in a formal home hospice program. She enjoyed high quality time with her family, and took several life-prolonging treatments such as transfusions and antibiotics. Eventually, "Diane" began to experience such severe pain that she had to make moment-to-moment choices between enduring severe pain or being sedated. She also had fevers indicative of severe infection that were not responding to antibiotics. It was clear that her life expectancy ranged from hours to at most a

week, and that during this time she would experience suffering, anguish and loss of dignity. After meeting with me to ensure that all alternatives had been explored, she took the barbiturates in an overdose and died. She did so alone because she had researched the law in the State of New York, and found that anyone who was with her might be vulnerable to prosecution.

d. In an effort to stimulate discussion about these issues, I subsequently described these events in an article published in the *New England Journal of Medicine*. A copy of this article is attached hereto as Exhibit B. A very public criminal investigation ensued. "Diane's" body, which she had donated to medical science, was subjected to an unwanted autopsy confirming the overdose. A Grand Jury was impaneled to consider whether I should be prosecuted under the New York statute prohibiting assisted suicide. I testified before the Grand Jury, along with "Diane's" spouse and several medical colleagues. The Grand Jury decided against prosecution.

27. I make a commitment to my terminally ill patients that I will not abandon them no matter what happens in the course of their illness. On occasion patients reach a point where their suffering is intolerable and unrelievable and they seek to hasten death. Though relatively few patients actually reach the point where they would act to hasten death, many of my patients fear reaching that point and seek reassurance that I will assist them in dying if they do.

28. I believe that the commitment to help dying patients achieve an end that is acceptable to them is a fundamental professional responsibility for physicians who are committed to the humane care of the dying. I also believe that we have a medical responsibility to respond to those terminally ill patients who reach a point where they are experiencing intolerable suffering that can only be relieved by their deaths. For most patients, hospice care is effective and physician-assisted

death is a reassuring possibility that never has to be acted upon. But for a relatively few dying patients, who suffer intolerably in spite of extensive efforts at palliation, assistance in dying is a welcome alternative to further suffering.

29. Although I was not successfully prosecuted under the New York statutes prohibiting assisted suicide, the fear of having to go through such an ordeal in the future deters me from responding to requests for assistance in dying that I would otherwise deem part of my professional responsibilities.

I declare under penalty of perjury that the foregoing is true and correct.

Dated: August 26, 1994
New York, New York

TIMOTHY E. QUILL, M.D.

TIMOTHY E. QUILL, M.D.

CURRICULUM VITAE

CURRENT APPOINTMENTS:

Associate Chief of Medicine
The Genesee Hospital, Rochester NY

Professor of Medicine and Psychiatry
University of Rochester School of Medicine and Dentistry

Director, Program for Biopsychosocial Studies

Primary Care Internist

EDUCATIONAL BACKGROUND:

Amherst College, Amherst, Mass.	B.A.	1971
University of Rochester School of Medicine and Dentistry	M.D.	1976
Residency in the Associated Hospitals Program, University of Rochester	R1, R2, R3 Internal Medicine	1976–1979
Fellowship, University of Rochester School of Medicine	Medical Psychiatric Liaison Fellowship	1979-1981

PREVIOUS FACULTY APPOINTMENTS:

Senior Instructor in Medicine and Psychiatry	Univ. of Rochester School of Medicine	1980–81
Clinical Assistant Professor of Medicine and Psychiatry	Univ. of Rochester School of Medicine	1981–88

Assistant Professor of Medicine and Psychiatry	Univ. of Rochester	1988–89
Associate Professor of Medicine and Psychiatry	Univ. of Rochester	1989–94
Professor of Medicine and Psychiatry	Univ. of Rochester	7/94–present

PROFESSIONAL AFFILIATIONS:

American Board of Internal Medicine, Board Certified in 1979
American College of Physicians (Fellow 1986)
Alpha Omega Alpha
National Board of Medical Examiners (Diplomat)
Society of General Internal Medicine
American Academy on Physician and Patient

ACADEMIC AWARDS:

Benjamin Rush Prize for distinguished scholarship and outstanding skills in psychiatry demonstrated while undergraduate medical student, 1976

Graduation speaker to the University of Rochester Medical School Class of 1976

Clinical Faculty Teaching Award, Associated Hospitals Program, 1982

The Frederick W. Anderson Teaching Award, The Genesee Hospital, 1984

LECTURESHIPS AND VISITING PROFESSORSHIPS:

Faculty for SREPCIM Faculty Development Course on the Medical Interview and related skills, Springfield, Mass. —1985

Faculty for National Faculty Development Course on Medical Interviewing, doctor-patient relationships, and communication dynamics. Portland, Oregon, 1987

Faculty at New England SREPCIM Workshop on Medical Interviewing, University of Massachusetts Medical Center—1987

Faculty for regional Faculty Development course on the Medical Interview and Related Skills, Portland, Oregon, 1986

Visiting Professor at the University of North Carolina at Chapel Hill, General Medical Unit, 1987

Visiting Professor at Worcester Memorial Hospital, Worcester, Mass., 1988 Faculty for national Faculty Development Course on Medical Interview and related skills, Brigham and Women's Hospital, Boston, Mass. 1988.

Faculty, Faculty Development Course on Teaching Medical Interviewing and Related Skills, Ben Gurion University Medical School, Israel, 1989.

Workshop Leader, National ACP Meeting, Panic Attacks and Other Anxiety disorders: Recognition and Treatment in Primary Care Practice, San Francisco, CA 4/89

Workshop Leader, National SGIM Meeting, Panic Attacks and Other Anxiety Disorders: Recognition and Treatment in Primary Care, Arlington, VA 4/89.

Faculty, Faculty Development course on the Medical Interview, Univ. of Massachusetts, Worcester, MA 9/89.

Visiting Lecturer on "Anxiety" at Mary McFarland Hospital, Albany Medical College, 12/89

Visiting Professor, Department of Medicine, Oregon Health Sciences University School of Medicine, Portland, Oregon, 2/90.

Workshop leader, "Anxiety Disorders in Primary Care" Symposium, University of Oklahoma College of Medicine, Tulsa, OK, 1/90.

Visiting Professor in the Department of Medicine, Oregon Health Sciences University, Portland, Oregon 2/90.

Faculty, Facilitator Training Course, Tulsa University, Oklahoma City, OK 9/90.

Faculty, Teaching Interviewing Skills Faculty Development Course, University of Oklahoma, Oklahoma City, OK 9/90.

Faculty, SGIM Faculty Development course on Teaching Medical Interviewing, University of Rochester, NY 6/91.

Faculty, AIDS for Primary Care Givers Faculty course, NYU Medical Center, 3/91.

Visiting Professor, Department of Medicine, Yale University, 11/91.

Visiting Lecturer on "Death, Dignity and Individualized Decision Making at Amherst College, Amherst, Mass. 12/91.

Visiting Lecturer on "Negotiating Death: How far should we go?" at Ethics Symposium at the University of Pennsylvania and the VA Medical Center, Philadelphia, PA. 5/92.

Visiting Lecturer on "Comfort Care of the Dying: Potentials and Limitations", Community Hospital of Lancaster, 1/93.

Visiting Professor at Emory University, Department of Psychiatry, Atlanta, Georgia, 2/93.

Visiting Lecturer on "Physician-Assisted Dying: Clinical and Legal Implications" Allegheny Hospital, University of Pittsburgh, 3/93.

Visiting Lecturer on "Physician-Assisted Dying", University of Virginia, Charlottesville, VA, 4/93.

Visiting Professor, New York University Medical Center, NYC, 5/93.

Visiting Lecturer at Medical Ethics Conference, LDS Hospital, University of Utah School of Medicine, Salt Lake City, Utah, 6/93.

Visiting Lecturer on Death and Dignity, Alfred University, Alfred, NY, 9/93.

Visiting Lecturer at Albany Law School, Albany, New York, 11/93

Visiting Lecturer at Cleveland Academy of Medicine, Cleveland, OH, 11/93

Visiting Lecturer at Colorado Springs Osteopathic Foundation, Colorado Springs, Colorado, 11/93.

Visiting Lecturer, North Memorial Med. Center, Robbinsdale, Minnesota, 12/93.

Visiting Lecturer, Rush University, Chicago, Illinois, 12/93.

Visiting Lecturer, Highland Park Hospital, Highland Park, Illinois, 12/93.
Visiting Lecturer, City of Hope Medical Center, Duarte, California, 2/94.
Visiting Lecturer, St. Barnabas Hospital/Cornell Med. Center, Bronx, NY, 2/94.
Visiting Lecturer, Jefferson County Med. Society, Louisville, Kentucky, 3/94.
Visiting Lecturer, St. John Fisher College, Rochester, NY, 4/94.
Visiting Lecturer, St. Luke's/Cook County Hospital, Chicago, Illinois, 5/94.
Visiting Lecturer, Garrett Theological Seminary, Evanston, Illinois, 5/94.

ADMINISTRATIVE ACTIVITIES:

Associate Chief of Medicine, The Genesee Hospital. 3/88–present
Head, Internal Medicine Division, The Genesee Hospital. 1980–present
Director, Fellowship in Advanced Biopsychosocial Studies (1984–present)
Chairman, CPR Committee, The Genesee Hospital
Member, Physician Assistant Committee, The Genesee Hospital

CONSULTANTSHIPS, BOARD MEMBERSHIPS, ADVISORY POSITIONS, SPECIAL ASSIGNMENTS:

Faculty at national and numerous regional and local Faculty Development Courses on the medical interview and related skills sponsored by the Society of General Internal Medicine.
Executive Committee member, American Academy on Physician and Patient, formerly the Task Force on Doctor and Patient of SGIM, 1985 to present.
Medical Director of Hospice Program, Genesee Region Home Care Association. 1984–88

Manuscript Reviewer for *Annals of Internal Medicine*, *Archives of Internal Medicine*, *Journal of the American Medical Association*, and *Journal of General Internal Medicine*.
Development and implementation of a model resuscitation policy at The Genesee Hospital.
Advisory Panel member, American Psychiatric Association's Panic Disorder Committee, 1989.
New York State Primary Care Advisory Panel, 1989
New York State Advisory Panel on Do-Not-Resuscitate, 1990.
Member, Professional Advisory Board, Death with Dignity Education Center, 1994.
Advisor, Task Force on Suicide and Assisted Dying of the American Association of Suicidology, 1994.
Member, Advisory Council, Choice in Dying, Inc. 1993–present

PRESENTATIONS AT MAJOR NATIONAL MEETINGS:

Presentation at SREPCIM Meeting on "Health-Care Seeking by Men During Their Spouse's Pregnancy", Washington DC. 1982
Presentation at SREPCIM Meeting on Medical Interviewing, Springfield, Mass. 1985.
Presentation at SREPCIM Meeting on Somatization, Washington, DC. 1985
Presentation at ABSAME Meeting on Somatization, Chevy Chase, MD. 1985
Presentation at the American Psychosomatic Society Annual Meeting on SREPCIM's approach to teaching about psychosocial aspects of care. Phila., PA. 1987
Presentation at ACP Workshop Improving Clinical Teaching, Cooperstown NY 1987
Presentation at ACP Workshop on Patient Activation, NY, NY. 1988
Presentation on "Diagnosis of Anxiety Disorders", Anxiety Awareness Board Boston, MA 9/88.

Presentation at Anxiety Disorders in Primary Care Symposium on "Assessing the Anxious Patient", Phoenix, AZ 11/88

Presentation on Somatization Disorder to the Canadian Royal College of Physicians, Edmonton, Canada 2/89.

Presentation at National ACP and SGIM Meetings, Panic Attacks & Anxiety Disorders: Recognition & Treatment in Primary Care, Washington, DC 1989.

Presentation at national ACP and SGIM Meetings, Panic Attacks and Other Anxiety Disorders, Chicago and Washington, D.C., respectively, April/May 1990.

Presentation at National SGIM Meeting on Delivering the Bad News. Washington, D.C., 5/90.

Presentation at American Academy of Emergency Physicians' Annual Meeting on Panic Disorder, San Francisco, CA, 9/90.

Presentation at National ACP and SGIM Meetings, Anxiety Disorders and Panic Attacks, New Orleans and Seattle, respectively, April/May 1991.

Presentation on "Panic Disorders" at American College of Emergency Physicians Annual Meeting, Boston, MA 10/91.

Presentation on "Physician-Assisted Dying: Progress or Peril" at the American Society for Law and Medicine Meeting, Chicago, IL. 4/92.

Presentation and workshop coordinator at National ACP Meeting on Biopsychosocial Problems in Primary Care, Washington, DC 5/92.

Presentation at National SGIM Meeting on Aid in Dying and Delivering Bad News. Washington, DC 5/92.

Presentation on "Debate on Active Euthanasia" at National APA Meeting, Washington, DC 5/92.

Presentation on "Assisted Suicide—Moral and Medical Implications" at the Washington National Cathedral, Washington, DC 5/92.

Keynote speaker at Symposium on Patient-Professional Communication and Ethical Issues in the 1900's, Oregon Health Sciences University, Center for Ethics in Health Care, 9/92.

Presentation at Conference on "Care of the Dying Patient", Midwest Bioethics Center, Kansas City, Missouri, 10/92.

Presentation at 1992 Annual Meeting of the American Society of Law and Medicine on "Working with Dying Patients", Boston, MA 2/92.

Presentation at Managing Mortality Conference, Center for Biomedical Ethics, Minneapolis, Minnesota, 12/92.

Presentation at AMA Leadership Conference on "Physician-Assisted Suicide", Atlanta, Georgia, 2/93.

Visiting Lecturer at Massachusetts Medical Society Symposium on Physician Assisted Suicide, Boston, MA, 10/93.

Visiting Lecturer at ACP Regional Meeting, Cape Cod, MA, 10/93.

Visiting Lecturer, American Assoc. of Suicidology, New York, NY, 4/94.

FILMS:

Protagonist for the American College of Physicians' Health Scope Series film entitled "Stress and Illness" 1985-86.

Advisory Board for Television program filming of "Living Well" produced by Vision Associates, NY, NY. (On PBS 1990)

Advisor and Participant in an American Academy of Family Physician and Upjohn Company CME videotape and monograph on "The Diagnosis and Treatment of Anxiety Disorders." (1991)

American Medical Association Documentary on "Medical Ethics", 1992

SOUNDING BOARD

DEATH AND DIGNITY
A Case of Individualized Decision Making

Reprinted from the *New England Journal of Medicine*
March 7, 1991

DIANE was feeling tired and had a rash. A common scenario, though there was something subliminally worrisome that prompted me to check her blood count. Her hematocrit was 22, and the white-cell count was 4.3 with some metamyelocytes and unusual white cells. I wanted it to be viral, trying to deny what was staring me in the face. Perhaps in a repeated count it would disappear. I called Diane and told her it might be more serious than I had initially thought—that the test needed to be repeated and that if she felt worse, we might have to move quickly. When she pressed for the possibilities, I reluctantly opened the door to leukemia. Hearing the word seemed to make it exist. "Oh, shit!" she said. "Don't tell me that." Oh, shit! I thought, I wish I didn't have to.

Diane was no ordinary person (although no one I have ever come to know has been really ordinary). She was raised in an alcoholic family and had felt alone for much of her life. She had vaginal cancer as a young woman. Through much of her adult life, she had struggled with depression and her own alcoholism. I had come to know, respect, and admire her over the previous eight years as she confronted these problems and gradually overcame them. She was an incredibly clear, at times brutally honest, thinker and communicator. As she took control of her life, she developed a strong sense or independence and confidence. In the previous $3^{1}/_{2}$ years, her hard work had paid off. She was completely abstinent from alcohol, she had established much deeper connections with her husband, college-age son, and several friends, and her business and her artistic work were blossoming. She felt she was really living fully for the first time.

Not surprisingly the repealed blood count was abnormal, and detailed examination of the peripheral blood smear showed myelocytes. I advised her to come into the hospital, explaining that we needed to do a bone marrow biopsy and make some decisions relatively rapidly. She came to the hospital knowing what we would find. She was terrified, angry, and sad. Although we knew the odds, we both clung to the thread of possibility that it might be something else.

The bone marrow confirmed the worst: acute myelomonocytic leukemia. In the face of this tragedy, we looked for signs of hope. This is an area of medicine in which technological intervention has been successful, with cures 25 percent of the time—long-term cures. As I probed the costs of these cures, I heard about induction chemotherapy (three weeks in the hospital prolonged neutropenia, probable infectious complications, and hair loss; 75 percent or patients respond, 25 percent do not). For the survivors, this is followed by consolidation chemotherapy (with similar side effects; another 25 percent die for a net survival of 50 percent). Those still alive, to have a reasonable chance or long-term survival, then need bone marrow transplantation (hospitalization for two months and whole-body irradiation, with complete killing of the bone marrow, infectious complications, and the possibility for graft-versus-host disease—with a survival of approximately 50 percent, or 25 percent or the original group). Though hematologists may argue over the exact percentages, they don't argue about the outcome of no treatment—certain death in days, weeks, or at most a few months.

Believing that delay was dangerous, our oncologist broke the news to Diane and began making plans to insert a Hickman catheter and begin induction chemotherapy that afternoon. When I saw her shortly thereafter, she was enraged at his presumption that she would want treatment, and devastated by the finality of the diagnosis. All she wanted to do was go home and be with her family. She had no further questions about treatment and in fact had decided that she wanted none. Together we lamented her tragedy and the unfairness of

life. Before she left, I felt the need to be sure that she and her husband understood that there was some risk in delay, that the problem was not going to go away, and that we needed to keep considering the options over the next several days. We agreed to meet in two days.

She returned in two days with her husband and son. They had talked extensively about the problem and the options. She remained very clear about her wish not to undergo chemotherapy and to live whatever time she had left outside the hospital. As we explored her thinking further, it became clear that she was convinced she would die during the period of treatment and would suffer unspeakably in the process (from hospitalization, from lack or control over her body, from the side effects of chemotherapy, and from pain and anguish). Although I could offer support and my best effort to minimize her suffering if she chose treatment, there was no way I could say any or this would not occur. In fact, the last four patients with acute leukemia at our hospital had died very painful deaths in the hospital during various stages of treatment (a fact I did not share with her). Her family wished she would choose treatment but sadly accepted her decision. She articulated very clearly that it was she who would be experiencing all the side effects or treatment and that odds or 25 percent were not good enough for her to undergo so toxic a course of therapy, given her expectations of chemotherapy and hospitalization and the absence of a closely matched bone marrow donor. I had her repeat her understanding of the treatment, the odds, and what to expect if there were no treatment. I clarified a few misunderstandings but she had a remarkable grasp of the options and implications.

I have been a longtime advocate of active informed patient choice of treatment or nontreatment, and of a patient's right to die with as much control and dignity as possible. Yet there was something about her giving up a 25 percent chance or long-term survival in favor of almost certain death that disturbed me. I had seen Diane fight and use her considerable inner resources to overcome alcoholism and depression, and

I half expected her to change her mind over the next week. Since the window of time in which effective treatment can be initiated is rather narrow, we met seven times that week. We obtained a second hematology consultation and talked at length about the meaning and implications of treatment and nontreatment. She talked to a psychologist she had seen in the past. I gradually understood the decision from her perspective and became convinced that it was the right decision for her. We arranged for home hospice care (although at that time Diane felt reasonably well, was active, and looked healthy), left the door open for her to change her mind, and tried to anticipate how to keep her comfortable in the time she had left.

Just as I was adjusting to her decision, she opened up another area that would stretch me profoundly. It was extraordinarily important to Diane to maintain in control of herself and her own dignity during the time remaining to her. When this was no longer possible, she clearly wanted to die. As a former director of a hospice program, I know how to use pain medicines to keep patients comfortable and lessen suffering. I explained the philosophy of comfort care, which I strongly believe in. Although Diane understood and appreciated this, she had known of people lingering in what was called relative comfort and she wanted no part of it. When the time came, she wanted to take her life in the least painful way possible. Knowing of her desire for independence and her decision to stay in control, I thought this request made perfect sense. I acknowledged and explored this wish but also thought that it was out of the realm of currently accepted medical practice and that it was more than I could offer or promise. In our discussion, it became clear that preoccupation with her fear of a lingering death would interfere with Diane's getting the most out of the time she had left until she found a safe way to ensure her death. I feared the effects of a violent death on her family, the consequences of an ineffective suicide that would leave her lingering in precisely the state she dreaded so much, and the possibility that a family member would be forced to

assist her, with all the legal and personal repercussions that would follow. She discussed this at length with her family. They believed that they should respect her choice. With this in mind, I told Diane that information was available from the Hemlock Society that might be helpful to her.

A week later she phoned me with a request for barbiturates for sleep. Since I knew that this was an essential ingredient in a Hemlock Society suicide, I asked her to come to the office to talk things over. She was more than willing to protect me by participating in a superficial conversation about her insomnia, but it was important to me to know how she planned to use the drugs and to be sure that she was not in despair or overwhelmed in a way that might color her judgment. In our discussion, it was apparent that she was having trouble sleeping, but it was also evident that the security of having enough barbiturates available to commit suicide when and if the time came would leave her secure enough to live fully and concentrate on the present. It was clear that she was not despondent and that in fact she was making deep, personal connections with her family and close friends. I made sure that she knew how to use the barbiturates for sleep, and also that she knew the amount needed to commit suicide. We agreed to meet regularly, and she promised to meet with me before taking her life, to ensure that all other avenues had been exhausted. I wrote the prescription with an uneasy feeling about the boundaries I was exploring—spiritual, legal, professional, and personal. Yet I also felt strongly that I was setting her free to get the most out of the time she had left, and to maintain dignity and control on her own terms until her death.

The next several months were very intense and important for Diane. Her son stayed home from college, and they were able to be with one another and say much that had not been said earlier. Her husband did his work at home so that he and Diane could spend more time together. She spent time with her closest friends. I had her come into the hospital for a conference with our residents, at which she illustrated in a most

profound and personal way the importance of informed decision making, the right to refuse treatment, and the extraordinary personal effects of illness and interaction with the medical system. There were emotional and physical hardships as well. She had periods or intense sadness and anger. Several times she became very weak, but she received transfusions as an outpatient and responded with marked improvement of symptoms. She had two serious infections that responded surprisingly well to empirical courses of oral antibiotics. After three tumultuous months, there were two weeks of relative calm and well-being, and fantasies of a miracle began to surface.

Unfortunately, we had no miracle. Bone pain, weakness, fatigue, and fevers began to dominate her life. Although the hospice workers, family members, and I tried our best to minimize the suffering and promote comfort, it was clear that the end was approaching. Diane's immediate future held what she feared the most—increasing discomfort, dependence, and hard choices between pain and sedation. She called up her closest friends and asked them to come over to say goodbye, telling them that she would be leaving soon. As we had agreed, she let me know as well. When we met it was clear that she knew what she was doing, that she was sad and frightened to be leaving, but that she would be even more terrified to stay and suffer. In our tearful goodbye, she promised a reunion in the future at her favorite spot on the edge of Lake Geneva with dragons swimming in the sunset.

Two days later her husband called to say that Diane had died. She had said her final goodbyes to her husband and son that morning and asked them to leave her alone for an hour. After an hour which must have seemed an eternity, they found her on the couch, lying very still and covered by her favorite shawl. There was no sign of struggle. She seemed to be at peace. They asked me for advice about how to proceed. When I arrived at their house, Diane indeed seemed peaceful. Her husband and son were quiet. We talked about what a remarkable person she had been. They seemed to have no doubts

about the course she had chosen or about their cooperation, although the unfairness of her illness and the finality or her death were overwhelming to us all.

DECLARATION OF SAMUEL C. KLAGSBRUN, M.D.

Samuel C. Klagsbrun, M.D. declares:

1. I am a plaintiff in this matter, am competent to testify and do so of my own personal knowledge.

2. I am a medical doctor specializing psychiatry and I am licensed to practice medicine in the State of New York.

3. I received my medical education at the Chicago Medical School, graduating in 1962.

4. I then completed an internship at the Michael Reese Hospital in Chicago in 1963, where I received the Intern of The Year award.

5. From 1963 through 1966, I served a psychiatric residency at the Yale New Haven Hospital in New Haven, Connecticut.

6. From 1966 through 1968, I was Chief of Psychiatry at the New London Submarine Base in New London, Connecticut. During this time I also served as a Staff Psychiatrist at the New London Child Guidance Clinic and was a Clinical Instructor in Psychiatry at Yale Medical School.

7. In 1968 I began a private practice in New York City. Between 1968 and 1974 I also served in various capacities at St. Luke's Hospital in New York, New York including as Director of the Psychiatric Day Hospital (1969-71) and Director of Psychiatric Consultation Service (1971-74).

8. From 1971 thorough 1988, I served as Associate Clinical Professor in Psychiatry at the Columbia University College of Physicians and Surgeons in New York City. From 1988 to the present, I have served as a Lecturer at Columbia.

9. From 1977 to the present, I have served as Executive Medical Director at the Four Winds Hospitals located in Katonah, New York and Saratoga Springs, New York.

10. From 1975 to the present, I have been a Senior Advisor at St. Christopher's Hospice, London, England.

11. I am a member of the American Medical Association, the American Psychiatric Association, the American Group Psychotherapy Association, and the American Association of Suicidology. I am a Committee Member of the American Cancer Society Public Education Section, a Member of the Board of Directors of the New York City division of the American Cancer Society, and an Executive Committee Member of the Westchester County Mental Health Association. I have served as Chairman of the Westchester County Mental Health Association Education Committee.

12. I have published numerous articles, papers and chapters in medical journals and textbooks. Many of these address care of dying patient. My complete curriculum vitae is attached hereto as Exhibit A.

13. Throughout my career I have provided psychiatric treatment to patients dying of terminal illnesses, particularly patients dying of cancer.

14. Most cancer patients experience progressive loss of appetite, weight, and increasing pain and fatigue. As a result, they also lose their ability to care for their own needs. In addition, there are a myriad of other problems related to the specific sites of the cancer. Those with cancer of the lung, for example, experience terrible shortness of breath and coughing. Those with brain cancer often experience excruciating headaches, seizures and progressive loss of brain function.

15. Cancer usually progresses steadily and slowly over a period of months. The cancer patient is fully aware of his or her present suffering and anticipates future suffering. The terminal cancer patient faces a terrifying future. Near the end, the cancer patient is usually bedridden and experiences a rapid loss of physical and mental functions. The patient also often experiences excruciating, unrelenting pain.

16. Pain management at the end stage of cancer often requires the patient to choose between enduring unrelenting pain or sacrificing an alert mental state to the high dose of drugs adequate to alleviate the pain. Many patients will choose one or the other of these options; however, some patients do not want to end their days either wracked with pain or in a drug-induced stupor. For some patients pain cannot be managed even with aggressive use of drugs.

17. I occasionally encounter mentally competent patients who are dying of cancer, who understand their condition, diagnosis, and prognosis, and who wish to avoid prolonged suffering by hastening their deaths. For some of these patients the paramount concern is the loss of control over their destiny, the intolerable dependency on their caretakers, and the awful sense of helplessness in their daily routines. These patients either lack any means to hasten their deaths or have access only to methods that have significant risk of failure and increased anguish and pain.

18. It is my professional judgment that the decision of such a patient to shorten the period of suffering before death can be rational, and on occasion my professional obligation to relieve suffering would dictate that I assist such a patient in hastening his or her death.

19. Under the statutes prohibiting assisted suicide, fulfillment of this professional responsibility might expose me to criminal prosecution. The statutes deter me from treating these patients as I believe I should.

20. The statutes prevent patients from making fundamental decisions about medical care, their lives, their suffering and their dignity. I recently had an experience, described below in detail, where, in my professional judgment a terminally ill patient of mine who desired to hasten his inevitable death was making a fully informed, rational decision and my professional judgment was that I should assist this patient in effectuating this choice; however, the statutes deterred me from doing so.

a. I once treated a patient to whom I shall refer as Ms. Jones. She was a 39-year old married woman, the mother of two children, and an accountant by profession. After being diagnosed with breast cancer, Ms. Jones underwent a mastectomy and then received radiation and chemotherapy. Ms. Jones subsequently was able to return to work on a part-time basis.

b. Ms. Jones came to me for psychotherapy, as did her husband. Her goal was to ensure that her approach to managing her illness was as sensible as possible, given the need to minimize the trauma to her children. Ms. Jones has always lived her life in a sensible and practical fashion. She had taken charge of her life by seeking sensible approaches to her problems.

c. More than a year later after she came to be in my care, notwithstanding the excellent medical care she had received for her cancer, Ms. Jones began experiencing severe and unrelenting headaches. A brain scan indicated that the cancer had metastasized to her brain. Ms. Jones underwent brain surgery to remove the tumor. She understood that her prognosis at this point was extremely poor, that there were no curative treatments, and that she was in the terminal phase of her illness. Ms. Jones began to explore alternatives, including the possibility of hastening her death should her suffering become intolerable.

d. Ms. Jones asked me if I would help her die in a painless and humane fashion by prescribing drugs she could take to hasten her death when her suffering became intolerable. I determined after extensive discussions with Ms. Jones, based on my extensive clinical experience in providing psychiatric care to terminally ill patients, that Ms. Jones's request was not caused by depression or any other mental disability. I knew that Ms. Jones was a brave, courageous woman, who was attempting to take charge of events and make an important decision by rationally considering her circum-

stances. My medical opinion was that she was asking me to help her attain a reasonable goal. However, given the current legal prohibition, I was compelled to deny her request.

e. Some months later, Ms. Jones began experiencing double vision, and it was determined that the brain cancer had spread. Still fully mentally competent, and suffering terribly, she implored me to assist her in hastening her death. I refused, and felt that I was performing a medical disservice in doing so.

f. Ms. Jones's husband called me a few days later and informed me that Ms. Jones was suffering constant nausea and intractable pain, and that she found life in this condition intolerable. Her family was devastated by having to watch her extreme suffering. Ms. Jones died several days later after further suffering.

g. At Mr. Jones's request, I treated the Jones children briefly after their mother's death. They were having emotional difficulties, not with her death, which their mother had prepared them for extremely well, but with the image of her terrible, lingering suffering at the end of her life. The image of her suffering was much more destructive to her children than her death, which they viewed as a peaceful solution to an intolerable situation.

h. I believe I failed in my duty to Ms. Jones by refusing her what I felt was an acceptable medical option for her to choose in these circumstances, *i.e.*, assistance in hastening her inevitable death in a certain and humane fashion.

i. The case of Ms. Jones is one of a number of similar cases I have experienced in my medical practice. I have witnessed these patients die in an inhumane and undignified manner after prolonged periods of extreme physical and psychological suffering. They desired to avoid

this suffering by hastening death in a humane manner, but were unable to do so.

21. The statutes prohibiting assisted suicide deter me from fulfilling my right and duty as a physician to relieve suffering and provide all the care in my professional power.

I declare under penalty of perjury that the foregoing is true and correct.

DECLARATION OF HOWARD A. GROSSMAN, M.D.

Howard A. Grossman, M.D. declares:

1. I am a plaintiff in this matter, am competent to testify and do so of my own personal knowledge.

2. I am a medical doctor specializing in Internal Medicine. Approximately 50 percent of my patients are infected with the Human Immunodeficiency Virus ("HIV").

3. I received my medical education at the State University of New York at Downstate School of Medicine in Brooklyn, New York, graduating in 1983.

4. From 1983 through 1986, I served a residency in Internal Medicine at the Kings County Hospital Center in Brooklyn, New York.

5. In 1987 I served as an Attending Physician in the Spellman Center for the Treatment of HIV-related Diseases at St. Clare's Hospital in New York City.

6. From 1987 through 1988, I served as Attending Physician in the Department of Medicine at the Bellevue Medical Center's Community Health Project, a satellite clinic designed to identify and treat those at high risk for HIV-related diseases.

7. From 1987 through 1990, I also served as Attending Physician at St. Clare's Hospital in New York City.

8. At present I am in private practice and serve as Attending Physician at St. Luke's/Roosevelt Hospital and St. Vincent's Hospital in New York City.

9. I have been involved with numerous research projects relating to treatment of persons infected with HIV and have lectured extensively regarding treatment of people with Acquired Immune Deficiency Syndrome ("AIDS").

10. I serve on the Board of Directors of the Gay Men's Health Crisis. I am a member of the AIDS Task Force of the

New York County Medical Society; the Physicians Advisory Committee to the Community Research Initiative on AIDS; the American College of Physicians; and the New York State/County Medical Society. I am a Board Member of the American Association of Physicians for Human Rights and past President of New York Physicians for Human Rights. I served on the former Scientific Advisory Board for Treatment Directory of the American Foundation for AIDS Research.

11. I am certified by the American Board of Internal Medicine and am a Diplomate of the National Board of Medical Examiners. My complete curriculum vitae is attached hereto as Exhibit A.

12. HIV infection produces a progressive destruction of the immune system, leading to AIDS, which is inevitably fatal. Persons with AIDS are vulnerable to a variety of unusual infections, cancers, and other syndromes such as wasting (chronic diarrhea/weight loss), peripheral neuropathy (nerve damage causing burning or shooting pain in the limbs), and dementia (loss of cognitive function). Death is often preceded by a prolonged period of illness and debility. As medical science becomes able to prevent and treat certain AIDS-related infections, patients develop more debilitating cancers and infections for which no treatment is available.

13. Patients with AIDS may die in many different ways. Many suffer from forms of cancer commonly seen with AIDS such as aggressive, disseminated lymphoma or Kaposi's Sarcoma. These patients may die from invasion of cancer into the lungs, causing progressive difficulty breathing and ultimately death by suffocation. Many die of pneumonia, which also causes the patient to essentially suffocate. Many with wasting disease basically die of starvation and dehydration, an excruciating process that may continue for weeks. Some patients lose so much weight that they appear skeletal and suffer such ravages of malnutrition as the inability to walk, skin deterioration and hydration. Still others die as the result of any one of several types of massive infections that resist treatment.

14. Many AIDS patients who will die of the above-described causes also suffer from conditions which themselves cause extreme pain and suffering. Examples include CMV retinitis, which leads to loss of vision and eventually blindness; neuropathy, which sometimes causes pain so agonizing that it can be relieved only by a dosage of narcotics which impairs consciousness; Kaposi's Sarcoma of the skin, which can produce severe disfigurement and pain from swollen tissues and open, weeping skin lesions.

15. Medicines can palliate the dying process in many cases. The majority of the time, I am able to ameliorate the symptoms of a dying patient so that the patient can be relatively free from pain and discomfort while dying. However, in some cases, the pain, discomfort, and loss of dignity can be relieved only with drugs which render the patient unconscious; in some cases even such aggressive use of drugs does not bring relief. In my practice I have had numerous AIDS patients receiving hospice care who repeatedly express frustration at how long the process is taking, and how painful, uncomfortable, and humiliating it is. Some of these patients have made repeated requests that their dying process be hastened.

16. I occasionally encounter mentally competent, terminally ill patients who understand their condition, diagnosis, and prognosis and wish to avoid prolonged suffering by hastening their deaths. These patients either lack any means to hasten their deaths or have access only to methods that have significant risk of failure and increased anguish and pain.

17. It is my professional judgment that the decision of such a patient to shorten the period of suffering before inevitable death can be rational, and on rare occasion my professional obligation to relieve suffering would dictate that I assist such a patient in hastening his or her death when palliative care becomes ineffective or unacceptable if the patient so chooses.

18. Under the statutes prohibiting assisted suicide, fulfillment of this professional responsibility would expose me to criminal prosecution. The statutes deter me from treating these patients as I believe I should.

19. The statutes have resulted in patients of mine dying tortured deaths.

20. One patient of mine, whom I will call Smith, was a vibrant active designer and AIDS activist who did not want to endure wasting and dementia before he died. While fully mentally competent and unquestionably in the end stage of AIDS, he requested my assistance in hastening his death, which I could not provide. This patient soon began experiencing a process of severe wasting, skin deterioration, chronic vomiting and, ultimately, dementia. He became disoriented and confused and unable to care for himself. The process continued for approximately six weeks before Smith died.

21. Such a prolonged dying period is inhumane to the patient, who must suffer against his wishes, and to the loved ones, who frequently express the belief that "we are kinder to our pets than we are to the terminally ill." After death, the survivors express guilt about the suffering their loved one endured, and the doctor feels remorse that the patient's suffering could not have been curtailed.

22. I have known AIDS patients who committed suicide relatively early in the course of the disease, apparently because of the fear that a death like that of patient Smith would be their fate. These individuals prematurely end their lives because they feel unable to discuss their fears with me and anticipate a death preceded by unrelieved suffering. As a physician, I have wished that I could have prevented their premature deaths by committing to help them through the subsequent stages of their illness, including, if they choose at the time, to hasten their deaths.

23. I also have known AIDS patients who attempt to commit suicide and fail. Often the failed attempt results in increased anguish and physical disability.

24. One of my current patients is plaintiff William A. Barth, who is known by his nickname "Willy." I have treated Willy regularly since 1989 and know him well. Currently we are pursuing an aggressive course of therapy to control his disease. In my medical judgment, Willy is mentally competent and should be able to request and receive my assistance in dying when his suffering becomes intolerable to him. Based on my extensive clinical experience in treating patients dying of AIDS, I have no question that Willy's condition is terminal, and that he will suffer severe pain and physical deterioration in the future. This will occur despite the availability of hospice care and aggressive pain management. Willy's decision whether or not to exercise a choice to hasten his death would be based on a full understanding of his condition, prognosis and medical care options.

I declare under penalty of perjury that the foregoing is true and correct.

DECLARATION OF WILLIAM A. BARTH

William A. Barth declares:

1. I am a plaintiff in this matter, am competent to testify and do so of my own personal knowledge.

2. I am 28 years old and am a former fashion editor for a major national fashion magazine. I am single and have no children. I have always enjoyed an active and independent lifestyle.

3. I was diagnosed HIV positive in April 1992. My physician is Dr. Howard A. Grossman, a plaintiff in this action. I have been a patient of Dr. Grossman's since 1989. In May 1992, I developed a Kaposi's sarcoma skin lesion. This was my first major illness associated with AIDS. I underwent radiation and chemotherapy to treat this cancer.

4. In September 1993, I was diagnosed with cytomegalovirus ("CMV") in my stomach and colon which caused severe diarrhea, fevers and wasting. My treatment for CMV required daily three hour home infusions.

5. In February 1994, I was diagnosed with microsporidiosis, a parasitic infection for which there is effectively no treatment. I have experienced significant additional wasting as a result.

6. At approximately the same time, I contracted AIDS-related pneumonia. The pneumonia's infusion therapy treatment was so extremely toxic that I vomited with each infusion.

7. In March 1994, I was diagnosed with cryptosporidiosis, a parasitic infection which has caused severe diarrhea, sometimes producing 20 stools a day, extreme abdominal pain, nausea and additional significant wasting. I have begun to lose bowel control due to the severe diarrhea.

8. I have also suffered from microbacterium avium, a form of tuberculosis which has caused yet additional wasting, fevers and night sweats.

9. For each of these conditions I have undergone a variety of medical treatments, each of which has had significant adverse side effects.

10. I have been unable to work since September 1993 because of my severe illness. It has been recommended that I take nightly intravenous feedings to attempt to stop the wasting. While I have tolerated some such feedings, I am unwilling to accept this for an extended period of time.

11. Since I was diagnosed HIV-positive I have received medical treatment. I believe that I have received good treatment and have benefited from it. At this point, it is clear to me, based on the advice of my doctors, that I am in the terminal phase of this disease. It has been explained to me and I understand that there are no cures.

12. I can no longer endure the pain and suffering associated with AIDS and I want to have drugs available for the purpose of hastening my death. I want to be able to speak openly with my doctor, Howard Grossman, about intentionally hastening my death through consumption of drugs prescribed for that purpose.

13. I am mentally competent. I have no current or historical mental health problems that would impair my decision making powers regarding end of life decisions. I declare under penalty of perjury that the foregoing is true and correct to the best of my knowledge.

DECLARATION OF GEORGE A. KINGSLEY

GEORGE A. KINGSLEY declares:

1. I am a plaintiff in this matter, am competent to testify, and do so of my own personal knowledge.

2. I am 48 years old and am the director of Systems and Operations for a major publishing company. Prior to working in the publishing business, I was employed in supervisory positions by a major domestic and international airline for over 12 years. I received my Bachelor of Arts in English, Psychology and Business Administration from the University of Illinois and hold diplomas in various managerial courses. I am single and have no children.

3. I was diagnosed HIV-positive in the late 1980s and diagnosed with AIDS in 1993. At this time I have almost no immune system function.

4. My first major illness associated with AIDS was cryptosporidiosis, a parasitic infection which caused me severe fevers and diarrhea and associated pain, suffering and exhaustion. In August 1993 I was hospitalized for approximately one month to receive treatment for this infection.

5. I also suffer from cytomegalovirus ("CMV") retinitis, an AIDS-related virus which attacks the retina and causes blindness. To date I have become almost completely blind in my left eye. I am at risk of losing my sight altogether from this condition. In November 1993 I was hospitalized for approximately two weeks to receive treatment for CMV.

6. I also suffer from toxoplasmosis, a parasitic infection which has caused lesions to develop on my brain. In December 1993 I was hospitalized for approximately three weeks to receive treatment for this infection.

7. From August 1993 to April 1994 I was unable to work because I was severely ill very frequently. Since April 1994 I have been able to return to work on a part time basis,

although my medical condition produces extreme fatigue. I live alone and I have noticed that my ability to care for myself is rapidly diminishing.

8. Several prescribed medications that I must take daily cause constant negative side effects. I take a large daily dosage of cleocin, an antibiotic prescribed to combat the toxoplasmosis infection. As a result of taking this medication I experience painful cramping, extreme gas with bloating and a total loss of appetite. I also take daily infusions of cytovene for the cytomegalovirus retinitis condition. This medication, administered for an hour through a Hickman tube which is connected to an artery in my chest, prevents me from ever taking showers and makes simple routine functions burdensome. In addition, I inject my leg daily with neupogen to combat the deficient white cell count in my blood. The daily injection of this medication is extremely painful.

9. Since I was diagnosed HIV-positive I have sought medical treatment. I believe I have received good treatment and have benefited from it. At this point it is clear to me, based on the advice of my doctors, that I am in the terminal phase of this disease. It has been explained to me and I understand that there is no cure for AIDS.

10. I always have believed in my ability to control my own destiny, and have made important decisions only after being guided by informed, rational thought. I value my freedom and independence above all.

11. I know what it is like to lose control over one's life because of AIDS. I have witnessed the excruciating process of dying from AIDS many times over the past several years. One of my best friends recently died after an extended period of suffering in the final stages of AIDS. This friend desired to exercise the choice of hastening his death but did not have the means to do so humanely. The sound of him crying out in pain still echoes in my memory. I could do nothing to help him and he could do nothing to help himself.

12. My informed, rational choice is that my death from AIDS, when I reach the point where there is nothing more that medical science can do to halt the advance of my disease and I am living with intolerable pain and suffering, be as swift, painless and dignified as possible. I want to be able to hasten my death in my own home, in a certain and humane way, surrounded with the people I love helping me make my passing comfortable and meaningful. I do not want my loved ones to watch me suffer needlessly.

13. I want to be able to discuss the issue of hastening my death freely and openly with my physician. It is my desire that my physician prescribe suitable drugs for me to consume for the purpose of hastening my death when and if my suffering becomes intolerable. While I understand that I could attempt to use over-the-counter drugs to hasten my death should my suffering become intolerable, I am horrified by the possibility that the drugs may not work effectively or completely but instead may cause additional and prolonged suffering. My purpose in seeking the advice of a physician is to be sure that I have the choice of hastening my death in the most humane and certain manner. However, I abhor the fact that discussing what I consider to be a humane act with my physician exposes him to criminal prosecution. My doctors have provided me with the best care possible and I would never do anything to jeopardize their ability to practice medicine.

14. I am mentally competent. I have no current or historical mental health problems that would impair my ability to make a rational decision regarding how to end my life.

I declare under penalty of perjury that the foregoing is true and correct.

AFFIDAVIT OF CARLA A. KERR, ESQ. WITH RESPECT TO JANE DOE AFFIDAVIT

CARLA A. KERR, ESQ. declares:

1. I am associated with the law firm of Hughes Hubbard & Reed which, along with Perkins Coie, is counsel for plaintiffs Timothy E. Quill, M.D., Samuel C. Klagsbrun, M.D., Howard A. Grossman, M.D., Jane Doe, George A. Kingsley, and William A. Barth in the above-captioned action. I am duly admitted to practice before this Court and am fully familiar with the facts and circumstances surrounding this action.

2. I submit this affidavit for the purpose of providing the Court with a redacted copy of the Declaration of Jane Doe, attached as Exhibit A. Plaintiff Jane Doe was a terminally ill, competent adult who died as a result of throat cancer subsequent to the commencement of this action. Ms. Doe's signature, in her true name, has been redacted from the Court's copy of the declaration to preserve her privacy. The original signed declaration is maintained in the law offices of Hughes Hubbard & Reed.

DECLARATION OF JANE DOE

JANE DOE declares:

1. I am a plaintiff in this matter, am competent to testify, and do so of my own personal knowledge.

2. Jane Doe is not my real name; I use this fictitious name in this lawsuit to protect my privacy.

3. I am 76 years old and am a retired physical education instructor. I received my degree in physical education from New York University in 1939. I also hold a Masters Degree in High School Guidance Counseling, which I earned from Queens College during the 1960s while I worked and cared for my children. I am widowed and have two grown children. I have always enjoyed an active and independent lifestyle. I have been a leader in my current retirement group school program and active in civic affairs.

4. In 1988 I was diagnosed with thyroid cancer. I underwent surgery to remove my thyroid, a portion of my jugular vein, and strap muscles in my right neck. I also had a 1/4 laryngectomy, leaving my voice weak but intact. I subsequently received iodine radiation therapy.

5. For several years my cancer was in remission. However, in late 1993 I was diagnosed with a major recurrence. I have a large cancerous tumor which is wrapped around the right carotid artery in my neck and is collapsing my esophagus and invading my voice box. The tumor has significantly reduced my ability to swallow and prevents me from eating anything but very thin liquids in extremely small amounts. The cancer has metastasized to my plural cavity and it is painful to yawn or cough.

6. My physicians have advised me that only palliative medical options are available to me and that no curative medical options are available. My physicians have suggested that one palliative procedure would be a complete laryngectomy, the surgical lifting of my stomach, and removal of my carotid

artery. This procedure would entirely and permanently eliminate my ability to speak, and the prognosis for recovery from it would be poor.

7. Because the tumor causes extreme difficulty in swallowing, I am constantly choking on my own saliva and mucous. At this time, I can no longer swallow sufficient food to nourish myself. It was recently recommended that I have a feeding tube surgically implanted into my stomach through which to receive nutrition and hydration. In early July 1994 I had the tube implanted and have suffered serious problems as a result. I have not tolerated the tube feeding well.

8. The pain associated with this cancer is constant, especially in my neck, where the pressure and ache are continuous. I experience very sharp pain around my diaphragm each time I take deep breaths, cough, belch or yawn.

9. I take a variety of medications to manage the pain. I attempt to take enough medication so as to alleviate the pain while still retaining an alert mental state. It is not possible for me to reduce my pain to an acceptable level of comfort and to retain an alert state.

10. I have experienced a variety of adverse side effects with each treatment regimen, including i) terrible scarring inside my throat and neck from surgery and radioactive iodine; ii) burning and swelling in my neck, a hoarse voice and nausea from beam radiation; and iii) severe pain, vomiting, nausea and pressure associated with the tube feeding.

11. I have pursued medical treatment since the time my cancer was originally diagnosed to the present time. I believe that I have received the currently available conventional treatment and have benefited from some of it. At this time, it is clear to me, based on the advice of my doctors, that I am in the terminal phase of this disease. It has been explained to me and I understand that there are no cures.

12. At the point at which I can no longer endure the pain and suffering associated with my cancer, I want to have drugs available for the purpose of hastening my death in a humane and certain manner. I want to be able to discuss freely with my treating physician my intention of hastening my death through the consumption of drugs prescribed for that purpose.

13. For all of my adult life I have held the belief that extending human suffering in the case of terminal illness is inhumane, uncivilized and cruel, since we have the technology to allow people to choose to die in a humane manner. I believe it is my right to die peacefully and comfortably when I am terminally ill and suffering intolerably. I believe it is partly religious freedom and partly the pursuit of liberty and happiness guaranteed me by the United States Constitution. I have always considered freedom to choose how and when to die a most important human right for the terminally ill.

14. People should not be asked against their will to suffer unnecessarily in the process of dying when medical science could provide a humane death. To withhold such choice, and the means to exercise it, from those who are suffering is to deny me my right to live and die humanely. I see it as unnecessarily cruel and inhumane to deny me this option. It also is inhumane to my loved ones, my family, to require them to watch helplessly as I am forced to endure such suffering.

15. I was able to put two of my dogs to rest when they were suffering from painful, incurable diseases and yet I do not, as a conscious and competent adult, have the freedom to opt for the same humane end to my life. This is wrong.

16. I am mentally competent. I have no current or historical mental health problems that would impair my decision-making powers regarding end-of-life decisions.

I declare under penalty of perjury that the foregoing is true and correct.

Executed on this 28 day of July, 1994.

94 Civ. 5321 (TG)

TIMOTHY QUILL, *et al.*,

Plaintiffs,

—against—

G. OLIVER KOPPELL,

Defendant.

DEFENDANT'S MEMORANDUM OF LAW IN OPPOSITION TO MOTION FOR A PRELIMINARY INJUNCTION AND IN SUPPORT OF CROSS-MOTION FOR JUDGMENT ON THE PLEADINGS

G. OLIVER KOPPELL
Attorney General of the
State of New York
120 Broadway–24th Floor
New York, NY 10271
(212) 416-8570

MICHAEL S. POPKIN
Assistant Attorney General
Of Counsel

JAY T. WEINSTEIN
Legal Assistant

* * *

and Supp. 1994).[5] The current laws classify assisted suicide under section 125.15(3) as manslaughter in the second, instead of the first degree, and treat "promoting a suicide attempt" as a class E felony. N.Y. Penal Law § 120.30 (McKinney 1987).[6]

C. The New York Task Force on Life And The Law

The New York Task Force on Life and the Law ("Task Force"), convened in 1985 by Governor Mario Cuomo and consisting of members from diverse backgrounds and viewpoints, has conducted a study of New York's prohibition of physician-assisted suicide for the terminally ill, and recommended *against* changing the laws with respect to this conduct. The New York State Task Force On Life And The Law, *When Death Is Sought: Assisted Suicide And Euthanasia In The Medical Context*, May 1994, at 117-48 (hereinafter "Task Force Report"). In the past, the Task Force's recommendations concerning the right to decide about medical treatment have been enacted into law. *See* New York Public Health Law

---

5 The New York State Court of Appeals recently held that an individual who aids or urges another to a successful suicide can also be found guilty of second degree manslaughter under N.Y. Penal Law § 125.15 (1), for recklessly causing another's death. *People v. Duffy*, 79 N.Y.2d 611, ___ N.Y.S.2d ___ (1992).

6 The Temporary State Commission on Revision of the Penal Law and Criminal Code, which, in 1965, introduced to the legislature the current form of New York's penal law, removed the "more sympathetic cases" of assisted suicide from the ambit of "murder," and placed within the category of second degree manslaughter instances of "assistance rendered at the request of a person tortured by painful disease." Temporary State Commission on Revision of the Penal Law and Criminal Code, Proposed New York Penal Law to the Legis. Session of 1964, at 339 (1964). The practice commentary to the current re-enactment of the penal law in fact includes a hypothetical of assisted suicide that would constitute second degree manslaughter: "a man who, upon the plea of his incurably ill wife, brings her a lethal drug in order to aid her in ending a tortuous existence . . ." Practice Commentary to N.Y. Penal Law § 125.15(3) (McKinney 1975) (by A. Hechtman).

Articles 29-B (Orders Not To Resuscitate) and 29-C (Health Care Agents and Proxies). *See* Task Force Report at vii. The Task Fore compiled extensive data regarding suicide and the terminally ill.

The Task Force found that allowing physician-assisted suicide or euthanasia[7] would expose significant segments of the population, especially those already compromised by poverty, lack of access to good medical care, or membership in a stigmatized social group, to "extraordinary risks." Task Force Report, Preface at vii-viii, and Ch. 6. It noted the statistical correlation between requests for assisted suicide and depression, as well as requests for assisted suicide and poorly controlled pain, and concluded that allowing assisted suicide would result in an increased number of suicides in individuals in both these categories suffering from treatable symptoms. *Id.* Other individuals, such as those who felt that they were a burden on their families, would also be likely to choose suicide. The Task Force recognized that suicide advocates posited ideal cases in which none of these conditions were present, and in which the physicians had long term relationships with their patients, but found that these ideal cases

* * *

[7] Physicians assist another in committing suicide when, for example, they provide a patient with a lethal dose of pills which the patient then self-administers. By contrast, euthanasia occurs when physicians themselves administer the lethal drug, an act of murder. *See* N.Y. Penal Law § 125.25(1). *See also*, Report of N.Y. Task Force, at 63-64. As numerous commentators have noted, the line between assisted suicide and euthanasia is far from bright.

No. 94 Civ. 5321 (TPG)
Received October 12, 1994

TIMOTHY QUILL, *et al.*,

Plaintiffs,

—v.—

G. OLIVER KOPPELL,

Defendant.

NOTICE OF CROSS-MOTION FOR JUDGMENT ON THE PLEADINGS

PLEASE TAKE NOTICE that, upon all the pleadings and proceedings in this matter, defendants will move this Court, before the Honorable Thomas P. Griesa, United States District Judge, at the Courthouse, Foley Square, New York, New York, on October 14, 1994 at 10:30 in the forenoon, or as soon thereafter as counsel may be heard, for an Order pursuant to Rule 12(c) of the Federal Rules of Civil Procedure granting them judgment on the pleadings, for the reasons set

forth in defendants' Memorandum of Law of even date with this cross-motion.

Dated: October 7, 1994

SUPPLEMENTAL DECLARATION OF TIMOTHY E. QUILL, M.D.

Timothy E. Quill, M.D. declares:

1. I am a plaintiff in this matter, am competent to testify and do so of my own personal knowledge.

2. I make this supplemental declaration in further support of plaintiffs' motion for a preliminary injunction and, to make clear the medical treatment that I seek to be able to give my patients.

3. I bring this action in order to be able to fulfill my professional obligations to my mentally competent, terminally ill patients who seek my assistance in hastening their deaths. I seek the right to prescribe drugs, if and when medically and psychiatrically appropriate, for such patients tc self-administer at the time and place of their choice for the purpose of hastening their impending deaths.

4. The proposition that the withdrawal of medical treatment does not require full, conscious and active participation by the terminally ill patient's doctor is not accurate. The removal of a life support system that directly results in the patient's death requires the direct involvement by the doctor, as well as other medical personnel. When such patients are mentally competent, they are consciously choosing death as preferable to life under the circumstances that they are forced to live. Their doctors do a careful clinical assessment, including a full exploration of the patient's prognosis, mental competence to make such decisions, and the treatment alternatives to stopping treatment. It is legally and ethically permitted for physicians to actively assist patients to die who are dependent on life-sustaining treatments.

5. For example, sometimes patients with lung cancer or other terminal respiratory diseases are put on respirators (breathing machines) in an effort to prolong their life. Some of these patients decide that they no longer want to go on living if they must remain on such machines to breathe, or because other aspects of their suffering have become intolerable. Once they are fully informed of their alternatives, and are sure that they want the respirator removed even if it will result in their death, they then have the right to have the treatment discontinued. At a practical level, the doctor must take several actions to carry out the patient's desire. The doctor must turn off the breathing machine, disconnect the machine from the tube that goes to the patient's lungs, and then remove the tube from the patient's lungs. Since dying of respiratory failure can be one of the most excruciating and frightening deaths possible, the doctor usually must also give morphine or barbiturates to ameliorate the patient's sensation of suffocation. These patients must be carefully monitored after the respirator is withdrawn, for sometimes the symptoms of severe air hunger reemerge in spite of continuous infusions of morphine or barbiturates. These medications must often be used in doses that contribute to the patient's death by suppressing their respiratory drive. Such patients can linger for days or even weeks in a twilight state, with fluctuating levels of mental alertness and of air hunger, before eventually dying. The removal of a mechanical ventilator requires active participation and ongoing monitoring by the doctor and other members of the health care team. In spite of everyone's best efforts, it can result in a wrenching experience for the patient, the patient's family and medical personnel.

6. Some dying patients are dependent on feeding tubes or intravenous lines to provide hydration and nutrition. These patients have the right to refuse this treatment even when it will result in their death. Though some patients find discontinuing hydration and nutrition an acceptable way to die, others experience the subsequent process of gradually dehydrating, starving, and passing into an unconscious, completely dependent and helpless state both humiliating and unacceptable. The process generally takes seven to ten days, though it may take much longer if the patient takes sips of any kind of liquids. The patient gradually loses control of his or her men-

tal and physical capacities, and becomes totally dependent on medical personnel and family to care for even the most basic bodily functions. The patient's kidneys and liver eventually fail, allowing the accumulation of toxins that gradually cloud consciousness, and eventually result in the patient's death. As patients pass through this process, they continue to need the active involvement of their physicians and other medical personnel. Patients whose organs are failing may experience hallucinations, fear and confusion. Such symptoms must be treated, often with sedatives that may hasten the patient's death. Under these circumstances, sedatives must be used because doctors must not let their dying patients linger in a nightmarish condition that can only end in their death. While death from dehydration and starvation is acceptable to some of our patients, others ask us why they must endure such an ordeal when it can only end in their death, especially when there are alternatives available that could ease death more humanely.

7. Though deaths such as those described above have been characterized as "natural," they actually involve the active participation of doctors throughout the process, often including medical interventions that contribute to an earlier death. As the clinical descriptions suggest, these processes are often not an easy way out. Yet, at least these patients who are dependent on life-sustaining treatment are allowed to have a legitimate, open discussion with their physician about choosing death as preferable to life under the circumstances they are forced to live, and their physicians are allowed to actively and openly assist them to die without fear of legal repercussions. Unfortunately, some dying patients who are in agony that can no longer be relieved, yet are not dependent on life-sustaining treatment, have no such options under current legal restrictions. It seems unfair, discriminatory, and inhumane to deprive some dying patients of such vital choices because of arbitrary elements of their condition which determine whether they are on life-sustaining treatment that can be stopped.

These patients are asking us, and at times begging us, for the same choice.

I declare under penalty of perjury that the foregoing is true and correct.

DECLARATION OF JACK FROOM, M. D.

Jack Froom, M.D. declares:

1. I am competent to testify and do so of my own personal knowledge.

2. I am a medical doctor and received my medical degree from the University of Illinois in 1946.

3. My specialty is Family Practice. I am certified by the American Board of Family Practice and have over 20 years experience practicing medicine in a clinical setting as a family physician. I am also a Professor of Family Medicine and have over 20 years of teaching experience in that field. I am presently Professor at the State University of New York at Stony Brook. From 1978 through 1991 I was the Director of Family Medicine Research at this University.

4. I serve on the editorial advisory board or am manuscript consultant to numerous medical journals including: Family Practice: An International Journal; Annals Of Internal Medicine; Pediatrics; Journal of American Diseases of Children; Journal of the American Board of Family Practice; Journal of Family Practice; Family Medicine; and Archives of General Psychiatry.

5. I hold hospital appointment privileges and am a Senior Attending Physician at University Hospital, Stony Brook, New York.

6. I have published over 80 articles related to the practice of Family Medicine in medical journals. I have also authored numerous books, book chapters and monographs in the field.

7. I have substantial experience and have conducted research and published in the area of detecting depression in primary care patients. Of particular relevance here are "Detection of Major Depressive Disorder in Primary Care Patients," 6 *Journal American Board of Family Practice* 5

(1993), "The Inventory to Diagnose Depression (IDD) in Primary Care Patients," 10 *Family Practice* 312 (1993).

8. My complete curriculum vitae is attached hereto.

9. In my nearly 50 years experience as a practicing family physician and medical educator, I have had many occasions to witness mentally competent, terminally ill adult patients confront issues relating to their dying process, including the issue of hastening the dying process. Over this period, I have also seen many patients endure unnecessarily prolonged pain and suffering in the dying process under circumstances where patients, for one reason or another, had insufficient participation in deciding upon their terminal care.

10. Physicians caring for patients with terminal illnesses necessarily become directly involved in assisting such patients and their families to understand the prognosis, expected course and options for either therapeutic or palliative care. In the presence of terminal illness, the shared goal of medical care at some point becomes comfort care rather than cure. The physician's task becomes one of alleviating pain and suffering as much as possible.

11. With advancing medical technology, many patients are subject to active and ineffective therapeutic efforts by their physicians, even when an early terminal outcome is not in doubt. As a result, many experience prolonged deaths often involving pain, suffering and loss of dignity. In reaction to this problem, an increasing number of patients want more direct control over the type of care they receive in the last stage of their lives. A subset of dying patients desire to shorten their dying process and thereby avoid a lingering death and associated pain, suffering and loss of dignity.

12. The desire of a patient to shorten the dying process is not necessarily indicative of depression or any other form of mental illness or instability. This choice can be entirely rational in light of a particular patient's condition, prognosis and suffering. Physicians can determine whether a patient's

request to hasten death is rational and competent or motivated by depression or other mental illness or instability. Physicians currently make these determinations as to patient capacity to make end-of-life decisions with respect to orders not to resuscitate and refusal of life-sustaining treatment.

13. Terminally ill persons who seek to hasten death by consuming drugs need medical counseling regarding the type of drugs and the amount and manner in which they should be taken, as well as a prescription, which only a licensed medical doctor can provide. Many terminally ill persons will be taking a variety of medications for their condition; for example, patients suffering chronic pain may be taking high doses of morphine or other narcotics and may have developed a high tolerance to narcotics. Knowing what drug, in what amount, will hasten death for a particular patient, in light of the patient's medical condition and medication regimen, is a complex medical task.

14. Physician assistance for terminally ill patients suffering unrelievable and intolerable pain and physical decline comports with a physician's ethical obligation to alleviate needless, painful suffering.

15. It is not uncommon, in light of present legal constraints on physician assistance, that patients seeking to hasten their deaths try to do so without medical advice. These efforts are often unsuccessful and can cause the patient and family increased anxiety, pain and suffering. Very often, patients who survive a failed suicide attempt find themselves in worse condition than before the attempt. Brain damage, for example, is one result of failed suicide attempts.

16. There is often a severe adverse emotional and psychological effect on terminally ill patients who either are unable to broach the subject of their desire to hasten their death with their physician because of the current prohibition or broach the subject but are rebuffed. These patients feel abandoned by their physician when most in need of help.

I declare under penalty of perjury under the laws of the United States of America that the foregoing is true and correct to the best of my knowledge.

DECLARATION OF MINNA BARRETT

Minna Barrett declares:

1. I am competent to testify and do so of my own personal knowledge. I submit this declaration in support of plaintiffs' motion to add Governor Mario M. Cuomo as defendant herein.

2. On Sunday, September 18, 1994, I watched a televised panel discussion with Governor Mario M. Cuomo and I recall the following discussion.

3. Governor Cuomo had been discussing the high prison population and violence in the streets. He was asked about his position on the death penalty. He said he was opposed.

In the context of a fuller discussion about issues of the gubernatorial race, a panelist asked the Governor how he felt about the pending lawsuit challenging the Attorney General on hastening death and allowing mentally competent terminally ill people control over their own deaths. Governor Cuomo responded that he was opposed to that right.

4. The panelist further pressed the issue, asking the Governor how he could oppose the right of mentally competent individuals, faced with terminal and horribly painful diseases, to alleviate this suffering by hastening a sure death and how he could possibly equate the death penalty, an act of punishment, with assisted death, an act of mercy.

5. Governor Cuomo responded that the panel had just finished discussing the violence that permeates society, whether it take the form of the violence that children face on the streets or the form of the death penalty. Governor Cuomo explained that allowing terminally ill individuals the right to hasten their own deaths is the equivalent of the State condoning the above mentioned kinds of violence.

6. The panelist then asked again how he could equate murder and violence with mercy and suggested that physician-

assisted death in the case of mentally competent, terminally ill individuals should be viewed as a right. She asked him what his position on abortion was, to which Cuomo firmly replied that abortion was a woman's right which was not up to review.

7. When the panelist again stated that she did not understand how he could equate physician-assisted death with murder, Cuomo told her that she had "no conscience." He then drew his own analogy, declaring that permitting these terminally ill individuals to hasten their own deaths was no different than condoning the murder we see in the streets by "putting guns in the hands of children."

I declare under penalty of perjury that the foregoing is true and correct.

AMENDED COMPLAINT FOR DECLARATORY JUDGMENT AND INJUNCTIVE RELIEF

Plaintiffs, for their complaint, allege:

PARTIES

1. George A. Kingsley is a mentally competent, terminally ill adult who resides in New York City.

2. Howard A. Grossman, M.D., is a physician licensed in the State of New York who practices internal medicine, primarily treating patients with AIDS, in New York City. Dr. Grossman sues on his own behalf and on behalf of his mentally competent, terminally ill patients.

3. Samuel C. Klagsbrun, M.D., is a physician licensed in the State of New York who practices psychiatry in New York City and Katonah, New York. Dr. Klagsbrun sues on his own behalf and on behalf of his mentally competent, terminally ill patients.

4. Timothy E. Quill, M.D., is a physician licensed in the State of New York who practices internal medicine in Rochester, New York. Dr. Quill sues on his own behalf and on behalf of his mentally competent, terminally ill patients.

5. G. Oliver Koppell, the Attorney General of the State of New York, has the powers entrusted to him under the Constitution and Executive Law of the State of New York. He is sued in his official capacity.

6. Mario M. Cuomo, the Governor of the State of New York, has the powers entrusted to him under the Constitution and Executive Law of the State of New York. He is sued in his official capacity.

JURISDICTION AND VENUE

7. Plaintiffs bring this action pursuant to 42 U.S.C. § 1983 to redress the deprivation of rights guaranteed by the Fourteenth Amendment to the Constitution of the United States. Plaintiffs seek a declaratory judgment pursuant to the Federal Declaratory Judgments Act, 28 U.S.C. §§ 2201 and 2202, and appropriate injunctive relief. The jurisdiction of this Court is invoked pursuant to 42 U.S.C. § 1983 and 28 U.S.C. §§ 1331 and 1343(a)(3).

8. Venue is properly laid in the Southern District of New York pursuant to 28 U.S.C. § 1391(b).

NATURE OF THE ACTION

9. This action seeks a declaratory judgment that the portions of the New York Penal Law sections criminalizing assisted suicide are unconstitutional as applied to physicians who assist mentally competent, terminally ill adults who choose to hasten inevitable death. This action also seeks appropriate injunctive relief. The sections of the Penal Law provide, in relevant part, that it is a class C felony to intentionally aid another person to commit suicide (N.Y. Penal Law § 125.15(3)), and a class E felony to promote a suicide attempt by intentionally aiding another person to attempt suicide (N.Y. Penal Law § 120.30). By criminalizing physician assistance in these circumstances, the New York Penal Law prevents mentally competent, terminally ill adults from exercising the right to choose to hasten inevitable death and thus avoid continued suffering and a lingering, painful death. These portions of sections 125.15(3) and 120.30 deny individuals the liberty and privacy to decide what to do with their own bodies and forces them to endure pain, anguish, and loss of dignity.

FACTUAL ALLEGATIONS COMMON TO ALL CLAIMS FOR RELIEF

10. George A. Kingsley is a 48-year-old publishing industry executive who is suffering from AIDS. Mr. Kingsley has been advised and understands that his illness is a terminal one, that he is in the terminal phase of his disease, and that there is no chance of recovery. Mr. Kingsley is fully aware of the ravages the disease wreaks and the prospect he faces of progressive loss of bodily function and integrity and increasing pain and suffering. Mr. Kingsley seeks necessary medical assistance in the form of medications prescribed by his physician to be self-administered for the purpose of hastening his death. Without such assistance Mr. Kingsley cannot hasten his death in a certain and humane manner.

11. There are mentally competent, terminally ill adults in the State of New York who desire to have the choice to seek physician assistance to hasten their deaths.

12. In the regular course of Dr. Howard A. Grossman's medical practice, Dr. Grossman treats patients who are terminally ill and experience chronic, intractable pain and/or intolerable suffering. Also in the regular course of his medical practice, Dr. Grossman encounters mentally competent, terminally ill patients who request assistance in the voluntary self-termination of life. Under certain circumstances it would be consistent with the standards of Dr. Grossman's medical practice to assist these patients in their decision to hasten death through the prescription of medications. Without such medical assistance these patients cannot hasten their deaths in a certain and humane manner. Sections 125.15(3) and 120.30 of the New York Penal Law prevent Dr. Grossman from exercising his best professional judgment to prescribe medications to these patients in dosages that would enable them to act to hasten their own deaths.

13. In the regular course of Dr. Samuel C. Klagsbrun's medical practice, Dr. Klagsbrun treats patients who are terminally ill and experience chronic, intractable pain and/or intolerable suffering. Also in the regular course of his medical practice, Dr. Klagsbrun encounters mentally competent, terminally ill patients who request assistance in the voluntary self-termination of life. Under certain circumstances it would be consistent with the standards of Dr. Klagsbrun's medical practice to assist these patients in their decision to hasten death through the prescription medications. Without such medical assistance these patients cannot hasten their deaths in a certain and humane manner. Sections 125.15(3) and 120.30 of the New York Penal Law prevent Dr. Klagsbrun from exercising his best professional judgment to prescribe medications to these patients in dosages that would enable them to act to hasten their own deaths.

14. In the regular course of Dr. Timothy E. Quill's medical practice, Dr. Quill treats patients who are terminally ill and experience chronic, intractable pain and/or intolerable suffering. Also in the regular course of his medical practice, Dr. Quill occasionally encounters mentally competent, terminally ill patients who request assistance in the voluntary self-termination of life. Under certain circumstances it would be consistent with the standards of Dr. Quill's medical practice to assist these patients in their decision to hasten death through the prescription of medications. Without such medical assistance these patients cannot hasten their deaths in a certain and humane manner. Sections 125.15(3) and 120.30 of the New York Penal Law deter Dr. Quill from exercising his best professional judgment to prescribe medications to these patients in dosages that would enable them to act to hasten their own deaths.

CLAIMS FOR RELIEF

COUNT I

(Violations of Liberty Guaranteed
by Fourteenth Amendment)

15. Plaintiffs repeat and reallege paragraphs 1 through 14 of their Complaint.

16. The Fourteenth Amendment guarantees the liberty of mentally competent, terminally ill adults with no chance of recovery to make decisions about the end of their lives, including the right to choose to hasten inevitable death with suitable physician-prescribed drugs and thereby avoid pain and suffering. The right to make this choice is a fundamental right and is entitled to the strongest degree of constitutional protection.

17. The Fourteenth Amendment guarantees the liberty of physicians to practice medicine consistent with their best professional judgment, including using their skills and powers to facilitate the exercise of the decision of competent, terminally ill adults to hasten inevitable death by prescribing suitable medications for the patient to self-administer for that purpose.

18. Plaintiffs have no adequate remedy at law and face imminent and irreparable loss of their rights. By reason of these violations of their constitutional rights, plaintiffs are entitled to declaratory judgment and injunctive relief against the enforcement of the relevant portions of sections 125.15(3) and 120.30 of the New York Penal Law.

COUNT II

(Violation of Equal Protection Guaranteed
by Fourteenth Amendment)

19. Plaintiffs repeat and reallege paragraphs 1 through 14 of their Complaint.

20. The Fourteenth Amendment guarantees patient-plaintiff George A. Kingsley and the mentally competent, terminally ill patients of physician-plaintiffs Timothy E. Quill, Samuel C. Klagsbrun and Howard A. Grossman, equal protection under the law of the State of New York. The relevant portions of sections 125.15(3) and 120.30 of the New York Penal Law deny the patient-plaintiffs and the patients of the physician-plaintiffs the equal protection of the law by denying them the right to choose to hasten inevitable death, while terminally ill persons whose treatment includes life support are able to exercise this choice with necessary medical assistance by directing termination of such treatment.

21. Patient-Plaintiff George A. Kingsley and the mentally competent, terminally ill patients of physician-plaintiffs Timothy E. Quill, Samuel C. Klagsbrun and Howard A. Grossman, have no adequate remedy at law and face imminent and irreparable loss of their rights. By reason of these violations of their constitutional rights, patient-plaintiffs and the patients of the physician-plaintiffs are entitled to declaratory judgment and injunctive relief against the enforcement of the relevant portions of sections 125.15(3) and 120.30 of the New York Penal Law.

PRAYER FOR RELIEF

WHEREFORE, plaintiffs request that this Court grant the following relief:

(1) A declaration that the relevant portions of sections 125.15(3) and 120.30 of the New York Penal Law are invalid

under the Constitution of the United States as applied to physicians who assist mentally competent, terminally ill adults who choose to hasten inevitable death, and thus violate 42 U.S.C. section 1983.

(2) An order permanently enjoining defendants, and all who act in concert with them, from enforcing the relevant portions of sections 125.15(3) and 120.30 of the New York Penal Law as applied to physicians who assist mentally competent, terminally ill adults who choose to hasten inevitable death.

(3) An award of plaintiffs' costs, expenses, and reasonable attorneys' fees pursuant to 42 U.S.C. section 1988.

(4) Such other and further relief as the Court deems just and proper.

Order to Show Cause

Upon all the pleadings and proceedings herein and upon the oral motion of plaintiffs in open court on October 19, 1994, it is hereby

ORDERED that plaintiffs may amend their complaint so as to add Robert M. Morgenthau, District Attorney of New York County, as a party defendant in this matter;

IT IS FURTHER ORDERED, that plaintiffs shall serve upon the District Attorney a Summons and Second Amended Complaint, as well as all material filed in this action to date, by hand delivery on October 20, 1994;

IT IS FURTHER ORDERED, that defendant Cuomo as Governor and defendant Morgenthau as District Attorney show cause by serving, by hand, any supplemental papers in opposition on or before November 1, 1994, at 5 o'clock p.m., why a preliminary injunction should not issue pursuant to Rule 65 of the Federal Rules of Civil Procedure enjoining the defendants, their officers, agents, servants, employees, attorneys, successors in office and all others acting under their authority, control, direction, permission or license, and all persons acting in concert and participation with them from enforcing New York Penal Law sections 125.15(3) and 120.30 against physicians who prescribe medications which mentally competent, terminally ill patients may use to hasten their impending deaths;

IT IS FURTHER ORDERED, that service of this order to show cause upon defendants on October 20, 1994, by facsimile or by hand, shall be deemed sufficient service as to defendants.

SECOND AMENDED COMPLAINT FOR DECLARATORY JUDGMENT AND INJUNCTIVE RELIEF

Plaintiffs, for their complaint, allege:

PARTIES

1. George A. Kingsley is a mentally competent, terminally ill adult who resides in New York City.

2. Howard A. Grossman, M.D., is a physician licensed in the State of New York who practices internal medicine, primarily treating patients with AIDS, in New York City. Dr. Grossman sues on his own behalf and on behalf of his mentally competent, terminally ill patients.

3. Samuel C. Klagsbrun, M.D., is a physician licensed in the State of New York who practices psychiatry in New York City and Katonah, New York. Dr. Klagsbrun sues on his own behalf and on behalf of his mentally competent, terminally ill patients.

4. Timothy E. Quill, M.D., is a physician licensed in the State of New York who practices internal medicine in Rochester, New York. Dr. Quill sues on his own behalf and on behalf of his mentally competent, terminally ill patients.

5. G. Oliver Koppell, the Attorney General of the State of New York, has the powers entrusted to him under the Constitution and Executive Law of the State of New York. He is sued in his official capacity.

6. Mario M. Cuomo, the Governor of the State of New York, has the powers entrusted to him under the Constitution and Executive Law of the State of New York. He is sued in his official capacity.

7. Robert M. Morganthau, District Attorney of New York County, has the powers entrusted to him under the Constitu-

tion and County Law of the State of New York. He is sued in his official capacity.

JURISDICTION AND VENUE

8. Plaintiffs bring this action pursuant to 42 U.S.C. § 1983 to redress the deprivation of rights guaranteed by the Fourteenth Amendment to the Constitution of the United States. Plaintiffs seek a declaratory judgment pursuant to the Federal Declaratory Judgments Act, 28 U.S.C. §§ 2201 and 2202, and appropriate injunctive relief. The jurisdiction of this Court is invoked pursuant to 42 U.S.C. § 1983 and 28 U.S.C. 1331 and 1343(a)(3).

9. Venue is properly laid in the Southern District of New York pursuant to 28 U.S.C. § 1391(b).

NATURE OF THE ACTION

10. This action seeks a declaratory judgment that the portions of the New York Penal Law sections criminalizing assisted suicide are unconstitutional as applied to physicians who assist mentally competent, terminally ill adults who choose to hasten inevitable death. This action also seeks appropriate injunctive relief. The sections of the Penal Law provide, in relevant part, that it is a class C felony to intentionally aid another person to commit suicide (N.Y. Penal Law § 125.15(3)), and a class E felony to promote a suicide attempt by intentionally aiding another person to attempt suicide (N.Y. Penal Law § 120.30). By criminalizing physician assistance in these circumstances, the New York Penal Law prevents mentally competent, terminally ill adults from exercising the right to choose to hasten inevitable death and thus avoid continued suffering and a lingering, painful death. These portions of sections 125.15(3) and 120.30 deny individuals the liberty and privacy to decide what to do with their own bodies and forces them to endure pain, anguish, and loss of dignity.

FACTUAL ALLEGATIONS COMMON TO ALL CLAIMS FOR RELIEF

11. George A. Kingsley is a 48-year-old publishing industry executive who is suffering from AIDS. Mr. Kingsley has been advised and understands that his illness is a terminal one, that he is in the terminal phase of his disease, and that there is no chance of recovery. Mr. Kingsley is fully aware of the ravages the disease wreaks and the prospect he faces of progressive loss of bodily function and integrity and increasing pain and suffering. Mr. Kingsley seeks necessary medical assistance in the form of medications prescribed by his physician to be self-administered for the purpose of hastening his death. Without such assistance Mr. Kingsley cannot hasten his death in a certain and humane manner.

12. There are mentally competent, terminally ill adults in the State of New York who desire to have the choice to seek physician assistance to hasten their deaths.

13. In the regular course of Dr. Howard A. Grossman's medical practice, Dr. Grossman treats patients who are terminally ill and experience chronic, intractable pain and/or intolerable suffering. Also in the regular course of his medical practice, Dr. Grossman encounters mentally competent, terminally ill patients who request assistance in the voluntary self-termination of life. Under certain circumstances it would be consistent with the standards of Dr. Grossman's medical practice to assist these patients in their decision to hasten death through the prescription of medications. Without such medical assistance these patients cannot hasten their deaths in a certain and humane manner. Sections 125.15(3) and 120.30 of the New York Penal Law prevent Dr. Grossman from exercising his best professional judgment to prescribe medications to these patients in dosages that would enable them to act to hasten their own deaths.

14. In the regular course of Dr. Samuel C. Klagsbrun's medical practice, Dr. Klagsbrun treats patients who are ter-

minally ill and experience chronic, intractable pain and/or intolerable suffering. Also in the regular course of his medical practice, Dr. Klagsbrun encounters mentally competent, terminally ill patients who request assistance in the voluntary self-termination of life. Under certain circumstances it would be consistent with the standards of Dr. Klagsbrun's medical practice to assist these patients in their decision to hasten death through the prescription of medications. Without such medical assistance these patients cannot hasten their deaths in a certain and humane manner. Sections 125.15(3) and 120.30 of the New York Penal Law prevent Dr. Klagsbrun from exercising his best professional judgment to prescribe medications to these patients in dosages that would enable them to act to hasten their own deaths.

15. In the regular course of Dr. Timothy E. Quill's medical practice, Dr. Quill treats patients who are terminally ill and experience chronic, intractable pain and/or intolerable suffering. Also in the regular course of his medical practice, Dr. Quill occasionally encounters mentally competent, terminally ill patients who request assistance in the voluntary self-termination of life. Under certain circumstances it would be consistent with the standards of Dr. Quill's medical practice to assist these patients in their decision to hasten death through the prescription of medications. Without such medical assistance these patients cannot hasten their deaths in a certain and humane manner. Sections 125.15(3) and 120.30 of the New York Penal Law deter Dr. Quill from exercising his best professional judgment to prescribe medications to these patients in dosages that would enable them to act to hasten their own deaths.

CLAIMS FOR RELIEF

COUNT I

(Violations of Liberty Guaranteed
by Fourteenth Amendment)

16. Plaintiffs repeat and reallege paragraphs 1 through 15 of their Complaint.

17. The Fourteenth Amendment guarantees the liberty of mentally competent, terminally ill adults with no chance of recovery to make decisions about the end of their lives, including the right to choose to hasten inevitable death with suitable physician-prescribed drugs and thereby avoid pain and suffering. The right to make this choice is a fundamental right and is entitled to the strongest degree of constitutional protection.

18. The Fourteenth Amendment guarantees the liberty of physicians to practice medicine consistent with their best professional judgment, including using their skills and powers to facilitate the exercise of the decision of competent, terminally ill adults to hasten inevitable death by prescribing suitable medications for the patient to self-administer for that purpose.

19. Plaintiffs have no adequate remedy at law and face imminent and irreparable loss of their rights. By reason of these violations of their constitutional rights, plaintiffs are entitled to declaratory judgment and injunctive relief against the enforcement of the relevant portions of sections 125.15(3) and 120.30 of the New York Penal Law.

COUNT II

(Violation of Equal Protection Guaranteed
by Fourteenth Amendment)

20. Plaintiffs repeat and reallege paragraphs 1 through 15 of their Complaint.

21. The Fourteenth Amendment guarantees patient-plaintiff George A. Kingsley and the mentally competent, terminally ill patients of physician-plaintiffs Timothy E. Quill, Samuel C. Klagsbrun and Howard A. Grossman, equal protection under the law of the State of New York. The relevant portions of sections 125.15(3) and 120.30 of the New York Penal Law deny the patient-plaintiffs and the patients of the physician-plaintiffs the equal protection of the law by denying them the right to choose to hasten inevitable death, while terminally ill persons whose treatment includes life support are able to exercise this choice with necessary medical assistance by directing termination of such treatment.

22. Patient-plaintiff George A. Kingsley and the mentally competent, terminally ill patients of physician-plaintiffs Timothy E. Quill, Samuel C. Klagsbrun and Howard A. Grossman, have no adequate remedy at law and face imminent and irreparable loss of their rights. By reason of these violations of their constitutional rights, patient-plaintiffs and the patients of the physician-plaintiffs are entitled to declaratory judgment and injunctive relief against the enforcement of the relevant portions of sections 125.15(3) and 120.30 of the New York Penal Law.

PRAYER FOR RELIEF

WHEREFORE, plaintiffs request that this Court grant the following relief:

(1) A declaration that the relevant portions of Sections 125.15(3) and 120.30 of the New York Penal invalid under the

Constitution of the United States as applied to physicians who assist mentally competent, terminally ill adults who choose to hasten inevitable death, and thus violate 42 U.S.C. section 1983.

(2) An order permanently enjoining defendants, and all who act in concert with them, from enforcing the relevant portions of sections 125.15(3) and 120.30 of the New York Penal Law as applied to physicians who assist mentally competent, terminally ill adults who choose to hasten inevitable death.

(3) An award of plaintiffs' costs, expenses, and reasonable attorneys' fees pursuant to 42 U.S.C. section 1988.

(4) Such other and further relief as the Court deems just and proper.

---

94 Civ. 5321 (TPG)

TIMOTHY E. QUILL, M.D., *et al.*,

Plaintiffs,

—against—

G. OLIVER KOPPELL, *et al.*,

Defendants.

DEFENDANTS G. OLIVER KOPPELL AND MARIO M. CUOMO'S ANSWER AND AFFIRMATIVE DEFENSES TO PLAINTIFFS' SECOND AMENDED COMPLAINT

Defendants G. Oliver Koppell and Mario M. Cuomo, by and through counsel, answer plaintiffs' second amended complaint ("complaint"), as follows:

1. Deny knowledge or information sufficient to form a belief as to the truth of the allegations set forth in paragraphs 1, 2, 3 and 4 of the complaint.

2. Admit the allegations set forth in paragraphs 5, 6, and 7 of the complaint, except that plaintiffs' assertion that defendants are sued in their official capacities states a legal conclusion to which no responsive pleading is required.

3. Paragraph 8 of the complaint states legal conclusions to which no responsive pleading is required. The Court is respectfully referred to the statutes cited therein for their contents.

4. Deny the allegations set forth in paragraph 10 of the complaint, except assert that the first two sentences state legal conclusions to which no responsive pleading is required, and respectfully refer the Court to the statutes cited therein for their contents.

5. Deny knowledge or information sufficient to form a belief as to the truth of the allegations set forth in paragraphs 11, 12, 13, 14 and 15 of the complaint.

6. In response to paragraph 16 of the complaint, repeat and reallege their answers to paragraphs 1 through 15 of the complaint and incorporate them by reference.

7. Deny the allegations set forth in paragraphs 17, 18 and 19 of the complaint.

8. In response to paragraph 20 of the complaint, repeat and reallege their answers to paragraphs 1 through 19 of the complaint and incorporate them by reference.

9. Deny the allegations set forth in paragraphs 21 and 22 of the complaint.

FIRST AFFIRMATIVE DEFENSE

10. The complaint fails in whole or in part to state a claim upon which relief can be granted.

SECOND AFFIRMATIVE DEFENSE

11. This action is barred in whole or in part by the Eleventh Amendment to the United States Constitution.

12. The Court lacks jurisdiction over the subject matter.

THIRD AFFIRMATIVE DEFENSE

13. This action does not present a case or controversy under Article III of the United States Constitution.

FOURTH AFFIRMATIVE DEFENSE

14. The issue presented is a non-justiciable political question.

WHEREFORE, defendants Koppell and Cuomo respectfully demand that the Court enter judgment dismissing the complaint with prejudice.

---

94 Civ. 5321 (TPG)

TIMOTHY E. QUILL, M.D.; SAMUEL C. KLAGSBRUN, M.D.; HOWARD A. GROSSMAN, M.D.; and GEORGE A. KINGSLEY,

Plaintiffs,

—against—

G. OLIVER KOPPELL, Attorney General of the State of New York; MARIO M. CUOMO, Governor of the State of New York; and ROBERT M. MORGENTHAU, District Attorney of the County of New York,

Defendants.

DEFENDANT ROBERT M. MORGENTHAU'S MEMORANDUM OF LAW IN OPPOSITION TO MOTION FOR A PRELIMINARY INJUNCTION

INTRODUCTION

Defendant Robert M. Morgenthau, the District Attorney of New York County, respectfully submits this memorandum of law in opposition to plaintiffs' motion for a preliminary injunction enjoining defendant Morgenthau, the other defendants and all persons acting in concert with the named defendants, "from enforcing New York Penal Law sections 125.15(3) and 120.30 against physicians who prescribe medications which mentally competent, terminally ill patients may use to hasten their impending deaths" (Oct. 20, 1994 Order to Show Cause at 2). As argued below in Point I, plaintiffs' motion should be denied because they have failed to demonstrate that issuance of the preliminary injunction is necessary to prevent irreparable injury to their alleged constitutional rights.* Moreover, as argued below in Point II, plaintiffs' motion should also be denied because the injunction they seek is impermissibly vague under Fed. R. Civ. Pro. 65(d) and is otherwise overly broad.

At the outset, however, it is by no means apparent why plaintiffs amended their complaint to add District Attorney Morgenthau, as opposed to any of the other District Attorneys in New York City or State, as a party defendant. After all, defendant Morgenthau can prosecute only those crimes which have a sufficient nexus to New York County. *See* N.Y. Crim. Pro. Law § 20.40 (McKinney's 1992). And plaintiffs do not allege any facts tending to show that the physician-plaintiffs are in any jeopardy of being prosecuted in New York County. In any event, defendant Morgenthau will address this matter in his answer or by appropriate motion.

---

* Defendant Morgenthau also submits that the federal constitution does not confer upon plaintiffs the suicide-related rights upon which they rely and that, accordingly, plaintiffs have failed to show a likelihood of success on the merits. However, defendant Morgenthau will not address the merits in this memorandum. Instead, defendant Morgenthau adopts the arguments on the merits made by defendant Koppell and *Amicus Curiae* New York State Catholic Conference.

AFFIDAVIT OF MICHAEL S. POPKIN ON BEHALF OF DEFENDANT MARIO M. CUOMO IN OPPOSITION TO PLAINTIFFS' MOTION FOR PRELIMINARY INJUNCTION AND IN SUPPORT OF DEFENDANTS' CROSS-MOTION FOR JUDGMENT ON THE PLEADINGS

STATE OF NEW YORK):
: SS.
COUNTY OF NEW YORK):

MICHAEL S. POPKIN, being duly sworn, deposes and says, as follows:

1. I am an Assistant Attorney General employed in the office of G. OLIVER KOPPELL, Attorney General of the State of New York, and I make this affidavit on behalf of Mario M. Cuomo, Governor of New York, in response to the

Court's Order to Show Cause in this matter, dated October 20, 1994. I have been duly authorized to make this affidavit. I make it upon personal knowledge, as well as information and belief, the source of such knowledge, information and belief being my familiarity with the proceedings herein; and conversations with the staff of the Governor's office.

2. By this affidavit, the Governor joins in the Attorney General's opposition to plaintiffs' Motion for a Preliminary Injunction, and in the Attorney General's pending Cross-Motion for Judgment on the Pleadings in this matter. For the reasons which appear below, the Governor will not—except for this affidavit,—submit additional papers on the motions under submission.

3. The Governor is sued in this case "in his official capacity." Plaintiffs' Second Amended Complaint at ¶6. With respect to this, it is the position of the Governor that he is not a necessary party to this suit. The Governor personally has not actually taken or threatened any action in this matter for which he is joined as a defendant. It is therefore inappropriate that he be so joined. As is the case with the Attorney General, the Governor does not possess primary authority to enforce the criminal statutes which are at issue in this case. Rather it is the District Attorneys of the several counties of the State who primarily enforce these laws. Parallelling the argument already before the Court, "[N]othing in the Penal Law, the Executive Law, or any other New York Statute authorizes the [Governor] to supervise or dictate to the District Attorneys of the various counties of the State of New York." Defendant's Memorandum of Law In Opposition to Motion for a Preliminary Injunction and in Support of Cross-Motion for Judgment on the Pleadings, at 3-4. Therefore, with respect to the Governor, this case continues not to present a case or controversy ripe for adjudication under Article III of the United States Constitution. The Governor is no more likely to prosecute the plaintiff-physicians in this case than is the Attorney General.

4. With respect to the enforcement of the criminal laws at issue in this case, the Governor believes that New York's various District Attorneys will continue to exercise vigilence and discretion. There is nothing to suggest that these officials will fail to exercise their responsibilities. The Governor's presence in this suit therefore adds nothing from the law enforcement point of view.

5. Further, where the constitutionality of the challenged statutes is concerned, the Governor believes that the interests of the State have been well represented in the papers already submitted by the Attorney General pursuant to his obligation to defend the constitutionality of state statutes. Therefore, because the Attorney General can adequately represent the State's interest in upholding the validity of its laws, the Governor is similarly not a necessary party to this action. Except as to his presence in this case as a defendant, additional arguments on his part are unnecessary.

6. For these reasons, as already indicated, the Governor will not (besides this affidavit) submit additional papers on the cross-motions under submission. In general, the Governor joins in the Attorney General's motion that the case be dimissed on the pleadings for failure to State a cause of action, and in the Attorney General's opposition to plaintiffs' request for a preliminary injunction. And in particular, as it pertains to himself, the Governor asks that the case be dismissed for failure to meet the requirements of Article III of the United States Constitution.

94 Civ. 5321 (TPG)

TIMOTHY E. QUILL, M.D.; SAMUEL C. KLAGSBRUN, M.D.; HOWARD A. GROSSMAN, M.D.; and GEORGE A. KINGSLEY,

Plaintiffs,

—against—

G. OLIVER KOPPELL, Attorney General of the State of New York; MARIO M. CUOMO, Governor of the State of New York; and ROBERT M. MORGENTHAU, District Attorney of the County of New York,

Defendants.

DEFENDANT ROBERT M. MORGENTHAU'S ANSWER TO PLAINTIFFS' SECOND AMENDED COMPLAINT

Defendant Robert M. Morgenthau answers plaintiffs' second amended complaint as follows:

1. Denies knowledge or information sufficient to form belief as to the truth of the allegations set forth in paragraphs 1, 2, 3, and 4 of the complaint.

2. Admits the allegations set forth in paragraphs 5, 6, and 7 of the complaint, except that plaintiffs' assertions that defendants are sued in their official capacities states a legal conclusion to which no responsive pleading is required.

3. Paragraphs 8 and 9 of the complaint state legal conclusions to which no responsive pleading is required.

4. Denies the allegations set forth in paragraph 10 of the complaint, except asserts that paragraph 10 states legal conclusions to which no responsive pleading is required, and respectfully refers the Court to the statutes cited therein for their contents.

5. Denies knowledge or information sufficient to form a belief as to the truth of the allegations set forth in paragraphs 11, 12, 13, 14 and 15 of the complaint.

6. In response to paragraph 16 of the complaint, repeats and realleges his answers to paragraphs 1 through 15 of the complaint and incorporates them by reference.

7. Denies the allegations set forth in paragraphs 17, 18 and 19 of the complaint.

8. In response to paragraph 20 of the complaint, repeats and realleges his answers to paragraphs 1 through 19 of the complaint.

9. Denies the allegations set forth in paragraphs 21 and 22 of the complaint.

DEFENSES

10. The complaint fails to state a claim upon which relief can be granted.

11. The action does not present a case or controversy under Article III of the United States Constitution.

WHEREFORE, defendant Robert M. Morgenthau respectfully demands that the Court enter judgment dismissing the complaint with prejudice.

SECOND SUPPLEMENTAL DECLARATION OF TIMOTHY E. QUILL, M.D.

Timothy E. Quill, M.D. declares:

1. I am a plaintiff in this matter, am competent to testify and do so of my own personal knowledge.

2. I make this second supplemental declaration in further support of plaintiffs' motion for a preliminary injunction.

3. I am currently treating mentally competent, terminally ill patients who understand their condition, diagnosis, and prognosis and wish to avoid prolonged suffering by hastening their deaths if and when their suffering becomes intolerable.

4. These patients have sought my assurance that I will assist them in hastening their deaths by prescribing drugs, if and when medically and psychiatrically appropriate, for them to self administer at the time and place of their choice.

5. The current penal law deters me from providing such assurance, despite my professional responsibility to those patients.

I declare under penalty of perjury that the foregoing is true and correct.

GRIESA, *Chief Judge*

New York law makes it a crime to aid a person in committing suicide, or in attempting to commit suicide. Plaintiffs urge that these provisions violate the United States Constitution, to the extent that they apply to situations where a physician aids the commission of suicide by a mentally competent, terminally ill adult wishing to avoid continued severe suffering, by prescribing a death-producing drug which the patient takes. Plaintiffs claim that a person has a constitutional right to terminate his life under these circumstances, and that a physician has a corresponding constitutional right not to be prosecuted for aiding a patient in the exercise of the patient's right.

Plaintiffs move for a preliminary injunction against the enforcement of the relevant statutes, §§ 125.15(3) and 120.30 of the New York Penal Law, to the extent they apply to physicians who give the kind of assistance described above. Defendants oppose plaintiffs' motion and cross-move for judgment on the pleadings dismissing the action.

Plaintiffs' motion for preliminary injunction is denied. Defendants' cross-motion to dismiss the action is granted. The motion to dismiss will be treated as one for summary judgment since the court has considered matters outside the pleadings—*i.e.*, declarations filed on the motion for preliminary injunction. There is no dispute on the essential facts and the issues presented are ones of law.

The Parties

The action was commenced on July 20, 1994. The original complaint named three physician plaintiffs, Timothy E. Quill, Samuel C. Klagsbrun, and Howard A. Grossman. There were also three patient plaintiffs who asserted that they were terminally ill and wished to have the assistance of physicians in committing suicide. All three of the patient plaintiffs have now died, leaving only the three physician plaintiffs.

The original complaint named only the Attorney General of the State of New York as a defendant. However, it was argued that the Attorney General was not the proper defendant because he was not responsible for prosecutions under the criminal laws of the State. The complaint has now been amended to add as defendants Governor Mario M. Cuomo and New York County District Attorney Robert M. Morgenthau. There is no longer any question about the fact that there are sufficient defendants present to allow the issues in the case to be litigated.

Amicus curiae briefs in opposition to plaintiffs' position have been filed by the New York State Catholic Conference and the Legal Center for the Defense of Life.

The Relevant Record

The Original Complaint

The original complaint of July 20, 1994 contained, among other things, allegations that the three patient plaintiffs were mentally competent adults; that they were in the terminal stages of fatal illnesses; that they faced progressive loss of bodily function and integrity as well as increasing suffering; and that they desired medical assistance in the form of medications prescribed by physicians to be self-administered for the purpose of hastening death.

As to the three physician plaintiffs, the complaint alleged that, in the regular course of their medical practice, they

treated terminally ill patients who requested assistance in the voluntary self-termination of life; that under certain circumstances it would be consistent with the standards of these physicians to prescribe medications to such patients which would cause death, since without such medical assistance these patients could not hasten their deaths in a certain and humane manner.

The original complaint alleged that the patient plaintiffs have a constitutional right under these circumstances to terminate their lives with this type of medical assistance; and that since the New York Penal Law makes it a crime to render such assistance, these provisions violate the constitutional rights of both the patient plaintiffs and the physician plaintiffs, specifically rights under the Due Process and Equal Protection Clauses of the Fourteenth Amendment.

Amendments to the Complaint

An amended complaint was filed on October 14, 1994. By this time, two of the three patient plaintiffs had died. The allegations about the remaining patient plaintiff were carried over into the amended complaint, as were the claims of the physician plaintiffs.

The second amended complaint was filed October 20, 1994. It was essentially the same as the previous complaint except for naming New York County District Attorney Robert M. Morgenthau as a defendant.

Subsequently, the third patient plaintiff died, thus leaving the three physicians as the only plaintiffs.

An answer was filed in August 1994 to the original complaint denying that plaintiffs have any valid claim. No amended answers were filed responding to the amended complaints, but the court deems the original answer to be a sufficient denial of plaintiffs' claims.

Declarations Filed on Motion For Preliminary Injunction

The motion for preliminary injunction was filed on September 16, 1994. In support of the motion, each of the three patient plaintiffs submitted declarations which confirmed the allegations in the complaint and added details about their diseased conditions and suffering.

The three physician plaintiffs have submitted declarations affirming their belief that proper and humane medical practice should include the ability to prescribe medication which will enable a patient to commit suicide under the circumstances described in this case.

A declaration by Quill also describes the following incident. In 1990 he treated a terminally ill patient, who feared a lingering death and who apprised Quill that she would act on her own to hasten death if he refused to assist her to do so. Quill made barbiturates available to the patient, which she could use to induce sleep, but which she could also take to end her life by an overdose at the point she desired to do so. She agreed to meet with Quill prior to taking any overdose. The patient reached the point where she desired to end her life. She met with Quill "to insure that all alternatives had been explored," after which she took the overdose and died. Quill was not present at the time of death. Subsequently, Quill wrote an article in the New England Journal of Medicine describing these events. This led to what Quill describes as a "very public criminal investigation" in New York State, and presentation to a grand jury. Quill testified before the grand jury, as did other witnesses. The grand jury did not indict.

The other two physician plaintiffs, Klagsbrun and Grossman, describe in their declarations specific incidents when terminally ill patients wished assistance in hastening death. Each doctor asserts that he refrained from rendering such assistance because of possible prosecution under the New York statutes.

The Statutes

Section 125.15(3) of the New York Penal Law provides in relevant part:

> A person is guilty of manslaughter in the second degree when:
>
> . . .
>
> 3. He intentionally . . . aids another person to commit suicide.

Section 120.30 provides:

> A person is guilty of promoting a suicide attempt when he intentionally . . . aids another person to attempt suicide.

Violation of either statute is a felony.

Plaintiffs are not seeking to strike down these statutes in their entirety. Plaintiffs claim that the statutes are unconstitutional only insofar as they apply to the type of physician assisted suicide at issue in this case. Both plaintiffs and defendants agree that, if a physician renders the type of assistance described here, he will violate § 125.15(3) where actual death by suicide occurs, and § 120.30 where the patient attempts to commit suicide and fails.

DISCUSSION

Justiciability

Defendants assert that there is no justiciable case or controversy as required by Article III of the Constitution. According to defendants, plaintiffs show nothing more than a speculative possibility of prosecution, rather than any actual threat of prosecution.

The court does not agree with these assertions. The relevant law is well set forth in *Babbitt v. United Farm Workers Nat'l Union*, 442 U.S. 289 (1979). There the Supreme Court dealt

with a constitutional challenge to certain Arizona agricultural labor regulations. The case was brought by a union and parties connected with the union. The Court held that certain of the plaintiffs' claims were justiciable and certain were not. The Court stated that when contesting the constitutionality of a criminal statute it is not necessary that the plaintiff first expose himself to actual prosecution. When the plaintiff has alleged an intention to engage in a course of conduct arguably affected with a constitutional interest, but proscribed by a statute, and there exists a credible threat of prosecution, a sufficient controversy is presented. On the other hand, where there are no fears of prosecution except those which are imaginary or speculative, there is no basis for federal court action. "Abstract questions" are not justicible. *Id.* at 297-99.

In *Babbitt* the Court upheld federal jurisdiction over claims where (1) the plaintiffs asserted both the intention and the constitutional right to engage in conduct which would violate the regulations, and (2) the state had not disavowed the intention of imposing criminal penalties. Thus the plaintiffs were "not without some reason in fearing prosecution," and the positions of the parties were "sufficiently adverse" to present a proper case. *Id.* at 302-3.

As to the claims in *Babbitt* held not to be justiciable, the Court found that it was uncertain whether the particular activities involved would actually give rise to a problem under the regulations. The factual pattern which might develop was unclear. *Id.* at 303-4.

Another instructive case is *Doe v. Bolton*, 410 U.S. 179 (1973). This was a companion abortion case to *Roe v. Wade*, 410 U.S. 113 (1973). In *Doe*, the plaintiffs challenged the Georgia anti-abortion statute. The Court held, among other things, that the claim of the physician plaintiffs presented a justiciable controversy. This was true despite the fact that none of them had been prosecuted or threatened with prosecution. The Court pointed out, 410 U.S. at 188:

> The physician is the one against whom these criminal statutes directly operate in the event he procures an abortion that does not meet the statutory exceptions and conditions. The physician-appellants, therefore, assert a sufficiently direct threat of personal detriment. They should not be required to await and undergo a criminal prosecution as the sole means of seeking relief.

On the basis of these authorities, the court holds that the instant case presents a justiciable controversy under Article III of the Constitution. The three physician plaintiffs seek to carry on activities which they contend are within their constitutional rights and which would violate the New York Penal Law. This is not a case about some activity in which a plaintiff might possibly engage and which might create a hypothetical issue of criminal liability. The physician plaintiffs credibly assert that they have had cases and continue to have cases in which their services are urgently sought to assist in the commission of suicide in the way described in this case. As to whether there is a threat of prosecution for so assisting, there has been the grand jury proceeding about plaintiff Quill. Although no indictment was returned, the State has by no means disavowed the intention of acting against physicians in future cases. Indeed, the State has in the present action vigorously defended its right to apply the statutes to such conduct. Thus, there is a credible threat of prosecution giving rise to sufficiently adverse positions so that a justiciable controversy exists. What is presented here is no mere abstract question.

This is particularly true since the issue of physician assisted suicide is being pressed by segments of the medical community and has sparked sharp public debate. It is most unlikely that the conduct at issue in this case would be ignored by the law enforcement authorities.

It is appropriate to note that the primary right claimed is that of the patient—*i.e.*, the right to decide to terminate one's life and to do so by suicide. However, if such a constitutional right resides in the patient, then there would be a corresponding constitutional right of the physician not to be prosecuted for assisting in the exercise of the patient's con-

stitutional right. The physician plaintiffs in the present case have standing to raise the whole range of issues—both as to the patient's asserted right to terminate his life and the physician's right to be free from prosecution for rendering assistance. *See Doe*, 410 U.S. at 188.

The Due Process Issue

The Fourteenth Amendment provides that no state may "deprive any person of life, liberty, or property, without due process of law." It is now established that there are certain subjects which are so fundamental to personal liberty that governmental invasion is either entirely prohibited or sharply limited. One recent articulation of this concept by the Supreme Court, which is strongly relied upon by plaintiffs, is contained in the plurality opinion in *Planned Parenthood v. Casey*, 112 S.Ct. 2791, 2807 (1992).

> Our law affords constitutional protection to personal decisions relating to marriage, procreation, contraception, family-relationships, child rearing, and education. . . . These matters, involving the most intimate and personal choices a person may make in a lifetime, choices central to personal dignity and autonomy, are central to the liberty protected by the Fourteenth Amendment. At the heart of liberty is the right to define one's own concept of existence, of meaning, of the universe, and of the mystery of human life. Beliefs about these matters could not define the attributes of personhood were they formed under compulsion of the State.

Casey confirmed the holding in *Roe v. Wade* that the Fourteenth Amendment protects a woman's decision to abort a pregnancy in the pre-viability stage.

Plaintiffs also rely on the Supreme Court decision in *Cruzan v. Director Missouri Dep't of Health*, 497 U.S. 261 (1990). In that case a woman suffered an accident, after which she could only be kept alive by artificial feeding and hydration. She lost her cognitive faculties, and apparently had no possibility of recovery. Her parents desired to have the life-sustaining apparatus withdrawn. The Supreme Court of Missouri held that it was necessary, before such a step could be taken, to show by clear and convincing evidence that the injured woman would have desired withdrawal of the medical devices, and further held that such evidence was lacking.

Although the United States Supreme Court, in reviewing the case, did not provide a single convenient statement of the question before it, a fair summary of the issues would appear to be whether the injured woman had a constitutional right requiring the hospital to withdraw life-sustaining treatment; whether this right could be exercised on behalf of the woman by her parents; and whether the exercise of this right was unduly hampered by the evidence rule imposed by the state court. In approaching these questions the Supreme Court stated:

> The principle that a competent person has a constitutionally protected liberty interest in refusing unwanted medical treatment may be inferred from our prior decisions.

Id. at 278. The Court went on to discuss the specific issue of whether this general right to refuse treatment would apply where such refusal might lead to death.

> Petitioners insist that under the general holdings of our cases, the forced administration of life-sustaining medical treatment, and even of artificially delivered food and water essential to life, would implicate a competent person's liberty interest. Although we think the logic of the cases discussed above would embrace such a liberty interest, the dramatic consequences involved in refusal of such treatment would inform the inquiry as to whether the deprivation of that interest is constitutionally permissible. But for purposes of this case, we assume that the United States Constitution would grant a competent

person a constitutionally protected right to refuse life-saving hydration and nutrition.

Id. at 279. Thus, the Court stopped short of actually deciding that there is a constitutional right to terminate medical treatment necessary to sustain life, although the Court *assumed* the existence of such a right for the purpose of going on to the other issues in the case. As to these, the Court held that the state had the power to require evidence of the patient's wishes rather than allowing the decision solely at the behest of family members, and that the state could properly require proof of the patient's wishes by clear and convincing evidence.

Plaintiffs in the present case argue that the reasoning and holdings of the Supreme Court in *Roe* and *Casey* are broad enough to establish that there is a fundamental right on the part of a terminally ill patient to decide to end his life, and to do so with the type of assistance described in this case. Plaintiffs also interpret the *Cruzan* decision as being tantamount to a holding that a terminally ill person has a constitutional right to require the withdrawal of life-sustaining treatment. Plaintiffs argue that it follows inevitably that there is a constitutional right of physician assisted suicide under the circumstances and in the manner at issue here.

Plaintiffs' reading of these cases is too broad. The Supreme Court has been careful to explain that the abortion cases, and other related decisions on procreation and child rearing, are not intended to lead automatically to the recognition of other fundamental rights on different subjects. *See, e.g., Bowers v. Hardwick*, 478 U.S. 186, 191 (1986); *Paris Adult Theatre I v. Slaton*, 413 U.S. 49, 68, n.15 (1973). With regard to *Cruzan*, as already described, the Court did not actually make the holding upon which plaintiffs seek to rely. In any event, it would appear clear that suicide has a sufficiently different legal significance from requesting withdrawal of treatment so that a fundamental right to suicide cannot be implied from *Cruzan*.

The Supreme Court has described the considerations which are appropriate before there can be a declaration that rights

"not readily identifiable in the Constitution's text" are deserving of constitutional protection. *See Bowers*, 478 U.S. at 191. Such rights must be implicit in the concept of ordered liberty so that neither liberty nor justice would exist if they were sacrificed. The Supreme Court has also characterized such rights as those liberties that are deeply rooted in the nation's history and traditions. *Id.* at 191-92. *See also Moore v. East Cleveland*, 431 U.S. 494, 503 (1977).

The trouble is that plaintiffs make no attempt to argue that physician assisted suicide, even in the case of terminally ill patients, has any historic recognition as a legal right. The history of the treatment of suicide by the law has been dealt with in a number of recent studies. *See, e.g.*, Thomas J. Marzen et al., *Suicide: A Constitutional Right?*, 24 Duquesne L. Rev. 1, 17-100 (1986); Note, *Physician-Assisted Suicide and New York Law*, 57 Alb. L. Rev. 819, 824-32 (1994); The New York State Task Force on Life and The Law, *When Death is Sought: Assisted Suicide and Euthanasia in the Medical Context*, 54-56 (1994). Justice Scalia's concurring opinion in *Cruzan*, 497 U.S. at 294-95, also contains a useful historical summary.

Suicide was a crime under English common law, even if the motive was to avoid suffering and illness. Obviously, no punishment could be inflicted upon the deceased, but sanctions were imposed by way of forfeiture of property and ignominious burial. The American colonies apparently adopted this common law rule, but it has been gradually abandoned so that no state in this country now criminalizes suicide or attempted suicide. However, as Justice Scalia states, this change in the law resulted from a desire "to spare the innocent family and not to legitimatize the act." *Cruzan*, 497 U.S. at 294.

As to assisting suicide, the majority of states in this country have long imposed criminal penalties on one who aids another in committing suicide. *See Cruzan*, 497 U.S. at 280 (majority opinion). The Model Penal Code, adopted by the American Law Institute, provides that it is a crime to assist a suicide. *Model Penal Code* § 210.5(2) and comment at 100 (American Law Institute 1980). The comment states:

> Self destruction is surely not conduct to be encouraged or taken lightly. The fact that penal sanctions wil prove ineffective to deter the suicide itself does not mean that the criminal law is equally powerless to influence the behavior of those who would aid or induce another to take his own life. Moreover, in principle it would seem that the interests in the sanctity of life that are represented by the criminal homicide laws are threatened by one who expresses a willingness to participate in taking the life of another, even though the act may be accomplished with the consent, or at the request of the suicide victim.

Plaintiffs are, of course, suggesting a limited form of physician assisted suicide. But plaintiffs have pointed to nothing in the historical record to indicate that even this form of assisted suicide has been given any kind of sanction in our legal history which would help establish it as a constitutionalright.

For these reasons, the court holds that the type of physician assisted suicide at issue in this case does not involve a fundamental liberty interest protected by the Due ProcessClause of the Fourteenth Amendment.

The Equal Protection Issue

Plaintiffs contend that even if there is no fundamental right to engage in assisting a patient's suicide under the Due Process Clause, they should prevail under the Equal Protection Clause. Their argument proceeds thus. It is established under New York law that a competent person may refuse medical treatment, even if the withdrawal of such treatment wil result in death. *See, e.g., Rivers v. Katz*, 67 N.Y.2d 485, 493, 504 N.Y.S.2d 74, 78, 495 N.E.2d 337 (1986); *In Re Storar*, 52 N.Y.2d 363, 438 N.Y.S.2d 266, 420 N.E.2d 64 (1981); *Schloendorff v. Soc'y of N.Y. Hosp.*, 211 N.Y. 125, 129, 105 N.E. 92, 93 (1914).

Plaintiffs further argue that such refusal of treatment is essentially the same thing as committing suicide with the advice of a physician. Plaintiffs urge that for the State to sanction one course of conduct and criminalize the other involves discrimination which violates the Equal Protection Clause of the Fourteenth Amendment.

The issue is whether the distinction drawn by New York law has a reasonable and rational basis. *Dandridge v. Williams*, 397 U.S. 471, 485, 487 (1969). To certain ways of thinking, there may appear to be little difference between refusing treatment in the case of a terminally ill person and taking a dose of medication which leads to death. But to another way of thinking there is a very great difference. In any event, it is hardly unreasonable or irrational for the State to recognize a difference between allowing nature to take its course, even in the most severe situations, and intentionally using an artificial death-producing device. The State has obvious legitimate interests in preserving life, and in protecting vulnerable persons. The State has the further right to determine how these crucial interests are to be treated when the issue is posed as to whether a physician can assist a patient in committing suicide. Clearly in the present public debate there are sincere and conscientious advocates for and against the concept of physician assisted suicide. Under the United States Constitution and the federal system it establishes, the resolution of this issue is left to the normal democratic processes within the State.

For these reasons the court holds that plaintiffs have not shown a violation of the Equal Protection Clause of the Fourteenth Amendment.

It should be noted that one federal district court has taken a view contrary to what is expressed in this opinion as to both the due process and the equal protection issues. *Compassion in Dying v. Washington*, 850 F. Supp. 1455 (W.D. Wash. 1994). That ruling is on appeal to the Ninth Circuit.

CONCLUSION

Plaintiffs' motion for a preliminary injunction is denied. Defendants' motion to dismiss, treated as a motion for summary judgment, is granted, and the action is dismissed.

SO ORDERED.

UNITED STATES DISTRICT COURT
SOUTHERN DISTRICT OF NEW YORK

---

94 CIVIL 5321(TPG)
Filed December 21, 1994

TIMOTHY E. QUILL, M.D.; SAMUEL C. KLAGSBRUN, M.D.; and HOWARD A. GROSSMAN, M.D.,

Plaintiffs,

—against—

G. OLIVER KOPPELL, Attorney General of the State of New York; MARIO M. CUOMO, Governor of the State of New York; and ROBERT M. MORGENTHAU, District Attorney of New York County,

Defendants.

JUDGMENT

Plaintiffs having moved for a preliminary injunction against the enforcement of the relevant statutes, Sections 125.15(3) and 120.30 of the New York Penal Law, to the extent they apply to physicians who give the kind of assistance described the Court's Opinion, defendants having opposed the motion and having cross-moved for judgment on the pleadings dismissing the action, and the said motions having come before the Honorable THOMAS P. GRIESA, U.S.D.J., and the Court on its own initiative having treated defendants' motion to dis-

miss as a motion for summary judgment, and the Court thereafter on December 16, 1994, having rendered its opinion (#74086); denying plaintiffs' motion for a preliminary injunction, and granting defendants' motion to dismiss, treated as a motion for summary judgment, and dismissing the action, it is,

ORDERED, ADJUDGED AND DECREED: That plaintiffs' motion for a preliminary injunction be and it is hereby denied, and it is further,

ORDERED, that defendants' motion to dismiss, treated as a motion for summary judgment, be and it is hereby granted, and it is further,

ORDERED, that the action be and it is hereby dismissed for the reasons stated in the Court's Opinion, dated December 16, 1994.

UNITED STATES COURT OF APPEALS
FOR THE SECOND CIRCUIT

No. 60—August Term, 1995

(Argued: September 1, 1995 Decided: April 2, 1996)

Docket No. 95-7028

TIMOTHY E. QUILL, M.D.; SAMUEL C. KLAGSBRUN, M.D.; and HOWARD A. GROSSMAN, M.D.,

Plaintiffs-Appellants,

—v.—

DENNIS C. VACCO, Attorney General of the State of New York; GEORGE E. PATAKI, Governor of the State of New York; ROBERT M. MORGENTHAU, District Attorney of New York County,

Defendants-Appellees.

Before:

MINER and CALABRESI, *Circuit Judges*,
and POLLACK, *Senior District Judge*.*

---

* The Honorable Milton Pollack of the United States District Court for the Southern District of New York, sitting by designation.

Appeal from summary judgment for defendants entered in the United States District Court for the Southern District of New York (Griesa, Ch. J.) in action to declare unconstitutional two New York statutes penalizing assistance in suicide to extent that the statutes prohibit physicians from acceding to requests of terminally-ill, mentally competent patients for drugs to hasten death.

Affirmed in part and reversed in part.

Judge Calabresi concurs in a separate opinion.

KATHRYN L. TUCKER, Perkins Coie, Seattle, WA, and CARLA A. KERR, Hughes Hubbard & Reed, New York, NY (David J. Burman, Thomas L. Boeder, Kari Anne Smith, Perkins Coie, Seattle, WA, Leigh A. Roveda, Hughes Hubbard & Reed, New York, NY, of counsel), *for Plaintiffs-Appellants*.

MICHAEL POPKIN, Assistant Attorney General, New York, NY (Dennis C. Vacco, Attorney General of the State of New York, Victoria Graffeo, Solicitor General, Kathie Ann Whipple, Acting Bureau Chief, Litigation Bureau, Susan L. Watson, Assistant Attorney General, of counsel), *for Defendants-Appellees*.

MARC FRAZIER SCHOLL, Assistant District Attorney, New York, NY (Robert M. Morgenthau, District Attorney of New York County, Marc Dwyer, Assistant

District Attorney, of counsel), *for Defendant-Appellee Robert M. Morgenthau*.

(Michael L. Costello, New York State Catholic Conference, Albany, NY, Mark E. Chopko, Michael F. Moses, United States Catholic Conference, Washington, DC, of counsel), for United States Catholic Conference and New York State Catholic Conference as *amici curiae*.

(Michael Tierney, New York, NY, of counsel), for New York State Right to Life Committee, Inc. as *amicus curiae*.

(James Bopp, Jr., Richard E. Coleson, Bopp, Coleson & Bostrom, Terre Haute, IN, of counsel), for The National Right To Life Committee, Inc. as *amicus curiae*.

(Paul Benjamin Linton, Clarke D. Forsythe, Americans United for Life, Chicago, IL, of counsel), for Members of the New York State Legislature as *amici curiae*.

(Cameron Clark, Claudia L. Hammerman, New York, NY, of counsel), for Lambda Legal Defense and Education Fund, Inc., National Association of People with AIDS, Unitarian Universalist Association, Americans for Death with Dignity, Death with Dignity Education Center, Gray Panthers Project Fund, Hemlock Society, and Minna Barrett as *amici curiae*.

MINER, *Circuit Judge*.

Plaintiffs-appellants Timothy E. Quill, Samuel C. Klagsbrun and Howard A. Grossman appeal from a summary judgment entered in the United States District Court for the Southern District of New York (Griesa, Ch. J.) dismissing their 42 U.S.C. § 1983 action against defendants-appellees. The action was brought by plaintiffs-appellants, all of whom are physicians, to declare unconstitutional in part two New York statutes penalizing assistance in suicide. The physicians contend that each statute is invalid to the extent that it prohibits them from acceding to the requests of terminally-ill, mentally competent patients for help in hastening death. In granting summary judgment in favor of defendants-appellees, the district court considered and rejected challenges to the statutes predicated upon the Due Process and Equal Protection Clauses of the Fourteenth Amendment to the United States Constitution. *Quill v. Koppell*, 870 F. Supp. 78 (S.D.N.Y. 1994). We reverse in part, holding that physicians who are willing to do so may prescribe drugs to be self-administered by mentally competent patients who seek to end their lives during the final stages of a terminal illness.

BACKGROUND

The action giving rise to this appeal was commenced by a complaint filed on July 20, 1994. The plaintiffs named in that complaint were the three physicians who are the appellants here and three individuals then in the final stages of terminal illness: Jane Doe (who chose to conceal her actual identity), George A. Kingsley and William A. Barth. The sole defendant named in that complaint was G. Oliver Koppell, then the Attorney

General of the State of New York. He has been succeeded as Attorney General by Dennis C. Vacco, who has been substituted for him as an appellee on this appeal. According to the complaint, Jane Doe was a 76-year-old retired physical education instructor who was dying of thyroid cancer; Mr. Kingsley was a 48-year-old publishing executive suffering from AIDS; and Mr. Barth was a 28-year-old former fashion editor under treatment for AIDS. Each of these plaintiffs alleged that she or he had been advised and understood that she or he was in the terminal stage of a terminal illness and that there was no chance of recovery. Each sought to hasten death "in a certain and humane manner" and for that purpose sought "necessary medical assistance in the form of medications prescribed by [her or his] physician to be self-administered."

The physician plaintiffs alleged that they encountered, in the course of their medical practices, "mentally competent, terminally ill patients who request assistance in the voluntary self-termination of life." Many of these patients apparently "experience chronic, intractable pain and/or intolerable suffering" and seek to hasten their deaths for those reasons. Mr. Barth was one of the patients who sought the assistance of Dr. Grossman. Each of the physician plaintiffs has alleged that "[u]nder certain circumstances it would be consistent with the standards of [his] medical practice" to assist in hastening death by prescribing drugs for patients to self-administer for that purpose. The physicians alleged that they were unable to exercise their best professional judgment to prescribe the requested drugs, and the other plaintiffs alleged that they were unable to receive the requested drugs, because of the prohibitions contained in sections

125.15(3) and 120.30 of the New York Penal Law, all plaintiffs being residents of New York.

Section 125.15 of the New York Penal Law provides in pertinent part:

> A person is guilty of manslaughter in the second degree when:
>
> . . . .
>
> 3. He intentionally . . . aids another person to commit suicide.

A violation of this provision is classified as a class C felony. *Id.*

Section 120.30 of the New York Penal Law provides:

> A person is guilty of promoting a suicide attempt when he intentionally . . . aids another person to attempt suicide.

A violation of this provision is classified as a class E felony. *Id.*

Count I of the complaint included an allegation that "[t]he Fourteenth Amendment guarantees the liberty of mentally competent, terminally ill adults with no chance of recovery to make decisions about the end of their lives." It also included an allegation that

> [t]he Fourteenth Amendment guarantees the liberty of physicians to practice medicine consistent with their best professional judgment, including using their skills and powers to facilitate the exercise of the decision of competent, terminally ill adults to hasten inevitable death by prescribing suitable medications for the patient to self-administer for that purpose.

Count II of the complaint included an allegation that

> [t]he relevant portions of . . . the New York Penal Law deny the patient-plaintiffs and the patients of the physician-plaintiffs the equal protection of the law by denying them the right to choose to hasten inevitable death, while terminally ill persons whose treatment includes life support are able to exercise this choice with necessary medical assistance by directing termination of such treatment.

In their prayer for relief the plaintiffs requested judgment declaring the New York statutes complained of constitutionally invalid and therefore in violation of 42 U.S.C. § 1983 "as applied to physicians who assist mentally competent, terminally ill adults who choose to hasten inevitable death." Plaintiffs also sought an order permanently enjoining defendants from enforcing the statutes and an award of attorney's fees.

By order to show cause filed on September 16, 1994, the plaintiffs moved for a preliminary injunction to enjoin then-Attorney General Koppell "and all persons acting in concert and participation with him from enforcing New York Penal Law sections 125.15(3) and 120.30 against physicians who prescribe medications which mentally competent, terminally ill patients may use to hasten their impending deaths." A declaration by each of the plaintiffs was submitted in support of the application, although Jane Doe had died prior to the filing of the order to show cause. Plaintiffs Kingsley and Barth were then in the advanced stages of AIDS and therefore sought an immediate determination by the district court.

In her declaration, Jane Doe stated:

> I have a large cancerous tumor which is wrapped around the right carotid artery in my neck and is

collapsing my esophagus and invading my voice box. The tumor has significantly reduced my ablity to swallow and prevents me from eating anything but very thin liquids in extremely small amounts. The cancer has metastasized to my plural [sic] cavity and it is painful to yawn or cough. . . . In early July 1994 I had the [feeding] tube implanted and have suffered serious problems as a result. . . . I take a variety of medications to manage the pain. . . . It is not possible for me to reduce my pain to an acceptable level of comfort and to retain an alert state. . . . At this time, it is clear to me, based on the advice of my doctors, that I am in the termnal phase of this disease. . . . At the point at which I can no longer endure the pain and suffering associated with my cancer, I want to have drugs available for the purpose of hastening my death in a humane and certain manner. I want to be able to discuss freely with my treating physician my intenion of hastening my death through the consumption of drugs prescribed for that purpose.

Mr. Kingsley subscribed to a declaration that included the following:

> At this time I have almost no immune system function. . . . My first major illness associated with AIDS was cryptosporidiosis, a parasitic infection which caused me severe fevers and diarrhea and associated pain, suffering and exhaustion. . . . I also suffer from cytomegalovirus ("CMV") retinitis, an AIDS-related virus which attacks the retina and causes blindness. To date I have become almost completely blind in my left eye. I am at risk of losing my sight altogether from this condition. . . . I also suffer from toxoplasmosis, a parasitic infection which has caused lesions to develop on my brain. . . . I . . . take daily infusions of cytovene for the . . . retinitis condition. This medication, administered for an hour through a Hickman tube which is connected to an artery in my chest, prevents me from ever taking showers and makes simple routine functions burdensome. In addition, I inject my leg daily with neupogen to combat the deficient white cell count in my blood. The daily injection of this medication is extremely painful. . . . At this point it is clear to me, based on the advice of my doctors, that I am in the terminal phase of [AIDS]. . . . It is my desire that my physician prescribe suitable drugs for me to consume for the purpose of hastening my death when and if my suffering becomes intolerable.

In his declaration, Mr. Barth stated:

> In May 1992, I developed a Kaposi's sarcoma skin lesion. This was my first major illness associated with AIDS. I underwent radiation and chemotherapy to treat this cancer. . . . In September 1993, I was diagnosed with cytomegalovirus ("CMV") in my stomach and colon which caused severe diarrhea, fevers and wasting. . . . In February 1994, I was diagnosed with microsporidiosis, a parasitic infection for which there is effectively no treatment. . . . At approximately the same time, I contracted AIDS-related pneumonia. The pneumonia's infusion therapy treatment was so extremely toxic that I vomited with each infusion. . . . In March 1994, I was diagnosed with cryptosporidiosis, a parasitic infection which has caused severe diarrhea, sometimes producing 20 stools a day, extreme abdominal pain, nausea and additional significant wasting.

> I have begun to lose bowel control . . . . For each of these conditions I have undergone a variety of medical treatments, each of which has had significant adverse side effects. . . . While I have tolerated some [nightly intravenous] feedings, I am unwilling to accept this for an extended period of time. . . . I understand that there are no cures. . . . I can no longer endure the pain and suffering . . . and I want to have drugs available for the purpose of hastening my death.

A cross-motion for judgment on the pleadings was filed by Attorney General Koppell on October 11, 1994. Thereafter, on October 14, 1994, an amended complaint was filed by the three physicians and Mr. Kingsley naming as defendants Attorney General Koppell and New York State Governor Mario M. Cuomo. The counts of the complaint were the same as set forth in the original complaint, alleging violations of liberty interests guaranteed by the Fourteenth Amendment in Count I and violation of equal protection rights guaranteed by the Fourteenth Amendment in Count II. The prayer for relief remained the same as in the original complaint. Supplemental declarations in support of the plaintiff's motion for preliminary injunction also were filed on October 14, 1994. In their supplemental declarations, Doctors Klagsbrun and Grossman reiterated their desire "to prescribe drugs, if and when medically and psychiatrically appropriate, for such patients to self-administer at the time and place of their choice for the purpose of hastening their impending deaths."

In his supplemental declaration, Dr. Quill declared:

> The removal of a life support system that directly results in the patient's death requires the direct

> involvement by the doctor, as well as other medical personnel. When such patients are mentally competent, they are consciously choosing death as preferable to life under the circumstances that they are forced to live. Their doctors do a careful clinical assessment, including a full exploration of the patient's prognosis, mental competence to make such decisions, and the treatment alternatives to stopping treatment. It is legally and ethically permitted for physicians to actively assist patients to die who are dependent on life-sustaining treatments. . . . Unfortunately, some dying patients who are in agony that can no longer be relieved, yet are not dependent on life-sustaining treatment, have no such options under current legal restrictions. It seems unfair, discriminatory, and inhumane to deprive some dying patients of such vital choices because of arbitrary elements of their condition which determine whether they are on life-sustaining treatment that can be stopped.

Along with the supplemental declarations filed on October 14th, an original declaration in support of the motion was filed by Dr. Jack Froom, a physician and Professor of Family Medicine with substantial experience in detecting depression in primary care patients. He declared:

> Physicians can determine whether a patient's request to hasten death is rational and competent or motivated by depression or other mental illness or instability. Physicians currently make these determinations as to patient capacity to make end-of-life decisions with respect to orders not to resuscitate and refusal of life-sustaining treatment. . . . Terminally ill persons who seek to hasten death by con-

suming drugs need medical counseling regarding the type of drugs and the amount and manner in which they should be taken, as well as a prescription, which only a licensed medical doctor can provide. . . . Knowing what drug, in what amount, will hasten death for a particular patient, in light of the patient's medical condition and medication regimen, is a complex medical task. . . . It is not uncommon, in light of present legal constraints on physician assistance, that patients seeking to hasten their deaths try to do so without medical advice. . . . Very often, patients who survive a failed suicide attempt find themselves in worse condition than before the attempt. Brain damage, for example, is one result of failed suicide attempts.

A second amended complaint was filed on October 20, 1994. The parties, allegations and prayer for relief were the same as those contained in the first amended complaint, except that Robert M. Morgenthau, District Attorney of New York County, was added as a defendant in his official capacity. Both Dr. Grossman and Dr. Klagsbrun practice medicine in New York City, and Mr. Morgenthau is responsible for the prosecution of crimes occurring in New York County. The physician plaintiffs each filed second supplemental declarations on November 28, 1994, in support of the motion for a preliminary injunction. Each stated that he was currently treating mentally competent, terminally-ill patients who desired to hasten their deaths by self-administering drugs to be provided by the physicians "if and when medically and psychiatrically appropriate." These patients, according to the physicians, understood "their condition, diagnosis, and prognosis and wish[ed] to avoid prolonged suffering by hastening their deaths if and when their

suffering [became] intolerable." None of the three terminally-ill plaintiffs named in the original complaint survived to the date of the district court's decision.

The opinion of the district court was filed on December 16, 1994. The district court denied the motion for a preliminary injunction and granted the defendants' cross motion to dismiss the action, treating the cross motion as one for summary judgment "since the court has considered matters outside the pleadings—*i.e.*, declarations filed on the motion for preliminary injunction." *Quill*, 870 F. Supp. at 79. After finding that the action presented a justiciable case or controversy, the district court first addressed the due process issue. The court determined that physician assisted suicide could not be classified as a fundamental right within the meaning of the Constitution:

> The Supreme Court has described the considerations which are appropriate before there can be a declaration that rights "not readily identifiable in the Constitution's text" are deserving of constitutional protection. Such rights must be implicit in the concept of ordered liberty so that neither liberty nor justice would exist if they were sacrificed. The Supreme Court has also characterized such rights as those liberties that are deeply rooted in the nation's history and traditions.
>
> The trouble is that plaintiffs make no attempt to argue that physician assisted suicide, even in the case of terminally ill patients, has any historic recognition as a legal right.

Id. at 83 (internal citations omitted). Accordingly, the district court concluded "that the type of physician assisted suicide at issue in this case does not involve a

fundamental liberty interest protected by the Due Process Clause of the Fourteenth Amendment." *Id.* at 84.

Turning to the equal protection issue, the district court identified a reasonable and rational basis for the distinction drawn by New York law between the refusal of treatment at the hands of physicians and physician assisted suicide:

> [I]t is hardly unreasonable or irrational for the State to recognize a difference between allowing nature to take its course, even in the most severe situations, and intentionally using an artificial death-producing device. The State has obvious legitimate interests in preserving life, and in protecting vulnerable persons. The State has the further right to determine how these crucial interests are to be treated when the issue is posed as to whether a physician can assist a patient in committing suicide.

Id. at 84-85. Accordingly, the court held "that plaintiffs have not shown a violation of the Equal Protection Clause of the Fourteenth Amendment." *Id.* at 85.

DISCUSSION

I. Justiciability

As they did in the district court, the state defendants contend on appeal that this action does not present a justiciable case or controversy. We reject this contention.

In *Babbitt v. United Farm Workers Nat'l Union*, 442 U.S. 289 (1979), the Supreme Court was faced with a constitutional challenge to an Arizona farm labor statute. The Court stated that, when contesting the constitutionality of a state criminal statute, it is not necessary

that the plaintiff first expose himself to actual prosecution. *Id.* at 298. Rather,

> [w]hen the plaintiff has alleged an intention to engage in a course of conduct arguably affected with a constitutional interest, but proscribed by a statute, and there exists a credible threat of prosecution thereunder, he "should not be required to await and undergo a criminal prosecution as the sole means of seeking relief."

Id. (quoting *Doe v. Bolton*, 410 U.S. 179, 188 (1973)). The Court in *Doe* held that plaintiff physicians had presented a justiciable controversy despite the fact that none had been threatened with prosecution. 410 U.S. at 188. The law that the physicians challenged was a criminal statute that directly criminalized the physician's participation in abortion. Accordingly, a sufficiently concrete controversy was presented.

The same principles lead to the conclusion that there is a case or controversy at issue here. Dr. Quill has had a criminal proceeding instituted against him in the past, and the state nowhere disclaims an intent to repeat a prosecution in the event of further assisted suicides. The other two physician plaintiffs also face the threat of criminal prosecution. Like the physicians in *Doe*, they "should not be required to await and undergo a criminal prosecution as the sole means of seeking relief." Finally, under *Doe*, the physicians may raise the rights of their terminally-ill patients. *See id.*

Although District Attorney Morgenthau argues in his brief on appeal that appellants have not shown that they are in any jeopardy of prosecution in New York County, a recent indictment by a New York County grand jury

demonstrates the contrary. A newspaper report printed on December 15, 1995 disclosed the following:

> Yesterday, District Attorney Robert M. Morgenthau of Manhattan announced that a grand jury had indicted [George] Delury, an editor who lives on the Upper West Side, on manslaughter charges for helping his 52-year-old wife, Myrna Lebov, commit suicide last summer.

Carey Goldberg, *Suicide's Husband Is Indicted; Diary Records Pain of 2 Lives*, N.Y. Times, Dec. 15, 1995, at B1.[1] The physician plaintiffs have good reason to fear prosecution in New York County.

II. Substantive Due Process

Plaintiffs argue for a right to assisted suicide as a fundamental liberty under the substantive component of the Due Process Clause of the Fourteenth Amendment. This Clause assures the citizenry that any deprivation of life, liberty or property by a state will be attended by appropriate legal processes. However,

> despite the language of the Due Process Clause[ ] of the . . . Fourteenth Amendment[ ], which appears to focus only on the processes by which life, liberty, or property is taken, the cases are legion in which th[at] Clause[ ] ha[s] been interpreted to have substantive content, subsuming rights that to a great extent are immune from . . . state regulation or proscription. Among such cases are those recognizing rights that have little or no textual support in the constitutional language.

---

[1] On March 15, 1996, Delury pleaded guilty to second-degree attempted manslaughter. Pam Belluck, *Man Will Get Prison Term for Helping His Wife Kill Herself*, N.Y. Times, Mar. 16, 1996, at 23, 26.

Bowers v. Hardwick, 478 U.S. 186, 191 (1986).

Rights that have no textual support in the language of the Constitution but qualify for heightened judicial protection include fundamental liberties so "implicit in the concept of ordered liberty" that "neither liberty nor justice would exist if they were sacrificed." *Palko v. Connecticut*, 302 U.S. 319, 325-26 (1937). Fundamental liberties also have been described as those that are "deeply rooted in this Nation's history and tradition." *Moore v. City of East Cleveland*, 431 U.S. 494, 503 (1977); *see also Griswold v. Connecticut*, 381 U.S. 479, 506 (1965) (White, J., concurring). It is well settled that the state must not infringe fundamental liberty interests unless the infringement is narrowly tailored to serve a compelling state interest. *Reno v. Flores*, 113 S. Ct. 1439, 1447 (1993). The list of rights the Supreme Court has actually or impliedly identified as fundamental, and therefore qualified for heightened judicial protection, include the fundamental guarantees of the Bill of Rights as well as the following: freedom of association; the right to participate in the electoral process and to vote; the right to travel interstate; the right to fairness in the criminal process; the right to procedural fairness in regard to claims for governmental deprivations of life, liberty or property; and the right to privacy. 2 Ronald D. Rotunda & John E. Nowak, *Treatise on Constitutional Law* § 15.7, at 434-36 (2d ed. 1992). The right of privacy has been held to encompass personal decisions relating to marriage, procreation, family relationships, child rearing and education, contraception and abortion. *See Carey v. Population Servs. Int'l*, 431 U.S. 678, 684-85 (1977). While the Constitution does not, of course, include any explicit mention of the right of privacy, this right has been recognized as encompassed by the Fourteenth

Amendment's Due Process Clause. *Id.* at 684. Nevertheless, the Supreme Court has been reluctant to further expand this particular list of federal rights, and it would be most speculative for a lower court to do so. *See* Rotunda & Nowak, *Treatise on Constitutional Law*, *supra*, § 15.7, at 433-37.

In any event, the Supreme Court has drawn a line, albeit a shaky one, on the expansion of fundamental rights that are without support in the text of the Constitution. In *Bowers*, the Supreme Court framed the issue as "whether the Federal Constitution confers a fundamental right upon homosexuals to engage in sodomy and hence invalidates the laws of the many States that still make such conduct illegal and have done so for a very long time." 478 U.S. at 190. Holding that there was no fundamental right to engage in consensual sodomy, the Court noted that the statutes proscribing such conduct had "ancient roots." *Id.* at 192. The Court noted that sodomy was a common law criminal offense, forbidden by the laws of the original 13 states when they ratified the Bill of Rights, and that 25 states and the District of Columbia still penalize sodomy performed in private by consenting adults. *Id.* at 192-93.

As in *Bowers*, the statutes plaintiffs seek to declare unconstitutional here cannot be said to infringe upon any fundamental right or liberty. As in *Bowers*, the right contended for here cannot be considered so implicit in our understanding of ordered liberty that neither justice nor liberty would exist if it were sacrificed. Nor can it be said that the right to assisted suicide claimed by plaintiffs is deeply rooted in the nation's traditions and history. Indeed, the very opposite is true. The Common Law of England, as received by the American colonies, prohibited suicide and attempted suicide. *See* Thomas J.

Marzen et al., *Suicide: A Constitutional Right?*, 24 Duq. L. Rev. 1, 56-67 (1985). Although neither suicide nor attempted suicide is any longer a crime in the United States, 32 states, including New York, continue to make assisted suicide an offense. The New York State Task Force on Life and the Law, *When Death Is Sought: Assisted Suicide and Euthanasia in the Medical Context*, 55 (1994) ("*When Death Is Sought*"). Clearly, no "right" to assisted suicide ever has been recognized in any state in the United States. *See generally* Mark E. Chopko & Michael F. Moses, *Assisted Suicide: Still a Wonderful Life?*, 70 Notre Dame L. Rev. 519, 561 (1995); Yale Kamisar, *Are Laws against Assisted Suicide Unconstitutional?*, 23 Hastings Center Rep., May-June 1993, at 32.

In rejecting the due process-fundamental rights argument of the plaintiffs, we are mindful of the admonition of the Supreme Court:

> Nor are we inclined to take a more expansive view of our authority to discover new fundamental rights imbedded in the Due Process Clause. The Court is most vulnerable and comes nearest to illegitimacy when it deals with judge-made constitutional law having little or no cognizable roots in the language or design of the Constitution.

Bowers, 478 U.S. at 194. The right to assisted suicide finds no cognizable basis in the Constitution's language or design, even in the very limited cases of those competent persons who, in the final stages of terminal illness, seek the right to hasten death. We therefore decline the plaintiffs' invitation to identify a new fundamental right, in the absence of a clear direction from the Court whose precedents we are bound to follow. The limited

room for expansion of substantive due process rights and the reasons therefor have been clearly stated: "As a general matter, the Court has always been reluctant to expand the concept of substantive due process because guideposts for responsible decisionmaking in this unchartered area are scarce and open-ended." *Collins v. City of Harker Heights*, 503 U.S. 115, 125 (1992). Our position in the judicial hierarchy constrains us to be even more reluctant than the Court to undertake an expansive approach in this unchartered area.

III. Equal Protection

According to the Fourteenth Amendment, the equal protection of the laws cannot be denied by any State to any person within its jurisdiction. U.S. Const. amend. XIV, § 1. This constitutional guarantee simply requires the states to treat in a similar manner all individuals who are similarly situated. *See* 3 Rotunda & Nowak, *Treatise on Constitutional Law*, *supra*, § 18.2, at 7. But disparate treatment is not necessarily a denial of the equal protection guaranteed by the Constitution. The Supreme Court has described the wide discretion afforded to the states in establishing acceptable classifications:

> The Equal Protection Clause directs that "all persons similarly circumstanced shall be treated alike." But so too, "[t]he Constitution does not require things which are different in fact or opinion to be treated in law as though they were the same." The initial discretion to determine what is "different" and what is "the same" resides in the legislatures of the States. A legislature must have substantial latitude to establish classifications that roughly approximate the nature of the problem perceived, that accommodate competing concerns both public and

> private, and that account for limitations on the practical ability of the State to remedy every ill. In applying the Equal Protection Clause to most forms of state action, we thus seek only the assurance that the classification at issue bears some fair relationship to a legitimate public purpose.

Plyler v. Doe, 457 U.S. 202, 216 (1982) (internal citations omitted and alteration in original).

The general rule, then, is that state legislation carries a presumption of validity if the statutory classification is "rationally related to a legitimate state interest." *City of Cleburne v. Cleburne Living Ctr., Inc.*, 473 U.S. 432, 440 (1985). In *Cleburne*, the equal protection issue revolved around a zoning ordinance that required a special use permit for homes for the mentally retarded but not for other multiple-dwelling and care-giving facilities. The Supreme Court resolved the issue as follows:

> Because in our view the record does not reveal any rational basis for believing that the Featherston home [for the mentally retarded] would pose any special threat to the city's legitimate interests, we affirm the judgment below insofar as it holds the ordinance invalid as applied in this case.

Id. at 448. In arriving at this conclusion, the Court rejected the city's claims that the disparate classification was justified by the negative attitudes of property owners in the neighborhood of the proposed facility, the location of the facility across the street from a junior high school and on a 500-year flood plain, concerns about legal responsibility for actions that might be taken by the mentally retarded, or concerns about the size of the facility and the number of occupants. *Id.* at 448-50. The Court carefully examined each of these claims

before finding that there was no acceptable reason for the disparate classification in any of them.

Also found invalid under the Equal Protection Clase for failure to survive rational basis scrutiny was a New Mexico statute providing a partial exemption from he state's property tax for certain honorably discharged eterans. *Hooper v. Bernalillo County Assessor*, 472 U.S. 612 (1985). The exemption was limited to veterans who had served on active duty during the Vietnam War fc at least 90 continuous days and were New Mexico residats before May 8, 1976. In finding the residence requement invalid under the Equal Protection Clause, he Court analyzed the New Mexico statute in light of he following principles: "When a state distributes benefits unequally, the distinctions it makes are subject to scrutiny under the Equal Protection Clause of the Fourteenth Amendment. Generally, a law will survive rational scrutiny if the distinction rationally furthers a legitimate state purpose." *Id.* at 618 (footnote omitted). The Court determined that the distinction made between veterans who arrived in the state prior to May 8, 1976 and those who arrived thereafter bore no rational relationship to the state's declared objectives of encouraging veterans to settle in the state and of rewarding citizens who resided in the state prior to the cut-off date for their military service. *Id.* at 619-20.

As to the first objective, the Court wrote:

> The distinction New Mexico makes between veterans who established residence before May 8, 1976, and those veterans who arrived in the State thereafter bears no rational relationship to one of the State's objectives—encouraging Vietnam veterans to move to New Mexico. The legislature set this eligibility date long after the triggering event

> occurred. The legislature cannot plausibly encourage veterans to move to the State by passing such retroactive legislation.

Id. at 619 (internal citation omitted). As to the second declared objective, the Court noted that a state court may legitimately compensate resident veterans for past services by providing various advantages, but that "the New Mexico statute's distinction between resident veterans is not rationally related to the State's asserted legislative goal." *Id.* at 621-22. The Court held:

> The State may not favor established residents over new residents based on the view that the State may take care of "its own," if such is defined by prior residence. Newcomers, by establishing bona fide residence in the State, become the State's "own" and may not be discriminated against solely on the basis of their arrival in the State after May 8, 1976.

Id. at 623. *See also Zobel v. Williams*, 457 U.S. 55 (1982) (holding that Alaska statute using length of residence as basis for distribution of oil reserve dividends violated Equal Protection Clause.)

While rational basis scrutiny governs judicial review of the constitutionality of legislation in the areas of social welfare and economics, *see Bowen v. Owens*, 476 U.S. 340, 345 (1986), strict scrutiny is the standard of review where a classification "impermissibly interferes with the exercise of a fundamental right or operates to the peculiar disadvantage of a suspect class," *Massachusetts Bd. of Retirement v. Murgia*, 427 U.S. 307, 312 (1976) (footnotes omitted). Suspect classes are those identified by race, alienage or national origin, *Cleburne*, 473 U.S. at 440, and fundamental rights are those explicitly or implicitly derived from the Constitution itself, *see*

San Antonio Indep. Sch. Dist. v. Rodriguez, 411 U.S. 1, 33-34 (1973). For the reasons described in Part II, *supra*, the New York statutes prohibiting assisted suicide during the terminal stages of illness do not impinge on any fundamental rights nor can it be said that they involve suspect classifications. Laws subject to strict scrutiny will survive such review only if they are suitably tailored to serve a compelling state interest. *Cleburne*, 473 U.S. at 440.

An intermediate level of scrutiny has been applied in analyzing certain equal protection guarantee violations. To pass this scrutiny, the classification must be substantially related to an important governmental objective. *Clark v. Jeter*, 486 U.S. 456, 461 (1988). This sort of examination has been applied to classifications based on sex or illegitimacy. *Id.*; *see also Kadrmas v. Dickinson Pub. Sch.*, 487 U.S. 450, 459 (1988); *Mississippi Univ. for Women v. Hogan*, 458 U.S. 718, 723-24 (1982). A heightened level of equal protection scrutiny also was applied in *Plyler*, where the Supreme Court struck down a Texas statute withholding from local school districts funding for the education of children not legally admitted into the United States. 457 U.S. at 202.

Applying the foregoing principles to the New York statutes criminalizing assisted suicide, it seems clear that: 1) the statutes in question fall within the category of social welfare legislation and therefore are subject to rational basis scrutiny upon judicial review; 2) New York law does not treat equally all competent persons who are in the final stages of fatal illness and wish to hasten their deaths; 3) the distinctions made by New York law with regard to such persons do not further any legitimate state purpose; and 4) accordingly, to the extent that the statutes in questions prohibit persons in

the final stages of terminal illness from having assistance in ending their lives by the use of self-administered, prescribed drugs, the statutes lack any rational basis and are violative of the Equal Protection Clause.

The right to refuse medical treatment long has been recognized in New York. In 1914 Judge Cardozo wrote that, under New York law, "[e]very human being of adult years and sound mind has a right to determine what shall be done with his own body." *Schloendorff v. Society of New York Hosp.*, 211 N.Y. 125, 129 (1914). In 1981, the New York Court of Appeals held that this right extended to the withdrawal of life-support systems. *In re Eichner* (decided with *In re Storar*), 52 N.Y.2d 363, *cert. denied*, 454 U.S. 858 1981). The *Eichner* case involved a terminally-ill, 83-year-old patient whose guardian ultimately was authorized to withdraw the patient's respirator. The Court of Appeals determined that the guardian had proved by clear and convincing evidence that the patient, prior to becoming incompetent due to illness, had consistently expressed his view that life should not be prolonged if there was no hope of recovery. *Id.* at 379-80. In *Storar*, the companion case to *Eichner*, the Court of Appeals determined that a profoundly retarded, terminally-ill patient was incapable of making a decision to terminate blood transfusions. There, the patient was incapable of making a reasoned decision, having never been competent at any time in his life. *Id.* at 380. In both these cases, the New York Court of Appeals recognized the right of a competent, terminally-ill patient to hasten his death upon proper proof of his desire to do so.

The Court of Appeals revisited the issue in *Rivers v. Katz*, 67 N.Y.2d 485 (1986) (establishing the right of mentally incompetent persons to refuse certain drugs). In

that case, the Court recognized the right to bring on death by refusing medical treatment not only as a "fundamental common-law right" but also as "coextensive with [a] patient's liberty interest protected by the due process clause of our State Constitution." *Id.* at 493. The following language was included in the opinion:

> In our system of a free government, where notions of individual autonomy and free choice are cherished, it is the individual who must have the final say in respect to decisions regarding his medical treatment in order to insure that the greatest possible protection is accorded his autonomy and freedom from unwanted interference with the furtherance of his own desires.

Id.

After these cases were decided, the New York legislature placed its imprimatur upon the right of competent citizens to hasten death by refusing medical treatment and by directing physicians to remove life-support systems already in place. In 1987, the legislature enacted Article 29-B of the New York Public Health Law, entitled "Orders Not to Resuscitate." N.Y. Pub. Health Law §§ 2960-79 (McKinney 1993). The Article provides that an "adult with capacity" may direct the issuance of an order not to resuscitate. § 2964. "Order not to resuscitate" is defined as "an order not to attempt cardiopulmonary resuscitation in the event a patient suffers cardiac or respiratory arrest." § 2961(17). "Cardiopulmonary resuscitation" is defined as "measures . . . to restore cardiac function or to support ventilation in the event of a cardiac or respiratory arrest." § 2961(4). An elaborate statutory scheme is in place, and it provides, among other things, for surrogate decision-making, § 2965, revocation of consent, § 2969, physician

review, § 2970, dispute mediation, § 2972, and judicial review, § 2973.

In 1990, the New York legislature enacted Article 29-C of the Public Health Law, entitled "Health Care Agents and Proxies." N.Y. Pub. Health Law §§ 2980-94 (McKinney 1993). This statute allows for a person to sign a health care proxy, § 2981, for the purpose of appointing an agent with "authority to make any and all health care decisions on the principal's behalf that the principal could make." § 2982(1). These decisions include those relating to the administration of artificial nutrition and hydration, provided the wishes of the principal are known to the agent. § 2982(2). The agent's decision is made "[a]fter consultation with a licensed physician, registered nurse, licensed clinical psychologist or certified social worker." *Id.* Accordingly, a patient has the right to hasten death by empowering an agent to require a physician to withdraw life-support systems. The proxy statute also presents a detailed scheme, with provisions for a determination that the principal lacks capacity to make health care decisions, for such a determination to be made only by the attending physician in consultation with another physician "[f]or a decision to withdraw or withhold life-sustaining treatment," § 2983, for provider's obligations, § 2984, for revocation, § 2985, and for special proceedings, § 2992, among other matters.

The concept that a competent person may order the removal of life-support systems found Supreme Court approval in *Cruzan v. Director, Missouri Dep't of Health*, 497 U.S. 261 (1990). There the Court upheld a determination of the Missouri Supreme Court that required proof by clear and convincing evidence of a patient's desire for the withdrawal of life-sustaining equipment.

The patient in that case, Nancy Cruzan, was in a persistent vegetative state as the result of injuries sustained in an automobile accident. Her parents sought court approval in the State of Missouri to terminate the artificial nutrition and hydration with which she was supplied at the state hospital where she was confined. The hospital employees refused to withdraw the life-support systems, without which Cruzan would suffer certain death. The trial court authorized the withdrawal after finding that Cruzan had expressed some years before to a housemate friend some thoughts that suggested she would not wish to live on a life-support system. The trial court also found that one in Cruzan's condition had a fundamental right to refuse death-prolonging procedures.

The Missouri Supreme Court, in reversing the trial court, refused to find a broad right of privacy in the state constitution that would support a right to refuse treatment. Moreover, that court doubted that such a right existed under the United States Constitution. It did identify a state policy in the Missouri Living Will Statute favoring the preservation of life and concluded that, in the absence of compliance with the statute's formalities or clear and convincing evidence of the patient's choice, no person could order the withdrawal of medical life-support services.

In affirming the Missouri Supreme Court, the United States Supreme Court stated: "The principle that a competent person has a constitutionally protected liberty interest in refusing unwanted medical treatment may be inferred from our prior decisions." *Id.* at 278. The Court noted that the inquiry is not ended by the identification of a liberty interest, because there also must be a balancing of the state interests and the individual's liberty interests before there can be a determination that con-

stitutional rights have been violated. *Id.* at 279. The Court all but made that determination in the course of the following analysis:

> Petitioners insist that under the general holdings of our cases, the forced administration of life-sustaining medical treatment, and even of artificially-delivered food and water essential to life, would implicate a competent person's liberty interest. Although we think the logic of the cases discussed above would embrace such a liberty interest, the dramatic consequences involved in refusal of such treatment would inform the inquiry as to whether the deprivation of that interest is constitutionally permissible. But for purposes of this case, we assume that the United States Constitution would grant a competent person a constitutionally protected right to refuse lifesaving hydration and nutrition.

Id.

The Court went on to find that Missouri allowed a surrogate to "act for the patient in electing to have hydration and nutrition withdrawn in such a way as to cause death," subject to "a procedural safeguard to assure that the action of the surrogate conforms as best it may to the wishes expressed by the patient while competent." *Id.* at 280. The Court then held that the procedural safeguard or requirement imposed by Missouri—the heightened evidentiary requirement that the incompetent's wishes be proved by clear and convincing evidence—was not forbidden by the United States Constitution. *Id.* at 280-82.

In view of the foregoing, it seems clear that New York does not treat similarly circumstanced persons alike: those in the final stages of terminal illness who are on

life-support systems are allowed to hasten their deaths by directing the removal of such systems; but those who are similarly situated, except for the previous attachment of life-sustaining equipment, are not allowed to hasten death by self-administering prescribed drugs. The district judge has identified "a difference between allowing nature to take its course, even in the most severe situations, and intentionally using an artificial death-producing device." *Quill*, 870 F. Supp. at 84. But Justice Scalia, for one, has remarked upon "the irrelevance of the action-inaction distinction," noting that "the cause of death in both cases is the suicide's conscious decision to 'pu[t] an end to his own existence.' " *Cruzan*, 497 U.S. at 296-297 (citations omitted and alteration in original) (Scalia, J., concurring). *See also* Note, *Physician-Assisted Suicide and the Right to Die with Assistance*, 105 Harv. L. Rev. 2021, 2028-31 (1992) (arguing that there is no distinction between assisted suicide and the withholding or withdrawal of treatment).

Indeed, there is nothing "natural" about causing death by means other than the original illness or its complications. The withdrawal of nutrition brings on death by starvation, the withdrawal of hydration brings on death by dehydration, and the withdrawal of ventilation brings about respiratory failure. By ordering the discontinuance of these artificial life-sustaining processes or refusing to accept them in the first place, a patient hastens his death by means that are not natural in any sense. It certainly cannot be said that the death that immediately ensues is the natural result of the progression of the disease or condition from which the patient suffers.

Moreover, the writing of a prescription to hasten death, after consultation with a patient, involves a far less active role for the physician than is required in

bringing about death through asphyxiation, starvation and/or dehydration. Withdrawal of life support requires physicians or those acting at their direction physically to remove equipment and, often, to administer palliative drugs which may themselves contribute to death. The ending of life by these means is nothing more nor less than assisted suicide. It simply cannot be said that those mentally competent, terminally-ill persons who seek to hasten death but whose treatment does not include life support are treated equally.

A finding of unequal treatment does not, of course, end the inquiry, unless it is determined that the inequality is not rationally related to some legitimate state interest. The burden is upon the plaintiffs to demonstrate irrationality. *See Kadrmas*, 487 U.S. at 463. At oral argument and in its brief, the state's contention has been that its principal interest is in preserving the life of all its citizens at all times and under all conditions. But what interest can the state possibly have in requiring the prolongation of a life that is all but ended? Surely, the state's interest lessens as the potential for life diminishes. *See In re Quinlan*, 70 N.J. 10, 41, *cert. denied*, 429 U.S. 922 (1976). And what business is it of the state to require the continuation of agony when the result is imminent and inevitable? What concern prompts the state to interfere with a mentally competent patient's "right to define [his] own concept of existence, of meaning, of the universe, and of the mystery of human life," *Planned Parenthood v. Casey*, 112 S. Ct. 2791, 2807 (1992), when the patient seeks to have drugs prescribed to end life during the final stages of a terminal illness? The greatly reduced interest of the state in preserving life compels the answer to these questions: "None."

A panel of the Ninth Circuit attempted to identify some state interests in reversing a district court decision holding unconstitutional a statute of the state of Washington criminalizing the promotion of a suicide attempt. *Compassion in Dying v. Washington*, 49 F.3d 586 (9th Cir. 1995).[2] The plaintiffs in the Washington case contended for physician-assisted suicide for the terminally-ill, but the panel majority found that the statute prohibiting suicide promotion furthered the following: the interest in denying to physicians "the role of killers of their patients"; the interest in avoiding psychological pressure upon the elderly and infirm to consent to death; the interest of preventing the exploitation of the poor and minorities; the interest in protecting handicapped persons against societal indifference; the interest in preventing the sort of abuse that "has occurred in the Netherlands where . . . legal guidelines have tacitly allowed assisted suicide or euthanasia in response to a repeated request from a suffering, competent patient." *Id.* at 592-93. The panel majority also raised a question relative to the lack of clear definition of the term "terminally ill." *Id.* at 593.

The New York statutes prohibiting assisted suicide, which are similar to the Washington statute, do not serve any of the state interests noted, in view of the statutory and common law schemes allowing suicide through the withdrawal of life-sustaining treatment. Physicians do not fulfill the role of "killer" by prescribing drugs to hasten death any more than they do by disconnecting life-support systems. Likewise, "psychological pressure" can be applied just as much upon the elderly and infirm

[2] On rehearing in banc, the Ninth Circuit vacated the decision of the panel and affirmed the decision of the district court. *Compassion in Dying v. Washington*, No. 94-35534, 1996 WL 94848 (9th Cir. Mar. 6, 1996) (in banc).

to consent to withdrawal of life-sustaining equipment as to take drugs to hasten death. There is no clear indication that there has been any problem in regard to the former, and there should be none as to the latter. In any event, the state of New York may establish rules and procedures to assure that all choices are free of such pressures. With respect to the protection of minorities, the poor and the non-mentally handicapped, it suffices to say that these classes of persons are entitled to treatment equal to that afforded to all those who now may hasten death by means of life-support withdrawal. In point of fact, these persons *themselves* are entitled to hasten death by requesting such withdrawal and should be free to do so by requesting appropriate medication to terminate life during the final stages of terminal illness.

As to the interest in avoiding abuse similar to that occurring in the Netherlands, it seems clear that some physicians there practice nonvoluntary euthanasia, although it is not legal to do so. *When Death Is Sought*, *supra*, at 133-34. The plaintiffs here do not argue for euthanasia[3] at all but for assisted suicide for terminally-ill, mentally competent patients, who would self-administer the lethal drugs. It is difficult to see how the relief the plaintiffs seek would lead to the abuses found in the Netherlands. Moreover, note should be taken of the fact that the Royal Dutch Medical Associ-

[3] There are those who use the terms "assisted suicide" and "euthanasia" interchangeably. *See* Patricia A. Unz, Note, *Euthanasia: A Constitutionally Protected Peaceful Death*, 37 N.Y.L. Sch. L. Rev. 439, 439 n.8 (1992). While euthanasia is derived from the Greek words meaning "good death," *id.* at 441, it seems clear that most states, including New York, make a distinction between the two acts. *See When Death Is Sought*, *supra*, at 63. In euthanasia, one causes the death of another by direct and intentional acts. *Id.* Accordingly, euthanasia falls within the definition of murder in New York. *See* N.Y. Penal Law § 125.25(1) (McKinney 1987).

ation recently adopted new guidelines for those physicians who choose to accede to the wishes of patients to hasten death. Under the new guidelines, patients must self-administer drugs whenever possible, and physicians must obtain a second opinion from another physician who has no relationship with the requesting physician or his patient. Marlise Simons, *Dutch Doctors to Tighten Rules on Mercy Killings*, N.Y. Times, Sept. 11, 1995, at A3.

Finally, it seems clear that most physicians would agree on the definition of "terminally ill," at least for the purpose of the relief that plaintiffs seek. The plaintiffs seek to hasten death only where a patient is in the "final stages" of "terminal illness," and it seems even more certain that physicians would agree on when this condition occurs. Physicians are accustomed to advising patients and their families in this regard and frequently do so when decisions are to be made regarding the furnishing or withdrawal of life-support systems. Again, New York may define that stage of illness with greater particularity, require the opinion of more than one physician or impose any other obligation upon patients and physicians who collaborate in hastening death.[4]

[4] For example, the state might take steps to assure the competence of prescribing physicians by imposing education and training qualifications, including pain management; it may require the establishment of local ethics committees as resources for physicians faced with questions relating to requests for lethal medications; it could specify the information to be furnished to the patient to ascertain that the patient's choice is a fully voluntary one; it might require consultations with other physicians for further diagnosis and prognosis in regard to the patient's illness, for psychiatric evaluation, and for evaluation of pain control possibilities; it may provide a time delay between a request for lethal medication and the prescription in order to allow a time for reflection; and it may suggest some sort of notification to the patient's family.

Recently, a group of physicians known as "Physicians for Mercy" proposed ten guidelines for doctor-assisted suicide. *Doctors Offer Some Support to Kevorkian: Urge 10 Guidelines in Assisting Suicide*, N.Y. Times, Dec. 5, 1995, at A21. These guidelines call for a physician who assists in suicide, called an "obitiatrist," to refer his patients to a psychiatrist, a specialist in the patient's specific illness, and, if necessary, a specialist in pain management, before acting at the behest of a mentally competent person with an incurable affliction. *Id.* "Physicians for Mercy" has decided to call the practice of physician assisted suicide "patholysis," a term coined by Dr. Jack Kevorkian, who has assisted in more than two dozen suicides. *Id.* However, Dr. Kevorkian's assistance has not been rendered exclusively to those beset by terminal illnesses. Bruce Fein, *The Right to Determine One's Exit from Life*, Wash. Times, Jan. 23, 1996, at A14.

The New York statutes criminalizing assisted suicide violate the Equal Protection Clause because, to the extent that they prohibit a physician from prescribing medications to be self-administered by a mentally competent, terminally-ill person in the final stages of his terminal illness, they are not rationally related to any legitimate state interest.

CONCLUSION

We reverse the judgment of the district court and remand for entry of judgment in favor of the plaintiffs in accordance with the foregoing. No costs are awarded to either side. *See* Fed. R. App. P. 39(a).

CALABRESI, *Circuit Judge*, concurring in the result:

The Court today strikes down the New York statutes prohibiting assisted suicide insofar as they apply to "terminally ill, mentally competent patients, who would self-administer drugs." It does so because it finds these statutes to be in violation of the Equal Protection Clause of the Fourteenth Amendment since they are not "ratio-

nally related to a legitimate state interest." *Ante* at 20 (citing *City of Cleburne v. Cleburne Living Ctr., Inc.*, 473 U.S. 432, 440 (1985)). At the same time, the Court declines to hold that these statutes violate the Due Process Clause of the Fourteenth Amendment, because "[t]he right to assisted suicide finds no cognizable basis in the Constitution's language or design." *Ante* at 18.

Recently the Ninth Circuit, sitting *en banc*, held that analogous laws violated the fundamental Due Process rights of terminally ill patients. *Compassion in Dying v. Washington*, No. 94-35534, 1996 WL 94848 (9th Cir. Mar. 6, 1996) (*en banc*). The Ninth Circuit recognized that Equal Protection arguments for invalidity were "not insubstantial," but did not discuss them in view of its Due Process holding. *Id.* at *39 n.139.

I agree with the Court that these statutes cannot stand. But I do not believe that the history of the statutes, and of New York's approach toward assisted suicide, requires us to make a final judgment under either Due Process or Equal Protection as to the validity of statutes prohibiting assisted suicide. What is not ready for decision ought not to be decided. I would therefore leave open the question of whether, if the state of New York were to enact new laws prohibiting assisted suicide (laws that either are less absolute in their application or are identical to those before us), such laws would stand or fall.

Accordingly, I join the Court's result, but write separately to explain my unwillingness to reach the ultimate Due Process and Equal Protection questions.

I. *A Bit of History*

There once was a time when the law and its judges were not called upon to make choices for human beings lying in the twilight between life and death. In the past, many of these decisions were left to individual doctors and their patients. Sometimes, easing of pain melded, not quite imperceptibly, into more. While doctors did not advertise their availability, there often was an understanding (perhaps unspoken), as patients entered into what usually were long-term relationships with physicians, that when the time came doctors would do what was expected of them. Laws prohibiting assisted suicide were on the books. But whether they were ever meant to apply to a treating physician, or whether such doctors were even slightly concerned about them, is unclear and lost in the shadows of time.[1] And despite a web of statutes, and doctors who, understandably, have become increasingly averse to taking risks and responsibilities, that tradition undoubtedly continues today. As the majority demonstrates, however, this fact is not a prescription for judicial silence. *Ante* at 13-15. We must, therefore,

[1] *See* NEW YORK STATE TASK FORCE ON LIFE AND THE LAW, WHEN DEATH IS SOUGHT: ASSISTED SUICIDE AND EUTHANASIA IN THE MEDICAL CONTEXT 57 (1994) ("No person has been convicted in New York State of manslaughter for intentionally aiding or causing a suicide. . . . The reluctance to bring such cases no doubt rests in part on the degree of public sympathy [such cases] often arouse, and the resulting difficulty of securing an indictment and conviction."); *Compassion in Dying*, 1996 WL 94848, at *17 (footnotes omitted) ("[T]he mere presence of statutes criminalizing assisting in a suicide does not necessarily indicate societal disapproval. That is especially true when such laws are seldom, if ever, enforced. There is no reported American case of criminal punishment being meted out to a doctor for helping a patient hasten his own death. . . . Running beneath the official history of legal condemnation of physician-assisted suicide is a strong undercurrent of a time-honored but hidden practice of physicians helping terminally ill patients to hasten their deaths.").

address petitioners' claim that New York's laws are invalid.

The statutes at issue were born in another age. New York enacted its first prohibition of assisted suicide in 1828. The statute punished any individual who assisted another in committing "self-murder" for first-degree manslaughter. Act of Dec. 10, 1828, ch. 20, 4 1828 N.Y. Laws 19 (codified at N.Y. Rev. Stat. pt. 4, ch. 1, tit. 2, art. 1, § 7 (1829)). This prohibition was tied to the crime of suicide, described by one contemporary New York Court as a "criminal act of self-destruction." *Breasted v. Farmers' Loan & Trust Co.*, 4 Hill 73, 75 (Sup. Ct. 1843), *aff'd*, 8 N.Y. 299 (1853).

English authorities had long declared suicide to be murder. *See* 3 EDWARD COKE, INSTITUTES OF THE LAWS OF ENGLAND 54 (London, E. & R. Brooke 1797) (1644); 1 MATTHEW HALE, PLEAS OF THE CROWN 411-18 (London, E. & R. Nutt 1736) (1680); 4 WILLIAM BLACKSTONE, COMMENTARIES ON THE LAWS OF ENGLAND *189 (1769); 3 JAMES FITZJAMES STEPHEN, HISTORY OF THE CRIMINAL LAW OF ENGLAND 104 (1869); William E. Mikell, *Is Suicide Murder?*, 3 COLUM. L. REV. 379, 391 (1903) ("[W]hatever may have been the law before Bracton's time . . . suicide is murder in English law."). And the leading American case echoed these English authorities. *See Commonwealth v. Bowen*, 13 Mass. 356 (1816). In that case, Chief Justice Parker instructed the jury: "Self-destruction is doubtless a crime of awful turpitude; it is considered in the eye of the law of equal heinousness with the murder of one by another. In this offence, it is true the actual murderer escapes punishment; for the very commission of the crime, which the the [sic] law would otherwise punish with its utmost rigor, puts the offender beyond the reach of its

infliction. And in this he is distinguished from other murderers. But his punishment is as severe as the nature of the case will admit; his body is buried in infamy, and in England his property is forfeited to the King." *Commonwealth v. Mink*, 123 Mass. 422, 428 (1877) (reprinting Parker's jury instructions in *Bowen*). *Mink* itself, written by Chief Justice Gray, found that "any attempt to commit" suicide is "unlawful and criminal." *Id.* at 429.

Four years after *Mink*, however, the New York Legislature revised the Penal Code. The new code provided that an intentional *attempt* to commit suicide was a felony with a maximum penalty of two years' imprisonment. Act of July 26, 1881, ch. 676, §§ 174, 178, 3 1881 N.Y. Laws 42-43. But while the Code declared suicide itself to be "a grave public wrong," it imposed no forfeiture because of "the impossibility of reaching the successful perpetrator." *Id.* § 173. The 1881 statute, echoing the earlier 1828 provision, punished assisting a successful suicide as manslaughter in the first degree. *Id.* § 175. The Code also punished assistance in attempted suicide as an unspecified felony. *Id.* § 176.

Whatever may have been the case in other jurisdictions,[2] the 1828 and 1881 statutes prohibited all attempts to assist in a suicide on the theory that such behavior created accessory liability. Thus, because attempted suicide was a crime, assisting in the commission of suicide was also a crime. And the titles of the sections of the 1881 statute manifest these derivative origins; section 175 prohibited "*Aiding* suicide" and section 176 prohibited "*Abetting* an attempt at suicide." *Id.* (emphasis added).[3]

---

[2] *See Compassion in Dying*, 1996 WL 94848, at *48-*49 (Beezer, J., dissenting).

[3] The 1937 New York Report of the Law Revision Commission explicitly found that "[t]he history of the [abetting and advising suicide] pro-

Whether these laws applied to a doctor who eased or hastened the death of a terminally ill patient is, of course, quite another matter, and one on which the evidence is scant.[4]

The 1881 scheme was altered in 1919 when the prohibition against attempted suicide (originally found in sections 174 and 178) was removed. Act of May 5, 1919, ch. 414, § 1, 2 1919 N.Y. Laws 1193. The Legislature, nevertheless, left in place the declaration of suicide as a "grave public wrong." *See Hundert v. Commercial Travelers Mut. Accident Ass'n of Am.*, 244 A.D. 459, 460, 279 N.Y.S. 555, 556 (1st Dep't 1935) (per curiam) ("[S]uicide, although recognized as a grave public wrong, is not a crime."). And the prohibition of assisting suicide also remained on the books. But we have found no case in which a physician aiding a person who wished to commit suicide was, in fact, penalized in New York after 1919.

In 1965, the Legislature took the next step and deleted the declaration that suicide was a "grave public wrong."[5]

vision is traceable into the ancient common law when a suicide or *felo de se* was guilty of a crime punishable by forfeiture of his goods and chattels. One who encouraged or aided him was guilty as an accessory to the crime of 'self-murder'. . . ." STATE OF NEW YORK, REPORT OF THE LAW REVISION COMMISSION FOR 1937, at 830 (1937).

4 *See supra* note 1.

5 The 1965 Act did provide that "[a] person acting under a reasonable belief that another person is about to commit suicide or to inflict serious physical injury upon himself may use physical force upon such person to the extent that he reasonably believes it necessary to thwart such result." Act of July 20, 1965, ch. 1030, 1965 N.Y. Laws 2355 (codified at N.Y. Penal Law § 35.10(4)). *See Von Holden v. Chapman*, 87 A.D.2d 66, 68, 450 N.Y.S.2d 623, 626 (4th Dep't 1982) (upholding order authorizing forced feeding of John Lennon's murderer, Mark David Chapman, to prevent Chapman from starving himself to death because "[t]he preservation of life has a high social value in our culture").

It, however, left in place redrafted versions of sections 175 and 176 of the 1881 Code, stating: "A person is guilty of manslaughter in the second degree when . . . [h]e intentionally causes or aids another person to commit suicide," § 125.15(3), and, "[a] person is guilty of promoting a suicide attempt when he intentionally causes or aids another person to attempt suicide," § 120.30.[6]

The years since 1965 have brought further erosion in the bases for prohibiting assisted suicide with respect to terminally ill persons. Thus, in 1981, the New York Court of Appeals declared that "a doctor cannot be held to have violated his legal or professional responsibilities when he honors the right of a competent adult patient to decline medical treatment." *In re Storar*, 52 N.Y.2d 363, 377, 420 N.E.2d 64, 71, 438 N.Y.S.2d 266, 273, *cert. denied*, 454 U.S. 858 (1981). The court applied this principle both to the withdrawal of life-support and to the refusal of blood transfusions. *Id.* at 379-80. Furthermore, in 1986, the court stated: "In our system of a free government, where notions of individual autonomy and free choice are cherished, it is the individual who must have the final say in respect to decisions regarding his medical treatment . . . ." *Rivers v. Katz*, 67 N.Y.2d 485,

6 Why the legislature left the prohibition of assisted suicide in the law, and whether it thought about the issue at all is hard to say. The 1937 Law Revision Report had, in a sense, presaged the event when it said that since New York had removed "all stigma [of suicide] as a crime" and that "[s]ince liability as an accessory could no longer hinge upon the crime of a principal, it was necessary to define it as a substantive offense." REPORT OF THE LAW REVISION COMMISSION, *supra* note 3, at 831. The Commission seemed to have been concerned primarily with those who talked others into killing themselves. It noted the important difference between aiding someone who had a mind-set to commit suicide and the "more dangerous" person "working upon the mind of a susceptible person to induce suicide," *id.* at 832.

493, 495 N.E.2d 337, 341, 504 N.Y.S.2d 74, 78 (1986). Lower courts, understandably, followed suit. *See Delio v. Westchester County Medical Ctr.*, 129 A.D.2d 1, 516 N.Y.S.2d 677 (2d Dep't 1987) ("[T]he common-law right of self determination with respect to one's body also forms the foundation for a competent adult patient's right to refuse life-sustaining treatment even if the effect is to hasten death . . . .").

The New York Legislature itself acted accordingly. In the 1987 Orders Not to Resuscitate Act, it provided that an "adult with capacity" may create an "order not to resuscitate" in the event the patient "suffers cardiac or respiratory arrest." Act of Aug. 7, 1987, ch. 818, § 1, 1987 N.Y. Laws 3140 (codified as amended at N.Y. Pub. Health Law, §§ 2960-2979 (McKinney 1993 & Supp. 1996)). In the 1990 Health Care Agents and Proxies Act, it went further and permitted a competent person to designate an agent who has "authority to make any and all health care decisions on the principal's behalf that the principal could make." Act of July 22, 1990, ch. 752, § 2, 1990 N.Y. Laws 1538 (codified as amended at N.Y. Pub. Health Law § 2982(1) (McKinney 1993)). The statute explicitly stated that choices regarding the withdrawal of artificial nutrition and hydration are within the purview of a health care agent when the wishes of the principal are reasonably known to the agent. N.Y. Pub. Health Law § 2982(2).[7]

[7] The 1990 Act provided the following caution: "This article is not intended to permit or promote suicide, assisted suicide, or euthanasia; accordingly, nothing herein shall be construed to permit an agent to consent to any act or omission to which the principal could not consent under law." N.Y. Pub. Health Law § 2989(3). The full significance of this section is not clear. It understandably limited the agent to doing those acts to which the principal, on whose behalf the agent is acting, could consent. It also seemed to leave in place the *status quo* both as to those acts, like suicide, which were no longer crimes and those, like assisted

Later, in 1994, the New York Task Force on Life and the Law, a group organized in 1985 at the request of Governor Cuomo and composed of doctors, bioethicists, and religious leaders, among others, prepared a report on the question. The report, in effect, said leave things as they are: permit suicide and attempted suicide, recognize the right of competent terminally ill patients—either on their own or through agents—to order the ceasing of nutrition and hydration and the withdrawal of life support systems, but do not alter the law to permit what petitioners seek today. NEW YORK STATE TASK FORCE ON LIFE AND THE LAW, WHEN DEATH IS SOUGHT: ASSISTED SUICIDE AND EUTHANASIA IN THE MEDICAL CONTEXT 142-46 (1994). The Legislature received the report and, not surprisingly, took no action, then or since.

From this historical survey, I conclude that 1) what petitioners seek is nominally still forbidden by New York statutes; 2) the bases of these statutes have been deeply eroded over the last hundred and fifty years; and 3) few of their foundations remain in place today.

Specifically:

• The original reason for the statutes—criminalizing conduct that aided or abetted other crimes—is long since gone.

• The distinction that has evolved over the years between conduct currently permitted (suicide, and aiding someone who wishes to die to do so by removing

suicide, which nominally were. But the section did not go further, as New York claims in a letter brief where it says, citing § 2989(3), that "New York's legislature expressly rejected permitting physician assisted suicide." Section 2989(3) did not speak to this any more than it spoke to the legality of suicide.

hydration, feeding, and life support systems) and conduct still prohibited (giving a competent, terminally ill patient lethal drugs, which he or she can self-administer) is tenuous at best.[8]

• The Legislature—for many, many years—has not taken any recognizably affirmative step reaffirming the prohibition of what petitioners seek.

• The enforcement of the laws themselves has fallen into virtual desuetude—not so much as to render the case before us nonjusticiable, but enough to cast doubt on whether, in a case like that which the petitioners present, a prosecutor would prosecute or a jury would convict. And this fact by itself inevitably raises doubts about the current support for these laws.[9]

II. *Constitutional Doubts*

In the case of ordinary legislation none of this would matter much. We regularly uphold laws whose original reason has vanished, whose fit with the rest of the legal system is dubious, whose enforcement is virtually nil, and whose continued presence on the books seems as much due to the strong inertial force that the framers of our constitutions gave to the *status quo* as to any current

---

8 *See ante* at 29-34 (the majority opinion's powerful discussion of the weakness of the distinction).

9 We note in passing that a jury in Michigan recently acquitted Dr. Jack Kevorkian after he argued (despite his earlier, quite explicit, publicity and statements) that all he was doing was ending pain. *See* Todd Nissen, *Kevorkian Found Not Guilty in Assisted Suicide Trial*, Reuters, Mar. 8, 1996. We note also that Iowa has just enacted a law forbidding assisted suicide and that this law does not prohibit "the responsible actions of a licensed health professional to administer pain medication to a patient with a terminal illness." *See Gov. Branstad Signs Bill Outlawing Assisted Suicide*, BNA Health Care Daily, Mar. 5, 1996.

majoritarian support. In a different context, I have argued that courts have used subterfuges and aggressive interpretations to rid the system of such laws. *See* GUIDO CALABRESI, A COMMON LAW FOR THE AGE OF STATUTES 163-66, 172-77 (1982). But I have also criticized such judicial action, at least in the absence of express legislative sanction. *See id.; Taber v. Maine*, 67 F.3d 1029, 1039 (2d Cir. 1995).

When legislation comes close to violating fundamental substantive constitutional rights or to running counter to the requirements of Equal Protection, however, there is, as I hope to demonstrate, a long tradition of constitutional holdings that inertia will not do. In such instances, courts have asserted the right to strike down statutes and, before ruling on the ultimate validity of that legislation, to demand a present and positive acknowledgment of the values that the legislators wish to further through the legislation in issue. And so it is to an examination of the substantive constitutional dubiety of the laws before us that I now turn.

There can be no doubt that the statutes at issue come close—at the very least—to infringing fundamental Due Process rights and to doing so in ways that are also suspect under the antidiscrimination principles of the Equal Protection Clause. While differing in emphasis, the various opinions of the Supreme Court in *Cruzan v. Director, Missouri Department of Health*, 497 U.S. 261 (1990), and in *Planned Parenthood v. Casey*, 505 U.S. 833 (1992), as well as the *en banc* opinion of the Ninth Circuit in *Companion in Dying*, and the strongly argued majority opinion in this case, make that abundantly clear.

In *Cruzan*, the Court examined whether guardians could order withdrawal of an incompetent patient's life support when, contrary to the requirements of the State of Missouri, there was not clear and convincing proof of the patient's wish to have life support withdrawn. In deciding that the guardians could not so order, the majority opinion noted that "[t]he principle that a competent person has a constitutionally protected liberty interest in refusing unwanted medical treatment may be inferred from our prior decisions." 497 U.S. at 278. It went on to describe the decision to withdraw life support as "deeply personal" and noted that "[i]t cannot be disputed that the Due Process Clause protects an interest in life as well as an interest in refusing life-sustaining medical treatment." *Id.* at 281.

Various Justices expanded on this theme. Justice O'Connor, concurring, wrote, "I agree that a protected liberty interest in refusing unwanted medical treatment may be inferred from our prior decisions, see *ante*, at 278-79, and that the refusal of artificially delivered food and water is encompassed within that liberty interest. See *ante*, at 279." *Id.* at 287. She then added, "Requiring a competent adult to endure such procedures against her will burdens the patient's liberty, dignity, and freedom to determine the course of her own treatment. Accordingly, the liberty guaranteed by the Due Process Clause must protect, if it protects anything, an individual's deeply personal decision to reject medical treatment, including the artificial delivery of food and water." *Id.* at 289. Justice Brennan, joined by Justices Marshall and Blackmun, dissenting, made a similar point: "Dying is personal. And it is profound. For many, the thought of an ignoble end, steeped in decay, is abhorrent. A quiet, proud death, bodily integrity intact, is a matter of extreme consequence." *Id.* at 310-11. In turn, Justice Stevens, also dissenting, powerfully noted: "Choices about death touch the core of liberty. Our duty, and the concomitant freedom, to come to terms with the conditions of our own mortality are undoubtedly 'so rooted in the traditions and conscience of our people as to be ranked as fundamental . . . .' " *Id.* at 343.

Even Justice Scalia, who was the only member of the Court to find that no liberty interest was implicated, recognized that such issues touch the essence of our humanity. He argued that the Constitution was silent on the question of whether one had a liberty interest in refusing life support, and that such a right could not be found in our history and tradition. *Id.* at 293-96 (Scalia, J., concurring). He then went on to say: "Are there, then, no reasonable and humane limits that ought not to be exceeded in requiring an individual to preserve his own life? There obviously are, but they are not set forth in the Due Process Clause. What assures us that those limits will not be exceeded is the same constitutional guarantee that is the source of most of our protection—what protects us, for example, from being assessed a tax of 100% of our income above the subsistence level, from being forbidden to drive cars, or from being required to send our children to school for 10 hours a day, none of which horribles are categorically prohibited by the Constitution. Our salvation is the Equal Protection Clause, which requires the democratic majority to accept for themselves and their loved ones what they impose on you and me." *Id.* at 300. Significantly, as the majority today points out, Justice Scalia also made clear that he recognized no sensible difference between assisted suicide (of the sort involved in the case before us) and assisted removal of life support and feeding tubes.

"[T]he cause of death in both cases is the suicide's conscious decision to 'pu[t] an end to his own existence.' " *Id.* at 295-97 (Scalia, J., concurring).

Although the Court in *Cruzan* did not ultimately decide whether a patient had a constitutionally protected right to die, the majority opinion clearly recognized that any infringement of such a liberty interest was at least constitutionally suspect.[10] It said, "Petitioners insist that under the general holdings of our cases, the forced administration of life-sustaining medical treatment, and even of artificially delivered food and water essential to life, would implicate a competent person's liberty interest. Although we think the logic of the cases discussed above would embrace such a liberty interest, the dramatic consequences involved in refusal of such treatment would inform the inquiry as to whether the deprivation of that interest is constitutionally permissible. But for purposes of this case, we assume that the United States Constitution would grant a competent person a constitutionally protected right to refuse lifesaving hydration and nutrition." *Id.* at 279.

What is more, the Court in *Cruzan* did not merely "assume" that a liberty interest in refusing life-sustaining medical treatment existed. It found that a prohibition of life-support termination would deprive a patient of that liberty interest. In doing so, the Court noted that

10 Both Justices O'Connor and Scalia joined Chief Justice Rehnquist's opinion, making it an opinion for the Court. Their own concurring opinions, however, gave significantly different glosses to the Court's opinion. *See Cruzan*, 497 U.S. at 287 (O'Connor, J., concurring) ("As the Court notes, the liberty interest in refusing medical treatment flows from decisions involving the State's invasions into the body. See *ante*, at 278-279"); *id.* at 293 (Scalia, J. concurring) ("While I agree with the Court's analysis today, and therefore join in its opinion, I would have preferred that we announce, clearly and promptly, that the federal courts have no business in this field . . . .").

"determining that a person has a 'liberty interest' under the Due Process Clause does not end the inquiry," and that "whether respondent's constitutional rights have been violated must be determined by balancing his liberty interests against the relevant state interests." *Id.* at 279 (internal quotation marks and citation omitted). It then "assumed" that when a patient's liberty interest was balanced against Missouri's interest in life, the balance would come out in favor of the patient.

Cruzan never actually struck this balance, of course, because the Court found that Missouri could insist on strong evidentiary requirements to ensure that Cruzan wanted to die, since "the Due Process Clause protects an interest in life as well as an interest in refusing life-sustaining medical treatment," *id.* at 281. But this in no way undermines *Cruzan*'s holding that in determining whether a patient has a constitutional right to die, we are required to "balance" the consequences of the state's prohibition of life-support termination against the state's interest in preserving life. *Id.* at 279.

Cruzan, therefore, teaches us that statutes that interfere with an individual's decision to terminate life are suspect under the Due Process Clause. The right to act on that decision is one that may or may not receive ultimate constitutional protection, however, depending on the power of the state's interests and the clarity with which those interests are expressed. Moreover, as Justice Scalia in his concurrence points out, the Equal Protection Clause also requires courts to examine whether such statutes apply equally to "you and me"—regardless of whether the prohibited activity interferes with a fundamental right or disadvantages a suspect class.

Like *Cruzan*, *Casey* suggests that New York's assisted suicide statutes are of doubtful constitutionality. In

Casey, the Court noted that "[o]ur law affords constitutional protection to personal decisions relating to marriage, procreation, contraception, family relationships, child rearing, and education" and that "the Constitution places limits on a State's right to interfere with a person's most basic decisions about . . . bodily integrity." 505 U.S. at 851, 849. In this respect, *Casey* borrowed from Justice Harlan's formulation in *Poe v. Ullman*, 367 U.S. 497, 543 (1961) (Harlan, J., dissenting), 505 U.S. at 848-49, and defined liberty interests to include choices at the core of human existence. Following Harlan, it stated: "These matters, involving the most intimate and personal choices a person may make in a lifetime, choices central to personal dignity and autonomy, are central to the liberty protected by the Fourteenth Amendment. At the heart of liberty is the right to define one's own concept of existence . . . . Beliefs about these matters could not define the attributes of personhood were they formed under compulsion of the State." *Id.* at 851.

Today's majority and the Ninth Circuit, *en banc*, in *Compassion in Dying*, go further than the Supreme Court did in *Cruzan* and *Casey*. These circuits—the first to rule on the matter—hold that laws prohibiting physicians from assisting suicide in some circumstances actually violate the Constitution. The majority does so because it can see no valid Equal Protection difference between the so-called "passive" assistance that New York allows and the "active" assistance that New York purports to forbid. The Ninth Circuit, instead, finds a violation of a fundamental Due Process right.[11]

[11] And some distinguished scholars agree. *See, e.g.*, Jed Rubenfeld, *The Right of Privacy*, 102 HARV. L. REV. 737, 794-95 (1989) ("If the decision to live or die is said to be so fundamental to a person that the state may not make it for him, then it is difficult to see on what plausible ground the right to make this decision could be granted to those on life support but denied to all other individuals."). There are, of course, distinguished scholars who disagree. *See, e.g.*, Yale Kamisar, *Against Assisted Suicide—Even a Very Limited Form*, 72 DETROIT MERCY L. REV. 735, 753-60 (1995).

In light of these opinions, I believe that it cannot be denied that the laws here involved, whether tested by Due Process or by Equal Protection, are highly suspect. It is also the case, however, that neither *Cruzan*, nor *Casey*, nor the language of our Constitution, nor our constitutional tradition clearly makes these laws invalid. What, then, should be done?

III. *The Constitutional Remand*

I contend that when a law is neither plainly unconstitutional (because in derogation of one of the express clauses of our fundamental charter or, for that matter, of the more general clauses, as these have been interpreted in our constitutional history and traditions), nor plainly constitutional, the courts ought not to decide the ultimate validity of that law without current and clearly expressed statements, by the people or by their elected officials, of the state interests involved. It is my further contention, that, absent such statements, the courts have frequently struck down such laws, while leaving open the possibility of reconsideration if appropriate statements were subsequently made.

Thus, in *Kent v. Dulles*, 357 U.S. 116, 129 (1958), in striking down a State Department directive limiting citizens' passport rights, the Supreme Court, said: "Where activities or enjoyment, natural and often necessary to the well-being of an American citizen, such as travel, are involved, we will construe narrowly all delegated powers that curtail or dilute them. We hesitate to find in this broad generalized power an authority to trench so heav-

ily on the rights of the citizen. . . . Thus we do not reach the question of constitutionality. We only conclude that § 1185 and § 211a do not delegate to the Secretary the kind of authority exercised here." And in *Greene v. McElroy*, 360 U.S. 474 (1959), in voiding a loyalty-security program that did not provide for confrontation of witnesses, the Court stated: "[Legislative and executive decisions] must be made explicitly not only to assure that individuals are not deprived of cherished rights under procedures not actually authorized, but also because explicit action, especially in areas of doubtful constitutionality, requires careful and purposeful consideration by those responsible for enacting and implementing our laws." *Id.* at 507 (citation omitted)

The same view was expressed even by the great constitutional absolutist, Justice Hugo L. Black. In *Barenblatt v. United States*, 360 U.S. 109 (1959), in dissent, he argued that the authority of the House UnAmerican Activities Committee to investigate communism in education should be limited, "[f]or we are dealing here with governmental procedures which the Court itself admits reach to the very fringes of congressional power. In such cases more is required of legislatures than a vague delegation to be filled in later by mute acquiescence." *Id.* at 139-40 (footnote omitted).[12]

While these earlier cases leaned in part on statutory interpretation or on broad readings of doctrines such as

12 The Court's opinion in *Kent* and Justice Black's dissent in *Barenblatt* relied in part on a pair of delegation opinions by Chief Justice Hughes dating from the 1930s. These were treated as using a similar approach because, in the 1930s, the statutes at issue were at the fringes of congressional power under the Commerce Clause. *See Kent*, 357 U.S. at 129 (citing *Panama Refining Co. v. Ryan*, 293 U.S. 388, 420-30 (1935)); *Barenblatt*, 360 U.S. at 140 n.7 (Black, J., dissenting) (citing *Panama Refining* and *A.L.A. Schechter Poultry Corp. v. United States*, 295 U.S. 495 (1935)).

delegation and vagueness, more recent opinions have applied constitutional remands directly.[13] In *Califano v. Goldfarb*, 430 U.S. 199 (1977), for example, Justice Stevens provided the swing vote in the Court's five-to-four decision that the Social Security Act's grant of special benefits to widows was in violation of Equal Protection. He found that the law discriminated "against a group of males [and] is merely the accidental byproduct of a traditional way of thinking about females." *Id.* at 233 (Stevens, J., concurring). Significantly, he went on to say that "[p]erhaps an actual, considered legislative choice would be sufficient to allow this statute to be upheld, but that is a question I would reserve until such a choice has been made." *Id.* at 223 n.9.[14]

13 Interpretation to avoid constitutional questions and undue delegation have proven particularly useful to the Supreme Court as ways of sending back for a second look federal statutes that came close to infringing fundamental rights. These devices, however, are either not available or are problematic when the statute that skates close to a constitutional line is a state law, since both what can and cannot be delegated within a state and how a state statute should be interpreted are paradigmatic issues of state law. *Compare Sweezy v. New Hampshire*, 354 U.S. 234, 254 (1957) (plurality opinion applying a concept akin to undue delegation to find that "[t]he lack of any indications that the legislature wanted the information the Attorney General attempted to elicit from petitioner must be treated as the absence of authority. It follows that the use of the contempt power . . . was not in accordance with . . . due process") *with id.* at 257 (Frankfurter, J., concurring in the result) (disagreeing with plurality on this issue because "whether the Attorney General of New Hampshire acted within the scope of the authority given him by the state legislature is a matter for the decision of the courts of that State, as it is for the federal courts to determine whether an agency to which Congress has delegated power has acted within the confines of its mandate"). In such circumstances, a reconsideration can occur at the behest of a federal court only if that court is willing impose a constitutional remand directly. *See infra* (discussion of *Thompson v. Oklahoma*, 487 U.S. 815 (1988), and *Abele v. Markle*, 342 F. Supp. 800 (D. Conn. 1972)).

14 The other four votes in the majority held that the statute was an invalid discrimination against women. *Califano*, 430 U.S. at 217 (plurality opinion).

The powerful, and telling, concurring opinion by Justice O'Connor in *Thompson v. Oklahoma*, 487 U.S. 815 (1988), which provided the fifth vote to strike down state death penalty laws applicable to minors less than sixteen years of age, did the same thing. The fact that such laws were on the books in many states did not suffice to meet the strictures of the Cruel and Unusual Punishment Clause. The laws may have been there inadvertently or as a result of inertia, and many state legislatures seemed not to have realized that children could be executed under their statutes. Such laws, moreover, were virtually never enforced against minors under sixteen. Hence, the Justice reasoned, they were invalid. But if states reenacted them, consciously and clearly, the Court would then have to consider whether the statutes could actually meet the Clause's requirements. *Id.* at 857 (O'Connor, J., concurring in the judgment).

Perhaps the most dramatic instance of this constitutional remand, or second look, approach occurred in our own Circuit, in a case bearing many similarities to the one before us today. In *Abele v. Markle*, 342 F. Supp. 800 (D. Conn. 1972) ("*Abele I*"), a three-judge district court was asked to examine the constitutionality of a Connecticut statute that banned abortion. Circuit Judge J. Edward Lumbard found the statute to be unconstitutional for reasons later echoed by the Supreme Court in *Roe v. Wade*, 410 U.S. 113 (1973). District Judge T. Emmet Clarie found no violation of due process for reasons akin to those adverted to in today's majority opinion. The key vote was by then-District Judge Jon Newman.

In his landmark opinion, now-Chief Judge Newman found that the Connecticut statute had been passed in 1860 to protect the health of pregnant women, and that

this aim was no longer applicable in 1972 because childbirth endangered a woman's life more than abortion did. *Id.* at 807-09 (Newman, J., concurring). Yet he recognized that other valid grounds for the statute might exist, including, perhaps, the protection of unborn life (*Roe v. Wade* had not yet been decided). Newman pointed out, however, that the statute was not passed to protect unborn life. "If the Connecticut legislature had made [such] a judgment," Newman mused, "the constitutionality of such laws would pose a legal question of extreme difficulty . . . ." *Id.* at 810. Because "that legislative determination has not been shown to have been made," Newman found it "inappropriate to decide the constitutional issue that would be posed" if the Legislature in fact passed a law designed to protect human life. *Id.* And since the statute before him, whatever its basis, raised strong constitutional doubts, Newman nullified the law while explicitly leaving the Legislature free to reconsider the issue.

Judge Newman's opinion is, of course, not binding on us. But it remains an important beacon suggesting what is the correct approach in extremely difficult cases in which neither the Supreme Court, nor constitutional language or tradition, gives clear guidance. It tells us how to deal with situations in which the state interests that might support such statutes can only be inferred from legislative inaction or from long-abandoned legislative motives.

Today, Timothy Quill takes the place of Janice Abele in challenging another statute of nineteenth-century origin. As with the Connecticut abortion law, the rationale for the New York assisted-suicide prohibition has eroded with the passage of time. In the nineteenth century, both suicide and attempted suicide were crimes and assisting

in those crimes was, derivatively, a crime as well. But suicide and attempted suicide are no longer crimes. Nevertheless, the prohibitions on assisted suicide might serve other valid ends. It is possible, for example, to imagine a state in which such statutes were part of an overall approach to the preservation of life that was so all-encompassing that the laws' validity might be upheld despite their infringement of important libertarian individual rights. Our Constitution gives us no more complete dominion over our bodies than it does over our property. *See, e.g., Schmerber v. California*, 384 U.S. 757 (1966) (holding that a state may, over a suspect's protest, have a physician extract blood from a person suspected of drunk driving). In other words, our Constitution does not enact the bodily equivalent of Herbert Spencer's Social Statics. *Cf. Lochner v. New York*, 198 U.S. 45, 75 (1905) (Holmes, J., dissenting). But there is no sign that such an overall "culture of life" reigns in New York State—quite the contrary.

Well before *Roe v. Wade*, New York enacted one of the most permissive abortion laws in the country. *See Roe*, 410 U.S. 113, 147-48 & n.41 (1973). New York recently reenacted the death penalty. *See* Act of Mar. 7, 1995, ch. 1, § 2, 1995 N.Y. Laws 1 (McKinney's) (codified at N.Y. Penal Law § 60.06 (McKinney's Supp. 1996)). As far as I know, no New York Legislature has seriously considered requiring individuals to give their blood, bone marrow or other organs, to keep those who need transplants alive. Indeed, such an idea would strike many as bizarre science fiction. Nearer to hand, the right to demand to die, as and when one wishes, has been recognized in New York for all those on feeding or hydration tubes or on other life support devices. All this the majority opinion demonstrates beyond peradventure.

Various *amici* for the respondents argue that the New York assisted suicide laws consciously adopt their particular vision of what life and death should be. *Amicus* United States Catholic Conference, for example, insists that suicide is antithetical to freedom, that it is not voluntary and that it is linked to psychiatric illness. But there is no reason to believe that New York has accepted these arguments. If it had, one would expect that New York would prohibit attempted suicide and that it would, for example, aggressively discourage suicide by the terminally ill, through legislative declarations defining it to be a "grave public wrong" or through some other means.

Other *amici* contend that the difference between what they call "active" assisted suicide (making lethal drugs available to those terminally ill who would self-administer them) and what they call "passive" behavior (actively removing life supports or feeding tubes, on demand, so that the patient may die) is fundamental. Even if I were to accept the distinction in the face of the powerful arguments made against it both by the majority today and by Justice Scalia in his *Cruzan* concurrence, there is no reason to believe that New York has consciously made such a judgment. Certainly New York has never enacted a law based on a reasoned defense of the difference.

The Attorney General of New York contends that its Legislature has, in fact, made just such a distinction by its inaction, by its failure to remove the prohibitions before us today. It left these in place after the prohibition on what could be called "passive" assisted suicide had been abrogated. Leaving aside the difficulties involved in arguing that legislative *inaction* should be given the *same* weight as legislative *action* in supporting the view that medical *action* and medical *inaction* are funda-

mentally *different*, the argument will not do. As the majority points out, we have not been given any clear statements of possible interests that the state actually believes would be served by the distinction. In their absence, how can we say that the distinction, which is anything but obvious, and which results in severe harm to the ability of some, but not all, individuals to determine crucial life and death choices for themselves, is mandated by the state's fundamental needs? And if the state does not affirmatively tell us what it wishes to put on the other side of the scale, how can we make the balance required by *Cruzan* come out any way but in favor of an individual's freedom to choose between life and death? Whether under Equal Protection, or Due Process, then, the absence of a recent, affirmative, lucid and unmistakable statement of why the state wishes to interfere with what has been held by the Supreme Court to be a significant individual right, dooms these statutes.

I take no position on what I would hold were such an affirmative statement forthcoming from the state of New York. In the wake of *Furman v. Georgia*, 408 U.S. 238, 239-40 (1972) (per curiam), which in effect sent all of the then-existing death penalty laws back for a second look by the states, the Supreme Court (rightly or wrongly) upheld most of the somewhat modified and subsequently enacted death penalty laws. *See Gregg v. Georgia*, 428 U.S. 153, 179-81 (1976) (plurality opinion). Conversely, one month after Judge Newman's concurrence in *Abele I*, Connecticut enacted a new anti-abortion law that was based on protecting the life of the fetus. Pub. Act No. 1, 1972 Conn. Acts 593 (May Spec. Sess.) (codified at Conn. Gen. Stat. § 53-30(a)-(b)). And the same panel that had decided *Abele I* (rightly or

wrongly) declared the new law unconstitutional.[15] Either result is possible after a second look in which the state affirms laws that it previously had allowed to remain in force through passivity or inertia.[16] What I do say is that no court need or ought to make ultimate and immensely difficult constitutional decisions unless it knows that the state's elected representatives and executives—having been made to go, as it were, before the people—assert through their actions (not their inactions) that they really want and are prepared to defend laws that are constitutionally suspect.

It is different when the Constitution speaks clearly. When a law violates the plain mandates of the text, history, or structure of the Constitution, no second look is warranted or appropriate. That law *must* fall. Laws that violate the core of the First Amendment and the core of the Takings Clause are but two examples. When that is not the case, when the Constitution and its history do not clearly render a statute invalid, when its validity depends instead, in part, on the strength of the state interests at

---

15 *See Abele v. Markle*, 351 F. Supp. 224, 232 (D. Conn. 1972) ("*Abele II*"). Then-District Judge Newman's opinion noted that, "for the author of this opinion," the Legislature's new "statement of legislative purpose makes the issue posed . . . quite different from the issue raised by the challenge to the prior statutes. . . . A statute of this sort, as I previously indicated [in *Abele I*], 342 F. Supp. at 810 and 811 n.18, poses a far more difficult question, one that I did not believe should be decided unless such a statute was enacted." *Id.* at 226 n.4. Judge Newman's opinion was joined by Judge Lumbard, while Judge Clarie dissented. The Supreme Court subsequently vacated the decision in light of *Roe*, 410 U.S. 951 (1973), and remanded the case to the district court. On remand, the same three judges declared the law unconstitutional. *Abele v. Markle*, 369 F. Supp. 807, 809 (D. Conn. 1973) (per curiam).

16 Sometimes, of course, a legislature will not reenact a statute that has been remanded to it, or will reenact it with modifications and limits sufficient to avoid any serious constitutional challenge.

stake, then a second look is not only appropriate, it is, in my view, usually required.

Without a second look by the people, courts are liable to err in either direction. They may uphold and thereby validate[17] (as they all too often have[18]) the infringement of rights upon which the states did not truly wish to encroach. Conversely, they may, ultimately and definitively, strike down laws, believing that the state interests involved are minor, when in fact these interests turn out to be highly significant.[19]

In the end, a constitutional remand does no more than this: It tells the legislatures and executives of the various states, and of the federal government as well, that if they wish to regulate conduct that, if not protected by our Constitution, is very close to being protected, they must do so clearly and openly. They must, in other words, face the consequences of their decision before the people.[20] Unless they do this, they cannot expect courts

17 *See* CHARLES L. BLACK, JR., THE PEOPLE AND THE COURT: JUDICIAL REVIEW IN A DEMOCRACY 52 (1960) ("[T]he Court, through its history, has acted as the legitimator of the government. In a very real sense, the Government of the United States is based on the opinions of the Supreme Court.").

18 *See* Guido Calabresi, *The Supreme Court, 1990 Term—Foreword: Antidiscrimination and Constitutional Accountability (What the Bork-Brennan Debate Ignores)*, 105 HARV. L. REV. 80, 143-45 (1991).

19 *See* Harry Wellington, *Common Law Rules and Constitutional Double Standards: Some Notes on Adjudication*, 83 YALE L.J. 221 (1973); Alexander Bickel & Harry Wellington, *Legislative Purpose and the Judicial Process: The* Lincoln Mills *Case*, 71 HARV. L. REV. 1 (1957); Alexander Bickel, *The Supreme Court, 1960 Term—Foreword: The Passive Virtues*, 75 HARV. L. REV. 40 (1961).

20 In this respect, the notion of a constitutional remand may respond to some of the concerns expressed by the dissenters in *Companion in Dying*. *See Compassion in Dying*, 1996 WL 94848, at *60 (Beezer, J. dissenting) ("Whether the charitable or uncharitable characterization [of physician-assisted suicide] ultimately prevails is a question that must be resolved by the people through deliberative decisionmaking in the voting booth . . . This issue we, the courts, need not—and should not—decide. . . . To declare a constitutional right to physician-assisted suicide would be to impose upon the nation a repeal of local laws."); *id.* at 61 (Fernandez, J., dissenting) ("Like so many other issues, it is one 'for the people to decide.' Our Constitution leaves it to them; it is they and their representatives who must grapple with the riddle and solve it.") (citation omitted); *id.* at 61 (Kleinfeld, J., dissenting) ("The Founding Fathers did not establish the United States as a democratic republic so that elected officials would decide trivia, while all great questions would be decided by the judiciary. . . . That an issue is important does not mean that the people, through their democratically elected representatives, do not have the power to decide it."). *See also* 1 BRUCE ACKERMAN, WE THE PEOPLE: FOUNDATIONS (1991); CAN. CONST. (Constitution Act, 1982), pt. I (Canadian Charter of Rights and Freedoms) § 33 (containing the *Non-Obstante* Clause that permits legislature to abrogate rights, but only if the legislature explicitly decides to do so).

to tell them whether what they may or may not actually wish to enact is constitutionally permitted.

IV. *Conclusion*

For all of the above reasons, I do not reach the merits in this case—merits that are, as Judge Newman said of those that he also did not reach in *Abele v. Markle*, "of extreme difficulty." 342 F. Supp. at 810. What, after all, are we to make of Margaret Mead's statement, cited in one of the *amicus* briefs, that we should beware of giving those who have the power to heal the right to kill, since anthropologically speaking the distinction between the two is relatively new in our cultures? It is certainly worth pondering. But how does it help us to distinguish between giving doctors the right to remove life support systems and the right of the terminally ill to demand lethal drugs from the same doctors? And how is one to weigh petitioners' claim that if doctors are not allowed to give patients lethal drugs for self-administration, those patients will be forced to commit suicide, legally,

in far more horrendous ways—by hanging, shooting, or gassing themselves? These methods, petitioners assert, are plausibly more dangerous to society and devastating to survivors. But is it really the case that terminally ill patients would take such measures? And which way would it cut, if they did not? These questions, moreover, hardly begin to approach the human tragedies, and the deeply held beliefs, that the issues we would have to decide would require us to explore. No. Unless New York forces us to face such choices head on, by asserting its interest in the prohibitions before us, we should not do so. And this New York has not done.

I would hold that, on the current legislative record, New York's prohibitions on assisted suicide violate both the Equal Protection and Due Process Clauses of the Fourteenth Amendment of the United States Constitution to the extent that these laws are interpreted to prohibit a physician from prescribing lethal drugs to be self-administered by a mentally competent, terminally ill person in the final stages of that terminal illness. I would, however, take no position on whether such prohibitions, or other more finely drawn ones, might be valid, under either or both clauses of the United States Constitution, were New York to reenact them while articulating the reasons for the distinctions it makes in the laws, and expressing the grounds for the prohibitions themselves. I therefore concur in the result reached by the Court.

QUESTIONS PRESENTED

1. Whether, under the Equal Protection Clause of the Fourteenth Amendment to the United States Constitution, terminally ill, mentally competent patients who do not require artificial life support and who want to commit suicide with the assistance of a physician are similarly situated to terminally ill, mentally competent patients who are or can be kept alive only by means of life-sustaining medical treatment, which they are free to refuse or terminate.

2. Whether a state retains a legitimate interest under the Equal Protection Clause of the Fourteenth Amendment to the United States Constitution in prohibiting physician assisted suicide while allowing terminally ill, mentally competent patients to refuse or discontinue artificial life support.

IN THE

Supreme Court of the United States

OCTOBER TERM, 1996

No. 95-1858

DENNIS C. VACCO, Attorney General of the State of New York; GEORGE E. PATAKI, Governor of the State of New York; and ROBERT M. MORGENTHAU, District Attorney of New York County,

Petitioners,

—v.—

TIMOTHY E. QUILL, M.D.; SAMUEL C. KLAGSBRUN, M.D.; and HOWARD A. GROSSMAN, M.D.,

Respondents.

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT

BRIEF FOR PETITIONERS VACCO AND PATAKI[1]

OPINIONS BELOW

The opinion of the United States Court of Appeals for the Second Circuit (J.A. 215)[2] is reported at 80 F.3d 716 (2d Cir. 1996). The opinion of the United States District Court for the Southern District of New York (J.A. 195) is reported at 870 F.Supp. 78 (S.D.N.Y. 1994).

---

[1] Petitioner Robert M. Morgenthau, although separately represented, joins in this brief.

[2] References to the joint appendix filed with this brief are cited as (J.A.).

JURISDICTION

The decision of the United States Court of Appeals for the Second Circuit was rendered, and judgment entered, on April 2, 1996. This Court has jurisdiction to hear this appeal under 28 U.S.C. § 1254(1).

CONSTITUTIONAL AND STATUTORY PROVISIONS INVOLVED

The constitutional and statutory provisions involved are the Due Process Clause and Equal Protection Clause of the Fourteenth Amendment to the United States Constitution, and New York Penal Law §§ 125.15(3) and 120.30.

The Fourteenth Amendment provides in pertinent part:

> No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

U.S. Const. amend. XIV, § 1.

Penal Law § 125.15(3) is entitled "Manslaughter in the second degree" and provides in pertinent part:

> A person is guilty of manslaughter in the second degree when . . . (3) He intentionally causes or aids another person to commit suicide. Manslaughter in the second degree is a class C felony.

N.Y. Penal Law § 125.15(3) (McKinney 1987).

Penal Law § 120.30 is entitled "Promoting a suicide attempt" and provides:

> A person is guilty of promoting a suicide attempt when he intentionally causes or aids another person to attempt suicide. Promoting a suicide attempt is a class E felony.

N.Y. Penal Law § 120.30 (McKinney 1987).

STATEMENT OF THE CASE

Advocating a radical departure from the established precedents and traditions of the State of New York and of this nation, plaintiffs-respondents ("plaintiffs") brought this case to urge recognition of a constitutional right for terminally ill patients to have the aid of a physician in committing suicide. Plaintiffs are three physicians who, together with three terminally ill patients,[3] commenced suit against the New York Attorney General[4] pursuant to 42 U.S.C. § 1983 to contest the constitutional validity of New York Penal Law §§ 125.15(3) and 120.30, which make criminal the acts of causing or aiding another to commit suicide or to attempt suicide (J.A. 21).

Plaintiffs allege that the "Fourteenth Amendment guarantees the liberty of mentally competent, terminally ill adults with no chance of recovery to make decisions about the end of their lives" (J.A. 26), that the right to assisted suicide is a fundamental right (J.A. 27), and that New York's laws are unconstitutional under the Due Process Clause (J.A. 27). They also assert that because terminally ill people may request the withdrawal of life-sustaining treatment, the prohibition of

---

[3] The plaintiff-patients, Mr. William A. Barth, Ms. Jane Doe, and Mr. George A. Kingsley, died by the time the district court rendered its opinion, leaving only the physicians as appellants before the Second Circuit and respondents before this Court.

[4] Former New York State Governor Mario M. Cuomo and Manhattan District Attorney Robert M. Morgenthau were added as parties by amendments to the complaint filed in October 1994. Dennis C. Vacco and George E. Pataki were substituted in the action following their succession to the offices of Attorney General and Governor, respectively, in 1995.

physician assisted suicide violates the rights, under the Equal Protection Clause, of those patients who are terminally ill but are not on artificial life support (J.A. 27). Plaintiffs seek a judgment authorizing physicians to furnish prescriptions for lethal medication to patients, which patients would then self-administer to cause their deaths (J.A. 28).

Suit was commenced in July 1994. In September 1994, plaintiffs moved for a preliminary injunction, in support of which they submitted affidavits that described, in detail, the suffering each plaintiff-patient had endured as a consequence of the illnesses that afflicted them. Patient Barth, in his affidavit (J.A. 96), stated that he suffered from several AIDS-related diseases, including cytomegalovirus, microsporidiosis, pneumonia, cryptosporidiosis, and microbacterium avium. The treatments Mr. Barth employed to combat the symptoms of his illnesses, such as daily infusions and overnight intravenous feeding, themselves caused serious negative side effects. Patient Jane Doe, in her affidavit (J.A. 105), stated that she suffered from thyroid cancer, which by the time of suit had caused a large cancerous tumor to wrap itself around her carotid artery, making it necessary to implant a feeding tube in her stomach which itself caused serious negative side effects. Ms. Doe was unable to take sufficient pain medication to achieve comfort while remaining mentally alert. Patient George A. Kingsley submitted an affidavit (J.A. 99) stating that he was afflicted with AIDS-related diseases including cryptosporidiosis, cytomegalovirus retinitis (leading to blindness in one eye), and toxoplasmosis. Mr. Kingsley self-administered medications through painful injections, and other infusions were administered daily through a tube connected to an artery in his chest.

All three patients expressed in their affidavits a desire for "certain death," to be achieved through the intervention of their physicians (J.A. 98, 102, 108). Fear of exposing their physicians to criminal sanction, however, kept the plaintiff-patients from committing suicide with their doctors' assistance (J.A. 102), while fear of exposing themselves to criminal sanctions kept the plaintiff-physicians from rendering such aid (J.A. 46, 71, 88). All of the plaintiff-patients, during the course of this litigation, died of the underlying diseases that afflicted them. The State of New York did not contest below, nor does it contest now, the depth of the suffering experienced by these plaintiff-patients.

Also submitted to the court below was the affidavit of plaintiff-physician Timothy Quill, M.D., describing the medical interventions which typically take place when patients refuse to continue life-sustaining medical treatment and opining that "[w]hen such patients are mentally competent, they are consciously choosing death as preferable to life under the circumstances that they are forced to live" (J.A. 116). As stated by Dr. Quill, "[w]hile death from dehydration and starvation is acceptable to some of our patients, others ask us why they must endure such an ordeal when it can only end in their death, especially when there are alternatives available that could ease death more humanely" (J.A. 118).

In response to the motion for a preliminary injunction, defendants-petitioners cross-moved for dismissal on the pleadings. In an opinion dated December 15, 1994 (J.A. 195), Chief Judge Griesa of the United States District Court for the Southern District of New York treated the cross-motion to dismiss as one for summary judgment (J.A. 197), and held on the merits that the criminalization of physician assisted suicide involves neither a denial of a fundamental liberty interest protected by the Fourteenth Amendment's Due Process Clause nor a denial of equal protection under that same Amendment (J.A. 207-09).

On appeal, the Second Circuit affirmed that portion of the district court's opinion which found no substantive due process right to assisted suicide, concluding that "[t]he right to assisted suicide finds no cognizable basis in the Constitution's language or design" (J.A. 233). The court found, however,

that New York's prohibition of physician assisted suicide violates the Equal Protection Clause, holding that physician assisted suicide is no different than the withdrawal of life-sustaining medical treatment, that the State of New York has no legitimate interest that justifies the "prolongation of a life that is all but ended," and that no rational basis exists to support New York's disparate treatment of the two (J.A. 245). On this basis, the court invalidated New York Penal Law §§ 125.15(3) and 120.30 to the extent that those laws impose criminal penalties on physicians who prescribe lethal dosages of medication for their terminally ill, mentally competent patients to self-administer in order to commit suicide (J.A. 249).

A concurring opinion (Calabresi, J.) agreed that the statutes were "constitutionally suspect" but recommended that New York's penal provisions on assisted suicide be sent back to the New York State Legislature on "constitutional remand" for full consideration and a clear articulation of the state interests involved should the Legislature re-enact the statutes (J.A. 265).

On October 1, 1996, this Court granted certiorari, 65 U.S.L.W. 3218 (U.S. Oct. 1, 1996) (No. 95-1858), to decide the equal protection questions presented.

SUMMARY OF ARGUMENT

The Second Circuit erred in concluding that terminally ill patients who exercise a right to forego or withdraw from artificial life support are, for equal protection purposes, similarly situated to those who are also terminally ill, have no equivalent life-sustaining treatment to forego, and want a physician's assistance in committing suicide. As this Court recognized in *Cruzan v. Director, Missouri Department of Health*, 497 U.S. 261 (1990), the right to forego treatment derives from the common law right to bodily integrity and freedom from unwanted physical intrusions. The asserted

"right" to physician assisted suicide is, by contrast, a right to demand outside assistance in the taking of one's own life.

The distinction between acts that artificially sustain life and those that artificially end life is reflected in *Cruzan* as well as in the laws of nearly every state, which provide for the refusal or termination of medical treatment but expressly prohibit assistance in suicide. It is also reflected in medical practice and medical ethics, which generally permit withdrawal of treatment but forbid a physician's assistance in a patient's suicide. These legal and medical distinctions are rooted in logical differences between refusal or termination of treatment and assisted suicide.

New York's prohibition of assistance in suicide also withstands equal protection scrutiny because it is rationally related to legitimate state interests. The ban reflects the State's interest in prohibiting intentional killing and protecting human life and its unwillingness to make judgments as to the value of life based on the "quality" of life experienced by its citizens. The Second Circuit's equal protection analysis, although ostensibly limited to terminally ill patients, is not so readily contained and could be employed to extend a right of assisted suicide to patients who are not terminally ill and to those who are not ill at all.

New York's prohibition of assisted suicide also is legitimately related to its interest in protecting vulnerable patients from mistake and abuse. There is a direct correlation between inadequate control of pain in medical treatment and patient requests for suicide. Especially with the advent of managed care and other cost control measures in medicine, there is a danger that the quick death offered by legalized suicide will be preferred to costly treatment and proper pain management, a risk which is enhanced for the poor and the elderly, who are likelier than others to suffer from inadequate pain relief. Moreover, any efforts to establish regulations governing and limiting the practice of assisted suicide are likely to founder

upon the confidentiality of the physician-patient relationship. Regulation of physician assisted suicide will inevitably be a matter of physician self-regulation.

The Second Circuit erred in its equal protection analysis, thereby arrogating to itself the decision that doctors may help their patients kill themselves. The question of whether physician assisted suicide should be prohibited, however, is one of legislative dimension, not constitutional imperative.

ARGUMENT

As the Second Circuit noted (J.A. 234), the Equal Protection Clause requires that " 'all persons similarly circumstanced shall be treated alike,' " but " 'does not require things which are different in fact or opinion to be treated in law as though they were the same.' " *Plyler v. Doe*, 457 U.S. 202, 216 (1982) (citations omitted). Moreover, "[u]nless a statute provokes 'strict judicial scrutiny' because it interferes with a 'fundamental right' or discriminates against a 'suspect class,' it will ordinarily survive an equal protection attack so long as the challenged classification is rationally related to a legitimate governmental purpose." *Kadrmas v. Dickinson Public Schools*, 487 U.S. 450, 457-58 (1988) (citations omitted). Only a statute that treats "similarly circumstanced" people differently without sufficient justification violates the Equal Protection Clause.

The Second Circuit's equal protection inquiry was conceptually legitimate but analytically flawed. Most importantly, the court failed to recognize that, whether viewed as a matter of precedent in law and practice in medicine or as a matter of logic, competent, terminally ill patients who want a physician's assistance in committing suicide are not similarly situated to their counterparts "who are on life-support systems" (J.A. 243-44). Nor did the court, despite holding correctly that the asserted right to assisted suicide is not

fundamental and thus is subject only to rational basis scrutiny, recognize the rational relationship between New York's statutes criminalizing assisted suicide and the legitimate purposes that underlie those statutes.

POINT I

TERMINALLY ILL PATIENTS ON LIFE SUPPORT WHO NO LONGER WANT THEIR LIVES SUSTAINED BY ARTIFICIAL MEANS AND TERMINALLY ILL PATIENTS WHO ARE NOT ON LIFE SUPPORT AND WANT TO "HASTEN DEATH" BY COMMITTING SUICIDE ARE NOT SIMILARLY SITUATED

The Second Circuit committed a central error when it concluded that terminally ill patients whose lives have been sustained by artificial means but who no longer want such treatment and terminally ill patients who are not on life support and wish to "hasten death" by committing suicide are similarly situated. The legal status of the two groups differs, as does the accepted medical practice with respect to each. Moreover, there are important logical and factual distinctions between "acts that artificially sustain life and acts that artificially curtail life." *People v. Kevorkian*, 527 N.W.2d 714, 728 (Mich. 1994), *cert. denied*, 115 S.Ct. 1795 (1995).

A. The Second Circuit's Reliance on *Cruzan* Was Misplaced

This Court, in its leading decision in this area, in fact has already recognized that the nature of the right that entitles a patient to refuse or terminate artificial life support differs from that of the asserted right of a terminally ill patient to receive assistance in committing suicide. *Cruzan v Director, Missouri Department of Health*, 497 U.S. 261 (1990), presented the question of whether an individual in a persistent vegetative state possesses a substantive due process right to

the withdrawal of life-sustaining medical treatment. While stopping short of declaring a constitutional right to withdraw from such treatment, *see id.* at 279, this Court made clear its belief that such a right, whether or not of constitutional dimension, derives from the common law principle of bodily integrity and the entitlement of the individual to be free from interference with his or her person. The Court noted that "[a]t common law, even the touching of one person by another without consent and without legal justification was a battery." *Id.* at 269. Moreover, "[t]his notion of bodily integrity has been embodied in the requirement that informed consent is generally required for medical treatment." *Id.* The "logical corollary" of this requirement "is that the patient generally possesses the right not to consent, that is, to refuse treatment." *Id.* at 270. *See also id.* at 287 (O'Connor, J., concurring) ("the liberty interest in refusing medical treatment flows from decisions involving the State's invasions into the body"); *id.* at 305 (Brennan, J., dissenting) (equating "freedom from unwanted medical attention" and right "to determine what shall be done with one's own body").

While recognizing the right (whether constitutional or not) to refuse or withdraw from life-sustaining treatment, *Cruzan* nevertheless observed that "there can be no gainsaying" a state's "interest in the protection and preservation of human life," as demonstrated by the fact that "the majority of States in this country have laws imposing criminal penalties on one who assists another to commit suicide." *Id.* at 280. At the very moment, then, that it recognized a right to refuse treatment, this Court took pains to acknowledge the power of a state to ban assisted suicide outright. The Court thus demonstrated its understanding that refusal of treatment and assisted suicide are different things, supported by different legal principles.[5]

---

[5] *See also* L. Tribe, *American Constitutional Law*, § 15-11, at 1370-71 (2d ed. 1988):

> The right of a patient to accelerate death as such—rather than merely to have medical procedures held in abeyance so that disease processes can work their natural course—depends on a broader conception of individual rights than any contained in common law principles. A right to determine when and how to die would have to rest on constitutional principles of privacy and personhood or on broad, perhaps paradoxical, conceptions of self-determination.

The Second Circuit erred by failing to distinguish the right of "a competent person [to] order the removal of life-support systems" (J.A. 241), which, following *Cruzan*, is based on the right to be free of bodily interference, from the asserted "right" of a terminally ill patient to assistance in suicide. The heavy reliance of the court below on *Cruzan* was misplaced because the right *Cruzan* recognizes does not embrace or suggest the "right" the Second Circuit announced. A person who seeks a physician's help in committing suicide is asserting not a right to be free of unwanted physical intrusions, but a right to insist on outside intervention in achieving a desired end. As *Cruzan* illustrates, the distinction is significant. *Accord Kevorkian*, 527 N.W.2d at 728 ("[i]n *Cruzan*, the Court was able to 'assume' a protected liberty interest in the withdrawal of life-sustaining medical treatment because it was able to distinguish between acts that artificially sustain life and acts that artificially curtail life. . . . [S]ome suggest that this is a distinction without constitutional significance . . . the *Cruzan* majority disagreed and so do we").

B. Termination of Life Support and Physician Assisted Suicide Are Legally and Medically Different

Until the decisions below and in *Compassion in Dying v. Washington*, 79 F.3d 790 (9th Cir.) (en banc), *cert. granted*, 65 U.S.L.W. 3218 (U.S. Oct. 1, 1996) (No. 96-110), this distinction was universally observed in American law. Thus, at least forty-four states which recognize the right to refuse treatment expressly disapprove of assisted suicide in statutes providing for the exercise of that refusal right,[6] and

Since the very first state decision authorizing termination of life support, *In re Quinlan*, 355 A.2d 647, 655 (N.J.) (recognizing "a real distinction between the self-infliction of deadly harm and a self-determination against artificial life support"), *cert. denied*, 429 U.S. 922 (1976), state courts, like state legislatures, have explicitly recognized a legal distinction between refusal of treatment and assisted suicide. *See, e.g., Thor v. Superior Court*, 855 P.2d 375, 385 (Cal. 1993) ("a necessary distinction exists between a person suffering from a life-threatening disease or debilitating injury who rejects medical intervention that only prolongs but never cures the affliction and an individual who deliberately sets in motion a course of events aimed at his or her demise and attempts to enlist the assistance of others"); *Fosmire v. Nicoleau*, 551 N.E.2d 77, 82 (N.Y. 1990) ("merely declining medical care, even essential treatment, is not considered a suicidal act"); *McKay v. Bergstedt*, 801 P.2d 617, 627 (Nev. 1990) ("there is a substantial difference between the attitude of a person desiring non-interference with the natural con-

Ann. § 609.215 (West 1987 and Supp. 1996); Miss. Code Ann. § 97-3-49 (1994); Mo. Ann. Stat. § 565.023.1(2) (Vernon 1996 Supp.); Mont. Code Ann. § 45-5-105 (1995); Neb. Rev. Stat. § 28-307 (1995); N.H. Rev. Stat. Ann. § 630.4 (1986); N.J. Stat. Ann. § 2C:11-6 (West 1995); N.M. Stat. Ann. § 30-2-4 (1994); N.Y. Penal Law §§ 120.30, 125.15(3) (McKinney 1987); N.D. Cent. Code § 12.1-16-04 (1995 Supp.); Okla. Stat. Ann. tit. 21, §§ 813, 814, 815 (West 1983); Or. Rev. Stat. § 163.125(1)(b) (1993) (although Oregon allows physician-assisted suicide under certain circumstances, *see* Or. Rev. Stat. §§ 127.800-127.897 (1996), assisted suicide remains generally illegal); Pa. Cons. Stat. Ann. tit. 18, § 2505(b) (Purdon 1983); R.I. Pub. Act 96-133, to be codified as R.I. Gen.Stat. tit. 11, ch. 60; S.D. Codified Laws Ann. § 22-16-37 (1988); Tenn. Code Ann. § 39-13-216 (1995 Supp.); Tex. Penal Code Ann. § 22.08 (Vernon 1994); Wash. Rev. Code Ann. § 9A.36.060 (1988); Wis. Stat. Ann. § 940.12 (West 1996). In *Compassion in Dying v. Washington*, 79 F.3d at 793-94, the Ninth Circuit held that the portion of the Washington statute prohibiting assisted suicide "as applied to the prescription of life-ending medication for use by terminally ill, competent adult patients who wish to hasten their deaths, violates the Due Process Clause of the Fourteenth Amendment."

sequences of his or her condition and the individual who desires to terminate his or her life by some deadly means either self-inflicted or through the agency of another"); *In re Gardner*, 534 A.2d 947, 955 (Me. 1987) (a "decision to live without artificial life-sustaining procedures would not constitute suicide"); *In re Colyer*, 660 P.2d 738, 743 (Wash. 1983) ("death which occurs after the removal of life sustaining systems is from natural causes, neither set in motion nor intended by the patient"); *Superintendent of Belchertown State School v. Saikewicz*, 370 N.E.2d 417, 426 n.11 (Mass. 1977) ("[i]n the case of the competent adult's refusing medical treatment such an act does not necessarily constitute suicide").

The legal distinction between refusal of treatment and suicide is paralleled by a medical distinction. The American Medical Association, the American College of Physicians, and the American Geriatrics Society all "consistently distinguish assisted suicide and euthanasia from the withdrawing or withholding of treatment." New York State Task Force on Life and the Law, *When Death Is Sought: Assisted Suicide and Euthanasia in the Medical Context* 108 & n.111 (1994). *See also* Council on Ethical and Judicial Affairs, American Medical Association, *Decisions Near the End of Life*, 267 JAMA 2229, 2230-31, 2233 (1992) (while "[t]he withdrawing or withholding of life-sustaining treatment is not inherently contrary to the principles of beneficence and nonmaleficence," assisted suicide "is contrary to the prohibition against using the tools of medicine to cause a patient's death"); American Geriatrics Society Policy Committee, *Voluntary Active Euthanasia Position Statement*, 39 J. Am. Geriatrics Society 826 (1991) (same). Medical ethicists also insist on the difference between termination of treatment and assisted suicide. *See* W. Gaylin et al., *Doctors Must Not Kill*, 259 JAMA 2139, 2139 (1988) ("[g]enerations of physicians and commentators on medical ethics have underscored and held fast to the distinction between ceasing useless treatments

(or allowing to die) and active, willful, taking of life"); Hastings Center, *Guidelines on the Termination of Life-Sustaining Treatment and the Care of the Dying* 129 (1987) ("[m]edical tradition and customary practice distinguish in a broadly accepted fashion between the refusal of medical intervention and intentionally causing death by assisting suicide").[8] The rank and file of the medical profession likewise observes the distinction. *See* M. Solomon et al., *Decisions Near the End of Life: Professional Views on Life-Sustaining Treatment*, 83 Am. J. Pub. Health 14, 17 (Jan. 1993) (survey shows 87% of hospital physicians and nurses agree with the statement that "to allow patients to die by foregoing or stopping treatment is ethically different from assisting in their suicide").

C. The Distinctions Are Grounded in Logic

The legal and medical distinctions between refusal or termination of treatment and assisted suicide are not arbitrary. Rather, they are rooted in at least three real logical differences between the two practices. First, they may be distinguished on the basis of intention of both physician and patient. As one expert puts it, a physician who withdraws treatment intends "to cease doing useless and futile or degrading things to the patient when [the patient] no longer stands to benefit from them," whereas a physician who assists a suicide "must, necessarily and indubitably, intend primarily that the patient be made dead." L. Kass, *Ethical Issues in Assisted Suicide*, Testimony Before Oversight Hearing on Assisted Suicide of House Committee on Judiciary, Subcomm. on the Constitution (April 29, 1996) at 16.[9] Similarly, a person who

---

[8] The Hastings Center is "America's preeminent institute for the study of medical ethics." E. Larson, *Seeking Compassion in Dying*, 18 Seattle U. L. Rev. 509, 517 (1995).

[9] Assisted suicide is distinguishable from palliative treatment that may result in the patient's death, which is encompassed by the doctrine of "double effect." The intent of palliative treatment is to relieve pain and suffering, even though death may be a possible side effect of the treatment. While medication may, for example, in some cases depress res-

terminates treatment may face death as a likely result, but his purpose may be not death but, for example, the avoidance of invasive medical technology or prevention of treatments that conflict with sincerely-held religious beliefs. By contrast, a person who commits or obtains assistance in committing suicide intends to take his own life; he has a specific intent to die. Several courts have based the distinction between refusal or termination of treatment and assisted suicide on the different intent that underlies each. *See Matter of Conroy*, 486 A.2d 1209, 1224 (N.J. 1985) (people who refuse life-sustaining treatment "may not harbor a specific intent to die," but may instead "fervently wish to live, but to do so free of unwanted medical technology, surgery, or drugs, and without protracted suffering"); *Saikewicz*, 370 N.E.2d at 426 n.11 ("in refusing treatment the patient may not have the specific intent to die"); *Satz v. Perlmutter*, 362 So.2d 160, 162-167 (Fla. Ct. App. 1978) (the fact that the patient "really wants to live, but * * * under his own power," precludes "his further refusal of treatment being classed as attempted suicide"), *aff'd*, 379 So.2d 359 (Fla. 1980).

Refusal or withdrawal of treatment and assisted suicide may also be distinguished based upon the difference between

---

piration and thus lead to death, it is administered solely for pain relief, but with the patient's knowledge and acceptance of the risk of death. See Council on Ethical and Judicial Affairs, American Medical Association, *Physician-Assisted Suicide* (Report 8), App. C, at 2 (Dec. 1993); *see also id.* at 3 ("[t]he relief of suffering is an essential part of the physician's role as healer").

Analytically and medically, acceptance of palliative treatment that may result in death is no different from the knowing acceptance of the risk of death that accompanies many medical treatments, such as the risk of death attendant on a quadruple bypass. If the patient's death results from the surgery, the surgeon is not responsible for the death, nor does he intend it, even though it technically occurred at his hands. The indicated treatment—intended for the patient's well-being and undertaken with the patient's informed consent—simply was not successful. J. Arras, *News From the Circuit Courts: How Not to Think About Physician Assisted Suicide*, 2 BioLaw S:171, S:181 (July-Aug. 1996).

action and inaction. As one court has said, assisted suicide involves "affirmative, assertive, proximate direct conduct, such as furnishing" an instrumentality of death, and thus differs from the "presence of a doctor during the exercise of his patient's" right to refuse treatment. *Bouvia v. Superior Court*, 225 Cal. Rptr. 297, 306 (Cal. Ct. App. 1986). It is true that one member of this Court, on whose opinion the court below relied (J.A. 243), has questioned "the action-inaction distinction," finding no legal difference from the patient's perspective between submitting to death and seeking it. *See Cruzan*, 497 U.S. at 296-97 (Scalia, J., concurring). As applied to the physician, however, the distinction is "deeply rooted in the law of negligence," which distinguishes between "active misconduct" or "misfeasance" and "passive inaction" or "nonfeasance." *Kevorkian*, 527 N.W.2d at 728. *See also* G. Scofield, *Exposing Some Myths About Physician-Assisted Suicide*, 18 Seattle U.L. Rev. 473, 479 (1995) ("the duty not to commit a battery does not generate a duty to rescue; a duty not to touch does not generate a duty to render aid"). Although the distinction will not always be clear-cut, there is an obvious moral distinction between "originat[ing] a fatal sequence" and "allow[ing] one to run its course." *See* P. Foot, *Killing and Letting Die*, in *Abortion: Moral and Legal Perspectives* 177, 180 (J. Garfield and P. Hennessey eds., 1984). Assisted suicide, in other words, "involves not *letting* the patient die, but *making* the patient die." S. Carter, *The Culture of Disbelief: How American Law and Politics Trivialize Religious Devotion* 236 (1993) (emphasis in original). The distinction is honored by the established difference between acting to bring about a death through assisting a suicide and allowing one to occur through refusal or withdrawal of life-sustaining treatment.

Perhaps the clearest distinction underlying the different status of refusal or withdrawal of treatment and assisted suicide is based on causation. A patient who declines or withdraws from life-sustaining treatment is letting nature take its course.

His death is caused by the underlying disease or disorder, not by some intervention unrelated to it. "[T]here must," in other words, "be an underlying fatal pathology if allowing to die is even possible. Killing, by contrast, provides its own fatal pathology." D. Callahan, *The Troubled Dream of Life: In Search of a Peaceful Death* 77 (1993). Numerous courts have recognized this distinction. *See, e.g., Kevorkian*, 527 N.W.2d at 728 ("suicide involves an affirmative act to end a life," whereas refusal or withdrawal of treatment "allows nature to proceed"); *Conroy*, 486 A.2d at 1224 (contrasting "allow[ing] the disease to take its natural course" and "self-inflicted injury").

Contrary to the view of the court below (J.A. 215), this is true regardless of whether the underlying pathology is the organic cause of death or whether it imposes some disability that leads inexorably to death. It is thus of no consequence whether, for example, the withdrawal of Nancy Cruzan's artificial hydration and nutrition led to her death due to "an underlying disease" or to starvation. Her persistent vegetative condition and resulting inability to eat caused her death. By contrast, if she had been injected with a lethal dose of drugs, the drugs alone would have resulted in her death. *See* G. Annas, *The "Right to Die" In America: Sloganeering from Quinlan and Cruzan to Quill and Kevorkian*, 34 Duquesne L. Rev. 875, 895-96 (1996) (distinguishing "real causes of death from the existence of various medical tools that may temporarily substitute for particular bodily functions").

Terminally ill patients who exercise a right to forego life-sustaining medical treatment are thus not in the same position as those who are also terminally ill, have no equivalent life-sustaining treatment to forego, but want a physician's assistance in committing suicide. The right to decline or withdraw from treatment derives from the common law right of bodily integrity. No such right underlies assisted suicide, which involves more than simply being let alone. The law has not treated the two classes of patients as similar, and long-standing medical practices distinguish between the two situations. The distinction, moreover, is supported by logical differences based on intent, causation and action/omission. The Second Circuit accordingly erred in concluding that the patients are "similarly circumstanced" (J.A. 243), and that their different treatment by the law can give rise to an equal protection violation.

POINT II

NEW YORK'S PROHIBITION OF ASSISTED SUICIDE IS SUPPORTED BY LEGITIMATE STATE INTERESTS

The case for physician assisted suicide, based as it is on instances of individual suffering, rests on what John Arras has called the "twin pillars of patient autonomy and mercy." J. Arras, *News from the Circuit Courts*, 2 BioLaw at S: 175. Dr. Arras notes:

> Many people advocate legalization [of physician assisted suicide] because they fear a loss of control at the end of life. They fear falling victim to the technological imperative; they fear dying in chronic and uncontrolled pain; and they fear the psychological suffering attendant upon the relentless disintegration of the self. They fear, in short, a bad death.

Id. at S: 174.

Juxtaposed against these real fears, the methodology of equal protection sounds formulaic at best. Nonetheless, as the Second Circuit recognized (J.A. 238), in order to survive equal protection scrutiny, New York's prohibition of assisted suicide need only be "rationally related to a legitimate state interest." *City of Cleburne, Texas v. Cleburne Living Center*, 473 U.S. 432, 440 (1985). Because the New York laws neither involve a suspect classification nor "impinge on personal

rights protected by the Constitution," any stricter scrutiny is inappropriate. *Id.*

Although the Second Circuit found otherwise (J.A. 245), New York's ban on assisted suicide bears an obvious and rational relation to several important state interests, and thus is valid under the Equal Protection Clause. Indeed, the reasons underlying the State's legislative choice to prohibit rather than allow physician assisted suicide are more than legitimate; they are compelling.

A. New York Has a Legitimate, Indeed Compelling, Interest in the Prohibition of Intentional Killing and the Preservation of Life

As this Court observed in *Cruzan*, "a State may properly decline to make judgments about the 'quality' of life a particular individual may enjoy, and simply assert an unqualified interest in the preservation of human life to be weighed against the constitutionally protected interests of the individual." *Cruzan*, 497 U.S. at 282.[10] In legislating to prohibit

[10] The Second Circuit asks: "What interest can the state possibly have in requiring the prolongation of a life that is all but ended? Surely, the state's interest lessens as the potential for life diminishes" (J.A. 245). *See also Compassion in Dying*, 79 F.3d at 820 (state's interest in protecting life "is dramatically diminished if the person it seeks to protect is terminally ill"). But, one article asks, "[w]hy should the state's interest in preserving life diminish as life approaches its end? Are the lives of older persons or the terminally ill less 'valuable' to the state than the lives of those who may live indefinitely? And what is it that makes them less 'valuable'?" T. Marzen et al., *Suicide: A Constitutional Right*? 24 Duquesne L. Rev. 1, 103 (1985). If the basis for the supposedly diminished state interest is the diminished public value of the lives of the terminally ill, then the state likewise has a lessened interest in preserving the lives of "[a]ll 'burdensome,' 'noncontributing' persons—those who are 'valueless' to the state in the same sense as the very ill or old." *Id.* at 104. And if the basis for the diminished state interest instead resides in some notion that it is merciful to let the terminally ill die if they so choose, "then it is even more merciful to legitimize the same choice for many others whose lives may seem . . . equally devoid of meaning or filled with suffering, but will nevertheless be prolonged indefinitely." *Id.*

physician assisted suicide, a state can reasonably balance the societal desire for a state's citizens to achieve a death without prolonged suffering against any weakening of society's prohibition of intentional killing. "That prohibition is the cornerstone of law and of social relationships. It protects each one of us impartially, embodying the belief that all are equal." House of Lords, *Report from the Select Committee on Medical Ethics*, Session 1993-94, vol. I at 48. Unquestionably there are individual cases of real suffering, but "individual cases cannot establish the foundation of a policy which would have such serious and widespread repercussions." *Id.* This is an instance in which the "interest of the individual cannot be separated from the interest of society as a whole." *Id.*

The Second Circuit's decision effectively disregards New York's interest in the prohibition of intentional killing and the preservation of life. The decision purports to be carefully proscribed, extending only to the "prescribing [of] medications to be self-administered by a mentally competent, terminally ill person in the final stages of his terminal illness" (J.A. 249). Yet predicated as it is on an equal protection framework that finds terminally ill patients "similarly situated" whether or not they are on life support, the very reasoning of the decision reveals its potential application to a far larger portion of the population.

The difficulty of containing the right to "hasten death," once recognized at all, is demonstrated by asking whether the right can readily be limited to the terminally ill. The problem is not merely one of definition, *see Developments in the Law—Medical Technology and the Law*, 103 Harvard L. Rev. 1519, 1644 n.11 (1990) ("[t]here is no generally accepted medical definition of 'terminal' "), or of explaining why a "terminal condition"[11] should have constitutional meaning, *see*

[11] This Court, in *United States v. Rutherford*, 442 U.S. 544 (1979), declined to exempt drugs to be used by terminally ill persons from FDA approval, because "under our constitutional framework, federal courts do not sit as councils of revision, empowered to rewrite legislation in accord

T. Marzen, *"Out, Out Brief Candle": Constitutionally Prescribed Suicide for the Terminally Ill*, 21 Hastings Const. L.Q. 799, 814-819 (1994). The entire basis for the right, according to the Second Circuit, is the similarity between terminally ill patients on life support and terminally ill patients who are not on life support. It is not merely the terminally ill, however, who have an essentially unqualified right to refuse or terminate life-sustaining treatment. As one state court observed, the right to refuse life-sustaining treatment is not "reserved to those suffering from terminal conditions." *Thor v. Superior Court*, 855 P.2d 375, 387 (Cal. 1993). Other state courts have repeatedly upheld the right of all competent individuals to refuse life-sustaining treatment. *See McKay v. Bergstedt*, 801 P.2d 617 (Nev. 1990) (respirator-dependent quadriplegic may terminate treatment); *State v. McAfee*, 385 S.E.2d 651 (Ga. 1989) (same); *Bouvia v. Superior Court*, 225 Cal. Rptr. 297 (Cal. Ct. App. 1986) (victim of severe cerebral palsy permitted to remove nasogastric feeding tube). *See generally* Y. Kamisar, *Against Assisted Suicide—Even a Very Limited Form*, 72 U. Detroit Mercy L. Rev. 735, 740-43 (1995) ("If personal autonomy and the termination of suffering are supposed to be the touchstones for physician-assisted suicide . . . doesn't someone who must continue to live what *she considers* an intolerable or unacceptable existence *for many years* have an equal—or even greater right to assisted suicide?") (emphasis in original).

Proponents of the right to assisted suicide, including one of the present plaintiff-physicians, have made clear their belief

with their own conceptions of prudent public policy." *Id.* at 555. *Cf. City of Cleburne*, 473 U.S. at 445 (declining to find that mentally retarded persons are a suspect class and stating that "it would be difficult to find a principled way to distinguish a variety of other groups who have perhaps immutable disabilities setting them off from others, who cannot themselves mandate the desired legislative responses, and who can claim some degree of prejudice from at least part of the public at large. One need mention only the aging, the disabled, the mentally ill, and the infirm.").

that it is improper to limit the exercise of this right to the terminally ill. *See* T. Quill, *Death and Dignity* 162 (1993) (it is arbitrary to exclude victims of incurable but not terminal progressive illnesses); Note, *Who Decides If There Is " 'Triumph in the Ultimate Agony?' " Constitutional Theory and the Emerging Right to Die with Dignity*, 37 William & Mary L. Rev. 827, 893-95 (1996) (limiting the right to the terminally ill is constitutionally impermissible). And at least one proponent has acted on that belief. *See* G. Annas, *The "Right to Die" in America*, 34 Duquesne L. Rev. at 891 (describing Dr. Jack Kevorkian's assistance in the suicide of a patient in the early stages of Alzheimer's disease).

A second, separate inquiry moves from the terminally ill who want a physician to "prescrib[e] medications to be self-administered" by a patient (J.A. 249) to those who seek suicide but are unable to self-administer the lethal agents necessary to accomplish the act. Imagine, Professor Kamisar says, a person who is terminally ill and wishes to end her own life, but is physically unable

> to perform the last, death-causing act herself? . . . If the claim that one has, or ought to have, a right to control the time and manner of one's death is well founded—if one who is terminally ill has, or ought to have, the right to make the choice whether or not to go on living until death comes naturally—how can this right be denied to someone simply because she cannot swallow the barbiturates that will bring about death?

Kamisar, *Against Assisted Suicide*, 72 U. Detroit Mercy L. Rev. at 747. In one direction, then, the movement is from the terminally ill to the non-terminally ill; in another, it leads from physician assisted suicide to physician administered active euthanasia.

In addition, if a state approves physician assisted suicide and then also approves voluntary active euthanasia, under an equal protection analysis it may well next countenance non-

voluntary active euthanasia.[12] Many people who are incapable of requesting death might still be regarded as entitled to assistance in suicide. This follows, most obviously, from *Cruzan*, where the Court permitted an inquiry into an incompetent patient's expression of her wishes when she was competent. Under the Second Circuit's decision, if those wishes had included assisted suicide, it is difficult to see what principle would have prevented them from being honored. And in states which invoke a "best interests" standard in making treatment decisions for incompetent patients, *see, e.g.*, *Barber v. Superior Court*, 195 Cal. Rptr. 484, 493 (Cal. Ct. App. 1983) (where the choice the incompetent patient would have made with respect to prolonging his life cannot be ascertained, "the surrogate ought to be guided in his decision by the patient's best interests"), even the failure of an incompetent or never-competent patient to specify his desires with respect to physician assisted suicide will not be an obstacle to the exercise of this "right," for he may be viewed as similarly situated in all important respects to a terminally ill, competent patient who wants to ingest a lethal dose of drugs.[13]

---

12 "Nonvoluntary" euthanasia is defined as "the euthanizing of incompetent patients or those who are unable to express their wishes." D. Callahan & M. White, *The Legalization of Physician-Assisted Suicide: Creating a Regulatory Potemkin Village*, 30 U. Richmond L. Rev. 1, 42 (1996).

13 The experience of the Netherlands is instructive. While euthanasia is proscribed by the Dutch Penal Code, a series of judicial decisions since 1973 has enabled Dutch physicians to practice euthanasia and assisted suicide under certain circumstances. *See generally* Comment, *Deference to Doctors in Dutch Euthanasia Law*, 10 Emory Internat'l L. Rev. 255 (1996). A survey commissioned by the Dutch government showed that, out of a total of 129,000 deaths, there were 400 cases of assisted suicide, 2300 cases of active voluntary euthanasia, and 1000 cases of nonvoluntary euthanasia, apparently including more than 100 cases in which the patient was mentally competent. P. J. van der Maas et al., *Euthanasia and Other Medical Decisions Concerning the End of Life*, 338 The Lancet 669-674 (1991).

Thus, while the holding of the Second Circuit is narrow, the rationale upon which it rests demonstrates the great difficulty in containing the right to "hasten death," once any such "right" is recognized. The result is not only a failure to credit New York's legitimate interest in preventing intentional killing, but is also the improper substitution of a judicial determination for a legislative judgment.

As this Court has noted, a state is not required to equivocate when it articulates its interest in the protection and preservation of human life, but rather may legitimately assert an "unqualified interest" in life's preservation. *Cruzan*, 497 U.S. at 282. In the context of assisted suicide, that is precisely what New York has done. In fact, the State has taken a long and considered look at assisted suicide and at the distinction between assisted suicide and the refusal of treatment, the Legislature having visited the issues in enactments spanning two centuries.[14] The State's most recent statutory mention of assisted suicide came as part of the adoption by the New York Legislature of statutory provisions on health care proxies. N.Y. Pub. Health Law Art. 29-C (McKinney 1993). At that time, the Legislature made clear that nothing being added to the law was "intended to permit or promote suicide, assisted suicide or euthanasia," N.Y. Pub. Health Law § 2989(3) (McKinney 1993), and New York's penal provisions criminalizing assisted suicide were unambiguously left in place and not modified in any form.

---

14 In 1788, New York recognized by statute the criminal common law, under which assisting suicide and assisting attempted suicide were crimes. Act of Feb. 21, 1788, ch. 37, § 2, 1788 N.Y. Laws 664, 665. In 1828, New York embodied its prohibition in its Penal Code. N.Y. Rev. Stat. pt. IV, ch. 1, tit.2, art. 1, § 7 (1829). The prohibition remained in place through a revision of the Penal Code in 1881. *See* N.Y. Penal L. tit. X, ch. 1, §§ 175, 176 (1882). The current provision dates from a complete revision, in 1965, of the criminal law in New York. 1965 N.Y. Laws c. 1030, codified at N.Y. Penal L. §§ 125.15(3), 120.30 (McKinney 1987). Under New York law, suicide itself is not a crime.

The substitution by the Second Circuit of its own "quality of life" judgment for that which was legislatively crafted was error. *See Heller v. Doe by Doe*, 509 U.S. 312, 319 (1993) (rational basis review " 'is not a license for courts to judge the wisdom, fairness, or logic of legislative choices,' " nor does it authorize " 'the judiciary [to] sit as a superlegislature' ") (citations omitted). When a legitimate governmental interest underlies a legislative act, the "calculus of effects, the manner in which a particular law reverberates in a society, is a legislative and not a judicial responsibility." *Personnel Administrator of Massachusetts v. Feeney*, 442 U.S. 256, 272 (1979). The Second Circuit's approach leaves no room for the quintessentially legislative act of achieving a "pragmatic compromise" between the societal desire "to respect patients' wishes, relieve suffering, and put an end to seemingly futile medical treatment" and the need "to maintain the salutary principle that the law protects all human life, no matter how poor its quality." Kamisar, *Against Assisted Suicide*, 72 U. Detroit Mercy L. Rev. at 758.[15] New York has, for its entire existence, struck the balance by prohibiting assisted suicide, *see* N.Y. Penal Law §§ 120.30, 125.15(3), while preserving for its citizens the common-law right to refuse life-sustaining treatment, *see Matter of Storar*, 420 N.E.2d 64, 70 (N.Y. 1981) (competent adult patient " 'has a right to determine what should be done with his own body' ") (quoting *Schloendorff v. Society of New York Hospital*, 105 N.E. 92, 93 (N.Y. 1914) (Cardozo, J.)). The valuation of human life that underlies this legislative line-drawing is for the people of the State to determine. It is not a function to be preempted by the courts.

[15] The coming debate over the allocation of not just medical resources but resources of all kinds in the face of global overcrowding highlights the dubious, indeed illegitimate, nature of a substitution of judicial judgment for that of the elected representatives of a given state.

B. The State Has a Legitmate, Indeed Compelling, Interest in Preventing Abuse and Mistake

Not only did the Second Circuit neglect the validity of New York's considered legislative judgment, but it also discounted other state interests underlying New York's decision to prohibit physician assisted suicide. One such interest of paramount concern lies in the State's desire to prevent abuse. The New York State Task Force on the Life and the Law[16] explored this question thoroughly in a 1994 report on physician assisted suicide and euthanasia, *When Death Is Sought: Assisted Suicide and Euthanasia in the Medical Context*, in which it unanimously recommended rejection of proposals to legalize physician assisted suicide,[17] based upon the potential for abuse and mistake.

Among its observations, the Task Force noted:

[16] The New York State Task Force on Life and the Law was convened by Governor Mario M. Cuomo in 1985 to recommend public policy on health care decision-making issues raised by medical advances and new technologies. It is chaired by the State's Commissioner of Health, and its membership includes the State's Commissioner on the Quality of Care for the Mentally Disabled, physicians, nurses, academics, lawyers and representatives of various religious communities. New York State Task Force, *When Death Is Sought: Assisted Suicide and Euthanasia in the Medical Context* i (1994). Since its inception, the Task Force has recommended public policy on a number of issues, including determination of death, the withdrawal and withholding of life-sustaining treatment, organ transplantation, the treatment of disabled newborns, and new practices to assist reproduction, and has issued reports and legislative proposals on, among other things, do-not-resuscitate orders and health care proxies. *Id.* at i, vii. *See also* New York State Task Force, *When Others Must Choose: Deciding for Patients Without Capacity* (1992); *Life Sustaining Treatment: Making Decisions and Appointing a Health Care Agent* (1987); *Do Not Resuscitate Orders: The Proposed Legislation and Report of the New York State Task Force on Life and the Law* (1986).

[17] Among the proposals examined by the Task Force in reaching its conclusions was one co-authored by Dr. Timothy Quill, plaintiff herein. New York State Task Force, *When Death Is Sought* at 142.

> Assisted suicide and euthanasia would carry us into new terrain—American society has never sanctioned assisted suicide or mercy killing. We believe that the practices would be profoundly dangerous for large segments of the population, especially in light of the widespread failure of American medicine to treat pain adequately or to diagnose and treat depression in many cases. The risks would extend to all individuals who are ill.

Id. at vii-viii. *See also id.* at viii ("the distinction between the refusal of medical treatment and assisted suicide and euthanasia has not been well-articulated in the broader public debate" and the "often-used rubric of the 'right to die' obscures" what are "critical distinctions"); Tribe, *American Constitutional Law* § 15-11 at 1370 ("[o]nce recognized, rights to die might be uncontainable and might prove susceptible to grave abuse").

As the Task Force stated, "[s]ome decisions to contribute to a patient's death may be well-intentioned but hasty and possibly mistaken. In other cases, patients may be pressured to consent to euthanasia when their care is expensive or burdensome to others." New York State Task Force, *When Death Is Sought* at 99. The Task Force likewise observed "that assisted suicide will be practiced through the prism of social inequality and prejudice that characterizes the delivery of services in all segments of society, including health care. Those who will be most vulnerable to abuse . . . are the poor, minorities, and those who are least educated and least empowered." *Id.* at 125.

As recognized by the Task Force, *id.* at x, research suggests that suicide requests diminish when there is adequate control of pain and other symptoms, *see* K. Foley, *The Relationship of Pain and Symptom Management to Patient Requests for Assisted Suicide*, 6 J. Pain & Symptom Management 289, 290 (1991), and "excessive pain, discomfort and anxiety are nearly always examples of inadequate treatment," D. Shew-

mon, *Active Voluntary Euthanasia: A Needless Pandora's Box*, 3 Issues L. & Med. 219, 220 (1987). There is, moreover, evidence indicating that physicians do not always give or know how to give adequate relief of pain. *See* New York State Task Force, *When Death Is Sought* at 43 (only 12% of physicians rate their pain management training as excellent or good). "Particularly with the emergence of cost controls and managed care in the United States, the danger of tempting health care providers to persuade chronic patients to minimize costs by ending it all painlessly is no fantasy." S. Kreimer, *Does Pro-Choice Mean Pro-Kevorkian? An Essay on Roe, Casey and the Right to Die*, 44 Am. U. L. Rev. 803, 841 (1995).

Moreover, it is not difficult to imagine that, given the inherent imbalance of power in the doctor-patient relationship, a doctor's suggestion of physician assisted suicide may be viewed not as the presentation of an option but as encouragement. *See, e.g.*, New York State Task Force, *When Death Is Sought* at 122 ("[t]hrough their tone, the encouragement they provide or withhold, and the way they present the information available, physicians can often determine the patient's choice"). This risk, obviously, is exacerbated for those "whose autonomy and well-being are already compromised by poverty, lack of access to good medical care, advanced age, or membership in a stigmatized social group," and who are likelier than others to suffer from inadequate pain relief. *Id.* at 120, 143. The coercive pressures which could surround the option of assisted suicide as a "medical treatment" cannot be underestimated. If the practice were to gain legal approval, physicians would presumably have a duty to inform patients fully about the option and, in response, some patients would likely feel there would be no alternative but to acquiesce, even if they would prefer to remain alive. *See id.* at 122 ("[e]ven assuming all physicians would act in good faith . . . physicians' recommendations would be a powerful fac-

tor in their patients' choices. Indeed, patients generally do what their doctors recommend").

The Second Circuit was mistaken in suggesting (J.A. 246-248) that New York's interest in protecting vulnerable patients from abuse is identical for patients who require life-sustaining treatment and those who consider physician assisted suicide. If the State prohibited patients from refusing unwanted medical treatment because of concerns about abuse, that could lead to the virtual enslavement of dying patients by tubes and invasive machinery, essentially mandating unwanted bodily interference. There is a difference between forcing invasive treatment on dying patients and helping them to kill themselves. Moreover, the nature and extent of the risk of abuse differs between the two populations. The risk of abuse with refusal of treatment is inherently limited: by definition, only people who require invasive treatment will die after refusing life-sustaining measures. By contrast, the risk of abuse and mistake with assisted suicide applies to every single person to whom the Second Circuit (or any other court) extends the "right."

Nor is the Second Circuit realistic in believing that New York can "establish rules and procedures to assure that all choices are free of such pressures" (J.A. 247). For one thing, there is the danger of error by physicians. No matter how many "safeguards" are proposed to accompany any legalization of assisted suicide, in practice all schemes of human governance are fallible, and mistakes are inevitable. The determination of who will be a "candidate" for assisted suicide depends upon a host of threshold decisions which must be made by physicians, all subject to fallible judgments, including determinations as to who is truly terminally ill, who is competent, who has a chance of recovery, and what is the proper course of pain management. All of these judgments are subject to the risk of misdiagnosis of the underlying illness or the failure to identify depression or other compromised mental state. *Cf. Addington v. Texas*, 441 U.S. 418, 430 (1979)

(the "nuances of psychiatric diagnosis render certainties virtually beyond reach in most situations").

Moreover, the physician-patient relationship "is conducted in private and protected by the ethical and legal requirements of confidentiality," and is therefore "inherently inconsistent with on-site procedural regulation." Callahan & White, *The Legalization of Physician-Assisted Suicide*, 30 U. Richmond L. Rev. at 66. *See also* T. Quill, *Death and Dignity: A Case of Individualized Decisionmaking*, 324 New Eng. J. Med. 691 (1991) (first exposing Dr. Quill's suicide assistance, which would otherwise have remained unknown). As a practical matter, regulation of physician assisted suicide will be largely self-regulation by physicans. Callahan & White, *The Legalization of Physician Assisted Suicide*, at 10. *See Shapero v. Kentucky Bar Association*, 486 U.S. 466, 481 (1988) (O'Connor, J., dissenting) (courts should defer to "legislative function" of states in area of professional regulation); *Thornburgh v. American College of Obstetrics & Gynecology*, 476 U.S. 747, 803 (1986) (White, J., dissenting) ("the government is entitled not to trust members of a profession to police themselves").

In reaching a determination to prohibit physician assisted suicide, a state may also rely on the fact that this practice is not generally accepted by physicians themselves as an appropriate medical procedure. Despite the fact that the plaintiff-physicians in this case assert that assisted suicide is, in some cases, ethically proper from their own point of view, and even assuming that some other physicians would agree, assisted suicide by physicians remains contrary to the established ethics of the medical profession. *See* Council on Ethical and Judicial Affairs, American Medical Association, *Decisions Near the End of Life*, 267 JAMA at 2233 ("physician-assisted suicide, like euthanasia, is contrary to the prohibition against using the tools of medicine to cause a patient's death"). There is simply no medical consensus in support of the practice, which has uniformly been regarded, to the present day, as out-

side the boundaries of acceptable medical procedure. *See* Council on Ethical and Judicial Affairs, American Medical Association, *Physician-Assisted Suicide*, 10 Issues L. & Med. 91 (1994) (physician assisted suicide is inconsistent with the physician's professional role). It surely is not irrational for the State, as here, to recognize, in law, a limitation which is ethically and clinically established by the profession itself.

In essence, "[t]o make assisted suicide legal is to require each individual to justify (at least to herself) the decision to remain alive." Kreimer, *Does Pro-Choice Mean Pro-Kevorkian?*, 44 Am. U. L. Rev. at 816. The State of New York has a legitimate interest, as a matter of public policy, in shielding its citizens from the burden of performing this calculus. New York's choice to avoid the risks and complications inherent in embarking on the path opened by any legalization of assisted suicide is a permissible judgment for a state confronted with an issue of enormous complexity and far-reaching effect. New York's interests in preserving life and avoiding the abuses that arise in connection with assisted suicide are legitimate, and the relationship between these interests and a prohibition on assisted suicide is obvious. It is only to those who view the case as the Second Circuit did, and seek a justification for the difference between physician assisted suicide and what that court called "suicide through the withdrawal of life-sustaining treatment" (J.A. 246), that this will not be enough. Because it is erroneous, as a matter of history, law, medicine and logic, to treat these practices as the same thing, terminally ill individuals who wish to commit suicide with a physician's assistance are not similarly situated to terminally ill individuals who refuse or terminate life-sustaining medical treatment, and New York's different treatment of the two groups does not implicate the Equal Protection Clause.

CONCLUSION

Wherefore, Petitioners respectfully pray that the judgment of the United States Court of Appeals for the Second Circuit, entered April 2, 1996, be reversed insofar as it invalidated on equal protection grounds two New York State penal provisions that prohibit assisted suicide in all forms. That portion of the Second Circuit's decision which concluded that there is no fundamental liberty interest under the Due Process Clause to secure assistance in committing suicide should be upheld.

QUESTION PRESENTED

May a State constitutionally criminalize a physician's prescription of medication requested by a competent, terminally ill patient in the final stages of dying, who seeks that medication to end her life without intolerable suffering, when the State permits terminally ill patients intentionally to end their lives by having their physicians withdraw or withhold essential medical treatment, including nutrition and hydration?

QUESTION PRESENTED i

TABLE OF AUTHORITIES v

INTRODUCTION 1

STATEMENT OF THE CASE 4

1. The Facts 5

2. The Law of the State of New York 10

3. The Proceedings Below 17

SUMMARY OF ARGUMENT 18

ARGUMENT 19

I. THE FOURTEENTH AMENDMENT PROTECTS THE LIBERTY AT ISSUE IN THIS CASE 19

A. This Court has Articulated a Principled Approach for Defining the Liberty Protected Under the Fourteenth Amendment 22

B. A Principled Interpretation of the Constitution Requires Protection of the Liberty At Issue in This Case 24

C. The *Cruzan* Decision, Too, Compels Recognition of the Patients' Fourteenth Amendment Liberty ... 28

D. Recognition of the Liberty Involved Here Does Not Require Taking the Approach That Led to Much of the Criticism of *Roe* v. *Wade* 32

II. ALTHOUGH THIS LIBERTY CAN BE CLOSELY REGULATED, THE STATE'S ABSOLUTE BAN IMPOSES AN UNDUE BURDEN ON ITS EXERCISE 33

A. The Legitimate Interests Put Forward by Petitioners Cannot Justify The Challenged Laws 35

B. The Only Rationales That Adequately Explain New York Law are Impermissible Bases for Imposing Such Suffering on the Dying Patient 42

III. THE LINES DRAWN BY THE STATE OF NEW YORK ARE ARBITRARY AND IRRATIONAL AND SO VIOLATE THE EQUAL PROTECTION CLAUSE 44

A. The Distinction Between Withdrawal of Life-Sustaining Treatment and the Provision of Life-Ending Medication, As Drawn By New York Law in the Context of Intentionally Death-Causing Behavior, is Not Rational 45

B. The Distinction Between Terminal Sedation and Prescription of Life-Ending Medication is Not Rational 48

CONCLUSION 50

INTRODUCTION

Seven years after the argument in *Cruzan* v. *Director, Mo. Dept. of Health*, 497 U.S. 261 (1990) — and two decades after *In re Quinlan*, 355 A.2d 647 (N.J.), cert. denied, 429 U.S. 922 (1976) — this Court is once again required to rule on laws that touch on fundamental issues of life and death. This case requires the Court to determine whether a State may forbid a terminally ill, mentally competent adult who is in the process of dying to end her own intolerable suffering, pain and physical disintegration by obtaining, within the context of the doctor-patient relationship, a prescription for medication that will allow her to end her life.

The law of New York evinces no blanket policy against a physician assisting such a terminally ill person in dying. Once a person reaches the final stages of life, New York always allows — as it sometimes does not for those whose conditions are reversible — the physician's termination of life-sustaining procedures, including the provision of food and water, even when the patient seeks such termination for the specific purpose of bringing about a merciful death. And for those dying patients willing to endure it, the State permits a procedure known as "terminal sedation" in which doctors induce a state of continuing unconsciousness — a "barbiturate coma" — wherein the patient is denied nutrition and hydration until he is dead. What the State does *not* permit is the provision of prescription drugs that would afford, to the dying patient who is suffering, a death that is certain, humane, and within his own control.

There can be no doubt about the profound nature of the liberty at issue in this case. The person who is dying in intolerable pain or torment faces "suffering [that] is too intimate and personal for the State to insist" that she must bear it. *Planned Parenthood of Southeastern Pennsylvania* v. *Casey*, 505 U.S. 833, 852 (1992). In many of our religions and cultures, bearing such suffering at the end of life is seen as an "ennobl[ing]" act, involving pain that should — or indeed must — be borne "with . . . pride." *Id.* Many of us would never choose to take life-ending drugs, even were we terminally ill, debilitated and suffering intolerably on the edge of death. Nonetheless, in the United States the decision whether to die a death marked by such suffering must, to the degree fate and medicine permit, be left to the individual.

This is particularly true when suffering occurs in a life already artificially extended — as so many lives are today — through the use of modern technology. The Court recognized this in *Cruzan*, explicitly acknowledging the constitutional liberty of a "seriously ill or dying" patient who is being given food and water by artificial means such as a feeding tube — there, a woman in a persistent vegetative state — to instruct that such sustenance be withheld in order to hasten death. See *Cruzan*, 497 U.S. at 289 (O'Connor, J., concurring) (recognizing this liberty); see *id.* at 305 (Brennan, J., joined by Marshall and Blackmun, JJ., dissenting) (same); *id.* at 343-344 (Stevens, J., dissenting) (same); see also *id.* at 279 (opinion of the Court) ("the logic of [our prior] cases . . . embrace[s] . . . a liberty interest" in avoiding "artificially delivered food and water essential to life"). Just as "[a] seriously ill or dying patient whose wishes are not honored may feel a captive of the machinery required for life-sustaining measures or other medical interventions," *id.* at 288 (O'Connor, J., concurring), so a person who is suffering intolerably while dying, having been brought to this point by chemotherapy, an organ transplant, or some other technological advance, may well during her artificially prolonged death "feel a captive" of the State within the prison house of her own body.

Constitutional protection for the liberty asserted here is also compelled by "consideration of the alternative." *Casey*, 505 U.S. at 859. As the Court has made clear, the Liberty Clause protects the right to make certain "important decisions." *Id.* Protection of a choice either inheres or it does not — regardless of the *direction* in which the individual ultimately will seek to exercise it. With an aging population and increasingly fierce competition over medical resources, if there is no protected liberty on the part of a dying, terminally ill patient to decide whether or not to endure further pain or suffering, then the State may just as readily prohibit the provision of life-*extending* treatment to such patients as it may prohibit their receipt of life-*ending* medication. Cf. *id.* ("If . . . the woman's interest . . . had not been recognized . . . the State might as readily restrict a woman's right to choose to carry a pregnancy to term as to terminate it . . . ."). Petitioners chillingly foreshadow such a circumstance when they argue that "[t]he coming debate over the allocation of . . . medical resources . . . highlights the . . . illegitimate nature of a substitution of judicial judgment for that of

the elected representatives of a given state." Pet. Br. 26 n. 15.

Recognition of a dying patient's liberty, within the doctor-patient relationship, to request (and to decide whether or not to use) a prescription for life-ending medication does not imply — as petitioners and their *amici* worry it might — any general "right to die," or "right to suicide." The liberty for which respondents seek recognition, like Nancy Cruzan's liberty acknowledged by this Court six years ago, can exist only in truly hopeless cases. Just as Nancy Cruzan, when conscious, would not have been opting for "suicide" in deciding to end a life that would include no meaningful cognition at all, so a patient in the final stages of dying is not committing suicide when choosing to avoid only unbearable, consciousness-filling pain or suffering. Only in such cases is there a protected liberty because only in such cases does the patient face solely a choice of *how* to die, not a choice between death and the myriad possibilities of future life.

Nor would a "right" to involuntary euthanasia — if such a horrific thing could be imagined — follow from the liberty that respondents seek to vindicate. That liberty follows from recognition of the basic rights to human dignity and bodily autonomy. It would be a profound sacrilege to these rights for a person's life ever to be taken involuntarily by another. Indeed, it was precisely the importance of ensuring that such a decision be the individual's own that led this Court in *Cruzan*, addressing the case of a woman in a vegetative state who was no longer competent, to permit the State "to safeguard the personal element of this choice through the imposition of heightened evidentiary requirements." 497 U.S. at 281.

Nor by any means do respondents seek to prohibit all state regulation in this area. Quite the contrary. Close regulation is required for many of the reasons put forward by petitioners and their *amici*. There is no doubt that power over life and death is subject to serious abuse — whether death is brought about by providing a lethal substance, or by disconnecting life-support machines. The state has compelling reasons to regulate closely *all* decisions intended to cause death, or taken with knowledge that they are more likely to hasten death than to extend life. This Court need not and should not make in this case what many have viewed as the mistake of *Roe* v. *Wade* — peremptorily pre-empting all state regulation

designed to advance society's important interests in this area. See, *e.g.*, Ginsburg, *Speaking in A Judicial Voice*, 67 N.Y.U. L. Rev. 1185, 1199 (1992).

The legal regime put in place by New York, however, is not a constitutional means of serving these interests. To begin with, the complete criminal prohibition of the prescription of life-ending drugs for mentally competent, terminally ill patients who are dying in unendurable pain and suffering unduly burdens those patients' constitutionally protected liberty.

Further, the State has not chosen a means of regulation that reasonably advances its asserted goals. For on the other side of the line drawn by the State — the permissible withdrawal of essential nutrition, hydration, respiration, kidney dialysis or other treatment for the purpose of bringing about death for those who are suffering intolerably in the process of dying — doctors are virtually unregulated. The line drawn by New York fatally undermines its claim that it has crafted its law to protect life in all circumstances or to prevent mistake or abuse.

Indeed, the only rationale that can explain the line drawn by New York is that the State prefers to send the (false) message that it does not tolerate *any* assistance in dying, despite the indisputable fact that physician assistance in dying (both lawful and unlawful) in fact goes on today. See Br. of Coalition of Hospice Professionals for Affirmance 15-17. The line drawn by New York serves only the impermissible purpose of permitting doctors to bring about death while maintaining plausible deniability — to the public at large, often to their patients and, perhaps, sometimes to themselves and one another.

But our nation is built upon the rule of law, not winks and nods. The State can have no cognizable interest in perpetuating a system that depends for its legitimacy on a gap between written and enforced law, especially if that gap makes it difficult for a patient to discuss honestly with her doctor what that doctor is doing with her body and, perhaps, her very life.

STATEMENT OF THE CASE

This action for declaratory and injunctive relief was decided on a motion for summary judgment. The facts are not in dispute; they

are contained in the pleadings and declarations filed in the District Court. See Pet. App. 65a.[1]

1. The Facts

The original plaintiffs were three physicians, Timothy E. Quill, Samuel G. Klagsbrun, and Howard A. Grossman, and three mentally competent terminally ill patients, Jane Doe, George Kingsley, and William A. Barth. An understanding of the intolerable pain and suffering that confronts such patients is the appropriate starting point for consideration of this case. Their declarations are set out in full at JA 106-108 (Jane Doe), JA 100-102 (George Kingsley) and JA 97-98 (William Barth). The declaration of Jane Doe, who was dying of thyroid cancer, gives a sense of their suffering:

> I am 76 years old and am a retired physical education instructor. . . . I also hold a Masters Degree in High School Guidance Counseling, which I earned from Queens College during the 1960s while I worked and cared for my children. I am widowed and have two grown children. I have always enjoyed an active and independent lifestyle. I have been a leader in my current retirement group school program and active in civic affairs.
>
> . . . . I have a large cancerous tumor which is wrapped around the right carotid artery in my neck and is collapsing my esophagus and invading my voice box. The tumor has significantly reduced my ability to swallow and prevents me from eating anything but very thin liquids in extremely small amounts. The cancer has metastasized to my pl[e]ural cavity

References to briefs filed in *Washington* v. *Glucksberg*, No. 96-110, are identified by inclusion in the citation of the phrase "in *Glucksberg*."

and it is painful to yawn or cough. . . .

. . . . Because the tumor causes extreme difficulty in swallowing, I am constantly choking on my own saliva and mucous. At this time, I can no longer swallow sufficient food to nourish myself. It was recently recommended that I have a feeding tube surgically implanted into my stomach through which to receive nutrition and hydration. In early July 1994 I had the tube implanted and have suffered serious problems as a result. I have not tolerated the tube feeding well. . .

. . . . I take a variety of medications to manage the pain. . . . It is not possible for me to reduce my pain to an acceptable level of comfort and to retain an alert state.

I have experienced a variety of adverse side effects with each treatment regimen, including i) terrible scarring inside my throat and neck from surgery and radioactive iodine; ii) burning and swelling in my neck . . . and nausea from beam radiation; and iii) severe pain, vomiting, nausea and pressure associated with tube feeding.

I have pursued medical treatment since the time my cancer was originally diagnosed to the present time. . . . At this time, it is clear to me, based on the advice of my doctors, that I am in the terminal phase of this disease. It has been explained to me and I understand that there are no cures.

At the point at which I can no longer endure the pain and suffering associated with my cancer, I want to have drugs available for the purpose of hastening my death in a humane and certain manner. I want to be able to discuss freely with my treating physician my intention of hastening my death through the consumption of drugs prescribed for that purpose.

. . . . I believe it is my right to die peacefully and comfortably when I am terminally ill and suffering intolerably. I believe it is partly religious freedom and partly the pursuit of liberty and happiness guaranteed me by the United States Constitution. . . .

People should not be asked against their will to suffer unnecessarily in the process of dying when medical science could provide a humane death. To withhold such choice, and the means to exercise it, from those who are suffering is to deny me my right to live and die humanely. I see it as

unnecessarily cruel and inhumane to deny me this option. It is also inhumane to my loved ones, my family, to require them to watch helplessly as I am forced to endure such suffering.

JA 106-108 (paragraph numbers omitted).

George Kingsley, a 48-year old publishing executive dying from AIDS, submitted a declaration that described some of his suffering. He had "almost no immune system function," was going blind, and had several illnesses including "toxoplasmosis, a parasitic infection which has caused lesions to develop on my brain." JA 100. He took a number of prescribed medications daily that caused "constant negative side effects." These included "painful cramping, extreme gas with bloating and a total loss of appetite." One medication "[is infused] daily . . . for an hour through a Hickman tube," which "is connected to an artery in my chest, prevents me from ever taking showers, and makes simple routine functions burdensome." JA 100-101.

George Kingsley declared:

I know what it is like to lose control over one's life because of AIDS. I have witnessed the excruciating process of dying from AIDS many times over the past several years. One of my best friends recently died after an extended period of suffering in the final stages of AIDS. This friend desired to exercise the choice of hastening his death but did not have the means to do so humanely. The sound of him crying out in pain still echoes in my memory. I could do nothing to help him and he could do nothing to help himself.

My informed, rational choice is that my death from AIDS, when I reach the point where there is nothing more that medical science can do to halt the advance of my disease and I am living with intolerable pain and suffering, be as swift, painless and dignified as possible. I want to be able to hasten my own death in my own home, in a certain and humane way, surrounded with the people I love helping me make my passing comfortable and meaningful. I do not want my loved ones to watch me suffer needlessly.

JA 101-102 (paragraph numbers omitted).

The declaration of William Barth, a 28-year old former magazine

fashion editor, who was also dying of AIDS, was a virtual litany of suffering. He described his treatment for an opportunistic cancer with "radiation and chemotherapy," a virus "in my stomach and colon which caused severe diarrhea, fevers and wasting," one "parasitic infection for which there is effectively no treatment" which caused "significant additional wasting," a second "parasitic infection which has caused severe diarrhea, sometimes producing 20 stools a day, extreme abdominal pain, nausea and additional significant wasting," and from which "I have begun to lose bowel control," and, finally, "a form of tuberculosis which has caused yet additional wasting, fevers and night sweats." JA 97-98.

He described some of the treatment regimes to which he was subjected. One "required daily three hour home infusions." A second, begun after he "contracted AIDS-related pneumonia . . . was so extremely toxic that I vomited with each infusion." JA 97.

He concluded:

> . . . . While I have tolerated some [nightly intravenous] feedings [to attempt to stop the wasting], I am unwilling to accept this for an extended period of time. . . . I can no longer endure the pain and suffering . . . and I want to have drugs available for the purpose of hastening my death.

JA 98.

Palliative medication is of course available to ease many patients' physical pain. But it is undisputed that for others, especially those dying of some forms of cancer and those particularly near death, it may be impossible to relieve their excruciating pain or other physical symptoms. JA 45 (Declaration of Timothy Quill, M.D.); Cherny & Portenoy, *Sedation in the Management of Refractory Symptoms: Guidelines for Evaluation and Treatment*, 10 J. Palliative Care 31 (1994). In addition, some patients may be unable to receive relief from pain because of their violent physical or psychological reactions to high doses of opiates. Palliative medication also has no effect on the suffering that may be brought on by a patient's own anguish, physical degeneration and loss of dignity. JA 46 (Quill Declaration); Cherny & Portenoy at 31. Further, at levels at which it may be effective, such medication may have the effect of impairing mental acuity. See JA 107 (Doe Declaration). Many patients find — especially near the end — that they cannot obtain

the required level of pain relief before losing whatever clarity of mind is otherwise left to them for communicating with loved ones, praying, or coming to terms with their impending death. Although these patients may be prepared to die, they are confronted instead only with intolerable suffering — the suffering of their own pain or of opiate-induced oblivion. See JA 45 (Quill Declaration).

All three of the named patient-plaintiffs died before the district court rendered its decision. JA 198. Significantly, "[t]he State of New York did not contest below, nor does it contest now, the depth of the suffering experienced by these plaintiff-patients." Pet. Br. 5.

The physician-plaintiffs alleged that they each "trea[t] patients who are terminally ill and experience chronic, intractable pain and/or intolerable suffering," and that "in the regular course of [their] medical practice" some of these patients "request assistance in the voluntary self-termination of life." JA 160-161 (Amended Complaint). Each alleged, and petitioners do not contest, that "[u]nder certain circumstances it would be consistent with the standards" of his "medical practice to assist these patients in their decision to hasten death through the prescription of medications," and that this assistance represented the only "certain and humane" manner in which these patients could die. *Id.*

Each physician-plaintiff filed a declaration describing the type of "medical treatment . . . I seek to be able to give my patients." JA 116 (Supp. Dec. of Dr. Quill); JA 121 (Supp. Dec. of Dr. Klagsbrun); JA 123 (Supp. Dec. of Dr. Grossman). Each declared that he sought the ability to "fulfill my professional obligations," by being permitted "to prescribe drugs, if and when medically and psychiatrically appropriate," JA 116; JA 121; JA 123, for his competent, terminally ill patients who wanted to be able to take them in order to prevent "prolonged suffering . . . if and when their suffering becomes intolerable." JA 190 (Second Supp. Dec. of Dr. Quill); JA 192 (Second Supp. Dec. of Dr. Klagsbrun); JA 194 (Second Supp. Dec. of Dr. Grossman). Each physician-plaintiff sued not only on his own behalf, but on behalf of his mentally competent, terminally ill patients with "chronic intractable pain and/or intolerable suffering," who seek "to make decisions about the end of their lives, including the right to choose to hasten inevitable death with suitable physician-prescribed drugs" in order to "avoid continued suffering and a lingering, painful death." See JA 158-163

(Amended Complaint).[2]

2. The Law of the State of New York

The law of New York provides that "[a] person is guilty of manslaughter in the second degree when . . . [h]e intentionally causes or aids another person to commit suicide." N.Y. Penal Law § 125.15(3). It also provides that "[a] person is guilty of promoting a suicide attempt when he intentionally causes or aids another person to attempt suicide." N.Y. Penal Law § 120.30. The interaction of these criminal statutes with end-of-life medical decisions under New York law requires some description.

Petitioners suggest that under New York law the refusal of life-sustaining medical treatment, including nutrition and hydration, has nothing to do with suicide — that it merely involves exercise of the right to "avoi[d] unwanted bodily intrusion." Pet. Br. 30; *id.* at 11, 13-19. But that is not so. To be sure, the refusal of life-sustaining treatment, or a request for its withdrawal, is not *generally* treated by New York law as "suicidal" even if it will foreseeably (or, indeed, inevitably) end in death. To reach this result, New York law utilizes a legal fiction concerning intent. See, *e.g.*, *Delio* v. *Westchester County Medical Center*, 516 N.Y.S. 2d 677, 692 (App. Div. 1987) ("[S]uicide requires a specific intent to die which has generally been found lacking in patients who refuse artificial life-sustaining medical treatment. Instead, a person's desire to have artificial life-support systems terminated evinces only an intent to live free of unwanted mechanical devices and permit the processes of nature to run their course.") (citations omitted).

Nonetheless, persons who are neither terminally ill nor suffering from an incurable condition that renders cognitive life impossible

[2] Plaintiffs Doe, Kingsley and Barth, and these other patients will be referred to collectively as the "patient-plaintiffs." One of the physician-plaintiffs "has had a criminal proceeding instituted against him in the past," Pet. App. 15a. The Second Circuit concluded the physician-plaintiffs here "fac[e] the threat of prosecution," that they may raise the rights of their patients, and that therefore there is a justiciable controversy. Pet. App. 15a. Accord *Planned Parenthood of Central Missouri* v. *Danforth*, 428 U.S. 52, 62 (1976). The death of the named patient-plaintiffs thus does not affect the justiciability of this cause.

(*e.g.*, a persistent vegetative state) may be forced to accept life-sustaining medical treatment under certain circumstances. New York's law *will* inquire into their intent to the extent that, if the injury that led to the need for treatment is found to be self-inflicted or the refusal of treatment or request for withdrawal is found to be motivated by a desire to die, the refusal or request for withdrawal may be treated as a suicidal act and hence denied. See *Fosmire* v. *Nicoleau*, 551 N.E.2d 77, 82 & n. 2 (N.Y. 1990) (right of young, otherwise healthy mother who had just delivered by caesarian section to refuse life-saving blood transfusion that would have "completely restore[d her] health" upheld only because "the injury here was not self-inflicted nor does the patient want to die"); see also *Van Holden* v. *Chapman*, 450 N.Y.S.2d 623, 625, 626-627 (App. Div. 1982) (mentally competent adult has no right to refuse nutrition "intravenously or by means of a nasal gastric tube" when his intent is to starve himself to death).

In these latter circumstances, a doctor who assisted the person by, for example, withdrawing essential medical treatment at that person's request would be subject to prosecution under the assisted suicide laws just as if he had provided a lethal prescription. While "merely declining medical care, even essential treatment, is not considered a suicidal act or indication of incompetence," *Fosmire*, 551 N.E.2d at 82, "[t]he State will intervene to prevent suicide," *id.* (citing *inter alia* N.Y. Penal Law § 35.10[4]).[3]

This is by no means illogical. The intentional and nonconsensual disconnection or termination of life-sustaining treatment by a physician would clearly amount to murder under state law. See *Grace Plaza of Great Neck, Inc.* v. *Elbaum*, 588 N.Y.S.2d 853, 857 (App. Div. 1992), aff'd, 623 N.E.2d 513 (N.Y. 1993). Similarly, assisting one whose specific intent was to kill himself by the disconnection or termination of some life-sustaining treatment to which he happened temporarily to be connected could violate New York's law against aiding in suicide. Cf. U.S. Catholic Conference,

[3] New York Penal Law § 35.10[4] provides that "[a] person acting under a reasonable belief that another person is about to commit suicide . . . may use physical force upon such person to the extent that he reasonably believes it necessary to prevent such result."

et al. Br. 20-21.

The situation is very different for those patients who are "fatally ill with no reasonable chance of recovery," see *Matter of Storar*, 420 N.E.2d 64, 66 (N.Y.), cert. denied, 454 U.S. 858 (1981), who are receiving life-sustaining treatment, and who seek to die through withdrawal of that treatment:[4] For them the State simply does not inquire into intent. In this terminal-illness context, the applicability of the "assisted suicide" law is conclusively reasoned away by the legal fiction that one who "ch[ooses] . . . a natural death," Cert. Pet. 9, through the withdrawal of life-sustaining treatment simply does not have the "intent to die." As petitioners concede before this Court, although the provision of life-ending medication is flatly forbidden to a suffering, terminally ill patient whose intent is to cause death, "terminally ill people may request the withdrawal of life-sustaining treatment," *even to end their lives*, in circumstances where, but for their incurable illness, the State would treat the request as a plea for assistance in committing suicide. Pet. Br. 3; Cert. Pet. 9. See, *e.g.*, *In the Matter of Lydia Hall Hospital*, 455 N.Y.S.2d 706, 709, 711 (Sup. Ct. Nassau County 1982) (competent "terminal[ly] il[l]" diabetic who "said he was suffering so much, he wanted to die" may terminate life-sustaining dialysis).

In sharp contrast, New York applies the *opposite* presumption (namely, of "suicidal" intent) for those terminal patients who would end their suffering through the self-administration of life-ending medication. Pet. Br. 15. But, as petitioners acknowledge, a physician may lawfully assist a terminally ill patient to end life through withdrawal of life-sustaining treatment even when that patient has *precisely the same intent* as the patient-plaintiffs here who seek a physician's prescription for life-ending medication. See Pet. Br. 15-16 (arguing only that the "purpose" of one who lawfully "terminates treatment . . . *may* . . . not [be] death"); see also *In the Matter of Lydia Hall Hospital*, 455 N.Y.S.2d at 709, 711.

---

[4] This description covers those who are terminally ill as well as those who suffer from conditions that drastically degrade life and that will not be cured or improved by the life-sustaining treatment. See, *e.g.*, *Delio* 516 N.Y.S.2d at 683 (right to withdrawal of food and water upheld for patient in persistent vegetative state who can breathe on his own and would, if given nutrition and hydration, remain alive indefinitely).

The purpose of the intentionally life-ending procedure is, in both cases, to "reliev[e] the patient's pain and suffering." Pet. Br. in CA2 at 27 (describing the supposed intent behind lawful withdrawal of life-sustaining treatment). And the patient-plaintiffs in this case — in precisely the same sense as those terminal patients on life-support who request the withdrawal of life-sustaining treatment — "fervently wish to live," Pet. Br. 16 (internal quotation marks and citation omitted). See, *e.g.*, JA 107 (declaration of Jane Doe) ("I have pursued medical treatment since the time my cancer was originally diagnosed to the present time."); JA 98 (declaration of William Barth) ("Since I was diagnosed HIV-positive I have received medical treatment. I believe that I have received good treatment and have benefitted from it."). Indeed, any suggestion to the contrary is profoundly offensive.

Thus, as the Second Circuit observed, "New York law does not treat equally all competent persons who are in the final stages of fatal illness and wish to hasten their deaths." Pet. App. 24a. In cases in which withdrawal of life-sustaining respiration, food or water is involved, the "New York Court of Appeals" has "recognized the right of a competent, terminally-ill patient to hasten his death upon proper proof of his desire to do so." See Pet. App. 25a. Cf. *e.g. Eichner* v. *Dillon*, 426 N.Y.S.2d 517, 537, 539 (App. Div. 1980), aff'd with modifications, 420 N.E.2d 64 (N.Y.), cert. denied, 454 U.S. 858 (1981) (the "State['s] . . . interest in discouraging irrational and wanton acts of self-destruction" is not implicated when "the terminally ill but competent individual . . . chooses not to resist death and to die with dignity"). But "those who are similarly situated, except for the previous attachment of life-sustaining equipment, are not allowed to hasten death by self-administering prescribed drugs." Pet. App. 30a.[5]

Under New York law, the intentionally life-ending acts of those terminally ill patients who do not depend on life-sustaining treatment

---

[5] Petitioners have not challenged the Second Circuit's construction of New York law. This Court in any event ordinarily defers to the lower federal courts' interpretations of state law — unless they amount to "plain" error — because the lower courts are "better schooled in and more able to interpret the laws of their respective States." *Brockett* v. *Spokane Arcades, Inc.*, 472 U.S. 491, 499-500 & n. 9 (1985).

are *deemed* "assisted suicide" by the State; the intentionally life-ending acts of those terminally ill patients who *do* depend on such treatment could also be so deemed, but they never are.

Petitioners argue that the "right of a competent adult patient to decline medical treatment . . . cannot be characterized as one to 'hasten death.'" Reply to Cert. Opp. 3. But the government's "characterization" of its actions cannot control "for constitutional purposes." *Colorado Republican Campaign Committee* v. *FEC*, 116 S.Ct. 2309, 2319 (1996) (Breyer, J., joined by O'Connor and Souter, JJ.). What matters is that, at least for the terminally ill patient in the process of dying, New York permits active physician assistance in deliberately bringing about death by the withdrawal of life-sustaining treatment — a withdrawal that, if undertaken without consent, would amount to homicide, and that, if undertaken deliberately to assist the death of an individual being treated for a condition from which recovery was expected, could be subject to prosecution for criminal assistance of suicide.

Patient-plaintiff Jane Doe, like some other terminal patients in the final stages of their illness, thus had lawfully available to her one method of physician assistance in ending her suffering. Because she required a feeding tube for nutrition and had had one surgically inserted, she could have asked to have it removed without running afoul of New York's assisted suicide laws.

But while this would have permitted Jane Doe to die with her physician's assistance before her cancer ravaged her further, she would have been subject to what for her would have been the degrading process of death by starvation. See JA 86 (Grossman Dec.) (describing "starvation and dehydration" as "an excruciating process that may continue for weeks"). She (and her family) would have been relegated to watching — perhaps only in glimpses as she was roused from a stupor brought on by malnutrition or medication or both — the degeneration of her body unto death.

For those who have a respirator removed, the state-approved process of dying is even more terrifying than it would have been for Jane Doe. "Since dying of respiratory failure can be one of the most excruciating and frightening deaths possible," JA 117 (Quill Supp. Dec.), doctors provide morphine or barbiturates to ease panic, air hunger, and the sense of suffocation, leaving patients — sometimes for weeks — in a "twilight state . . . before eventually dying." *Id.*

The administration of such drugs is lawful, even though it is undisputed that they can hasten death. *Id.* This is permitted in New York because of the familiar (but loosely applied) "double effect" principle, which applies to all patients, whether or not they are on life-sustaining treatment.

Petitioners concede that under this principle doctors may administer drugs with the "intent . . . to relieve pain and suffering" even with the foreseeable effect — indeed, the overwhelming likelihood — of causing death. See Pet. Br. 15-16 n. 9. But they may not provide medication at the request of the patient for the *purpose* of hastening death, even to end suffering in the final stages of terminal illness. See Pet. Br. in CA2 at 27.

Double effect, by relying on the fiction that the clearly foreseeable consequences of an act are not intended, often permits doctors deliberately to cause death, but because the provision of drugs for the same purpose remains criminal in all circumstances, the law prevents open consultation with the patient, the family and other physicians. Frighteningly, in these circumstances — unlike a legal regime in which open consultation about life-ending medication is permitted — "[j]ustification by double effect . . . may function as a 'fig leaf' for euthanasia." Truog, Berde, Mitchell and Grier, *Barbiturates in the Care of the Terminally Ill*, 327 New Eng. J. Med. 1678, 1680 (1992) ("Truog, *et al.*").

Finally, even those who are *not* connected to any sort of life-sustaining device are permitted, within the lines drawn by New York law, to obtain active physician assistance in ending their lives — so long as they employ another particularly gruesome method: "terminal sedation." See, *e.g.*, Rousseau, *Terminal Sedation in the Care of Dying Patients*, 156 Arch. Intern. Med. 1785, 1785-1786 (1996); see Pet. Br. in CA2 at 27.

"As the end of life approaches, th[e] relief of physical and psychological symptoms can become more difficult." Cherny & Portenoy, 10 J. Palliative Care at 31. Terminal sedation is sometimes "prescribed" for those whose misery is too great, either because of the "twisting and racking pain that invades, dominates and shrivels their consciousness, that leaves them no psychic or mental space for the things they want to think and say and do before they die," Roy, *Need They Sleep Before They Die?*, 6 J. Palliative Care 3 (1990), or because of "suffering related to existential or

spiritual concerns" that "cannot be adequately controlled despite aggressive efforts to identify a tolerable therapy." Cherny & Portenoy at 31.

Using heavy sedation or anesthesia, the doctor places the patient in "a sleep-like state" for "the last days or weeks of life." American Medical Association, *et al.* ("AMA") Br. in *Glucksberg* 6. Two authors from New York's Memorial Sloan Kettering Cancer Center describe the effect as "[t]he loss of interactional function." Cherny & Portenoy, 10 J. Palliative Care at 31. This type of "sedation" is also referred to by medical professionals as a "barbiturate coma." Truog, et al. at 1679.

Once a patient is in that deathlike state, which the doctor may maintain by a continuous infusion of barbiturates, benzodiazepines or other anesthetics at doses that will keep him unconscious, see *id.*, the patient is entitled under state law to fulfillment of his previously expressed desire to refuse "artificial nutrition and hydration." American Geriatrics Society ("AGS") Br. 7 (footnote omitted). Since with "sedation and withdrawal of treatment," AMA Br. in *Glucksberg* 10, the patient's IV tube will be delivering only unconsciousness and no food or water, the patient's body tissues and vital organs deteriorate, causing death within seven to ten days. JA 117 (Quill Supp. Dec.).

It is clear that under New York law the terminal sedation option is available to all who are terminally ill and who find their situation intolerable.[6] Indeed, it has been estimated that between 5% and 52% of dying patients "develo[p] intolerable symptoms that requir[e] terminal sedation for terminal relief." Rousseau, 156 Arch. Intern. Med. at 1785. "[S]edation can always eliminate symptoms in persons near death. This course is available at present, without any change in the law . . . ." AGS Br. 25; see also New York State Task Force on Life and the Law, *When Death is Sought: Assisted Suicide and Euthanasia in the Medical Context* 40, 92-94, 164 (1994) ("New York Task Force Report").

---

[6] See N.Y. Penal Law §120.05(5) (otherwise applicable criminal assault statute does not apply when one "intentionally causes stupor [or] unconsciousness" if this condition is induced with "consent" or for a "medical or therapeutic treatment").

Of course, as even the AGS acknowledges in a remarkable understatement, "some may view such treatment as undesirable." AGS Br. 25; see also New York Task Force Report at 93-94 & n. 60. Indeed. Some may think it monstrous to have their minds chemically shut down and to be imprisoned in their decaying bodies and deliberately starved to death, while loved ones keep a gruesome vigil. Even aside from the fact that patients put to sleep in this way may still perceive their surroundings and feel great pain, Resp. Br. in *Glucksberg* 22 n. 13, some patients may deem the whole procedure an assault on their humanity and the very essence of degradation.

To the patients who regard this permitted last resort as horrifying, the only reply given by petitioners and their *amici* is that the "social cost of accommodating their preference for physician-assisted suicide over sedation and withdrawal of treatment is likely to be high." AMA Br. 10.

3. The Proceedings Below

The District Court granted summary judgment for petitioners. Pet. App. 63a. The Second Circuit reversed. Pet. App. 1a. Contrary to the conclusion of the Ninth Circuit in *Compassion in Dying* v. *Washington*, 79 F.3d 790 (9th Cir. 1996) (en banc), cert. granted *sub nom. Washington* v. *Glucksberg*, No. 96-110, the Second Circuit held that, "in the absence of a clear direction" from this Court, it could not recognize a constitutionally protected liberty in this case. Pet. App. 16a-20a. The court, however, struck down on equal protection grounds the ban on physician provision of life-ending medication, concluding that

> New York does not treat similarly circumstanced persons alike: those in the final stages of terminal illness who are on life-support systems are allowed to hasten their deaths by directing the removal of such systems; but those who are similarly situated, except for the previous attachment of life-sustaining equipment, are not allowed to hasten death by self-administering prescribed drugs.

Pet. App. 29a-30a. The court held that

> to the extent [the statutes] prohibit a physician from prescribing

medications to be self-administered by a mentally competent, terminally ill person in the final stages of his terminal illness they are not rationally related to any legitimate state interest.

Pet. App. 35a.

Judge Calabresi concurred in the result. He concluded that "for many, many years" the State legislature "has not taken any recognizably affirmative step reaffirming the prohibition of what [plaintiffs] seek." Pet. App. 44a. Consequently, "on the current legislative record" he found a violation of both due process and equal protection. Pet. App. 62a. He would, however, have left open the possibility of reconsideration of the constitutional question "were New York to reenact [the prohibitions] while articulating the reasons for the distinctions it makes in the laws, and expressing the grounds for the prohibitions themselves." Pet. App. 62a.

SUMMARY OF ARGUMENT

I. Under the procedure for defining the scope of Fourteenth Amendment Liberty described by the controlling opinion in *Planned Parenthood of Southeastern Pennsylvania* v. *Casey*, 505 U.S. 833 (1992), the liberty at issue in this case deserves constitutional protection. It implicates a constellation of interests each of great constitutional moment; these interests have played animating roles in this Court's previous Liberty Clause decisions. Indeed, if *Casey* is to remain defensible as a principled explication of protected liberty, the protected nature of the patient's decision at issue here must be recognized.[7]

II. The legal regime at issue in this case unduly burdens that constitutionally protected liberty. Not only does it present a virtually

[7] Petitioners have framed the Questions Presented in this case to address only equal protection principles. As prevailing parties in the Court of Appeals, respondents are of course entitled to "defend [their] judgment on any ground properly raised below." *Washington* v. *Yakima Indian Nation*, 439 U.S. 463, 476 n. 20 (1979). Consequently, and in the hope that our analysis of this question will be useful to the Court, respondents also urge affirmance of the judgment below on Liberty Clause grounds. Respondents have "pressed this issue throughout the litigation," *id.*, and "presented [it] as a basis upon which the judgment below should be sustained." *Id.* See Cert. Opp. 22 n. 8.

insurmountable obstacle to the exercise of protected liberty, it is not a reasonably tailored means of advancing any of the State's important interests in this area.

III. The legal regime here also violates equal protection. Neither the distinction between those who are on life-support and those who are not, nor the distinction between legally permitted and forbidden methods of physician assistance in dying, can survive even rational-basis scrutiny.

ARGUMENT

I. THE FOURTEENTH AMENDMENT PROTECTS THE LIBERTY AT ISSUE IN THIS CASE

This Court has held that the Constitution protects from governmental intrusion an individual's right to make certain profound, life-shaping decisions. Those decisions that "involv[e] the most intimate and personal choices a person may make in a lifetime, choices central to personal dignity and autonomy, are central to the liberty protected by the Fourteenth Amendment." *Planned Parenthood of Southeastern Pennsylvania* v. *Casey*, 505 U.S. 833, 851 (1992). The final, life-shaping choices which a dying person is capable of making — so that, to the degree medically possible, the person's dying will be free of unbearable pain and suffering and will not destroy the dignity and integrity of that person as a human being — are solidly encompassed within that liberty. Indeed, if *Casey* and this Court's other holdings construing "the substantive sphere of liberty which the Fourteenth Amendment protects," *Casey*, 505 U.S. at 848, are to be understood as principled decisions, the Court must recognize the protected nature of this profoundly personal dimension of liberty.

Petitioners and their *amici* argue that recognition of the right asserted in this case will lead inevitably to recognition of a general right to die, a broad right to choose the timing and manner of one's death, or a right to physician-assisted suicide. But respondents do not urge recognition of any such broadly-defined liberty. The right asserted here is distinguishable in principle from those which concern petitioners. A patient who is in the final stages of terminal illness and who seeks to avoid a death marked by intolerable pain and suffering faces unique circumstances. The choice of how to die

is the only choice left to him. An individual whose only options are those visible from a misery-drenched deathbed has no freedom left, no control over his life at all, if the management of this choice — meager though it may seem to the healthy — is deemed to be within the plenary control of government.

For such a person, the ability to make that choice in the context of the doctor-patient relationship that has brought him this far is surely "the matrix, the indispensable condition," *Palko* v. *Connecticut*, 302 U.S. 319, 327 (1937), of any other freedom. For no other freedom is possible for a dying person — nothing remains that the dying person can call his own — if the State may prescribe the conditions under which, and the ways in which, the person may die. No liberty would truly belong to the dying individual if the process of dying were deemed a dance the State is free to choreograph, a final chapter the State is free to script.

All other persons, even the chronically ill and those who are not in the final stages of dying, may yet make many choices, select life paths, and explore possibilities that are beyond the State's authority and ability to control. Thwarted by the State in an attempt to commit suicide, they may yet live to rejoice that no "right to die" had been accorded them. A law preventing suicide in such cases cannot be said to reduce those denied such an option to "creature[s] of the state," *Pierce* v. *Society of Sisters*, 268 U.S. 510, 535 (1925), with every other liberty, and the very possibility of control over their lives, thereafter dependent on the State's sufferance.

Those who are suffering as they are about to die must be permitted this choice, not because their lives are worth less, Pet. Br. 20 & n. 10, but because — for their dignity, for their very humanity — the decision implies so much more. Indeed, respect for the precious quality of every human being requires that the Constitution be construed to protect the essential dignity of those for whom life is all but over equally with that of those with many years ahead.

This Court has already recognized just such a distinction in *Cruzan* v. *Director, Mo. Dept. of Health*, 497 U.S. 261 (1990), in considering the withdrawal of life-sustaining food and water. It is clear that the constitutional liberty recognized in that case extends *only* to "[a] seriously ill or dying" person. *Id.* at 288 (O'Connor, J., concurring); accord *id.* at 265 (opinion of the Court) (Nancy Cruzan

had "virtually no chance of recovering her cognitive faculties"). For at the same time that this Court recognized that the liberty of someone in Nancy Cruzan's condition includes the liberty to refuse life-sustaining food and water, see *supra* p. 2, the Court also made clear that the State is not "required to remain neutral in the face of an informed and voluntary decision *by a physically able* adult to starve to death." 497 U.S. at 280 (emphasis added).

That distinction is the very one we seek to reaffirm here — between what has traditionally been deemed "suicide" and a difficult, profoundly personal decision being made by a person who recognizes, no matter how much she desires to live, that all she has before her is the question of how to die.[8]

Because this Court has observed that "[s]ubstantive due process analysis must begin with a careful description of the asserted right," *Reno* v. *Flores*, 507 U.S. 292, 302 (1993) (internal quotation marks omitted), it is vital to stress that the only right asserted by the patient-plaintiffs and claimed before this Court is the right of the competent, terminally ill patient to choose whether to endure a death marked by intolerable agony, degradation, and suffering.[9]

---

[8] As the Second Circuit suggested, see Pet. App. 34a, it will be for each State — and not this Court — at least in the first instance, to decide precisely when it regards this terminal phase of the dying process to have begun. As the Second Circuit found, the problem of definition, see Pet. Br. 21, is largely imaginary, because "most physicians would agree on the definition of 'terminally ill' . . . for purposes of the relief that plaintiffs seek." Pet. App. 34a; see *id.* ("it seems even more certain" that physicians "would agree on when" the "final stages" of dying begin); see Resp. Br. in *Glucksberg* 34-35. Further, the issue is one that New York law already faces: "Physicians are accustomed to advising patients and their families in this regard and frequently do so when decisions are to be made regarding the furnishing or withdrawal of life-support systems." Pet. App. 34a; see also N.Y. Public Health Law § 2961 (defining "terminal condition" for purposes of identifying the class of patients for whom surrogates may issue orders not to resuscitate).

[9] This is the appropriate level of generality at which the liberty in question should be described. As this Court has repeatedly held, "the liberty which encompasses [the Court's previous] decisions 'includes "the interest in independence in making certain kinds of important *decisions*."'" *Casey*, 505 U.S. at 859 (citations omitted and emphasis added). Thus, unlike petitioners themselves, the United States analyzes the respondents' claim at this level of generality (although in slightly different words), concluding that indeed there

A. This Court has Articulated a Principled Approach for Defining the Liberty Protected Under the Fourteenth Amendment

Casey includes a clear and principled articulation of the proper judicial approach to determining whether a government regulation implicates a constitutionally protected liberty. The Court explained that the judicial responsibility "to define the liberty of all," 505 U.S. at 850, calls upon the Court "not to mandate our own moral code," *id.*, but "to exercise that same capacity which by tradition courts always have exercised: reasoned judgment." *Id.* at 849. See also *Rochin* v. *California*, 342 U.S. 165, 171-172 (1952) (per Frankfurter, J.).

The Court adopted the approach advanced by the second Justice Harlan, under which the Court must define the scope of liberty by reference to the historically enduring principles (and not just the concrete historical practices) that are revealed in the decisions of this Court and the traditions of this Nation.

> [T]he full scope of the liberty guaranteed by the Due Process Clause . . . . is not a series of isolated points . . . . It is a rational continuum which, broadly speaking, includes a freedom from all substantial arbitrary impositions and purposeless restraints . . . . The best that can be said is that through the course of this Court's decisions [due process] has represented the balance which our Nation, built upon postulates of respect for the liberty of the individual, has struck between that liberty and the demands of organized society. . . . The balance of which I speak is the balance struck by this country, having regard to what history teaches are the traditions from which it developed as well as the traditions from which it broke. That tradition is a living thing. A decision of this Court which radically departs from it could not long survive, while a decision which builds on what has survived is likely to be sound.

Casey, 505 U.S. at 848-850 (quoting *Poe* v. *Ullman*, 367 U.S. 497, 543, 542 (1961) (Harlan, J., dissenting from dismissal on jurisdictional grounds)); see also *Griswold* v. *Connecticut*, 381 U.S. 479, 493-498 (1965) (Goldberg, J., concurring).

---

is a protected liberty at stake here. See Govt. Br. in *Glucksberg* 12.

In upholding the woman's claim of liberty in *Casey*, the Court stated that "[i]t is settled now . . . that the Constitution places limits on a State's right to interfere with a person's most basic decisions about family and parenthood, as well as bodily integrity." 505 U.S. at 849 (citations omitted). After canvassing the precedents concerning marriage, procreation, contraception, the decision whether to bear or beget a child, family life and relationships, child rearing, and education, the Court concluded that such

> matters, involving the most intimate and personal choices a person may make in a lifetime, choices central to personal dignity and autonomy, are central to the liberty protected by the Fourteenth Amendment. At the heart of liberty is the right to define one's own concept of existence, of meaning, of the universe, and of the mystery of human life. Beliefs about these matters could not define the attributes of personhood were they formed under compulsion of the State.

Id. at 851.

The decision to end a pregnancy, the Court concluded, "originate[s] within the zone of conscience and belief." *Id.* at 852. Nonetheless, because the act of abortion is "fraught with consequences," *id.*, the Court inquired further into the nature of the liberty that the petitioners in that case sought to vindicate. The Court concluded that

> the liberty of the woman is at stake in a sense unique to the human condition . . . . The mother who carries a child to full term is subject to anxieties, to physical constraints, to pain that only she must bear . . . . Her suffering is too intimate and personal for the State to insist, without more, upon its own vision of the woman's role, however dominant that vision has been in the course of our history and our culture. The destiny of the woman must be shaped to a large extent on her own conception of her spiritual imperatives and her place in society.

Id. Consequently, the Court concluded in light of "the reasoning and the tradition of the precedents we have discussed" that the liberty of

the woman to choose to end a pregnancy was constitutionally protected. *Id.* at 853. This aspect of the *Casey* decision was not, as some have suggested, grounded upon *stare decisis*. "Even on the assumption that the central holding of *Roe* was in error, that error would go only to the strength of the state interest in fetal protection, not to the recognition afforded by the Constitution to the woman's liberty." *Id.* at 858; accord *id.* at 871.

B. A Principled Interpretation of the Constitution Requires Protection of the Liberty At Issue in This Case

The words from *Casey* about the profound, personal, even spiritual significance of the constitutionally protected decision at issue there apply with at least equal strength to dying people who must decide whether to endure a death marked by intolerable suffering. This Court has already concluded that "[t]he choice between life and death is a deeply personal decision of obvious and overwhelming finality." *Cruzan*, 497 U.S. at 281. Involving as it does profound questions of conscience and self-definition, the decision the patient-plaintiffs seek to make is unquestionably among "the most intimate and personal choices a person may make in a lifetime, [a] choic[e] central to dignity and autonomy." *Casey*, 505 U.S. at 851.

The right not to be forced to die in unendurable suffering and agony involves a constellation of interests — interests that have been recognized in this Court's previous cases — each one of which is, in and of itself, among the most profound that may be held by a human being and each of which is of constitutional dimension. To hold that the decision at issue in this case is less significant, or less firmly grounded in the Liberty Clause, than the decision whether to bear or beget a child, or to use contraceptives, or to send one's child to private school, would do irreparable damage to this Court's commitment to principled exposition of constitutional rights.[10]

---

[10] Indeed, it would render this Court's decision in *Casey* itself vulnerable to repudiation as unprincipled and *ad hoc*, an illegitimate interference with the power of the State. Remarkably, some *amici* before this Court already argue that this Court should reverse in this case to make clear that *Casey* cannot "serve as . . . a precedent." See Br. of Sen. Orrin Hatch, *et al.* 22 (argument heading).

1. To begin with, of course, there is the interest in bodily integrity. Justice Cardozo's classic formulation comes from a New York State case: "Every human being of adult years and sound mind has a right to determine what shall be done with his own body . . ." *Schloendorff v. Society of New York Hospital*, 105 N.E. 92 (N.Y. 1914). "It is settled now . . . that the Constitution places limits on a State's right to interfere with a person's most basic decisions about . . . bodily integrity." *Casey*, 505 U.S. at 849. See, *e.g.*, *Washington* v. *Harper*, 494 U.S. 210, 221-222 (1990); *Rochin* v. *California*, 342 U.S. 165, 172 (1952); *Cruzan* 497 U.S. at 288 (O'Connor, J., concurring).

This Court's cases make plain that this interest is not confined to avoiding forcible bodily intrusion but is equally implicated by a rule — such as that at issue in this case — prohibiting desired medical intervention. Indeed, as Justices O'Connor, Kennedy and Souter concluded in their opinion for the Court in *Casey*, the constitutional protection of the liberty of a woman seeking a doctor's assistance in terminating the natural progress of her pregnancy is, among other things, "a rule . . . of personal autonomy and bodily integrity." *Casey*, 505 U.S. at 857 (citing *inter alia Cruzan*, 497 U.S. at 278). Thus, this Court stuck down in that case a husband notification provision that might have prevented a woman from ending her pregnancy in part because "the State has touched not only upon the private sphere of the family but upon the very bodily integrity of the pregnant woman. Cf. *Cruzan* v. *Director, Mo. Dept. of Health*, 497 U.S. at 281." *Casey*, 505 U.S. at 896. Indeed, the very liberty to obtain medical treatment — a liberty surely protected under the Fourteenth Amendment, see Govt. Br. in *Glucksberg* 13 — implicates the interest in bodily integrity without involving any forcible bodily intrusion.

2. Next, the deeply personal interest in freedom from pain and suffering, even apart from the interest in personal autonomy, is implicated here as well. This, too, is unquestionably of constitutional dimension. In *Casey* this Court rested its conclusion about the woman's liberty partly on this very aspect of pregnancy: "The mother who carries a child to full term is subject to anxieties, to physical constraints, to pain that only she must bear. . . . Her suffering is too intimate and personal," 505 U.S. at 852, for "the State to insist she make the sacrifice." *Id.*

One need not denigrate the pain and physical difficulty associated with childbirth or, indeed, the psychological pain and anguish associated with continuing an unwanted pregnancy, cf. Govt. Br. in *Glucksberg* 14, to recognize that the profound and unendurable suffering alleged by the plaintiffs here is no less than that associated with unwanted pregnancy, and that for the patients who seek the aid of this Court, it is all the more profound because it will last, without respite, until the short time left in their lives is over.[11]

3. Finally, the decision of one who is dying whether to endure an excruciating death involves, no less than the abortion decision, "the right to define one's own concept of existence, of meaning, of the universe, and" — most profoundly — "of the mystery of human life." 505 U.S. at 851. A decision about whether to die in such a way, or instead to take some action to hasten the end of suffering — be it withdrawal of food, or self-administration of some life-ending drug — is inevitably a reflection of a person's understanding of the meaning of life and of the role of death in that life. Undoubtedly it is true that "many religious and philosophical traditions hold that this suffering may be of great value." Truog, *et al.*, 327 New Eng. J. Med. at 1680. But "[b]eliefs about th[is] matter could not define the attributes of personhood were they formed under compulsion of the State." *Casey*, 505 U.S. at 851. This decision, like the decision whether or not to choose abortion, must "originate within the zone of conscience and belief." *Id.* at 852. It involves "[t]he destiny" of the patient, which "must be shaped to a large extent on her own conception of her spiritual imperatives and her place in society." *Id.* Although, again as with abortion, the decision not to endure that suffering may be viewed by "some [as] nothing short of an act of violence against . . . human

---

[11] Cf. Govt. Br. in *Glucksberg* 14-15 (arguing unconvincingly that the interest of a terminally ill patient in avoiding severe suffering is not as consequential as the interest in terminating a pregnancy). Nor need one denigrate the profound implications of the abortion right for women's equality — implications recognized in *Casey*, 505 U.S. at 856 — to recognize that, at least until now, laws prohibiting abortion have been invalidated by this Court only on Liberty Clause grounds, and that their invalidation on those grounds is appropriate. See Ginsburg, *Some Thoughts on Autonomy and Equality in Relation to* Roe *v.* Wade, 63 N.C. L. Rev. 375, 382 (1985).

life," and although that pain might be "endured . . . with a pride that ennobles" the sufferer in the eyes of some, such "suffering is too intimate and personal for the State to insist, without more," *id.*, that an individual *must* bear it.

4. It is not our contention, as some of petitioners' *amici* suggest, that *Casey* has removed history and tradition from the due process equation. As the language from Justice Harlan quoted in *Casey* makes clear, 505 U.S. at 848-850, tradition is an important guidepost for judges bound to define the scope of the Liberty Clause of the Fourteenth Amendment. *Casey* recognized that constitutional significance inheres, however, not in the historic legality or illegality of a specific act, but in the treatment, in our history and tradition, of interests like those in bodily integrity and autonomy, in avoiding pain and suffering, and in making profoundly intimate and personal life-shaping decisions.

Concluding that the alternative would amount to nothing less than "shrink[ing] from the duties of our office," *id.* at 849, this Court, in "interpreting the full meaning" of the Constitution "in light of all our precedents," *id.* at 901, in *Casey* resoundingly rejected the view

> that the Due Process Clause protects only those practices, defined at the most specific level, that were protected against government interference by other rules of law when the Fourteenth Amendment was ratified.

Id. at 847 (citing *Michael H.* v. *Gerald D.*, 491 U.S. 110, 127-128 n. 6 (1989) (opinion of Scalia, J.)).

The Court observed that in many prior cases it had found practices protected under the Liberty Clause despite their having been unlawful in many states at the time of the ratification of the Fourteenth Amendment. *Id.* at 847-848. To the list given there can be added the right of a patient like Nancy Cruzan to refuse life-sustaining food and water. Thus, the fact that most states historically have forbidden physicians to provide life-ending medication to their suffering patients in the final stages of terminal illness does not alter the constitutional calculus in this case. Cf., *e.g.*, *Loving* v. *Virginia*, 388 U.S. 1, 12 (1967).

The protection of interests like bodily integrity and autonomy reflects "respect for the teachings of history . . . [and] the basic values that underlie our society." *Griswold*, 381 U.S. at 501

(Harlan, J., concurring). The Liberty Clause protects decisions where the underlying values at stake — not the particular practice at issue — are "deeply rooted in this Nation's history and tradition." *Moore* v. *City of East Cleveland*, 431 U.S. 494, 503 (1977) (plurality opinion of Powell, J.).

The Court in *Casey*, then, consistent with precedent, examined the "basic reasons why certain [actions] . . . have been accorded shelter under the Fourteenth Amendment," *id.* at 501, and concluded that those reasons required recognition of the liberty of a woman to choose whether or not to end a pregnancy. Those same reasons require recognition of the liberty asserted here.[12]

C. The *Cruzan* Decision, Too, Compels Recognition of the Patients' Fourteenth Amendment Liberty

The *Cruzan* Court's conclusion that Nancy Cruzan's constitutionally protected liberty to refuse "medical treatment" included the right to refuse artificial delivery of food and water, see *supra* p. 2, also requires recognition of the liberty at issue here.

1. In *Cruzan* this Court recognized that the right to refuse "medical treatment" included the right to refuse artificial delivery of food and water, "[w]hether or not the techniques used to pass food and water into the patient's alimentary tract are termed 'medical

---

[12] The values at stake here are reflected in the sanctity with which the deathbed has always been surrounded in our history and tradition. An enormous solicitude for the rights of individuals as their lives draw to a close has marked our culture. Both the words and the wishes of one on his deathbed have traditionally and deservedly received legal protection. Thus, deathbed statements are generally admissible as evidence despite the hearsay rule, and the wishes of one facing imminent death are honored even when otherwise-required legal formalities are not met. See, *e.g.*, *Ridden v. Thrall*, 26 N.E. 627, 629 (N.Y. 1891) (gifts *causa mortis*). Even as death has, for most of us, changed its venue from the home to the hospital, there has been no concomitant change in our firmly-rooted tradition that holds death to be a personal and intimate event or in our belief that, to the extent possible, the dying person should be able to obtain that which will bring comfort. The very manner of dying — whether in solitude or surrounded by loved ones, with which family members to share one's final days and hours, from whom to seek solace and spiritual assistance — has always been recognized as a matter of profoundly personal choice.

treatment,'" 497 U.S. at 288 (O'Connor, J., concurring). This recognition undoubtedly was influenced by the profound indignity that would be wrought upon an unconscious patient by the slow atrophy and disintegration of her body that would accompany her continued life or what might more properly be called her "prolonged death." Cf. App. to Pet. for Cert. at A96, *Cruzan v. Director, Missouri Department of Health*, 497 U.S. 261 (1990) (No. 88-1503).

The importance to this case of *Cruzan*'s extension of the right to refuse medical treatment to include decisions to forego food and water cannot be overstated. The recognition of that right can only be understood as a recognition of the liberty, at least in some circumstances, to physician assistance in ending one's life. That was the very point of the Court's statement that "[t]he choice between life and death is a deeply personal decision of obvious and overwhelming finality." *Id.* at 281 (opinion of the Court).

Cruzan by its terms of course dealt with a physician's assistance in withdrawing nutrition and hydration, not with the provision of a life-ending prescription. But that cannot affect the nature of the *liberty* involved. Most important in *Casey* was this Court's recognition that the character and strength of an asserted liberty is the same whether the decision ultimately requires the state to respect the patient's wish to be free of medical intervention (as when a woman seeks to avoid a governmentally *coerced* abortion) or to respect the patient's wish to seek a physician's assistance in provision of a medical procedure (as when a woman seeks invalidation of a governmental *ban* on abortions). That was the point of the statement by Justices O'Connor, Kennedy and Souter, writing for the Court, that

> The soundness of [the liberty] prong of the *Roe* analysis is apparent from a consideration of the alternative. If indeed the woman's interest in deciding whether to bear or beget a child had not been recognized as in *Roe*, the State might as readily restrict a woman's right to choose to carry a pregnancy to term as to terminate it, to further asserted state interests in population control, or eugenics, for example. Yet *Roe* has been sensibly relied upon to counter any such suggestions.

Casey, 505 U.S. at 859 (citing cases involving forced abortion, coerced sterilization and the right to refuse life-sustaining treatment).

This quoted language from *Casey* also recognizes that the liberty to make protected decisions is a two-way street, so that it is inherent in a claim to such autonomy that a court cannot ask which way it will be exercised before concluding that liberty is indeed at stake. The *interests* asserted to overcome a claim of liberty will differ depending upon whether the State desires to prohibit its exercise in one or another direction (e.g., the interest in life vs. the interest in population control). And those interests may be of different strength, so that in theory one option might be permissible while another one is not. But those interests must be weighed against the protected liberty; they are not to be front-loaded into its definition.

Given this understanding of liberty, if the patient-plaintiffs here were to have no liberty to shorten their suffering, they would have no liberty to prolong it either. In an age of managed care, one can readily imagine a State deciding to prohibit extraordinary treatment for suffering patients who are about to die, on the ground that scarce resources would best be allocated elsewhere. See Pet. Br. 26 n. 15.

2. Further, this Court should recognize that advances in medical technology have all but swept away any line that once existed between the "artificial" life support that imprisoned Nancy Cruzan and the so-called "nature" that imprisons the patient-plaintiffs here. As Justice O'Connor put it in her opinion in *Cruzan*, "[a] seriously ill or dying patient whose wishes are not honored may feel a captive . . . . " *Id.* at 288 (O'Connor, J., concurring). Although the captivity she described there was the captivity "of the machinery required for life-sustaining measures or other medical interventions," *id.*, the idea of "captivity" applies with equal strength to those whose suffering takes place in lives not only prolonged but profoundly transformed — as so many now are (and as those of the named patient-plaintiffs here were) — by heroic or recently-unimaginable medical advances.

One may be alive only as a result of chemotherapy, antibiotics, bone-marrow transplants or any of the other wide range of life-prolonging therapies — each of which changes the patient unalterably, and ultimately may leave her "suffering" a "prolonged deat[h]" quite different from what "nature" would otherwise have decreed. See, *e.g.*, JA 126 (Declaration of Jack Froom, M.D.). When one then confronts, precisely because of that treatment, an end filled with life-encompassing pain, disintegration or suffering, how

can one *not* "feel a captive," *Cruzan*, 497 U.S. at 288 (O'Connor, J., concurring), to the very technology that has brought one to that point? To give but one of myriad examples, a patient who receives a bone marrow transplant may live longer than he otherwise would, but the very life-saving transplant may subsequently produce "graft versus host" disease in which the bone marrow graft actually attacks the rest of the host body and slowly kills it. For such persons, at the very least, there can be no doubt but that their liberty to choose death must be as great as Nancy Cruzan's.

3. There are also those terminally ill patients who receive ongoing palliative treatment that is itself profoundly painful, but without which their lives would be even more harrowing. Such treatments include, for example, daily infusion therapies, debriding dressing changes so painful they may require premedication with narcotics, and suction catheterization of the trachea to remove secretions. Ending such palliative — yet not life-sustaining — treatments would be unthinkable for these patients. They are thus left "captive of . . . medical interventions" just as Nancy Cruzan was, with "[s]uch forced treatment burdening [their] . . . liberty interests as much as any state coercion." *Id.*

4. The development of increasingly sophisticated life-prolonging techniques animates the entire question in the modern world of physician assistance in dying. See Preston, *Physician Involvement in Life-Ending Practices*, 18 Seattle L. Rev. 531, 542 (1995) ("Today, whether by intravenous feeding or by multiple-organ transplants, ... [m]ost persons in the late stages of dying are in their particular conditions exactly because of [past] medical intervention[s]."); Benrubi, *Euthanasia — The Need for Procedural Safeguards*, 326 New Eng. J. Med. 197-199 (1992) (describing life-prolonging treatments that result in prolonged suffering, and deaths "more protracted and uncomfortable" than the patient, even though not "on" life support, would have had otherwise). Changes in technology are likely to make whatever remains of the "natural"/"artificial" distinction grow even less meaningful in the future. This case thus requires the Court to apply the same principles that underlie *Cruzan* to factual circumstances vastly changed even from the time of the adoption of the very laws at issue in this case. Cf. *Ollman* v. *Evans*, 750 F.2d 970, 995 (D.C. Cir 1984) (en banc), cert. denied, 471 U.S. 1127 (1985) (Bork, J., joined by Wilkey, Ginsburg and MacKinnon, JJ., concurring) ("Where there

is a known principle to be explicated the evolution of doctrine is inevitable . . . In a case like this, it is the task of the judge in this generation to discern how the framers' values, defined in the context of the world they knew, apply to the world we know.").

Due Process would not, in the 18th through mid-19th centuries, likely have been thought to include the right to avoid the artificial prolongation of life. But medical science was primitive. Cf. Maurice B. Gordon, *Aesculapius Comes to the Colonies* 5 (1949). It has been only this century that ushered in the life-extending medical techniques that may, for all their benefit, also lead to more grotesque forms of death, and with them the recognition of the constitutional significance of avoiding an artificially-prolonged life. See *Cruzan*.

As their declarations make clear, each of the patient-plaintiffs in this case was — thankfully — kept alive by extraordinary medical advances, only to face a lingering death instead of what might have been a swift one. In defining the scope of their liberty in this case in light of that modern reality, this Court must take account of the factual circumstances in which its decision will apply. It must issue a decision that is "defensible . . . as [an] applicatio[n] of constitutional principle to facts as they ha[ve] not been seen by this Court before." *Casey*, 505 U.S. at 863-864. Indeed, a proper understanding of these "significant facts," *id.* at 866, is essential to the very performance of the judicial function in this case.

D. Recognition of the Liberty Involved Here Does Not Require Taking the Approach That Led to Much of the Criticism of *Roe* v. *Wade*

A judgment of affirmance here can and should be rendered in a way that avoids the pitfalls that led to much of the scholarly criticism of the decision in *Roe* v. *Wade*, 410 U.S. 113 (1973). *Roe* almost completely foreclosed the States from legislating in the area of abortion, in an opinion that "'rea[d] like a set of hospital rules and regulations.'" Ginsburg, *Some Thoughts on Autonomy and Equality in Relation to* Roe *v.* Wade, 63 N.C. L. Rev. 375, 381 (1985) (brackets added) (quoting Archibald Cox, *The Role of the Supreme Court in American Government* 113 (1976)). Commentators have urged that "[t]he Court properly invalidated the

Texas proscription" at issue in *Roe* "because '[a] law that absolutely made criminal all kinds and forms of abortion . . . is not a reasonable accommodation of interests,'" *id.* at 382 (quoting Freund, *Storms Over the Supreme Court*, 69 A.B.A. J. 1474, 1480 (1983)), but that "[i]f *Roe* had left off at that point and not adopted . . . a 'medical approach,'" the decision would have been understood more widely as an appropriate judicial act. *Id.*

Because New York's criminal law is so extreme, this case presents an opportunity appropriately to vindicate individual liberty while avoiding these pitfalls. The controlling opinion in *Casey* abandoned *Roe*'s "elaborate but rigid," 505 U.S. at 872, framework in favor of the "undue burden" standard under which this Court would be able to invalidate the complete criminal prohibition at issue here while permitting a substantial degree of less intrusive regulation. This standard promises the "reasonable accommodation of interests" that critics of the *Roe* opinion have argued is appropriate.

II. ALTHOUGH THIS LIBERTY CAN BE CLOSELY REGULATED, THE STATE'S ABSOLUTE BAN IMPOSES AN UNDUE BURDEN ON ITS EXERCISE

Recognition of a protected liberty is of course only the first half of the due process equation. Before determining that a law or regulation is unconstitutional, a court must weigh the countervailing state interests urged in its support to see if they may justify the particular interference with protected liberty. See, *e.g.*, *Cruzan*, 497 U.S. at 279. The question of whether laws touching upon the liberty at stake in this case should be measured under the undue burden standard adopted by the controlling opinion in *Casey*, 505 U.S. at 876 (plurality opinion), or under the test which asks whether a regulation is "narrowly tailored to serve a compelling state interest," e.g., *Reno* v. *Flores*, 507 U.S. 292, 302 (1993), is one this Court need not resolve here, for the blanket prohibition at issue in this case cannot survive under either standard.

The United States, acknowledging the liberty at stake here, argues that the Court should apply "the same legal standard" it applied in *Cruzan*. Govt. Br. in *Glucksberg* 17. But *Cruzan* itself did not explicitly apply *any* particular standard of review, holding only that the procedural requirements put in place in that case by Missouri law

"permissibly . . . advance [the State's] interests." 497 U.S. at 282.[13] This Court, however, has subsequently made clear that *Cruzan* necessarily stands for the proposition that "a State's interest in the protection of life falls short of justifying any plenary override of individual liberty claims." See *Casey*, 505 U.S. at 857 (citing *Cruzan*, 497 U.S. at 278). This is consistent with the undue burden standard articulated in *Casey*, a standard whose application suffices to support affirmance here.

Indeed, application of the undue burden standard may be particularly appropriate in this case, for it was designed to accommodate important state interests when an individual seeks to make a constitutionally protected choice, like the one involved in this case, "that has such profound and lasting meaning." *Casey*, 505 U.S. at 873 (plurality opinion).

The joint opinion in *Casey* articulated "[s]ome guiding principles" for application of the undue burden test, which it described as "a standard of general application." See 505 U.S. at 877, 876 (plurality opinion); see also *id.* at 878. Under this test, regulations touching on a protected liberty will be upheld only if they are "reasonably related," *id.*, or "'reasonably directed,'" *id.* at 900, to an "'important and legitimate,'" *id.* at 871, or "substantial," *id.* at 876, governmental interest. Further, no regulation will be permitted "that has the purpose or effect of placing a substantial obstacle in the path" of an individual seeking to exercise a constitutionally protected liberty. *Casey*, 505 U.S. at 877 (plurality opinion); see also *id.* at 878 (illustrating that even a properly tailored regulation will be struck down if it has this purpose or effect). In determining whether it poses a "substantial obstacle," a law that touches on constitutionally protected liberty is to be measured by reference to "those for whom it is an actual rather than an irrelevant restriction." See *id.* at 895;

[13] The United States describes *Cruzan* as applying "an intermediate standard . . . in which the individual's 'liberty interests' are 'balance[d] • • • against the relevant state interests.'" Govt. Br. in *Glucksberg* 17 (quoting *Cruzan*, 497 U.S. at 279). The quoted language from *Cruzan*, however, does not articulate a legal standard. An examination of the quoted passage reveals that it merely describes the process by which a court — under whatever standard — must evaluate a claim that a law or regulation unlawfully infringes upon a constitutionally protected liberty.

see also *Fargo Women's Health Organization* v. *Schafer*, 507 U.S. 1013, 1014 (1993) (O'Connor, J., joined by Souter, J., concurring in denial of application for stay and injunction).

States are permitted under the undue burden test to enact laws that "create a structural mechanism by which the State, or [an interested individual], may express profound respect for . . . life . . . , *if they are not a substantial obstacle*" to the person's "exercise of the right to choose." *Id.* at 877 (emphasis added). This may include regulations that "provide a reasonable framework" for ensuring that the liberty is not exercised incautiously, *id.* at 885-887, as well as regulations designed to persuade the individual to choose life. See *id.* at 872-873. The test recognizes that "[w]hat is at stake is the [person's] right to make the ultimate decision, not a right to be insulated from all others in doing so." *Id.* at 877.

A. The Legitimate Interests Put Forward by Petitioners Cannot Justify The Challenged Laws

None of the interests put forth by petitioners suffices to justify New York's legal regime.

1. Petitioners begin with the State's interest in protecting life in all circumstances. See Pet. Br. 20-21. Accepting that interest as legitimate, the criminal laws at issue here sweep much too broadly, placing a substantial (indeed, a virtually insurmountable) obstacle in the path of those in the final stages of terminal illness who are not on life-support and who seek to exercise their protected liberty to choose a death free of unbearable pain and suffering. See Resp. Br. in *Glucksberg* 27. Such a "plenary override of individual liberty claims" like these has been held impermissible. See *Casey*, 505 U.S. at 857 (citing *Cruzan*, 497 U.S. at 278).

The argument that the ban is essential to meet the State's interest in protecting life in all circumstances is also fatally undermined by the fact that the State has chosen to authorize much requested physician action intended to result in the death of a competent terminally ill adult. Cf. *City of Ladue* v. *Gilleo*, 114 S.Ct. 2038, 2044 (1994) (exemptions from a ban, there on displaying signs, "diminish the credibility of the government's rationale" for imposing the restriction in the first place). It permits, virtually without regulation, the life-ending withdrawal of treatment, including

nutrition and hydration, and it allows terminal sedation of those who are not already on life-support. New York's legal regime thus would not be a reasonable means of advancing the State's interest in life even if it did not present a substantial obstacle to the exercise of protected liberty. See *e.g.*, *Clark* v. *Jeter*, 486 U.S. 456, 464 (1988) (six-year statute of limitations for child support actions involving illegitimate children not "substantially related" to Pennsylvania's interest in avoiding litigation of stale or fraudulent claims because "[i]n a number of circumstances [the State] permits the issue of paternity to be litigated more than six years after the birth of an illegitimate child").

Petitioners argue that what is permitted in terms of withdrawal of life-sustaining treatment "may be distinguished" from what is forbidden "on the basis of [the] intention of both physician and patient." Pet. Br. 15. But, as we have seen, the law of New York does not actually hew to this line, instead permitting withdrawal of treatment even where the actual intention of both doctor and patient plainly is to cause death. Ultimately, petitioners acknowledge as much, arguing only that the purpose of one who seeks withdrawal of treatment "*may* be not death but, for example, the avoidance of invasive medical technology." Pet. Br. 16.

Petitioners also argue that their decision to permit withdrawal of life-sustaining treatment is justified by a difference in the cause of death: "[a] patient who declines or withdraws from life-sustaining treatment is letting nature take its course," Pet. Br. 17, whereas one who is not on artificial life support dies "from the drugs alone." *Id.* 18.[14] But even putting to one side the manifestly *un*natural case of terminal sedation, the law of New York recognizes that withdrawal of life support is ordinarily a but-for cause of the death that inevitably ensues. It punishes unconsented withdrawal of life-sustaining treatment as homicide. And even the consensual withdrawal of life-sustaining treatment for the purpose of causing the death of one who is not terminally ill may sometimes be treated as

[14] In truth, of course, since withdrawal of a life-support system such as a respirator is invariably accompanied by pain medication, "it is not possible to know if the morphine or the disease produced the actual moment of death." Br. of Choice in Dying 11.

unlawful assisted suicide. See *Fosmire* v. *Nicoleau*, 551 N.E. 2d 77, 82 & n. 2 (N.Y. 1990); *Van Holden* v. *Chapman*, 450 N.Y.S. 2d 623, 625, 626-627 (App. Div. 1982). Thus, New York law does not simply permit nature to "take its course."[15]

Finally, the AMA argues that the State must permit withdrawal of life-sustaining treatment (but not the provision of life-ending medication) because patients would be reluctant without that option to accept many modern treatment regimens. AMA Br. 23. Yet this cannot explain the line drawn by the State, because many life-prolonging treatments that do not involve permanent attachment to life-sustaining equipment — from antibiotics to chemotherapy to surgery — leave patients at a profound risk of debilitation or pain. If the option of withdrawing life-sustaining devices is necessary to encourage people to seek therapies that require such devices, then the option of life-ending medication should be equally necessary to encourage people to obtain this latter class of life-prolonging treatment.

2. Next the State and its *amici* proffer a series of interests related to the protection of those who are "outside the class of persons described by the Court of Appeals": those for whom palliative care or treatment of depression might ease suffering, those for whom exercise of the liberty might not truly be voluntary, and those who are not actually in the final stages of terminal illness. See Govt. Br. in *Glucksberg* 23. These reflect serious concerns about avoiding abuse and the mistaken exercise of this life-ending liberty. See Pet. Br. 27; Govt. Br. in *Glucksberg* 19-24 (detailing ways in which the decision to end life may be mistaken or may be the result of pressures felt from physicians and family).

Undoubtedly the protection of people who might seek to end life mistakenly or under pressure is a compelling interest. This interest, however, does not require a complete ban on the provision of life-

[15] Petitioners also argue that the interest in protecting life does not require prohibiting withdrawal of life-sustaining treatment when intended to cause death because of the "difference between action and inaction." Pet. Br. 16-17. The State's homicide laws of course answer this, recognizing that the removal of, say, a feeding tube does not amount to "passive inaction," *id.* at 17 (internal quotation marks and citations omitted). Indeed, if anything, death from a drug that is self-administered involves *less* action on the part of the physician.

ending medication even to those for whom the right to self-administer such a prescription drug is a protected liberty, and who act without pressure or error. There are a number of less restrictive mechanisms that the State could mandate that would reasonably advance — would in fact be precisely tailored to address — the interests petitioners and their *amici* put forth. See Br. of State Legislators in Support of Respondents 23-25, 29, App. 1a-12a. Indeed, in permitting the issuance of orders not to resuscitate — which implicate many of these same concerns — New York has already put some such regulations in place. See N.Y. Public Health Law § 2964.[16]

In light of such alternatives, the ban at issue in this case, even if it did not strike impermissibly to the bone of protected liberty, could not be said "reasonably" to advance the State's interest in avoiding mistake or coercion. Indeed, at least unless it is absolutely necessary, the imposition of intolerable suffering upon a human being is not a constitutionally permissible means of achieving these or the other goals put forward as justifications for the law at issue here, such as creating an incentive for improving the medical profession's attention to patients' pain, see AMA Br. 22, or "increas[ing] the public's awareness of hospice" care. National Hospice Association Br. 18. Cf. *Eisenstadt* v. *Baird*, 405 U.S. 438, 448 (1972).

Furthermore, any argument that this ban has been put in place as a necessary mechanism to prevent mistakes, coercion or, indeed, even involuntary euthanasia, dissolves in the face of the fact that some patients already intending to die may lawfully receive, essentially without any regulatory safeguards at all, physician assistance in dying through the withdrawal of life-sustaining treatment (or through the process of terminal sedation).[17] The

---

[16] That *any* regulatory scheme might occasionally be evaded by the physicians subject to it, Pet. Br. 31, proves too much: the "outright prohibition" defended as an alternative to targeted safeguards, AMA Br. 23, has already proven susceptible to circumvention, and may indeed invite a cynicism that makes evasion even more tempting. See *infra* at p. 40-42.

[17] Coercion and undue influence in this setting might be addressed by the criminal prohibition against "caus[ing] . . . suicide," *e.g.*, N.Y. Penal Law § 125.15(3), which is not challenged in this action. And indeed, because that

precise risks about which the State claims to be concerned are of course equally present in those circumstances. Indeed, many of them (such as family coercion or a failure of physician sensitivity) might well be *more* salient in the case of a person connected to life-sustaining medical equipment. And, because disconnecting life-support machinery typically gives the patient no last clear chance at a change of heart — it is the doctor's hand, not the patient's, that takes the final step[18] — there is, if anything, *less* basis for confidence that the process causing the patient's death is in fact a genuine expression of the patient's free and informed will rather than the instrument of a homicide.[19]

---

statutory provision could be applied to those who pressure patients to request or use life-ending medication as well, there should be no concern that affirmance in this case will create a regulatory vacuum until the state legislature can revisit the matter. Further, the laws here are challenged not on their face but only as applied to the class of terminally ill, competent persons who voluntarily choose to obtain a prescription for life-ending medication. New York's Attorney General would be free to enforce the state's assisted suicide laws with respect to all others and indeed would be free immediately to adopt interim guidelines to ensure that only competent persons in the final stages of terminal illness avail themselves of the relief sought here and that all decisions concerning life-ending medication are fully voluntary.

[18] Indeed, in one major study, 39% of the patients who asked for and received lethal medication (despite the formal illegality) did not use it once their sense of control was re-established. Back *et al.*, *Physician Assisted Suicide and Euthanasia in Washington State*, 275 JAMA 922 (1996); see also Richard Posner, *Age and Old Age* 224 (1995) (predicting that permitting physicians to prescribe life-ending medication "might actually reduce the number of suicides and postpone the suicides that do occur").

[19] The suggestion by the United States that withdrawal of life-sustaining treatment may be distinguished from the provision of life-ending drugs on the ground that withdrawal may reveal that a person has been misdiagnosed, see Govt. Br. in *Glucksberg* 25 — something that typically would not happen with a prescription of life-ending medication — is wrong. Patients like Nancy Cruzan will invariably die quite quickly if their life-support is withdrawn, regardless of the accuracy of their physicians' diagnosis that there is no hope of recovery. (Thus, as biology dictates, Karen Ann Quinlan, who was ultimately able to breathe on her own, lived for years after withdrawal of her respirator, see Govt. Br. 14, only because artificial nutrition and hydration were provided.) That certainty of death is precisely why this Court in *Cruzan* concluded that it was permissible to place the risk of error on the party seeking

In any event, this Court has never permitted a State completely to deprive some persons of a constitutionally protected liberty in order to protect "*other* persons," Govt. Br. in *Glucksberg* 19 n. 2 (emphasis added), from its own failure to put in place mechanisms to ensure that this liberty is exercised only by those entitled to do so. See, *e.g.*, *Sable Communications* v. *FCC*, 492 U.S. 115, 128 (1989) (even to protect children, government may not "reduce the adult population . . . to . . . only what is fit for children") (ellipsis in original, internal quotation marks and citations omitted).

3. Petitioners and their *amici* also argue that the liberty at stake here is outweighed by the countervailing interest in preventing such consequences as non-voluntary euthanasia and euthanasia under a "best interests" standard for incompetent patients. Pet. Br. 23-24.

Cruzan itself provides the strongest response. The Court there held it permissible for a state to "seek to safeguard the personal element" of the "choice between life and death" "through the imposition of heightened evidentiary requirements" whenever it allows a surrogate to exercise the rights of an incompetent patient. 497 U.S. at 281; see also *id.* at 289-292 (O'Connor, J., concurring).[20]

In any event, the "slippery slope" claim here rings particularly hollow in light of the types of life-ending measures the State already permits physicians to undertake. If there is a slope to fear, the State — in permitting withdrawal of life-support, death by "double-effect" and terminal sedation, all essentially without regulation — has already slid along it further than anything respondents seek.

In particular, under the guise of "double effect," acts of euthanasia take place in New York and throughout the United States *every day*. See, e.g., Asch, *The Role of Critical Care Nurses in Euthanasia and Assisted Suicide*, 334 New Eng. J. Med. 1374, 1376 (1996). Dying

---

to terminate life-support. See *Cruzan*, 497 U.S. at 283.

[20] Petitioners raise concerns about suffering, terminally-ill patients who are unable to administer drugs to themselves. Pet. Br. 23. But any competent individual, however disabled, who is able with the assistance of modern technology unambiguously to *communicate* a voluntary decision to receive life-ending medication could certainly be enabled, through modern technology, to *self-administer* it.

patients in agony, whose pain cannot be soothed with medication, are given increasingly large doses of painkillers that will undoubtedly kill them. E.g., Cotton, *Medicine's Position is Both Pivotal and Precarious in Assisted Suicide Debate*, 273 JAMA 363 (1995). But because states like New York make it hazardous for the foreseeable, natural consequence of this medication to be confronted frankly, the drugs are administered — by doctors undoubtedly acting in what they believe to be the best interests of their patients — without the full discussion of the consequences to which respect for a patient's very humanity entitles her. *Id.* ("We talk about the 'double effect,' and know jolly well we are sedating them into oblivion, providing pain relief but also providing permanent relief, and we don't tell them.") (quoting Dr. Peter Goodwin); see Br. of Coalition of Hospice Professionals for Affirmance 26.[21] In this

---

[21] Petitioners' claims about the Netherlands, see Pet. Br. 24 n.13, are conspicuously bereft of any evidence at all that Holland's decision to permit physician assistance in dying (while still deeming it technically criminal) actually led to any *increase* in involuntary euthanasia by doctors rather than simply bringing to light "a practice that, in the Netherlands as in every other country (including the United States), has been going on undercover and entirely at the discretion of the physician." Margaret Battin, *The Least Worst Death* 141 (1994). The most recent report on the subject concludes that the data of the well-known 1991 study of the Dutch experience, and of its 1996 successor, "do not support the idea that physicians in the Netherlands are moving down a slippery slope" towards "less careful end-of-life decision making and . . . the gradual social acceptance of euthanasia performed for morally unacceptable reasons." van der Maas *et al.*, *Euthanasia, Physician-Assisted Suicide, and Other Medical Practices Involving the End of Life in the Netherlands*, 1990-1995, 335 New Eng. J. Med. 1699, 1705 (1996).

To the extent that any conclusions can be drawn, it appears that a system of genuine regulation might actually lead to a *decrease* in the rate of nonvoluntary euthanasia. Although there are no strictly comparable data, studies suggest that there may be more such euthanasia in the United States than in Holland. For example, seven percent of surveyed U.S. critical care nurses had "engag[ed] in euthanasia or assisted suicide without a request from either the patient or a surrogate." See Asch, *The Role of Critical Care Nurses in Euthanasia and Assisted Suicide*, 334 New Eng. J. Med. 1374, 1376 (1996). The article reporting that data appears to suggest that some of the patients killed in this way were mentally competent. *Id.*

The precisely comparable figures for the Netherlands are difficult to determine, since in the Dutch studies "nonvoluntary" euthanasia has been

regard, a decision of this Court upholding the right of patients to discuss and receive life-ending medication openly — a decision that will doubtless lead to regulation of these life and death decisions — may actually play a critical role in pulling this nation *back* from the precipice of involuntary euthanasia.[22]

B. The Only Rationales That Adequately Explain New York Law are Impermissible Bases for Imposing Such Suffering on the Dying Patient

Implicitly acknowledging that the State permits, in the case of withdrawal of life-sustaining treatment, precisely the acts that it would deem "assisted suicide" were they to involve the provision of life-ending prescription drugs, the United States attempts to defend the State's regime on the ground that "[i]n one case, the cause of death *can reasonably be viewed* as the underlying disease;" in the other, "the cause of death can only be *viewed* as the lethal medication." Govt. Br. in *Glucksberg* 24 (emphasis added). The United States argues that permitting the more obvious type of physician assistance "'[c]ould have a subtle but widespread impact on society' by sending the message that society does not value each of its members." Govt. Br. 12 (citation omitted). In essence,

---

defined to include all deaths caused intentionally but without a "concurrent, explicit" request by the patient. But the latest Dutch report suggests that in *every* case involving a competent patient whose death was counted within this category (many of whom had only hours or days to live), "either the decision was discussed with the patient earlier in the illness or the patient had expressed a wish for euthanasia if suffering became unbearable." See van der Maas, *et al.*, 335 New Eng. J. Med. at 1701.

[22] Petitioners contend that the liberty urged here will require patients constantly to justify their decision to remain alive. Pet. Br. 32. The fatal problem with this argument is that it could be used to object to any constitutionally protected liberty, from the right to free speech to the right to choose abortion. A State's desire to protect its citizens from the "burden" of liberty is obviously illegitimate. In any event, terminally ill patients on life support already must confront this choice under New York law. As the Second Circuit found, just as much "'psychological pressure' can be applied" upon "the elderly and infirm to consent to withdrawal of life-sustaining equipment as to take drugs to hasten death. . . . [T]he state of New York may establish rules and procedures to assure that all choices are free of such pressures." Pet. App. 32a-33a.

therefore, this final argument for reversing the decision below amounts to a claim that, whatever constitutional rights dying individuals might have to avoid the agony or indignity to which some are condemned by the state laws now in place, those rights are best sacrificed in the larger interest of preserving appearances.

But surely the Constitution does not permit the State to sacrifice the rights of the dying on the altar of appearances. However well-tailored the State's ban is to the achievement of this goal, it cannot be doubted, in a nation committed not to regulation by winks and nods but to the rule of law — indeed in a nation committed to the democratic accountability of its governmental officials, see *New York* v. *United States*, 505 U.S. 144, 182-183 (1992) — that a state's interest in *appearing* to protect life in a way that it does not actually protect it is neither sufficiently "substantial" nor sufficiently "important" to outweigh a terminal patient's liberty to avoid a horrific death. Indeed, there is no more fixed constitutional principle than that the government has *no* interest in restricting the awareness of its citizenry. See, *e.g.*, *44 Liquormart, Inc.* v. *Rhode Island*, 116 S.Ct. 1495, 1508 (1996) (Stevens, J., joined by Kennedy and Ginsburg, JJ.); *id.* at 1515-1520 (Thomas, J., concurring in part and concurring in the judgment).[23]

This Court is also urged not to recognize a right to end suffering, essentially because it would result in regulation of *all* the death-causing medical treatment in which the State now permits physicians to engage. The AMA argues that "the unprecedented intrusion into the physician-patient relationship needed independently to regulate such treatment decisions would" be "all too likely to undermine what progress has been made in decisions to withdraw or withhold life-sustaining treatment and to use effective pain control," AMA Br. 17; see also *id.* at 22 (if the "boundary is lost, much support for . . . withdrawing treatment . . . may be lost as well").

But the State can have no legitimate interest in protecting doctors

---

[23] There is of course all the difference in the world between ending practices that lead to a profession's bad reputation, see *Florida Bar* v. *Went For It, Inc.*, 115 S.Ct. 2371, 2376 (1995), and employing the law to *cover up* existing practices that one fears may have that same effect — a choice that no view of the First Amendment could sanction.

from what all must concede to be not only appropriate but necessary regulation. The interest in physician freedom cannot justify the indignity and brutality of the way the State insists that those with intractable end-of-life pain and distress must be prepared to die.

III. THE LINES DRAWN BY THE STATE OF NEW YORK ARE ARBITRARY AND IRRATIONAL AND SO VIOLATE THE EQUAL PROTECTION CLAUSE

Even if this Court were to conclude that there is no protected liberty here — or were it to desire not to reach that constitutional issue — the judgment below should still be affirmed, because the distinctions drawn by New York law are irrational, and so violate equal protection even under the scrutiny applicable when no independently protected liberty is involved.[24]

"In applying the Equal Protection Clause to most forms of state action, we . . . seek only the assurance that the classification at issue bears some fair relationship to a legitimate public purpose." *Plyler* v. *Doe*, 457 U.S. 202, 216 (1982). But although "[a] legislature must have substantial latitude to establish classifications" that "accommodate competing concerns both public and private, and that account for limitations on the practical ability of the State to remedy every ill," *id.*, a distinction drawn in the law "must be reasonable, not arbitrary, and must rest upon some ground of difference having a fair and substantial relation to the object of the legislation." See *Eisenstadt*, 405 U.S. at 447 and n. 7 (quoting *Reed* v. *Reed*, 404 U.S. 71, 75-76 (1971) (internal quotation marks and citation omitted)).

As this Court's precedents make clear, this standard, though deferential, does not amount to judicial abdication. Applying it, this Court has never shied away in appropriate circumstances from

---

[24] Of course, if this Court concludes that the laws at issue in this case intrude on a constitutionally protected liberty — or that the political process is systemically incapable of adequately protecting the interests of the dying, see Resp. Br. in *Glucksberg* 39 n. 26 — those laws would violate equal protection because, as shown above, see *supra* pp. 35-43, the State has failed to show that the distinctions drawn by its laws are narrowly tailored to serve a compelling state interest.

invalidating arbitrary classifications and legislation. See, *e.g.*, *Romer* v. *Evans*, 116 S.Ct. 1620, 1627-1629 (1996); *Allegheny Pittsburgh Coal Co.* v. *County Commission of Webster County*, 488 U.S. 336, 344-346 (1989); *City of Cleburne* v. *Cleburne Living Center*, 473 U.S. 432, 447-450 (1985); *Hooper* v. *Bernalillo County Assessor*, 472 U.S. 612, 619-623 (1985); *Eisenstadt*, 405 U.S. at 447-455; *Reed*, 404 U.S. at 75-77.

A. The Distinction Between Withdrawal of Life-Sustaining Treatment and the Provision of Life-Ending Medication, As Drawn By New York Law in the Context of Intentionally Death-Causing Behavior, is Not Rational

Even assuming the State had asserted a legitimate interest in compelling a dying patient to keep suffering against her will, the principal line drawn by state law is both arbitrary and irrational. The State purports to prohibit doctors from assisting their patients to die with dignity when they are in the final stages of terminal disease and are intolerably suffering. Thus a doctor may not assist such a patient by providing life-ending medication for her own administration even when, in the physician's professional opinion, it is medically and psychiatrically appropriate. Yet the State permits doctors deliberately to assist such patients to die if they can do so by withdrawing life-sustaining treatment, including artificially provided food and water.

The decision in this context to distinguish those who are on life-sustaining treatment from those who are not simply cannot be justified. The State treats them differently "on the basis of criteria wholly unrelated to the objectives of th[e] statute[s]" at issue. *Reed* v. *Reed*, 404 U.S. at 76. As applied to acts equally intended to facilitate death, the line cannot be defended on the ground of a difference of intent. See Pet. Br. 15-16. For, as described above, although the State refuses to *characterize* the intent of the patient in the former case as an intent to die, the legal distinction does not depend on any difference in *actual* intent between the patients the doctors are permitted to assist to die and those whom they are not. See *Colorado Republican Campaign Committee* v. *F.E.C.*, 116 S.Ct. 2309, 2319 (1996) (Breyer, J., joined by O'Connor and Souter, JJ.) (the government's "characterization" of its actions cannot control

"for constitutional purposes"); *id.* at 2321-2322 (Kennedy, J., joined by Rehnquist, C.J., and Scalia, J., concurring in the judgment and dissenting in part) ("[W]e cannot allow the Government's suggested labels to control our [constitutional] analysis.").

Nor can a distinction in "causation" between "natural" death and death by human "intervention" justify the line drawn by the State. Pet. Br. 17-18. Petitioners argue that one who is disconnected from life-sustaining treatment "is letting nature take its course" in that "[h]is death is caused by the underlying disease or disorder." *Id.* But this Court has recognized that is not the case. See *Cruzan*, 497 U.S. at 280 (referring to "hav[ing] hydration and nutrition withdrawn in such a way as to cause death"). And even New York law does not pretend it is true: Any doctor who disconnected a person from life-support *without* informed consent could be prosecuted for committing homicide by "causing" the patient's death; and any doctor who disconnected from life-support a patient who requested such action in order to die but was otherwise likely to recover could be prosecuted for assisting a suicide. Moreover, as the court below observed,

> there is nothing "natural" about causing death by means other than the original illness or its complications. The withdrawal of nutrition brings on death by starvation, the withdrawal of hydration brings on death by dehydration, and the withdrawal of ventilation brings about respiratory failure. . . . It certainly cannot be said that the death that immediately ensues is the natural result of the progression of the disease or condition from which the patient suffers.

Pet. App. 30a. See also *Cruzan*, 497 U.S. at 296-297 (Scalia, J., concurring).

Nor can the line drawn by New York be defended on the basis that those individuals whom the State permits to obtain a physician's help in dying, and only those individuals, are "being subjected to an ongoing bodily intrusion" and, "just as they could have refused the intrusion, they can withdraw their consent at any time," so that it is neither their "terminal illness" nor any positive action or decision of the State but simply "the now undesired bodily intrusion" that "empowers" them to end their lives by "refus[ing] further treatment" and having life-support removed. Br. for Bioethics Professors

Supporting Petrs. 14.

A desire to permit patients to effect the termination of bodily intrusions simply cannot justify the line drawn by the State. First, as we have seen, see *supra* pp.10-11, the State does not *always* permit the life-ending withdrawal of treatment by non-terminal patients whose intent is to die. Second, patients currently "on" life-support and those who are not both may have had bodily intrusions which are ongoing and for which they have given consent: an artificial heart valve, a kidney or a bone marrow transplant, for example. These are considerable bodily invasions that change the patient inalterably, and may transform the nature of her death.

Such patients may wish to die by withdrawing their consent to the bodily intrusion to which they have been subjected. But their cases demonstrate that the State's line is not about permitting patients to undo a battery. Even where withdrawal of consent is theoretically possible, the State would doubtless say that a patient has no right to end his own life by insisting, for example, that surgeons remove a donor kidney or heart that had already been implanted. On the other hand, if the State *did* permit this type of life-ending physician assistance, how could it argue that it is rational not to permit the same patient to obtain a lethal dose of medication from a physician for the same ultimate purpose?

Nor, finally, can the line be defended on the basis of a difference — whether in kind or degree — in the risks involved. As we have shown, all the risks of error and coercion are at least as great with respect to what the State permits as to what it forbids. See *supra* pp. 38-39. Likewise, the argument from medical necessity — that patients will not endure technologically-advanced treatments without the option of voluntarily seeking physician assistance in dying — applies with the same force on both sides of the state-drawn line. See *supra* p. 37.

Indeed, the very way the line developed underlines the impossibility of defending it. The statutes at issue in this case admit by their terms of no exceptions for those receiving life-sustaining treatment. Those exceptions are part of the gloss put on the statutes by a series of decisions of the New York courts. Because the resulting legal regime is thus not a reflection of any coherent legislative judgment — because it does not "establish classifications that accommodate competing concerns both public and private,"

Plyler v. *Doe*, 457 U.S. at 216 — it is hardly surprising that petitioners' *post hoc* rationalizations of the lines drawn by the State fall so far short of the mark. Cf., e.g., *United States* v. *Virginia* 116 S.Ct. 2264, 2275 (1996) (rationales offered only in hindsight not credited). Yet the fact that the line at issue here may in this sense be explicable as an historical vestige cannot itself save it. For even when the historical record can *explain* an anomaly, "an explanation is not the same as a justification." *Norman* v. *Reed*, 502 U.S. 279, 294 n. 10 (1992). See also, *e.g.*, *Allegheny Pittsburgh Coal Co.*, 488 U.S. at 344-346 & n. 4 (when a policy that might be sound in the abstract is applied in an "aberrational" way that creates an irrational disparity, it violates equal protection); accord *Nordlinger* v. *Hahn*, 505 U.S. 1, 15 (1992) (upholding similar scheme that was intentionally adopted).[25]

B. The Distinction Between Terminal Sedation and Prescription of Life-Ending Medication is Not Rational

If any doubt were to remain as to the irrationality of the line New

---

[25] The United States attempts to establish that New York's legislature has deliberately chosen to "preserve the distinction" between "refusing unwanted medical treatment" and "assisted suicide." Govt. Br. 16-17. The events to which it points do not support this contention. There is no evidence that the failure in 1965 to *delete* the assisted suicide laws was a reflection of any conscious thought whatever. Pet. App. 41a n. 6. The 1987 Orders Not to Resuscitate Act has nothing to do with the distinction to which the United States refers. Finally, the 1990 Health Care Agents and Proxies Act actually acknowledges the judicial decisions permitting the life-ending withdrawal or withholding of artificially-supplied food and water, explicitly permitting health-care agents to decide about this, provided the wishes of the principal are known to the agent, N.Y. Public Health Law §2982(2). The legislative caveat quoted by the United States, Govt. Br. 18, merely makes clear that the legislation was not intended as a substantive expansion of the rights recognized by the New York courts. See N.Y. Pub. Health Law § 2989.

Because the line drawn by the State here has endured merely through legislative inertia, this Court's deference is certainly less warranted. Indeed, the lack of evidence of "careful [legislative] consideration" and the doctrines requiring this Court to "avoid unnecessary, or unnecessarily broad, constitutional adjudication," *Thompson v. Oklahoma*, 487 U.S. 815, 857-858 (1988) (O'Connor, J., concurring in judgment), warrant consideration of the approach advocated by Judge Calabresi in the court below. Pet. App. 35a-62a.

York has drawn between those who are on life support and those who are not, the *other* line drawn by the State — in permitting physician assistance in the voluntary ending of the life of a person who is not (yet) on life-sustaining treatment, by the administration of terminal sedation followed by the withholding of nutrition and hydration, see AMA Br. in *Glucksberg* 10 ("sedation and withdrawal of treatment") — renders indisputably and utterly irrational the ban on physician provision, to identically-situated patients, of a simple, life-ending prescription.

Neither petitioners nor their *amici* attempt to defend this extraordinary distinction. Even if the State were found to be appropriately furthering some purpose by banning physician provision, to suffering terminally-ill patients, of requested life-ending prescription drugs while at the same time permitting those on life support to request assistance in the life-ending withdrawal of life-sustaining treatment, New York's regime would not be a rational means of serving any such purpose precisely because it exempts the procedure of physician-administered terminal sedation.

What purpose could possibly be "rationally" furthered by permitting one who is not dependent on life support to seek physician assistance to end his own life — but only if he is willing to do so in a way that is horrific and cruel: by consenting to be made unconscious, rendering him dependent on life support (in the form of artificial nutrition and hydration) if he is to remain alive, and then deliberately causing his own death by having a physician *withhold* it?

The permitted means of assistance — to induce barbiturate coma and then starve the person to death — is gruesome regardless of the patient's anesthetized state. For one who is *not* in a coma to be *rendered* unconscious — in order to permit the atrophy of a week- or two-week-long process of starvation and dehydration — is a profound affront to the dignity of the person. Indeed, this Court has recognized in the Eighth Amendment setting that, even for capital murderers sentenced to be punished by death, a method of ending life that involves "unnecessary pain," *Louisiana* v. *Resweber*, 329 U.S. 459, 463 (1947) (opinion of Reed, J.) or "a lingering death," *In re Kemmler*, 136 U.S. 436, 447 (1890), is unconstitutionally "cruel." See U.S. Const. Amend. VIII.

Literally every interest advanced by the State to defend its

prohibition on the prescription of life-ending drugs is present equally — if not more so — when the physician administers barbiturates to induce what is to be a terminal coma. Yet the State restricts only those who seek the former. There is no rational argument in favor of a legal scheme that permits a dying patient to obtain active assistance to end his life, but only if he does so in a way that is particularly gruesome or terrible or does profound dishonor to the human body and spirit, and that indeed entails a sacrifice of what all would presumably concede to be a constitutional right — the right *not* to be rendered unconscious and dependent.

Surely the State cannot permit assistance in dying only to those patients willing and able to endure the extreme hardship or further suffering involved in accepting terminal sedation. This distinction, drawn but not defended by the State of New York, essentially defines "caprice."[26] Particularly in light of the legal availability of terminal sedation, then, the criminal ban on the prescription of life-ending drugs cannot be upheld as a rational means of furthering any legitimate purpose.

CONCLUSION

The judgments of the Courts of Appeals here and in *Washington* v. *Glucksberg*, No. 96-110, should be affirmed.

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT

REPLY BRIEF FOR PETITIONERS VACCO AND PATAKI

I. PLAINTIFFS MISCHARACTERIZE NEW YORK LAW WITH RESPECT TO ITS TREATMENT OF PATIENTS WHO EXERCISE THE RIGHT TO REFUSE OR WITHDRAW FROM MEDICAL TREATMENT

As a matter of law in New York, a mentally competent adult patient, whether or not terminally ill, has a right to be free of bodily intrusion and, as a corollary, can refuse or withdraw informed consent to medical treatment, including that

which is life-sustaining. *See, e.g., Fosmire v. Nicoleau*, 551 N.E.2d 77 (N.Y. 1990) (patient not terminally ill); *Matter of Storar*, 420 N.E.2d 64 (N.Y. 1981) (patient terminally ill). A physician may not proceed with treatment in such a circumstance. *Rivers v. Katz*, 495 N.E.2d 337, 342-43 (N.Y. 1986). Regardless of the presence of terminal illness, New York law honors the voluntary request of a competent patient to withdraw from or refuse medical treatment.

Plaintiffs are simply wrong in suggesting (Br. pp. 10-11) that New York inquires into the motivation of individuals who are not terminally ill and seek to exercise this right. Plaintiffs mischaracterize *Fosmire v. Nicoleau*, which held that a competent adult who had no terminal illness had the right to refuse life-sustaining blood transfusions. Although the Court of Appeals observed, as plaintiffs note, that the patient did not "want to die," 551 N.E.2d at 82 n. 2, this lack of intent to die was not the basis for its holding that the patient should have been permitted to refuse treatment. Rather, said the Court, although "[t]he State will intervene to prevent suicide," "merely declining medical care, even essential treatment, is not considered a suicidal act." *Id.* at 82.

This is hardly the same thing as "remaining neutral in the face of an informed and voluntary decision by a physically able adult to starve to death." *Cruzan v. Director, Missouri Department of Health*, 497 U.S. 261, 280 (1990). Thus, in *Von Holden v. Chapman*, 450 N.Y.S.2d 623 (4th Dept. 1982), the State was allowed to insert a nasogastric feeding tube in a prisoner in custody in a state psychiatric center who had refused to eat for 22 days but was receiving no medical treatment. Plaintiffs' characterization of the case to the contrary (Br. p. 11) is incorrect. *See id.* at 627 ("essential dissimilarity" of "right to decline medical treatment" and "right to take one's life").

There is thus no basis for plaintiffs' unsupported assertion (Br. pp. 11, 47) that "assisting one whose specific intent [is] to kill himself by the disconnection or termination of some life-sustaining treatment . . . could violate New York's law against aiding in suicide." Regardless of either the presence of terminal illness or the underlying intent, New York honors the voluntary decision of a competent patient to withdraw from or refuse medical treatment. *See infra* n. 3.

II. THE SUBSTANTIVE COMPONENT OF THE FOURTEENTH AMENDMENT DUE PROCESS CLAUSE DOES NOT ENCOMPASS A FUNDAMENTAL RIGHT TO OBTAIN THE ASSISTANCE OF A PHYSICIAN IN COMMITTING SUICIDE

Despite the highly charged and inconsistent terms used (Pl. Br. pp. 1, 3, 19, 24), the constitutional "right" plaintiffs are seeking is the right of mentally competent, terminally ill adults to obtain a physician's assistance in committing suicide (J.A. 28).[1] *See Reno v. Flores*, 507 U.S. 292, 302 (1993) (" 'substantive due process' analysis must begin with a careful description of the asserted right"). Any such asserted right is entitled to heightened constitutional protection under the substantive component of the Fourteenth Amendment's Due Process Clause only if it is " ' "so rooted in the traditions and conscience of our people as to be ranked as fundamental." ' " *Id.* (citations omitted). Whether viewed purely from the standpoint of historical practice or considered in terms of the substantive due process rights that have heretofore been protected by this Court, the asserted right to a physician's assistance in committing suicide cannot be deemed fundamental.

The simplest due process approach to this case is the one correctly taken by the court below. The Second Circuit, rec-

ognizing that fundamental liberties are only "those that are 'deeply rooted in this Nation's history and tradition,' " noted that "the very opposite is true" of the right asserted by plaintiffs (J.A. 231-232) (quoting *Moore v. City of East Cleveland*, 431 U.S. 494, 503 (1977)). Citing scholarship demonstrating that the English common law, the American colonies, and most states at the time of the enactment of the Fourteenth Amendment prohibited suicide and attempted suicide (J.A. 232-33), *see also* T. Marzen, et al., *"Suicide: A Constitutional Right?"—Reflections Eleven Years Later*, 35 Duq. L. Rev. 261, 262-268 (1996); Br. of Members of New York and Washington State Legislatures, pp. 8-23, the court then observed that most states today make assistance in suicide a crime, while no state has ever recognized a "right" to assisted suicide (J.A. 233).[2] Acknowledging the need to exercise restraint " 'because the guideposts for responsible decision-making in this uncharted area are scarce and open-ended,' " the Second Circuit properly declined "to identify a new fundamental right" (J.A. 233-34) (quoting *Collins v. City of Harker Heights*, 503 U.S. 115, 125 (1992)). *See also Michael H. v. Gerald D.*, 491 U.S. 110, 122 n.2 (1989) ("[t]he protection need not take the form of an explicit constitutional provision or statutory guarantee but it must at least exclude . . . a societal tradition of enacting laws *denying* the interest").

Plaintiffs acknowledge "that most states historically have forbidden physicians to provide life-ending medication to their suffering patients" (Br. p. 27) but ask this Court to locate substantive due process rights in "historically enduring principles" as well as "concrete historical practices" (Br.

[2] In the past five years, the legislatures of fifteen states have debated the issue and decided to retain their prohibitions, and nine other states have strengthened their statutory prohibitions. Br. of Sen. Orrin Hatch et al., p. 25. Clearly, "the balance struck by this country," whether regarded in terms of "the traditions from which it developed" or "the traditions from which it broke," *see Poe v. Ullman*, 367 U.S. 497, 542 (1961) (Harlan, J., dissenting), is overwhelmingly to prohibit physicians from prescribing medications for the purpose of causing death.

p. 22). Even if this Court accepts the invitation, the conclusion remains the same. The principles underlying this Court's prior recognition of substantive due process rights do not embrace a right to a physician's assistance in suicide.

Plaintiffs' argument rests primarily and unsuccessfully on this Court's decisions in *Cruzan* and *Planned Parenthood of Southeastern Pennsylvania v. Casey*, 505 U.S. 833 (1992). Plaintiffs first contend (Br. pp. 19-21) that the asserted right of a "competent, terminally ill patient" to choose assisted suicide is congruent to the right recognized in *Cruzan*, which, according to plaintiffs, extends only to a seriously ill or dying person. There is no such limitation in *Cruzan*. The Court in that case mentioned that Nancy Cruzan had "virtually no chance of recovering her cognitive faculties," 497 U.S. at 265, purely as a descriptive matter. The right to withdraw from or refuse treatment extends to all. *See Schloendorff v. Society of New York Hospital*, 105 N.E.2d 92, 93 (N.Y. 1914) (Cardozo, J.). And as the *Cruzan* Court also made clear, the exercise of the right is readily distinguishable from any suicidal act, which may be prevented by the state. 497 U.S. at 280.

Plaintiffs' strained reading of *Cruzan* and the right it recognizes is evidenced also in their argument (Br. p. 25) that the recognition of "bodily integrity," 497 U.S. at 269, encompasses both a right to avoid bodily intrusion and a right to obtain "desired medical intervention."[3] But—as the cases cited by plaintiffs indicate and the word itself suggests[4]—"integrity" is a defensive right only. *See Washington v. Harper*, 494 U.S. 210 (1990) (right to avoid unwanted administration of antipsychotic drugs); *Rochin v. California*, 342

[3] Underlying plaintiffs' argument is the entirely unsupported proposition that the prescribing of drugs to kill a patient is a medical treatment. *See* Br. of American Medical Association, et al., pp. 4-5.

[4] The word derives from the Latin *integer*, meaning intact or untouched.

U.S. 165 (1952) (right to avoid forcible stomach pumping); *Schloendorff*, 105 N.E.2d 92 (common law right to damages for unconsented-to medical treatment). Indeed, this Court in *Casey* identifies *Cruzan*, *Harper*, *Rochin* and other cases only as "recognizing limits on governmental power to mandate medical treatment or to bar its rejection." *See* 505 U.S. at 857. This does not encompass or suggest a limitation on governmental power to prohibit death-causing intervention.

Nor is it true, as plaintiffs claim (Br. p. 29), that *Cruzan*'s recognition of a right to refuse treatment "can only be understood as a recognition of the liberty . . . to physician assistance in ending one's life." The individual interest at issue in *Cruzan* is not in death but in terminating treatment. *See* 497 U.S. at 279 ("a constitutionally protected right to refuse life-saving hydration and nutrition"); *id.* at 287 (O'Connor, J., concurring) ("a protected liberty interest in refusing unwanted medical treatment"); *id.* at 302 (Brennan, J., dissenting) ("a fundamental right to be free of unwanted life support"). While the Court in *Cruzan* notes that "[t]he choice between life and death is a deeply personal decision," the holding of the case is simply that the State "may legitimately seek to safeguard the personal element of this choice" with a heightened evidentiary standard. 497 U.S. at 281.

Plaintiffs' argument is not bolstered by reference to the recognition in *Casey* that the substantive due process right identified in *Roe v. Wade*, 410 U.S. 113 (1973), embraces both a right to choose and a right to avoid abortion. *See Casey*, 505 U.S. at 859. This shows, plaintiffs say (Br. p. 30), "that the liberty to make protected decisions is a two-way street." But this changes nothing about *Cruzan*, because the right to refuse treatment can by definition be exercised only defensively. In prohibiting assisted suicide, New York is not placing improper limits on which "way" the negative right in *Cruzan* will be exercised; there is only one way it *can* be exercised.[5]

[5] This is why plaintiffs' concerns about "a State deciding to prohibit extraordinary treatment for suffering patients who are about to die" (Br. p. 30) are inapposite. The fact that a negative right to refuse treatment can be exercised only in one "way" has no bearing on the viability of any positive right to receive or demand medical treatment.

See G. Scofield, *Exposing Some Myths About Physician-Assisted Suicide*, 18 Seattle U. L. Rev. 473, 479 (1995) (acknowledgement of "negative right" to refuse treatment does not create a duty to respect "positive right" to physician assisted suicide). Rather, the State is applying a prophylactic rule to a dangerous and hitherto-unrecognized positive "right."

Nor is plaintiffs' argument more persuasive when it moves further from *Cruzan* in the direction of *Casey*. *Casey*'s relevance to the present case is extremely problematic. The reaffirmance in *Casey* of a woman's constitutionally-protected liberty interest in choosing an abortion was based largely on "the rule of *stare decisis*." 505 U.S. at 845-46; *see also id.* at 866-67 (relying on "precedential force" of *Roe v. Wade*). Moreover, *Casey* rested in part on the importance of the right it recognized to the achievement of gender equality. *See id.* at 852 (state cannot "insist, without more, upon its own vision of the woman's role"); *id.* at 856 ("the ability of women to participate equally in the economic and social life of the Nation has been facilitated by their ability to control their reproductive lives"). *See also* R. Ginsburg, *Speaking in a Judicial Voice*, 67 N.Y.U. L. Rev. 1185, 1200 (1992) (emphasizing "the women's equality dimension of the issue" in *Roe* and *Casey*). No comparable interest applies to physician assisted suicide.

Casey cannot be relied on in the present case, as plaintiffs attempt (Br. pp. 23-25), for its recognition that substantive due process protects "the most intimate and personal choices a person may make in a lifetime, choices central to personal dignity and autonomy" that "define the attributes of personhood," 505 U.S. at 851, or its understanding of the "intimate and personal" nature of a woman's "suffering." 505 U.S. at 851-852. This language, taken (as plaintiffs take it) literally

and out of the "unique" context of abortion, 505 U.S. at 852, would encompass a vast range of intimate personal decisions.

Plaintiffs implicitly recognize the potential for chaos in applying *Casey*'s language so literally. Thus, in an effort to assuage fears of widespread abuse, they define eligibility for the asserted right narrowly: one must be among the suffering terminally ill. In invoking *Casey*'s language, however, plaintiffs speak only in general terms of pain and personal autonomy, and liken the right they assert to other rights whose exercise is not limited to a specific segment of society. If, as plaintiffs suggest, the autonomy-based right to assistance in suicide can properly be exercised only by the terminally ill and "closely regulated" by the State, it is difficult to see how it can possibly be "fundamental."

Moreover, plaintiffs (Br. pp. 19-20) are suggesting that the terminally ill alone may obtain assistance in suicide because their quality of life is so diminished that "[t]he choice of how to die is the only choice left to [them]." This consolatory approach, requiring the creation of new rights when others cannot be exercised, is not how the acknowledgement of fundamental rights works. Nor is it apparent why this analysis limits the application of the right, for it can readily be said of anyone whose quality of life is, in his own or someone else's view, diminished in any significant way. And in any event, a judgment as to the "quality of life" is something that, according to this Court, a state need not make. *Cruzan*, 497 U.S. at 282. If a state may decline to make such a judgment, surely the Constitution does not require it to do so or to give effect to such a judgment.

Plaintiffs' argument that there is a fundamental right to assistance in suicide is undermined by an additional contradiction. On the one hand, they recognize the gravity and profundity of death and the irreducibly personal nature of dying. On the other hand, they suggest (Br. pp. 30-31) that "advances in medical technology" and "[t]he development of

increasingly sophisticated life-prolonging treatment" impart a new urgency to the right they assert. But the fact of death is a constant in nature and in human and American history. Neither its profundity nor its mystery nor its centrality has ever been deemed to justify a right to obtain assistance in committing suicide, even though the right to refuse treatment has always been recognized.[6] And though it may be that we die differently today than we did a hundred (or twenty) years ago, we do not necessarily die worse. Did death in an earlier age entail an end *less* "filled with life-encompassing pain, disintegration or suffering"? Given modern advances in pain relief and palliative care, it seems impossible, even when these advances are not fully deployed. *See generally* New York State Task Force on Life and the Law ("Task Force"), *When Death is Sought: Assisted Suicide and Euthanasia in the Medical Context* ("*When Death Is Sought*") 35-47 (1994). Neither the misery nor the mystery of death is a new phenomenon. The law has always treated them with appropriate solemnity, yet they have never been deemed to give rise to a right, "fundamental" or otherwise, to obtain assistance in suicide.

The right to assistance in suicide that plaintiffs claim can be found nowhere in the text of the Constitution. Its exercise has always been, and continues to be, prohibited by the great majority of the states. Nor can it be derived from either the language or the holding of *Cruzan* or *Casey*. It is, in plaintiffs' own formulation, activated by precisely the supposedly diminished quality of life of the terminally ill that is not constitutionally cognizable. And it is compelled neither by the profundity and mystery of death nor by the particular circumstances of dying in contemporary America. However the

---

[6] Plaintiffs suggest (Br. p. 32), absolutely without support, that "Due Process would not, in the 18th through mid-19th centuries, likely have been thought to include the right to avoid the artificial prolongation of life." On the contrary, as *Cruzan* recognized, the right derives unchanged from the English common law.

right to assistance in suicide is viewed, it is not "fundamental" and thus is not entitled to heightened protection under the Due Process Clause.

III. NEW YORK'S PROHIBITION OF ASSISTED SUICIDE IS A PERMISSIBLE MEANS OF VALIDATING ITS LEGITIMATE INTERESTS

The proper approach to a substantive due process case is clearly articulated in *Reno v. Flores*.[7] Any state infringement of a fundamental right must be "narrowly tailored to serve a compelling state interest," while "[t]he impairment of a lesser interest . . . demands no more than a 'reasonable fit' between governmental purpose . . . and the means chosen to advance that purpose." *Reno v. Flores*, 507 U.S. at 302, 305. As demonstrated in the preceding section, the right asserted by plaintiffs is not "fundamental" in nature. Thus, as long as there is a "reasonable fit" between New York's purposes in prohibiting assisted suicide and the prohibition itself, the law is not unconstitutional.

The interests asserted by New York demonstrate the reasonableness of its prohibition of assisted suicide. As discussed at length in the equal protection context in defendants' main brief (pp. 20-26), the State asserts the interest in "the protection and preservation of human life" that, according to *Cruzan*, justifies state "laws imposing criminal penalties on

---

[7] The standard by which to judge the validity of New York's prohibition does not, as plaintiffs argue (Br. p. 34), derive from *Casey*. The plurality opinion in that case affirmed the conclusion of *Roe v. Wade* that women have a substantive due process right to abortion that can be limited only by state regulation that does not impose an "undue burden" on or a "substantial obstacle in the path of" the exercise of that right. *Casey*, 505 U.S. at 877. *Casey*'s approach presupposes a substantive right that is deemed "fundamental" under the Due Process Clause, a right not found here. And if, as the United States Solicitor General proposes, the "undue burden" standard is something less than strict scrutiny, then New York's prohibition survives that review because, as plaintiffs have conceded (Br. p. 37), the State's interests are compelling.

one who assists another to commit suicide." 497 U.S. at 280. Plaintiffs now argue (Br. p. 35) that the State's interest is "fatally undermined" by its authorization of "the life-ending withdrawal of treatment." As *Cruzan* makes clear, however, the criminalization of assisted suicide can coexist with the right to terminate treatment, which derives from the common law of informed consent, may be exercised by the terminally ill or anyone else, and cannot be absolutely prohibited by a state. *See Cruzan*, 497 U.S. at 270, 279, 281-82.

This analysis does not change when the use of drugs with a "double effect" is considered. As medical literature cited by plaintiffs demonstrates, physicians recognize "the primacy of comfort as the dominant goal of care." N. Cherney & R. Portenoy, *Sedation in the Management of Refractory Symptoms: Guidelines for Evaluation and Treatment*, 10 J. Palliative Care 31, 35 (1994). Sometimes, achievement of this goal requires that a physician administer a pain-relieving drug in doses large enough to have the possible side effect of fatal depression of respiration. This potential "double effect" is accepted throughout medicine, and is acknowledged, for example, whenever physicians perform surgery that entails (or involves the use of an anaesthetic that entails) a foreseeable risk of unintended death. Because the physician's purpose is to cure or palliate rather than kill, administration of the drug is not assisted suicide.

Similarly, patients near death occasionally suffer such "refractory" pain that the primary goal of "adequate relief of intolerable symptoms" requires "impair[ment] of the [patient's] conscious state." *Id.* at 34. The physician administers a sedative—an opioid, a benzodiazepine, or (rarely) a barbiturate—which provides relief but increases the risk of accelerating death. *Id.* at 35. Again, this is no different from any other medical procedure that balances the frequently incompatible goals of "prolonging survival," "optimizing comfort" and "optimizing function." *Id.* at 34. Sometimes, too, a physician will administer a sedative prior to fulfilling

a patient's informed and competent request to terminate life-prolonging treatment, *see* R. Truog, et al., *Barbiturates in the Care of the Terminally Ill*, 327 New Eng. J. Med. 1678, 1680 (1992), thus properly minimizing the patient's suffering. But plaintiffs' repeated suggestion (Br. pp. 15-16, 49-50) that a patient may "consen[t] to be made unconscious, rendering him dependent on life support . . . and then deliberately caus[e] his own death by having a physician withhold" life-sustaining treatment is utterly without support in the record and unquestionably outside the bounds of accepted medical practice.

Indeed, the very article on which plaintiffs rely for the concept of "terminal sedation" rejects any notion that it is a practice used to cause or induce death:

> Although proponents of physician-assisted suicide and euthanasia contend that terminal sedation is covert physician-assisted suicide or euthanasia, the concept of sedating pharmacotherapy is based on informed consent and the principle of double effect.

P. Rousseau, *Terminal Sedation in the Care of Dying Patients*, 156 Arch. Intern. Med. 1785, 1785-86 (1996). The predicate for terminal sedation is "refractory" physical and psychosocial symptoms, that is, symptoms that are unresponsive to treatment. *Id.* "Although relief of symptoms with a preserved function is the usual goal of medicine . . . relief of suffering may predominate over all other considerations, including maintenance of consciousness." *Id.* But the practice contemplates only the level of medication required to control symptoms, and thus not all will be rendered unconscious. *Id.* Finally, the practice envisions only a "current do-not-resuscitate order" so that when death arrives, unwanted life-prolonging measures are not used. *Id.*

At least as important as the State's interest in protecting human life is its interest in avoiding error and abuse. As plaintiffs themselves note (Br. p. 37), "the protection of

people who might seek to end life mistakenly or under pressure is a compelling interest." The dimensions of this interest are discussed at length in defendants' main brief (pp. 27-32) and many *amicus* briefs, and will only be summarized here: the risk of error inherent in any determination of "terminal" illness, given the absence of any clear-cut definition of the term and the facts that doctors typically make poor judgments about the period of life remaining to the terminally ill and that their prognoses of survival time fail to account for variations in treatment, *see* Br. of American Geriatrics Society, pp. 16-21, National Hospice Organization, pp. 14-15; the impossibility of reliably measuring pain or suffering if they are to be aspects of a valid exercise of the right to assistance in suicide, *see* Br. of American Geriatrics Society, p. 25; the problematic nature of the voluntariness of a request for suicide and the competence of one who makes such a request in light of the possibility of inadequately-treated pain or undiagnosed and undertreated depression, *see* Br. of Project on Death in America, et al., pp. 15, 23, American Medical Association, et al., p. 13, American Geriatrics Society, p. 21; the erosion of voluntariness attributable to overwhelming financial pressures, whether exerted by families or by managed care organizations, with their strong economic incentives to limit medical treatment, *see* Br. of International Anti-Euthanasia Task Force, *passim*, American Medical Association, et al., p. 13, Project on Death in America, p. 20; the same concern about voluntariness due to the imbalance and dependency inherent in the physician-patient relationship, *see* Task Force, *When Death Is Sought* at 73, 121; the fact that the risk of error and abuse is enhanced for the poor and minorities, who are especially likely to receive inadequate diagnosis and treatment and especially vulnerable to financial pressures, *see* Br. of American Medical Association, et al., p. 13; and the fact that any regulation of decisions about assisted suicide would require an unprecedented intrusion into the physician-patient relationship, *see* Br. of American Medical Association, et al., p. 17.

Plaintiffs acknowledge the legitimacy of these concerns, but suggest (Br. pp. 37-38) that they do not "require a complete ban on the provision of life-ending medication" to those with "the right to self-administer such a prescription drug." The sole possessor of such a right, according to plaintiffs (Br. p. 21), is the "competent, terminally ill patient [who may] choose whether to endure a death marked by intolerable agony, degradation, and suffering." Plaintiffs reject the possibility that the freedom they claim will perforce be extended to others who (they agree) do not have a constitutional right to exercise it. On the other hand, they insist (Br. p. 38) that the fact that New York limits but does not ban the withdrawal from life-prolonging treatment means that "less restrictive measures" than an outright prohibition must be employed to regulate assisted suicide as well.

Plaintiffs' argument collapses under the weight of this contradiction. As noted in defendants' main brief (pp. 21-24), if the justification for invalidating New York's ban is the equivalence between assisted suicide and termination of treatment, then the right claimed by plaintiffs simply cannot be limited as they say it must be in order to survive constitutional scrutiny. If, however, the right can be exercised only upon the error-prone determination of far more factors than are entailed in deciding whether to give effect to a request to withdraw from life-prolonging treatment, then the greater risk of error connected with physician assisted suicide justifies New York's prohibition of it.

Even if plaintiffs were somehow correct in suggesting that the "right" to assistance in suicide can be limited to the terminally ill, they remain wrong in the central assertion of their argument (Br. pp. 38-39): that "[t]he precise risks about which the State claims to be concerned [with respect to assisted suicide] are of course equally present" in decisions to withdraw from life-prolonging treatment. For several reasons, the risks are greater with physician assisted suicide.

First, patients wishing to terminate life support are, by definition, already receiving substantial medical care, whereas those who choose assisted suicide may be doing so in lieu of unavailable or inadequate medical attention. Br. of American Geriatrics Society, p. 12. The risk of error and involuntariness due to, for example, inadequate pain control or undiagnosed and untreated depression is thus far greater with assisted suicide, even among the terminally ill.

Moreover, severely ill persons who wish to kill themselves share with other suicidal individuals a clinical profile characterized by depression and extreme anxiety, whereas such a profile is not typical of seriously ill patients who elect to terminate life-supporting medical interventions. *See* Br. of American Suicide Foundation (*Glucksberg*), pp. 5-15. In other words, when comparing risks, a terminally ill patient's choice of suicide is substantially less likely to be truly voluntary than a terminally ill patient's choice to terminate treatment.

Furthermore, as demonstrated by the amicus brief of the American Geriatrics Society (pp. 16-21), predictions of death from the natural course of serious illness can be formulated only as probability judgments encompassing a wide range of time spans for virtually all serious illnesses.[8] This inherent uncertainty of prognostic data severely undermines plaintiffs' case, which distinguishes those in "the final stages of a terminal illness" by virtue of the supposed certainty of their imminent deaths. An individual who discontinues treatment because he mistakenly thinks death is imminent may well, as plaintiffs put it, survive and "live to rejoice" (Br. p. 20). But many individuals who request assistance in suicide on the basis of the same, inherently unreliable information will have

---

[8] For example, "the actual survival curve for persons with less than a 50% chance to live six months" according to one prognostic model reveals that most "terminal" illnesses have "a substantial 'tail' of long term survivors: more than one-fifth of some patient groups are alive after two years." J. Lynn, et al., *Defining the 'Terminally Ill:' Insights from SUPPORT*, 35 Duq. L. Rev. 311, 320 (1996).

their lives cut needlessly short. These differences in the risk attendant upon the uncertainty of a prognosis of terminal illness justify New York's prohibition of assisted suicide while it permits termination of treatment.

The prevalence of managed care increases the risk of error by and abuse of patients who choose suicide relative to those who withdraw from treatment. The brief *amicus curiae* of the International Anti-Euthanasia Task Force (p. 30) notes the cost-effectiveness of "managed death." To put it bluntly, it is cheaper to kill patients at once than to treat them at length. As one article notes, patients may raise the possibility of assisted suicide early in the disease process, perhaps upon "the initial announcement . . . of a frightening diagnosis," whereas discussions and decisions substantially in advance of death about terminating life-prolonging treatment are uncommon, despite efforts to promote earlier decision-making. S. Wolf, *Physician-Assisted Suicide in the Context of Managed Care*, 35 Duq. L. Rev. 455, 474 (1996). Moreover, research that projects savings from such termination "has concluded those savings are modest at best," perhaps because those who terminate life-prolonging treatment then require costly palliative care instead. *Id.* at 475. Thus, there are significant financial incentives in the one situation that are often not present in the other.

Nor are the risks which would accompany legalization of assisted suicide speculative, for as noted in defendants' main brief (p. 24 n. 13), the actual experience of the Netherlands with euthanasia and assisted suicide is instructive. First, it is abundantly clear that Dutch guidelines designed to assure, *inter alia*, the voluntariness of the choice of death are frequently neglected. *See, e.g.*, L. Kass & N. Lund, *Physician-Assisted Suicide, Medical Ethics and the Future of the Medical Profession*, 35 Duq. L. Rev. 395, 412-13 (1996). Furthermore, the very article upon which plaintiffs rely to dismiss defendants' concerns about adoption of the Dutch approach reveals that in 1995, 0.7 percent of deaths in the

Netherlands involved ending a patient's life without his or her explicit request. P. van der Maas, et al., *Euthanasia, Physician-Assisted Suicide, and Other Medical Practices Involving the End of Life in the Netherlands, 1990-1995*, 335 New Eng. J. Med. 1699, 1700 (1996). The equivalent in the United States, where there are 2.3 million deaths annually, is more than forty deaths a day attributable to nonvoluntary euthanasia.[9] The risk is very real.

Thus, no matter what the scope of the asserted "right," whether extended only to the terminally ill or otherwise, New York may ban its exercise entirely. *Cruzan* observes that even as a state must recognize the right to refuse medical treatment, it may assert its interest in the protection of human life by prohibiting assistance in suicide. Moreover, there are many reasons to believe that the risk of error and abuse is significantly greater with assisted suicide than with withdrawal from treatment, especially under the regime of managed care that increasingly dominates the provision of health care services in America. These state interests are concededly not only rational but compelling. The difference in nature and risk between assisted suicide and withdrawal from life-prolonging treatment means that prohibiting the former while allowing the latter "is not excessive in relation to th[ose] valid purpose[s]." *Reno v. Flores*, 507 U.S. at 303. Accordingly, New York's ban on assisted suicide does not violate the substantive component of the Due Process Clause.

---

[9] Plaintiffs, suggesting (Br. p. 41 n. 21) that there may be more such nonvoluntary euthanasia in the United States than in the Netherlands, cite a study suggesting that 7% of critical care nurses in the United States have engaged in nonvoluntary euthanasia, while ignoring the fact that 23% of Dutch physicians have done so. *See id.* at 1701. Moreover, the study they cite has been widely and severely criticized for its methodological flaws. *See, e.g.*, C. Scanlon, *Euthanasia in Nursing Practice—Right Question, Wrong Answer*, 334 New Eng. J. Med. 1401 (1996).

IV. NEW YORK'S PROHIBITION OF ASSISTED SUICIDE DOES NOT VIOLATE THE EQUAL PROTECTION CLAUSE

The foregoing discussion leaves little to add to the exploration of the equal protection issue in defendants' main brief. The assumed existence of a substantive due process right to withdraw from life-prolonging treatment does not suggest an equivalent right to assistance in suicide. *See San Antonio Indep. Sch. Dist. v. Rodriguez*, 411 U.S. 1, 33 (1973) ("it is not the province of this Court to create substantive constitutional rights in the name of guaranteeing equal protection of the laws"). New York law, of course, makes no "classification" of the sort essential for equal protection analysis. All New Yorkers may exercise the right to terminate unwanted medical treatment; none may exercise the "right" to assist or be assisted in suicide. New York's policy thus cannot violate the Equal Protection Clause. *See, e.g., Personnel Administrator of Massachusetts v. Feeney*, 442 U.S. 256, 271-274 (1979) (disproportionate negative impact of facially neutral and otherwise valid state law does not violate equal protection unless it affects a historically-disadvantaged group and was enacted for a discriminatory purpose); Pl. Br. p. 10 (acknowledging that terminating treatment is not viewed under New York law as a suicidal act).

But even if New York's approach is deemed a "classification," it survives constitutional scrutiny. As plaintiffs concede (Br. pp. 44-45), the Equal Protection Clause requires in the present case only that a statutory classification be rationally related to a legitimate state purpose. Like the court below, plaintiffs rely (Br. p. 45) on the supposed similarities between "providing life-ending medication" and "withdrawing life-sustaining treatment." For the reasons discussed in defendants' main brief and in the preceding section of this brief, however, assisted suicide and withdrawal from life-prolonging treatment differ both inherently and with respect to the risks they present. It was reasonable for the New York Legislature to consider these differences and prohibit one practice while permitting the other.[10] *See* Pl. Br. p. 37 (State's interests in preventing abuse and mistake are "compelling").

We note in conclusion that the balance struck by the New York Legislature between the exercise of individual autonomy by those who truly want to commit suicide and the protection of the many vulnerable citizens who do not is desirable but not inevitable. The fact remains, however, that never once in American history has a patient lawfully obtained a physician's assistance in committing suicide. A declaration that there is a right to do so would be a leap—from near universal prohibition to constitutional obligation—unprecedented in this Court's history. There is no basis for such a leap.

---

[10] Plaintiffs' argument (Br. p. 48 n. 25), following the concurrence of Judge Calabresi in the court below, that there is no evidence of recent legislative consideration of the issues in this case, is belied by, *inter alia*, (1) the 1990 enactment of the New York Health Care Proxy Act, which permits a "health care agent" to make decisions about withdrawal of artificial nutrition and hydration, but "is not intended to permit or promote suicide, assisted suicide, or euthanasia," N.Y. Pub. Health L. § 2989(3) (McKinney 1993 & Supp. 1996); and (2) the presentation in 1994 to the Legislature of the report of the Task Force, *When Death Is Sought*, which unanimously recommended that the law not be changed to permit assisted suicide, *see When Death Is Sought* at xii.

CONCLUSION

THE JUDGMENT OF THE UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT SHOULD BE REVERSED WITH RESPECT TO ITS EQUAL PROTECTION HOLDING AND OTHERWISE UPHELD.

Dated: Albany, New York
December 24, 1996

Respectfully submitted,

QUESTION PRESENTED

Whether a State that allows competent, terminally ill persons to refuse life-sustaining medical treatment violates the Equal Protection Clause if it makes it unlawful for physicians to prescribe lethal dosages of medication for use by such persons who request the medication for the purpose of ending their lives.

v.

TIMOTHY E. QUILL, ET AL.

ON WRIT OF CERTIORARI
TO THE UNITED STATES COURT OF APPEALS
FOR THE SECOND CIRCUIT

BRIEF FOR THE UNITED STATES
AS AMICUS CURIAE SUPPORTING PETITIONERS

INTEREST OF THE UNITED STATES

This case raises the question whether the Equal Protection Clause of the Fourteenth Amendment permits a State to prohibit a physician from prescribing lethal dosages of medication for a competent, terminally ill adult who requests such medication for the purpose of ending his life, while allowing a competent, terminally ill adult to refuse or discontinue artificial life support. The court of appeals concluded that such competent, terminally ill adults are similarly circumstanced and that the State has insufficient justification for distinguishing between the

prescription of lethal medication and the termination of life-sustaining medical treatment, including the withdrawal of hydration, feeding tubes, respirators, and similar devices. See Pet. App. 29a-33a.

The United States owns and operates numerous health care facilities that permit patients to refuse life-sustaining treatment, but do not permit physicians either to administer or to prescribe medications for the purpose of ending a patient's life. For example, the Department of Veterans Affairs (VA) operates 173 medical centers, 126 nursing homes, and 55 in-patient hospices. A VA policy manual generally permits the withholding and withdrawal of life-sustaining treatment in response to a patient's request, but prohibits "the active hastening of the moment of death." Department of Veterans Affairs, Manual M-2 ¶ 31.08(c) (Nov. 1991). Similarly, the VA's hospice program guide states that "[t]he hospice philosophy does not condone nor participate in any action intended to hasten * * * the patient's death." Department of Veterans Affairs, Veterans Health Admin., Program Guide 1140.10: Hospice Program ¶ 1.02(b) (Sept. 1996). A similar practice is followed by the military services, which operate 124 medical centers, the Indian Health Service, which operates 43 hospitals, and the National Institutes of Health, which operate a clinical center.

In addition, Pub. L. No. 101-508, § 4206(a)(2), 104 Stat. 1388-115, requires all health care providers receiving Medicaid or Medicare first, to inform all competent adults about state laws concerning the right of patients to refuse life-sustaining treatment and second, to record any advance directives the patient might have. 42 U.S.C. 1395cc(f). No federal law authorizes or encourages physician assisted suicide.

The United States therefore has a substantial interest in the resolution of the question presented in this case.

STATEMENT

1. Under New York law, "[a] person is guilty of manslaughter in the second degree when * * * [h]e intentionally causes or aids another person to commit suicide." N.Y. Penal Law § 125.15(3) (McKinney 1987). Similarly, he is "guilty of promoting a suicide attempt when he intentionally causes or aids another person to attempt suicide." *Id.* § 120.30. Three terminally ill patients and three physicians who treat terminally ill patients filed suit in the United States District Court for the Southern District of New York alleging that those statutes violate the Due Process and Equal Protection Clauses of the Fourteenth Amendment to the extent that they bar physicians from prescribing lethal dosages of medication for mentally competent, terminally ill patients who request this medication for the purpose of ending their lives.

At the time of the filing of the complaint, each of the patient plaintiffs was a mentally competent adult in the final stages of a terminal illness. Patient Jane Doe, a retired teacher, suffered from a thyroid cancer that made it necessary to implant a feeding tube in her stomach; she was unable to reduce her pain to a manageable level. Pet. App. 5a, 7a-8a. Patient George A. Kingsley, a publishing executive, was infected with AIDS and suffered a host of related illnesses, including parasitic infections that caused brain lesions, pain, diarrhea, exhaustion and wasting, and a virus that was robbing him of his sight. *Id.* at 5a, 8a-9a. Patient William A. Barth, a former fashion editor,

also suffered from AIDS and related illnesses, including skin cancer, pneumonia and parasitic infections that caused diarrhea, fevers, wasting and "pain and suffering" that he could "no longer endure." *Id.* at 5a, 9a-10a. Each sought "necessary medical assistance in the form of medications prescribed by [her or his] physician" in order to hasten death "in a certain and humane manner." *Id.* at 5a. Each died before the district court ruled on their motion for a preliminary injunction.

The physician plaintiffs alleged that they treated "mentally competent, terminally ill patients" who "experience[d] chronic, intractable pain and/or intolerable suffering." Pet. App. 5a. They alleged that, under certain circumstances, it would be consistent with the standards of medical practice to prescribe medications that these patients could self-administer in order to hasten death. *Ibid.*

The district court dismissed plaintiffs' claims. Pet. App. 63a-78a. It rejected their due process claim on the grounds that there was no fundamental liberty interest in physician assisted suicide. *Id.* at 76a. It then rejected their equal protection claim, finding a reasonable and rational basis to distinguish between the right to refuse medical treatment and the claimed right to physician assistance in committing suicide. Citing the State's interests "in preserving life, and in protecting vulnerable persons," as well as the State's "further right to determine how these crucial interests are to be treated," the court found it "hardly unreasonable or irrational for the State to recognize a difference between allowing nature to take its course, even in the most severe situations, and intentionally using an artificial death-producing device." *Id.* at 77a.

2. a. The court of appeals reversed. Pet. App. 1a-62a. The court found no substantive due process violation, concluding that the New York statutes do not infringe any fundamental liberty interest because assisted suicide is neither "so implicit in our understanding of ordered liberty that neither justice nor liberty would exist if it were sacrificed" nor "deeply rooted in the nation's traditions and history." *Id.* at 18a. The court held, however, that the statutes violate the Equal Protection Clause "because, to the extent that they prohibit a physician from prescribing medications to be self-administered by a mentally competent, terminally-ill person in the final stages of his terminal illness, they are not rationally related to any legitimate state interest." *Id.* at 35a. It concluded that "New York does not treat similarly circumstanced persons alike: those in the final stages of terminal illness who are on life-support systems are allowed to hasten their deaths by directing the removal of such systems; but those who are similarly situated, except for the previous attachment of life-sustaining equipment, are not allowed to hasten death by self-administering prescribed drugs." *Id.* at 29a-30a.

The court found no legitimate state interest to support this difference in treatment. See Pet. App. 31a-34a. It dismissed the argument that the refusal of treatment allows a "natural" death or requires less action by the physician. *Id.* at 30a-31a. It then rejected the State's asserted interest in "preserving the life of all its citizens at all times and under all conditions," suggesting that this interest "lessens as the potential for life diminishes," and that the State has no interest in "requir[ing] the continuation of

agony when the result is imminent and inevitable." *Id.* at 31a.

Finally, the court concluded that the New York statutes do not serve any of the state interests identified by the Ninth Circuit panel in *Compassion in Dying* v. *Washington*, 49 F.3d 586 (1995), on reh'g en banc, 79 F.3d 790 (1996), cert. granted *sub nom. Washington* v. *Glucksberg*, No. 96-110 (Oct. 1, 1996). See Pet. App. 32a-34a. Those interests include preserving the role of physicians as healers, not killers; "avoiding psychological pressure upon the elderly and infirm to consent to death"; "preventing the exploitation of the poor and minorities"; "protecting handicapped persons against societal indifference"; "preventing the sort of abuse" found in the Netherlands, where physician assisted suicide is permitted and euthanasia occurs;[1] and avoiding difficulties that arise from the lack of a clear definition of the "terminally ill." *Id.* at 32a.

b. Judge Calabresi concurred in the result. Pet. App. 35a-62a. He concluded that, while the statutes still "nominally * * * forbid[]" physician assisted suicide, "the bases of these statutes have been deeply eroded over the last hundred and fifty years" and "few

[1] It is important to keep in mind the distinctions among (1) a patient's decision to decline or terminate unwanted medical treatment, including nutrition and hydration, even where that treatment may be necessary to sustain life; (2) the prescription by a physician of a lethal dosage of medication, to be self-administered by the patient, which is what is generally meant by the term "physician assisted suicide"; and (3) the administration by a physician of a lethal medication, referred to as "euthanasia." This case concerns only the second of these scenarios: physician-provided lethal medication. See Pet. App. 4a, 35a.

of their foundations remain in place today." *Id.* at 43a. Citing the "constitutional dubiety" of those statutes, he concluded that they could be upheld only on the basis of a "present and positive acknowledgment" by the legislature of the state interests at stake. *Id.* at 45a.

Based on his conclusion that the legislature "for many, many years * * * ha[d] not taken any recognizably affirmative step reaffirming the prohibition of what [respondents] seek," Pet. App. 44a, he would have held that, "on the current legislative record, New York's prohibitions on assisted suicide violate both the Equal Protection and Due Process Clauses of the Fourteenth Amendment * * * to the extent that these laws are interpreted to prohibit a physician from prescribing lethal drugs to be self-administered by a mentally competent, terminally ill person in the final stages of that terminal illness," *id.* at 62a. Judge Calabresi declined, however, to take a position on "whether such prohibitions, or other more finely drawn ones, might be valid, under either or both clauses of the United States Constitution, were New York to reenact them while articulating the reasons for the distinctions it makes in the laws, and expressing the grounds for the prohibitions themselves." *Ibid.*

SUMMARY OF ARGUMENT

A state legislature, seeking to balance respect for individual patients' wishes against the protection of many patients' lives, may conclude that extremely important state interests justify a distinction between the refusal of unwanted medical treatment and the prescription of lethal dosages of medication for the purpose of ending life. Those interests include

preserving the distinction between killing a patient and letting a patient die; preventing the deaths of persons who are erroneously diagnosed as terminally ill; prohibiting a practice that is vulnerable to abuse or error and extremely difficult to police; and avoiding the greatest intrusions upon a patient's bodily integrity. Thus, a State does not violate the Equal Protection Clause of the Fourteenth Amendment by allowing a doctor to honor patients' directives to discontinue life-sustaining medical treatment while prohibiting a doctor from prescribing lethal dosages of medication for patients who request this medication for the purpose of ending their lives.

ARGUMENT

I. A STATE MAY CONCLUDE THAT IMPORTANT STATE INTERESTS JUSTIFY PROHIBITING PHYSICIAN ASSISTED SUICIDE WHILE PERMITTING THE REFUSAL OF MEDICAL TREATMENT

1. The Equal Protection Clause of the Fourteenth Amendment directs that "all persons similarly circumstanced shall be treated alike." *Plyler* v. *Doe*, 457 U.S. 202, 216 (1982) (quoting *F.S. Royster Guano Co.* v. *Virginia*, 253 U.S. 412, 415 (1920)). The Constitution does not, however, "require things which are different in fact or opinion to be treated in law as though they were the same," *ibid.* (quoting *Tigner* v. *Texas*, 310 U.S. 141, 147 (1940)), and a legislature must have some "latitude" in creating classifications that respond to perceived problems and "accommodate competing concerns both public and private," *ibid.*

In finding no rational basis for distinguishing between a patient's refusal of medical treatment and a physician's prescription of a lethal drug for the

purpose of helping a patient commit suicide, see Pet. App. 24a-25a, the court of appeals overlooked extremely important state interests offering substantial justification for this distinction. The gravity and magnitude of the harms that could accompany the prescription of lethal medication are such that a responsible, compassionate state legislator who took full account of the important liberty interest of a terminally ill person in avoiding protracted severe pain or suffering could still conclude that a prohibition on this practice was necessary to guard against those harms.

2. As we develop more fully in our amicus brief (at 16-24) in *Washington* v. *Glucksberg*, No. 96-110, at this point in our history, a state legislature could responsibly conclude that making physician assisted suicide available for some "would create widespread and unjustified risks for many others." New York State Task Force on Life and the Law, *When Death Is Sought: Assisted Suicide and Euthanasia in the Medical Context* 135 (May 1994) (*Task Force Report*). Those dangers include the deaths of many persons who are not competent, not terminally ill, and not truly ready to die, but who are steered toward suicide by a confluence of forces, including a health care system that often undertreats patients' pain and depression; physicians who cannot or do not take the time to explore their patients' fears about the course of their illness and to reassure them of continued support; family members who are exhausted by the ordeal of a lingering illness; a mistaken diagnosis or prognosis; or the patients' own fears of being a "burden" to their loved ones or society.

3. Undoubtedly, some of these dangers also attend the decision to withhold or withdraw medical treat-

ment. In other respects, however, a legislature confronts weighty practical differences in terms of the dangers each practice poses to the lives and welfare of the State's citizens. Harms that arise from physician prescribed lethal medication often differ in kind or degree from those that result from patient refusal of medical treatment. Those harms include the erosion of the distinction between killing and letting die; the far more serious consequence of an erroneous diagnosis of a terminal illness; and the far greater number of persons whose lives could be shortened through error or undue influence. Also supporting the distinction between the two practices is the often invasive nature of life support.

a. The principal distinction between providing a patient lethal medication and allowing a patient to refuse treatment is the widely accepted distinction between killing and letting die. To let a patient die is to acknowledge the futility of further medical treatment and to let nature run its course. Death results from the underlying fatal pathology of the patient's disease or disorder, not from the independent action of the physician. Physician prescribed lethal medication, in contrast, provides its own fatal pathology. There is, in short, "a fundamental difference between what nature does to us and what we do to one another." Daniel Callahan, *The Troubled Dream of Life* 76 (1993). That intuitive distinction, which comports with our common experience, is reflected in state law and medical practice. See 96-110 Pet. App. A68 & n.77 (listing States that permit the withdrawal of life-sustaining treatment); *id.* at A135-A136 (listing States that prohibit assisted suicide); see also *Thor* v. *Superior Court*, 855 P.2d 375, 385 (Cal. 1993) ("[A] necessary distinction exists between a person suffering from a serious life-threatening disease or debilitating injury who rejects medical intervention that only prolongs but never cures the affliction and an individual who deliberately sets in motion a course of events aimed at his or her own demise and attempts to enlist the assistance of others."); *McKay* v. *Bergstedt*, 801 P.2d 617, 627 (Nev. 1990) (recognizing a "substantial difference" between "non-interference with the natural consequences of [a patient's] condition" and a patient's "terminat[ing] his or her life by some deadly means either self-inflicted or through the agency of another"); *In re Colyer*, 660 P.2d 738, 743 (Wash. 1983) ("A death which occurs after the removal of life sustaining systems is from natural causes, neither set in motion nor intended by the patient [or physician].").

Underlying this distinction are important ethical considerations about the physician's professional responsibility to do no harm. The medical profession recognizes ethical distinctions between discontinuing unwanted, futile treatments and "using the tools of medicine to cause a patient's death." Council on Ethical and Judicial Affairs, American Medical Ass'n, *Decisions Near the End of Life*, 267 J. Am. Med. Ass'n 2229, 2230-2231, 2233 (1992); see Brian McCormick, *Continued Opposition: House Refuses to Open Door on Physician-Assisted Suicide*, Am. Med. News, Dec. 20, 1993 at 7; Willard Gaylin, et al., *Doctors Must Not Kill*, 259 J. Am. Med. Ass'n 2139 (1988); Mildred Solomon, et al., *Decisions Near the End of Life: Professional Views on Life-Sustaining Treatments*, 83 Am. J. Pub. Health 14, 17 (Jan. 1993). A State legitimately can assert an interest in preserving this boundary; allowing physicians to participate in suicide could erode public confidence in the profession

and undermine patients' trust in their doctors. See Thomas J. Marzen, *"Out, Out Brief Candle": Constitutionally Prescribed Suicide for the Terminally Ill*, 21 Hastings Const. L.Q. 799, 824 (1994) (that few people "may find medical professionals willing and able to ratify and to assist in * * * [suicide] is easily outweighed by the distrust and acute ambivalence engendered in the majority by assigning such a disparate role to an unwilling profession"). The prohibition on assisting suicide erects an important psychological barrier for the physician who might be tempted to resort to a quick exit for the patient whose illness he cannot cure. Moreover, reasonable legislators could fear that legalizing assisted suicide "[c]ould have a subtle but widespread impact on society" by sending the message that society does not value each of its members. *Task Force Report* 101-102.

It is true that a patient's right to terminate his treatment allows him in some circumstances to enlist the assistance of a physician to exercise that right, for example, by removing a feeding tube. It also is true that the removal of a feeding tube requires greater physician involvement and greater bodily intrusion than what respondents seek here. But the distinction between killing and letting die rests on the underlying cause of the patient's death, not on the mere involvement of a physician. With the removal of the feeding tube, the cause of death (assuming the patient dies) is the underlying illness that robbed him of his ability to eat; the physician's removal of the feeding tube lets that illness run its course. With the provision of lethal medication, the physician provides the cause of the patient's death. While this distinction may not be satisfying in all respects, it is workable, and it is grounded in moral and ethical considerations that the State has an interest in preserving. Moreover, as we develop more fully in our amicus brief (at 22-24) in *Washington* v. *Glucksberg*, No. 96-110, permitting the prescription of lethal medication, but attempting to limit it to the terminally ill and to avoid euthanasia, presents equally problematic distinctions and far greater risks. See generally Daniel Callahan & Margot White, *The Legalization of Physician-Assisted Suicide: Creating a Regulatory Potemkin Village*, 30 U. Rich. L. Rev. 1, 6, 63-64 (1996) (Callahan & White); Seth F. Kreimer, *Does Pro-Choice Mean Pro-Kevorkian? An Essay on* Roe, Casey, *and the Right to Die*, 44 Am. U. L. Rev. 803, 820-824 (1995); Timothy Quill, et al., *Care of the Hopelessly Ill—Proposed Clinical Criteria For Physician-Assisted Suicide*, 327 New Eng. J. Med. 1380, 1381 (1992); 96-110 Pet. App. A100-A101 (Ninth Circuit, sitting en banc, acknowledging the difficulty of maintaining any distinction between physician–prescribed and physician–administered medication).

b. Also reinforcing the current distinction between physician assisted suicide and the refusal of medical treatment is the State's undeniable interest in preventing the death of persons who are erroneously diagnosed as terminally ill. Predicting a patient's life expectancy is difficult and uncertain. See, *e.g.*, Joanne Lynn, et al., *Accurate Prognostications of Death: Opportunities and Challenges for Clinicians*, 163 W. J. Med. 250, 251 (1995). "A surprising number of people have had the experience of being misinformed that they had a terminal illness." Richard A. Posner, *Aging and Old Age* 245 (1995). "[Physician] assisted suicide leave[s] no opportunity to recognize or correct a diagnosis that is negligently provided, or

provided competently, but proves incorrect over time." *Task Force Report* 131. By contrast, the termination of life-sustaining medical treatment for a person wrongly believed to be dependent on such treatment does not result in certain death. Karen Ann Quinlan, for example, lived for years after her life support was disconnected. See George J. Annas, *The "Right to Die" in America: Sloganeering from* Quinlan *and* Cruzan *to* Quill *and* Kevorkian, 34 Duq. L. Rev. 875, 881 n.13 (1996).

c. Refusal to permit physician assisted suicide may also be justified by the predictable difficulty of regulating and limiting such assistance, particularly when it could be offered to all terminally ill persons, or even all members of society. The privacy that appropriately cloaks the doctor-patient relationship could lead thoughtful legislators to conclude that "the nature of the doctor-patient relationship and of the medical procedures themselves renders them resistant to * * * 'clear criteria, rigorous procedures, and adequate safeguards.'" Callahan & White, 30 U. Rich. L. Rev. at 2 (quoting Franklin Miller, et al., *Regulating Physician-Assisted Suicide*, 331 New Eng. J. Med. 119, 120 (1994)). While permitting patients to decline life-sustaining treatment admittedly creates some of the same risks, those risks are limited to an identifiable, self-contained class of persons—those who cannot live without the treatment—many of whom are in hospitals or nursing homes, where their care may be supervised by others. See *Task Force Report* 74; President's Commission for the Study of Ethical Problems in Medicine and Biomedical and Behavioral Research, *Deciding to Forego Life-Sustaining Treatment: A Report on the Ethical, Medical, and Legal Issues in Treatment Decisions* 17-18 (Mar. 1983). A legislature reasonably could decide to entrust state regulators, professional organizations, and institutional review boards with the admittedly difficult task of regulating to avoid error and abuse with regard to this group of patients, without having sufficient confidence that they could perform the same task with regard to the vast number of patients who could seek physician assisted suicide.

d. The invasiveness of some compelled life-sustaining treatment presents another legitimate basis for allowing patients to decline it, even while prohibiting physician assisted suicide. As one commentator described it, to be forced to receive life-sustaining treatment "is in fact to be forced into a particular, all-consuming, totally dependent, and indeed rigidly standardized life: the life of one confined to a hospital bed, attached to medical machinery," with his body "so far expropriated from his own will, supposing that he seeks to die, that the most elemental acts of existence—such as breathing, digesting, and circulating blood—are forced upon him by an external agency." Jed Rubenfeld, *The Right to Privacy*, 102 Harv. L. Rev. 737, 795 (1989). To deny physician assistance in committing suicide is to foreclose one humane and certain route of escape from pain and suffering, but it does not subject a person to nearly the same degree of intrusion and restraint as requiring a person to submit to unwanted medical treatment.

Taken together, these public policy considerations provide substantial justification for prohibiting physician prescribed lethal medication while permitting patient refusal of medical treatment. The court of appeals therefore erred in concluding that the State's interests in preserving this distinction were "[n]one." Pet. App. 31a.

II. THE NEW YORK STATUTORY PROHIBITION OF ASSISTED SUICIDE SUFFICIENTLY REFLECTS A CONTEMPORARY LEGISLATIVE JUDGMENT

Similarly, Judge Calabresi erred in concluding that New York has made no contemporary assertion of the prohibition against assisted suicide. He argued that the statutes criminalizing assisted suicide are anachronisms "born in another age" when suicide itself was a crime and that the New York legislature has retained them through inertia, failing to make any actual, considered legislative judgment to continue those proscriptions or to articulate the state justifications for them. Pet. App. 38a, 57a. That view overlooks significant developments in New York law.

1. Suicide or attempted suicide has not been a crime in New York since 1919. Act of May 5, 1919, ch. 414, § 1, 1919 N.Y. Laws 1193. In 1965, the New York legislature deleted the statutory declaration that suicide is a "grave public wrong." Act of July 20, 1965, ch. 1030, 1965 N.Y. Laws 1544 (codified at N.Y. Penal Law § 35.10(4) (McKinney 1987)). At that time, the legislature reasserted the criminal prohibitions against intentionally causing or aiding a suicide or attempted suicide—the statutory provisions at issue here. See N.Y. Penal Law §§ 120.30, 125.15(3) (McKinney 1987). That reflects, at the very least, not inertia, but rather a legislative judgment to continue the criminal prohibition against assisting suicide while deleting condemnation of the suicide itself.

2. Since 1965, the New York legislature has adopted legislation giving force to a patient's common law right to refuse medical treatment, but preserving the distinction between refusing unwanted medical treatment on the one hand and assisted suicide or euthanasia on the other. In 1987, the legislature enacted a statute permitting a competent adult to create an order not to resuscitate, or administer cardiopulmonary resuscitation (CPR), in the event that the person suffered cardiac or respiratory arrest. Act of Aug. 7, 1987, ch. 818, § 1, 1987 N.Y. Laws 1526 (codified as amended at N.Y. Pub. Health Law §§ 2960-2979 (McKinney 1993 & Supp. 1996)). The legislature adopted that measure in response to a 1986 report and recommendation by the New York State Task Force on Life and the Law. See *Do Not Resuscitate Orders: The Proposed Legislation and Report of the New York State Task Force on Life and the Law* (Apr. 1986). After acknowledging distinctions between the common law right to refuse treatment (to which the legislature was giving effect) and suicide (which the State has an interest in preventing), the Task Force noted that the State's interest in preserving life gave way in the case of orders not to resuscitate primarily because of the highly invasive nature of CPR. *Id.* at 15.

In 1990, the legislature sought further to protect the patient's right to decline unwanted treatment by allowing persons to direct the withholding of life-sustaining treatment through health care proxies and the appointment of health care agents. Act of July 22, 1990, ch. 752, § 2, 1990 N.Y. Laws 1538 (codified as amended at N.Y. Pub. Health Law § 2982(1) (McKinney 1993)). The legislature again acted at the recommendation of the Task Force. See New York State Task Force on Life and the Law, *Life-Sustaining Treatment: Making Decisions and Appointing a Health Care Agent* (July 1987). The Task Force's report accompanying its proposed legislation included

a thoughtful discussion of the need to preserve the distinction between "killing" and "letting die." See *id.* at 36-42. The legislature went a step further, incorporating into the statute an express caveat preserving that distinction:

> This article is not intended to permit or promote suicide, assisted suicide, or euthanasia; accordingly, nothing herein shall be construed to permit an agent to consent to any act or omission to which the principal could not consent under law.

N.Y. Pub. Health Law § 2989(3) (McKinney 1993). Thus, the legislature, in the context of respecting patients' liberty interests in determining the course of their medical treatment, consciously reinforced the line between the permissible withdrawal of life-sustaining treatment and the prohibited assistance of suicide. That recent legislative reaffirmance of this well-established and widely-accepted line convincingly answers Judge Calabresi's assertion that the distinction has endured merely through legislative inertia.

CONCLUSION

The judgment of the court of appeals should be reversed.

Respectfully submitted.

INTEREST OF AMICUS*

Amicus curiae, American Life League, Inc., is a District of Columbia corporation, with its office in Stafford, Virginia, recognized under 26 USC § 501(c)(3) as a tax-exempt organization. The *Amicus* is a social welfare and educational organization, incorporated in 1981, with some 300,000 active supporting families across the country.

The *Amicus* researches and publishes a magazine, newsletters, brochures and other material relating to the human rights of persons born and preborn; sponsors, and participates in, symposia and other public and invitational means of discussion and education; monitors, and reports upon, pertinent state and federal administrative, legislative, and judicial developments; and otherwise seeks to fulfill the mandate of its Articles of Incorporation and the concerns of its supporters. Its professional and volunteer staff includes those experienced in the fields of medicine, science, public policy, theology and law, and other persons who are, or who have become, cognizant in areas of factual and interpretive knowledge as to biological, theological, philosophic, legal, political and economic aspects of the rights of persons born and preborn.

* The parties to the present case have consented to the filing of this brief; letters granting consent are being submitted with this brief.

SUMMARY OF ARGUMENT

This case presents a challenge to various sections of the New York Penal Law making it a crime to aid a person in committing suicide or attempting to commit suicide. The lower court struck down the New York laws as violative of the United States Constitution because these laws lack any rational basis and violate the equal protection clause of the fourteenth amendment. *Quill v. Vacco*, 80 F.3d 716 (2d Cir. 1996). The lower court held that the New York laws do not treat similarly circumstanced persons alike in that those in the final stages of terminal illness who are on life support systems are allowed to be killed by the removal of such systems, but those who are similarly situated, except for previous attachment to the life support systems, are not allowed to be killed by self-administering prescribed drugs. Further, the court held that New York does not have any apparent interest in requiring the prolongation of a life that is all but ended.

The lower court's equal protection analysis is incorrect. Contrary to the lower court's decision in *Quill*, it violates the equal protection guarantee of the fourteenth amendment for a state to protect innocent non-aggressor persons in general by prohibiting their intentional killing as homicide, and then to carve out an exception to that protection so as to allow some such persons to be intentionally killed. The equal protection guarantee demands that "No state shall . . . deny to *any person* the equal protection of the laws." U.S. Const. XIV amend., § 1 (emphasis added).

In addition to deciding this case, this court should reconsider its decision in *Cruzan v. Director, Missouri*

Department of Health, 497 U.S. 261 (1990), since both decisions, as well as *Compassion in Dying v. Washington*, 79 F.3d 790 (9th Cir. 1996) (en banc), allow the intentional killing of innocent, non-aggressor persons. By prohibiting the intentional killing of innocent non-aggressor persons in general, a state violates the equal protection clause to carve out an exception to that protection so as to allow some such persons to be intentionally killed. Furthermore, when a state excludes any class of innocent non-aggressor persons from its general prohibition against intentional killing, it steps upon a slippery slope leading predictably to the involuntary killing of the unwanted.

It is possible, however, for the law to protect patients against intentional killing without interfering with proper medical decisions. There comes a time when a person has done all that is reasonably required of him to preserve and prolong his life, nature should be allowed to take its course, and the proper judgments of physicians and family should be respected. In this context, a person should be allowed to die a natural and dignified death. Such cases are not now before this court. Rather, since the situations in *Quill*, *Compassion in Dying*, and *Cruzan* all involve the intentional killing of innocent non-aggressor persons, this court should reject the holding and reasoning in *Quill*, as well as of *Compassion in Dying*, and should reconsider its holding in *Cruzan*. This court ought to reaffirm the basic entitlement to equal protection against intentional killing.

ARGUMENT

I. IT VIOLATES THE EQUAL PROTECTION GUARANTEE OF THE FOURTEENTH AMENDMENT FOR A STATE TO PROTECT INNOCENT, NON-AGGRESSOR PERSONS IN GENERAL BY PROHIBITING THEIR INTENTIONAL KILLING AS HOMICIDE, AND THEN TO CARVE OUT AN EXCEPTION TO THAT PROTECTION SO AS TO ALLOW SOME SUCH PERSONS TO BE INTENTIONALLY KILLED.

The basic issue presented in this brief was capsulized by Justice Stevens in *Thornburgh v. American College of Obstetricians and Gynecologists*, 476 U.S. 747, 779 (1986) (Stevens, J., concurring), where he stated that "the permissibility of terminating the life of a person could scarcely be left to the will of the state legislatures." *See also Roe v. Wade*, 410 U.S. 113, 157 n.54 (1973). In *Roe v. Wade*, the court conceded that if "the fetus is a 'person' within the language and meaning of the fourteenth amendment . . . the appellant's case, of course, collapses." *Id.* at 156. The governing principle here is that a fourteenth amendment "person" does not hold his life subject to the will of the legislature as to whether another shall be legally permitted to kill him.[1]

The fourteenth amendment provides: "No state shall . . . deny to *any person* the equal protection of the laws."

---

[1] *Roe v. Wade* held that the preborn child is not a fourteenth amendment "person," whether or not he is a human being. *Roe's* recognition of the right to kill the preborn nonperson has an obvious bearing upon the subsequent allowance by courts of intentional killing in the "right-to-die" context. However, an examination of *Roe* itself is beyond the scope of this brief.

U.S. Const. XIV amend., § 1 (emphasis added). In *Cruzan* and *Quill*, as well as *Compassion in Dying*, the patients involved are all "persons" within the meaning of the fourteenth amendment. They are all innocent non-aggressors. Clearly, if the fourteenth amendment guarantee of equal protection means anything, it must mean that such persons cannot be excluded from the protection of state homicide laws by permitting them to be intentionally killed by others in any situation. Yet, the courts' decisions in all three cases allowed precisely that.

" 'The life of those to whom life has become a burden – of those who are hopelessly diseased or fatally wounded – nay, even the lives of criminals condemned to death, are under the protection of the law, equally as the lives of those who are in the full tide of life's enjoyment and anxious to continue to live.' " *Cruzan*, 497 U.S. at 295 (Scalia, J., concurring) (quoting *Blackburn v. State*, 23 Ohio St. 146, 163 (1873)). Furthermore, " 'The lives of all are equally under the protection of the law, and under that protection to their last moment. . . . [Assisted suicide] is declared by the law to be murder, irrespective of the wishes or the condition of the party to whom the poison is administered. . . . ' " *Id.* (quoting *Blackburn*, 23 Ohio St. at 163). The right to life is the most basic right, since death forecloses "the right to have rights." *See Furman v. Georgia*, 408 U.S. 238, 290 (1972) (Brennan, J., concurring). As Representative Joshua R. Giddings put it:

> Our fathers, recognizing God as the author of human life, proclaimed it a "self-evident" truth that every human being holds from the Creator an inalienable right to live . . . .

> . . . If this right be denied, no other can be acknowledged. If there be exceptions to this central, this universal proposition, that *all men*, without respect to complexion *or condition*, hold from the Creator the right to live, who shall determine what portion of the community shall be slain? And who may perpetrate the murders?

Cong. Globe, 35th Cong., 1st Sess. App. 65-66 (1858) (second emphasis added).

Representative Thaddeus Stevens summarized the principle:

> This is man's Government; the Government of all men alike; not that all men will have equal power and sway within it. Accidental circumstances, natural and acquired endowment and ability, will vary with fortunes. But equal rights to all the privileges of Government is innate in every immortal being, no matter what the shape or color of the tabernacle which it inhabits.

Cong. Globe, 39th Cong., 1st Sess. 74 (1865).

Similarly, Representative John A. Bingham, author of section one of the fourteenth amendment, declared, with reference to the fifth amendment, the principle he viewed as fundamental:

> [T]he Constitution of the United States . . . declared that "no person shall be deprived of life, liberty, or property without due process of law." By that great law of ours it is not inquired whether a man is "free" by the laws of England; it is only to be inquired *is he a man*, and therefore free by the law of that creative energy which breathed into his nostrils the breath of

> life, and he became a living soul, endowed with the rights of life and liberty. . . .
>
> Before that great law *the only question to be asked of a creature claiming its protection is this: Is he a man?* Every man is entitled to the protection of American law, because its divine spirit of equality declares that all men are created equal.

Cong. Globe, 40th Cong., 1st Sess. 542 (1867) (emphasis added). Senator Allen G. Thurman stated that a state may not deny equal protection to "any person" in the jurisdiction, "be he sane or be he insane, be he old or be he young, be he innocent or be he criminal, be he learned or be he ignorant." 3 Cong. Rec. 1794 (1875). And as Justice Brennan put it in another context,

> At bottom, the battle has been waged on moral grounds. The country has debated whether a society for which the dignity of the individual is the supreme value can, without a fundamental inconsistency, follow the practice of deliberately putting some of its members to death.

Furman, 408 U.S. at 296 (Brennan, J., concurring).

In summary, since the right to life is the indispensable right, it violates the equal protection of the laws for a state to deny to some innocent non-aggressor persons the protection against intentional deprivation of that right which it provides to such persons in general.

II. IN DECIDING THE *QUILL* CASE, THIS COURT SHOULD RECONSIDER *CRUZAN*, SINCE BOTH DECISIONS, AS WELL AS *COMPASSION IN DYING*, ALLOW THE INTENTIONAL KILLING OF INNOCENT, NON-AGGRESSOR PERSONS.

It is essential to note, first, what these cases do *not* involve. They do not involve the difficult decisions as to the withholding or withdrawal of medical treatment that is arguably burdensome, dangerous, extraordinary or disproportionate to the expected outcome. The law, which is a blunt instrument, can have only a limited role in such cases. Such cases are not now before this court. Rather, our concern is with cases involving actions by third persons taken with the specific intention of causing the death of the patient in question. *Cruzan* involved the withdrawal of food and water provided by tube, the provision of which was not burdensome, dangerous, extraordinary, or disproportionate to the expected outcome, from an incompetent patient. The nutrition and hydration were withdrawn with the specific intent of causing Nancy Cruzan's death with the purpose of carrying out her own desire to have them withdrawn and to die. In *Quill* and *Compassion in Dying*, the courts approved the administration of lethal agents with the same intention and purpose.

The distinction between passive and active killing, as noted by Justice Scalia in his concurrence in *Cruzan* is not helpful. *Cruzan*, 497 U.S. at 296-97 (Scalia, J., concurring). Starving a person to death, as the "caregivers" of Nancy Cruzan did to her, is no different from putting a gun to her temple and squeezing the trigger. As a matter of fact,

the latter method is probably less painful to the victim.[2] If Nancy Cruzan had miraculously sat up in her hospital bed and handed a gun to her "caregiver" and the "caregiver" killed Nancy, there would have been a trial for homicide. The fact that the "caregivers" chose to starve Nancy to death should be of no consequence in the eyes of the law. Courts have upheld convictions of parents for statutory manslaughter for negligently failing to supply their child with necessary medical attention which results

---

[2] In a note to his opinion in *Brophy v. New England Sinai Hospital, Inc.*, 497 N.E.2d 626, 641, n.2 (Mass. 1986) (Lynch, J., dissenting), Justice Lynch recounted the physical hardship which the evidence in the case showed to be normally associated with starvation and dehydration:

> Removal of the G. tube would likely create various effects from the lack of hydration and nutrition, leading ultimately to death. Brophy's mouth would dry out and become caked or coated with thick material. His lips would become parched and cracked. His tongue would swell, and might crack. His eyes would recede back into their orbits and his cheeks would become hollow. The lining of his nose might crack and cause his nose to bleed. His skin would hang loose on his body and become dry and scaly. His urine would become highly concentrated, leading to burning of the bladder. The lining of his stomach would dry out and he would experience dry heaves and vomiting. His body temperature would become very high. His brain cells would dry out, causing convulsions. His respiratory tract would dry out, and the thick secretions that would result could plug his lungs and cause death. At some point, within five days to three weeks his major organs, including his lungs, heart, and brain, would give out and he would die.

Id.

in the death of the child. *State v. Williams*, 484 P.2d 1167 (Wash. Ct. App. 1971). Simply put, *Cruzan*, *Quill*, and *Compassion in Dying* are all cases dealing with the intentional killing of an innocent person who cannot in any way be described as an aggressor. In the assisted suicide cases, whether the doctor feeds the patient the poison or prescribes it, the intent of his act is to kill the patient. Some may attempt to distinguish cases where the victim has been declared "terminally ill." However, the attempt to make that distinction reinforces our equal protection argument. The law should not provide lesser protection to an innocent person, with respect to the indispensable right to life, merely because he or she has been defined as terminally ill. To do so is a violation of equal protection and therefore unconstitutional.

When a state protects innocent, non-aggressor persons in general by forbidding them to be intentionally killed by another, it would deny equal protection of the law for the state to exclude from that protection some such persons because they are terminally ill or because they have asked to be killed. *Cruzan*, *Quill*, and *Compassion in Dying* do not involve the question of whether a competent person has a constitutional right to commit suicide by his own unassisted hand. Apart from the incongruity that would be involved in a state trying to impose a criminal penalty on a person who successfully kills himself by his own hand, the state clearly has constitutional authority to forbid a person to attempt suicide by his own hand. *See Cruzan*, 497 U.S. at 298-300 (Scalia, J., concurring). Otherwise, one would have to affirm a constitutional right to alienate the unalienable right to life. However, the limited issue involved in *Cruzan*, *Quill*, and

Compassion in Dying is the question of whether the state may rightly withdraw criminal sanctions from a person who intentionally kills another because the victim has consented to his own homicide.

> Generally, it may be said that consent by the victim is not a defense in a criminal prosecution. The explanation most commonly given for this rule is that a criminal offense is a wrong affecting the general public, at least indirectly, and consequently cannot be licensed by the individual directly harmed. Thus, it is no defense to a charge of murder that the victim, upon learning of the defendant's homicidal intentions, furnished the defendant with the gun and ammunition.

Wayne R. LaFave & Austin W. Scott, Jr., *Criminal Law* 408 (1972) (footnotes omitted). In such cases, it would violate the equal protection clause for the state to exclude such persons from the protection of the general prohibition against homicide. Therefore, this court should not only reverse the judgment in *Quill*, and also in *Compassion in Dying*, but it should also reconsider its decision in *Cruzan*.

III. WHEN A STATE EXCLUDES ANY CLASS OF INNOCENT, NON-AGGRESSOR PERSONS FROM ITS GENERAL PROHIBITION AGAINST INTENTIONAL KILLING, IT STEPS UPON A SLIPPERY SLOPE LEADING PREDICTABLY TO THE INVOLUNTARY KILLING OF THE UNWANTED.

For a state to allow the intentional killing of certain innocent human beings is ultimately to subject the value of life to utilitarian considerations and to deny the very

humanity and dignity of the human person.[3] The slippery slope arguments have been made elsewhere,[4] and the

---

[3] The Missouri State Supreme Court in *Cruzan v. Harmon*, 760 S.W.2d 408, 422 (Mo. 1988), *aff'd sub nom. Cruzan v. Director, Missouri Department of Health*, 497 U.S. 261 (1990), observed that the argument "that Nancy will not recover, is but a thinly veiled statement that her life in its present form is not *worth living*. Yet a diminished quality of life does not support a decision to cause death." (emphasis added).

[4] *See* Yale Kamisar, *When Is There A Constitutional "Right to Die"? When Is There* No *Constitutional "Right to Live"?*, 25 Ga. L. Rev. 1203, 1206 (1991) (arguing that in the euthanasia context "[w]e have *moved down* the slippery slope a considerable distance; we have *seen* the slippery slope"); Leo Alexander, M.D., *Medical Science Under Dictatorship*, 241 New Eng. J. Med. 39 (1949). Dr. Alexander observed,

> Whatever proportions these crimes [of the Nazi euthanasia program] finally assumed, it became evident to all who investigated them that they had started from small beginnings. The beginnings at first were merely a subtle shift in emphasis in the basic attitude of the physicians. It started with the acceptance of the attitude, basic in the euthanasia movement, that there is such a thing as life not worthy to be lived. This attitude in its early stages concerned itself merely with the severely and chronically sick. Gradually the sphere of those to be included in this category was enlarged . . . . But it is important to realize that the infinitely small wedged-in lever from which this entire trend of mind received its impetus was the attitude toward the non-rehabilitable sick.

Id.; see also Joseph R. Stanton, M.D., *The New Untermenschem*, Hum. Life Rev., Fall 1985, at 77, 82 (noting that Dr. Alexander, shortly before his death, commented in 1984 on the situation in the United States: "It is much like Germany in the 20's and 30's – the barriers against killing are being removed").

decisions in *Quill* and *Compassion in Dying* confirm those apprehensions.

One can discern in these and other "right-to-die" cases a path leading toward involuntary, enforced euthanasia. The decisions and rhetoric in *Cruzan*, *Quill*, and *Compassion in Dying* bring to mind the arguments for euthanasia made in 1920 by Dr. Karl Binding and Dr. Alfred Hoche in *The Release of the Destruction of Life Devoid of Value*. Doctors Binding and Hoche wrote:

> By death with dignity, we don't mean only the right to death with dignity, but much more, the legally acknowledged right to the complete relief of an unbearable life. . . .
>
> Realizing that there is indeed human life whose continuation is of no interest to any reasonably thinking person, then it [sic] up to the legislature to ask this fateful question: "Is it our duty to continually defend this unsocial life by giving it full protection of the law or is it our duty to release it for euthanasia?" You could also pose this question from a legal point of view: Shall we prefer to see the continued support for this kind of life as an example of the sacredness of life or shall we consider the legalization of the mercy killing, so relieving for all those involved, as the smaller evil. . . .
>
> There is no point of view, not legal, social, moral nor religious which presents a good reason for failure to legalize the euthanasia of those persons desperately desiring death with dignity by those who are apt to do so. I consider this release or legalization a simple duty of justified compassion. We often apply compassion to various cases.

Karl Binding & Alfred Hoche, *The Release of the Destruction of Life Devoid of Value* 14-20 (Robert L. Sassone, 1975) (1920).

In the aftermath of *Cruzan*, *Quill*, and *Compassion in Dying*, how long will it be before some court will decide that the decision of an elderly, infirm person not to accept assisted suicide is evidence that he is legally incompetent to make such a decision – for is it not wholly irrational for a person with such a low quality of life to want to live? So therefore the decision must be made for him, for his own good of course. Significantly, arguments are currently made for the rationing of health care based on "fixed categories of patients."[5] And added pressures from the monitoring of physician's decisions by insurance companies, and the rising costs of Social Security and Medicare are moving society toward the adoption of a "regulated life span" with the prospect of enforced euthanasia.[6]

The legalization of intentional killing involved in *Cruzan*, *Quill*, and *Compassion in Dying* will predictably result in unacceptable consequences; for example, as noted by Thomas J. Marzen, et al., "if the 'right to die' recognized in present case law were deemed to encompass a 'right to suicide,' then suicide by substituted judgment – constitutionally sanctioned, active, involuntary euthanasia – of incompetent persons would be a logical

---

[5] Charles L. Sprung, M.D., J.D., *Changing Attitudes and Practices in Forgoing Life-Sustaining Treatments*, 263 J. Am. Med. Ass'n 2211, 2214 (1990).

[6] Paul Craig Roberts, *Next, The Regulated Life Span?*, Wash. Times, April 10, 1990, at F3.

consequence." Thomas J. Marzen, et al., *Suicide: A Constitutional Right?*, 24 Duq. L. Rev. 1, 102 (1985). As Marzen notes:

> Any attempt to limit this "right to suicide" to certain persons or circumstances, for example to persons who are terminally ill or elderly, would conflict with the "freedom of choice" or privacy theory that is advanced to assert the existence of such a "right" in the first place. . . .
>
> The young woman tragically disappointed in love, the middle-aged man who has lost his family and whose career has been destroyed, the depressed teen, and the person of any age who has been severely disabled, all might well believe that they ought to be able to exercise this "right" with the same freedom as the person who is terminally ill or older. . . . [T]here is nothing in the Constitution that would limit the existence of a right it acknowledges in such a selective and arbitrary fashion [as to apply only to terminally ill or elderly persons].

Id. at 102-03.

Further, as Yale Kamisar notes:

> There is another reason I very much doubt that the right to assisted suicide could or would be limited for very long to persons who are terminally ill – the force of reasoning contained in the analysis of [*Quill* and *Compassion in Dying*] that handed down the right to die decisions I discussed earlier. Both the Second and Ninth Circuits seemed to agree with those proponents of assisted suicide who maintain there is no principled difference in terms of constitutional doctrine and precedent between the alleged right to

assisted suicide and the established right to terminate life support. The problem is that the right to reject life-sustaining treatment has not been limited to terminally ill people.

One need only recall the *Elizabeth Bouvia* case, which arose a decade ago. At the time of the litigation, Ms. Bouvia, a young woman afflicted with severe cerebral palsy, had a long life expectancy. Nor was she unconscious or mentally impaired. Indeed, the court described her as both "intelligent" and "alert." Nevertheless, she was granted the relief she sought – the right to remove a tube keeping her alive against her wishes.

To be sure, neither the *Bouvia* case nor other cases upholding the right of nonterminally ill persons to reject life-sustaining treatment were decided by the U.S. Supreme Court. But *Bouvia* and these other cases have been well received by bioethicists and medicolegal commentators. . . .

If the Second Circuit is right about terminally ill patients being "similarly situated" *whether or not* they are on life support, does it not follow that patients suffering from the same *nonterminal* illness are also "similarly situated," regardless of whether they are on life support? If the Second Circuit's equal protection analysis is sound, how can we prevent persons suffering serious but not terminal illnesses from enlisting the aid of another to die by suicide when patients with the same nonterminal illnesses *who are on life support systems* may hasten their deaths by directing the removal of such systems? Are not the "similarly circumstanced"

group of nonterminally ill patients *off* life support systems being denied equal protection?

Yale Kamisar, *The Reasons So Many People Support Physician-Assisted Suicide – And Why These Reasons Are Not Convincing*, 12 Issues in L. & Med. 113, 129-30 (1996).

For the law to recognize a right to assisted suicide for those defined as "terminally ill" would invite the development of loose criteria defining those who fall within this category. Despite the court's contention in *Quill*,[7] no doctor can say with certainty how long a person may live. Taken to its logical extreme, in the end, are we not all "terminally ill"?

There is reason to expect that the creation of a fundamental right to assisted suicide, or the creation of a right to assisted suicide based on equal protection principles, will result in constitutionally sanctioned active, involuntary euthanasia. While Dr. Alexander observed in 1984 that the situation in the United States regarding the value of human life was approaching that of Germany in the 20's and 30's, *see supra* note 4, this court today has the opportunity to reconstruct some of the fallen barriers against the intentional killing of innocent human life. As a result, this court should reaffirm the fundamental precept of the equal protection clause and require state laws that generally prohibit homicide to protect all innocent non-aggressor persons. No innocent, non-aggressor can be rightfully exempted from the protection of state homicide laws on account of a utilitarian notion of human life.

---

[7] See the discussion regarding the definition of "terminally ill." *Quill*, 80 F.3d at 731.

Therefore, this court ought to reconsider *Cruzan* in light of these principles and in the context of *Quill* and *Compassion in Dying*.

IV. THE LAW CAN PROTECT PATIENTS AGAINST INTENTIONAL KILLING WITHOUT INTERFERING WITH PROPER MEDICAL DECISIONS.

A sound determination of "right-to-die" cases is difficult, but not impossible. It can be difficult to distinguish legitimate withholding or withdrawal of medical treatment, including termination of the administration of food and water that no longer sustains the life of a patient near death, from actions which are homicidal in intent. The law should not require that excessive treatment be given to impede the act of dying. There comes a time when a person has done all that is reasonably required of him to preserve and prolong his life, nature should be allowed to take its course, and the proper judgments of physicians and family should be respected. In this context, a person should be allowed to die a natural and dignified death.

In what situations, then, should the law interfere? We can safely enumerate two. First, it should do so in cases involving the circumstances presented in *Quill* and *Compassion in Dying*. These cases should be considered unlawful *per se* since they always involve the intentional killing of an innocent non-aggressor person. The fact that the patient is terminally ill is of no consequence. For example, if the physician were to shoot and kill a terminally ill patient only moments before the patient's death, the physician could be convicted for an unlawful homicide. As argued in this brief, where state law forbids the

intentional killing of innocent non-aggressor persons in general, a state may not carve out an exception for some such persons, such as those who are terminally ill or even imminently dying; to do so would violate the equal protection clause. Therefore, assisted suicide must be unlawful per se because it involves the intentional killing of innocent non-aggressor persons; it is of no consequence that the patient requests to be killed.

Second, the law should forbid the *Cruzan*-type case because it too involves unlawful, intentional killing. Three factors characterize such cases and help to illustrate this point:

1. The patient in the *Cruzan*-type case is *not dying or near death*. Nancy Cruzan, for example, had a life expectancy of 30 years;

2. These type cases *do not involve the withdrawal of medical treatment, including food and water provided by tube, that is burdensome, dangerous, extraordinary, or disproportionate to the expected outcome*. In *Cruzan*, the administration of food and water by tube was effective in sustaining Nancy Cruzan's life. It was therefore not useless even though it obviously would not correct her underlying condition; and

3. The action in question, the withdrawal of medical treatment, was taken with the *specific intent to cause the death* of the patient. The motive or purpose of the action may have been to relieve the patient of life considered burdensome or useless, but the clear and specific intent was to achieve that purpose by means of intentionally killing the patient. A permissible intention, on the other hand, would be to ease the

excessive pain *caused by the medical treatment itself.*

In these two classes of cases, assisted suicide and the *Cruzan*-type case, the law must protect the potential victims by providing to them the equal protection of the homicide laws. Other types of cases might be conjectured but they are not before the court today.

In summary, it is impermissible for a state to carve out an exception to the general protection of its homicide laws merely because a patient is considered terminally ill or because the patient's life is considered burdensome or useless, even when the patient has consented to be killed. Since the situations in *Quill, Compassion in Dying,* and *Cruzan* all involve the intentional killing of innocent non-aggressor persons, this court should reject the holding and reasoning of *Quill,* as well as of *Compassion in Dying,* and should reconsider its holding in *Cruzan.*

CONCLUSION

As Circuit Judge Calabresi noted in *Quill,* there is "no sign that . . . [a] 'culture of life' reigns in New York State – quite the contrary." *Quill,* 80 F.3d at 740 (Calabresi, J., concurring). This court, however, ought to reaffirm that the U.S. Constitution promotes the "culture of life" and rejects the "culture of death." This court ought to overrule *Quill,* and also *Compassion in Dying,* and ought to reconsider its decision in *Cruzan* so as to reaffirm the

basic entitlement to equal protection against intentional killing.

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT

AMICI CURIAE BRIEF OF NOT DEAD YET and AMERICAN DISABLED FOR ATTENDANT PROGRAMS TODAY IN SUPPORT OF PETITIONERS

INTERESTS OF AMICI CURIAE

Amici are two national organizations composed primarily of persons with disabilities, including persons with spina bifida, cerebral palsy, muscular dystrophy, spinal cord injuries, multiple sclerosis, quadriplegia, paraplegia, head and brain injuries, polio, amyotrophic lateral sclerosis, as well as many other disabilities. Most of these

persons use assistive devices, including motorized and manual wheelchairs, ventilators, and personal assistance services for meeting their personal hygiene needs, transferring from bed to wheelchair and preparing food.

NOT DEAD YET is a national organization of people with severe disabilities who oppose the legalization of assisted suicide because it singles out people with significant health impairments for assistance to die, denying them the equal protection of laws and medical practice standards automatically applied to healthy individuals who are suicidal. Since 1985, individuals who are now Not Dead Yet members have participated actively in numerous states in the formulation of public policy concerning the so-called "right to die," have written numerous published articles on the issue, and were invited and testified recently before the Constitution Subcommittee of the Judiciary Committee of the U.S. House of Representatives on assisted suicide.

AMERICAN DISABLED FOR ATTENDANT PROGRAMS TODAY (ADAPT) is a national organization, most of whose members have severe disabilities and have been institutionalized in nursing facilities and other public institutions solely because they have disabilities. ADAPT has a long history and record of enforcing the civil rights of people with disabilities and was one of the key organizations

that participated in the political and legislative process that resulted in the passage in 1990 of the Americans With Disabilities Act, 42 U.S.C. § 12101 et seq., ("ADA"). It was the plaintiff in the case ADAPT v. Skinner, U.S. Department of Transportation, 867 F.2d 1471, 881 F.2d 1184 (3d Cir. 1989). [1]

SUMMARY OF ARGUMENT

Discrimination against people with severe disabilities pervades our society. Assisted suicide is the most lethal form of such discrimination. Applied only to people with significant health impairments, assisted suicide is the ultimate expression of society's fear and revulsion regarding disability. Health status becomes the basis of a double standard in which people with disabilities, a "discrete and insular minority," 42 U.S.C. § 12101(a)(7), are discriminatorily denied the protection of suicide prevention laws, medical practice standards, and statutes prohibiting abuse, neglect and homicide that nondisabled persons receive. This double standard based on health status violates the ADA.

Given the pervasive prejudice against and social devaluation of people with severe disabilities and the absence of adequate health

---

[1] All parties have consented in writing to filing of this brief. Copies of the written consents are on file with the Clerk of the Supreme Court.

care and appropriate supportive services, safeguards cannot be established to prevent abuses resulting in the wrongful death of numerous disabled persons, old and young.

If, however, this Court were to uphold a constitutional right to assisted suicide or authorize its legalization by states, such provisions should apply to everyone -- regardless of health status or disability -- on a nondiscriminatory basis.

ARGUMENT

I. The Creation Of A Right To Assisted Suicide For A Class Of Individuals Based On Health Status Or Disability Is A Lethal Form Of Discrimination Which Violates The ADA.

A. People With Disabilities, With Either Terminal Or Nonterminal Health Impairments, Are The Class Of People Affected By The Proposed Right To Assisted Suicide.

The outcome of this case potentially threatens the lives and well-being of a significant number of the 23,588,000 noninstitutionalized people in the United States who have severe disabilities. [2] They comprise 12.1 percent of the total population, 15 years old and over in the United States. The outcome will also affect the only minority group, people with disabilities, that is open to all regardless of race, gender, nationality, sexual orientation, income, place

[2] U.S. Dep't. of Commerce,Statistical Abstract of the United States 1994 at 137 (114th ed. 1994)(Table No. 202). Census data is not available for people with severe disabilities who are institutionalized.

of residency, political affiliation, or any other characteristic, and the only minority group, from a statistical viewpoint, which only 9 percent of its members join at birth.

There are five primary bases for asserting that people with severe disabilities, including nonterminal disabilities, are the actual and potential victims of a right to assisted suicide:

1. Courts in numerous jurisdictions have ruled that people with severe but nonterminal disabilities may legally be denied suicide prevention that nondisabled people routinely receive, but are to be treated like terminally ill people, with respect to the withholding and withdrawal of life sustaining medical treatment. [3]

2. The diagnosis and prognosis of terminal illness is inherently uncertain, as respondents themselves admit. [4] In addition, many doctors conclude that lives of people with severe disabilities are not worth saving, solely because of their disabilities. The potential for error and abuse against people with severe disabilities is too great.

3. Over three quarters of Jack Kevorkian's assisted suicides involved people who were clearly not terminally ill under

[3] See infra at 7-10.

[4] Timothy Quill,et al, Sounding Board: Care of the Hopelessly Ill, New Eng. J. of Med. 1380, 1381, Nov. 5,1992.

accepted medical definitions, but were only severely disabled. [5]

4. In the Netherlands, a country in which assisted suicide has been widely accepted and practiced for many years and the country often referred to as "the model" for the United States, a governmental report demonstrates that many people with nonterminal disabilities have been killed, and thousands have been killed involuntarily. [6]

5. Well-known proponents of assisted suicide have written that it should be applied to people with nonterminal disabilities. In Final Exit, Hemlock Society founder Derek Humphry writes,

> What can those of us who sympathize with a justified suicide by a handicapped person do to help? When we have statutes on the books permitting lawful physician aid-in-dying for the terminally ill, I believe that along with this reform there will come a more tolerant attitude to the other exceptional cases.

Many cases in which state courts have expanded the right to refuse treatment demonstrate that prejudice, stereotypes and devaluation of people with disabilities have already had a substantial

adverse impact on members of this minority group. Flagrant prejudice against people with disabilities pervades each decision.

Elizabeth Bouvia wanted medical support while starving herself to death. She had blamed herself for her parents' divorce. When she was ten her mother placed her in an institution, visiting her only twice in eight years. At eighteen, she moved to her own apartment, earned a college degree and began working on a master's degree. She had a series of emotional blows, including a miscarriage, the death of her brother, serious financial distress, withdrawal from graduate school because of discrimination, and separation from her new husband. [7] A nondisabled person with this history, who refused nutrition and requested physician assistance to commit suicide, would have been diagnosed as suicidal and provided suicide intervention and treatment. But because Ms. Bouvia also had cerebral palsy, a lifelong, nonterminal disability, it was concluded that her decision to die was reasonable and not deserving of intervention. [8] However, only following two years of

[7] See L. Hearn, It's More of a Struggle to Live than Die, Chi. Trib. Feb. 8, 1984, Sec. 51-53;Robert A. Bernstein, Accept the Disabled, N.Y. Times, Jan. 10, 1984, at A23; David.Gelman & Daniel Pedersen, The Most Painful Question, Newsweek, Jan. 16, 1984, at 72; Paul K. Longmore, Elizabeth Bouvia, Assisted Suicide and Social Prejudice, 3 Issues in Law & Med. 141, 153 (1987).

[8] Much to the dismay of members of the disability community, including amici, death row prisoners receive more suicide prevention than Ms. Bouvia, Mr. Bergstedt and other persons with severe disabilities. See e.g., Autry v. McKaskle, 727 F.2d 358 (5th Cir. 1984).

lengthy court proceedings did Ms. Bouvia decide not to exercise her newly won right.

Kenneth Bergstedt had quadriplegia and used a ventilator. Throughout his 30 years of life, Mr. Bergstedt was dependent on his father, who, fearing he would soon die of lung cancer, supported his son's decision to die. A psychiatric report before a lower court declared Mr. Bergstedt to be depressed but presumed this was due to "the quality of life for this man...." [9] Mr. Bergstedt believed that he would be forced to live in a nursing home after his father's death and was unaware of in-home service alternatives. The Nevada Supreme Court pointed out that Mr. Bergstedt's

> suffering resulted more from his fear of the unknown than any source of physical pain.... It is equally clear that if Kenneth had enjoyed sound physical health, but had viewed life as unbearably miserable because of his mental state, his liberty interest would provide no basis for asserting a right to terminate his own life with or without the assistance of others. [10]

Ruling after his death, even the Nevada Supreme Court, which had supported Mr. Bergstedt's request for physician assisted suicide, recognized that he had not been properly informed and had not made

---

[9] McKay v. Bergstedt, 801 P.2d 617, 637(Nev. 1990)(dissent observing that "[w]ith this kind of support it is no wonder that he decided to do himself in").

[10] Id. at 624-25 (emphasis added).

a free and intelligent life-or-death decision. If he were still alive, the court said "it would have been necessary to fully inform him of the care alternatives that would have been available to him after his father's death or incapacity." [11]

David Rivlin was paralyzed as a result of a surfing accident a full eighteen years before he committed suicide with the aid of medical support. He had no terminal illness, but he used a ventilator. He was confined to a nursing home in Michigan against his will because of the lack of adequate in-home support services at that time. In addition, his relationship with his fiance had recently ended. [12] Mr. Rivlin was given his "right to die" but was never offered the options he expressly requested to live in the community.

Larry McAfee, a thirty-four year old man with quadriplegia as a result of an accident, was transferred from one institution to another "like a sack of potatoes" over a period of four years. [13] Georgia did not pay for community support but would pay only for the

---

[11] Id. at 628. Presumably, these care alternatives included the personal assistance that millions of other people with severe disabilities receive and with which they live in the community.

[12] Stanley S. Herr, et al., No Place to Go: Refusal of Life-Sustaining Treatment by Competent Persons with Physical Disabilities, 8 Issues in Law & Med.3,13-15 (1992).

[13] Peter Applebome, An Angry Man Fights to Die, Then Tests Life, N.Y.Times, Feb. 7,1990, at A 1.

cost of nursing home care [14] and for intensive care in a hospital unit where he lived for eight months, even though he was not ill, let alone critically or terminally ill. [15] The Georgia Supreme Court affirmed the lower court's assessment that Mr. McAfee was hopelessly injured. [16] In the nursing home, he was told when to eat, sleep, and even what he could watch on his own video recorder. [17] Nevertheless, after disability rights advocates including members of the amici communicated with Mr. McAfee, he changed his mind. By the time Mr. McAfee won his so-called "right to die," he had worked with disability advocates to get out of the nursing home and pursue work as an engineer using computer aided drafting. Mr. McAfee had experienced how people with severe disabilities are devalued as human beings and was quoted as saying,

> You're looked upon as a second-rate citizen. People say, 'you're using my taxes. You don't deserve to be here. You should hurry up and leave.' You reach a point where you just can't take it anymore. [18]

[18] Id at 60

These four cases are examples of discrimination against and devaluation of people with disabilities. These decisions occurred because the general public, including judges and physicians, share common societal reactions to people with severe disabilities:

1. nondisabled persons fear that they will become disabled themselves and assume that having a severe disability is worse than death itself;

2. nondisabled persons often view people with severe disabilities as lacking in "quality of life," and such people are to be pitied instead of being granted civil rights or equal legal protections; and

3. to many nondisabled persons, disability falsely implies entrapment, loss of control, and loss of dignity.

As a consequence of these reactions, persons with severe disabilities are segregated, put out of sight in institutions, or neglected, abandoned, abused, and increasingly assisted to die. These public misconceptions, however, are refuted by research studies on disabled people's quality of life. [19]

Each of these cases dismissed the state interest in protecting

---

[19] See e.g., J.R.Bach & M.C.Tilton, Life Satisfaction and Well Being Measures in Ventilator Assisted Individuals with Traumatic Tetraplegia, 75 Arch. of Physical Med. & Rehab. 626 (1994).

the lives of these disabled individuals and found a "right to die" through the withdrawal of life-sustaining treatment. However, the courts specifically distinguished any right involving active physician-assisted suicide. Before this Court is the request to obliterate this distinction.

Reviewing the people whom Jack Kevorkian assisted in committing suicide also demonstrates the potential for uncontrolled discrimination against people with disabilities, if this Court sanctions active physician-assisted suicide. Of the 40 people who died between June 4,1990 and September 7, 1996 with the assistance of Kevorkian, at least 28 people had diseases that were not life-threatening and autopsies revealed they were not terminally ill. [20] For example, nine of them had multiple sclerosis. As the New York Times recently reported in connection with these people,

> multiple sclerosis is not a fatal disease.... Its tendency to wax and wane repeatedly and unpredictably can have patients wavering back and forth between elation and despair.... [T]he depression that often accompanies the disease is a treatable condition.... [S]ervices are available to help every person with illness live a more productive and comfortable life and that whatever the state of a person's disability, life need not be worthless. [21]

---

[20] Thomas Maier, Waiting at Death's Door, Newsday, Sept. 8, 1996, at A 4-5. See Appendix A.

[21] Jane E. Brody, Putting Emphasis on Assisted Living with M.S., N.Y. Times, October 23, 1996 at C 11.

Like those people who had multiple sclerosis, most of Kevorkian's other "patients" did not have terminal illnesses nor did they receive appropriate services to help make life meaningful. For example, **Janet Adkins**, age 54, who died June 4, 1990, was in the early stages of Alzheimer's, was not terminally ill, and her own doctor said she had ten years of productive life ahead of her. She never met or spoke with Kevorkian until two days before her death. According to an aunt, "She did not want to be a burden to her husband and family." [22] **Marjorie Wantz**, age 58, who died October 23, 1991, had no life-threatening condition, had reportedly experienced pelvic pain, but an autopsy found she had no apparent illness or disease. [23] **Sherry Miller**, 42, who died October 23,1991, had multiple sclerosis and could have lived for many years but felt she was "becoming a burden on people," and she had suffered from depression but did not want to take the medication for it. [24] **Elaine Goldbaum** had financial problems and

[24] Id.

feared losing her house, [25] **Jonathan Grenz** was said to be depressed and "overwhelmed with grief" following his mother's death, [26] and **Ali Khalili** had told his doctor that "the quality of his life had been compromised by an anxiety state." [27] Kevorkian assited them all to die.

These people represent the extent of discrimination that exists in our society; with appropriate treatment and services, many of them would be alive today. It is against the backdrop of these and other cases, reflecting society's growing support of a "right to die" for people with severe disabilities, that your amici request protection from the very real threat to the lives of people with disabilities that will result from a right to assisted suicide through active measures.

B. Denying People With Disabilities The State Benefit Of Suicide Prevention And Enforcement Of Abuse, Neglect And Homicide Laws Violates The ADA.

Lethal discrimination against people with severe disabilities and functional limitations is an integral and pervasive part of America's twentieth century history. The forms of this lethal discrimination include:

[30] Although the Court recognized the historical practice of "'putting away ... the offspring of the inferior, or of the better when they chance to be deformed' [would]do ...violence to both the letter and spirit of the Constitution," Meyer v. Nebraska, 262 U.S. 390, 401-02 (1923), three years later it upheld the constitutionality of sterilization imposed by a State because Carrie Buck was labelled "feeble-mindedness." Buck v. Bell, Superintendent of the Virginia Colony for Epileptics and Feeble Minded, 274 U.S. 200, 207 (1927). Buck ratified the view of the feebleminded as "a menace," holding: "It is better for all the world, if instead of waiting to execute degenerate offspring for crime, or to let them starve for their imbecility, society can prevent those who are manifestly unfit from continuing their kind." Id.

children with severe physical disabilities; [31] and

5. withdrawal of medical treatment. [32]

This Court has acknowledged that at least one of the forms of this discrimination, the practice of withholding lifesaving medical assistance by medical professionals from children with lifelong severe disabilities, has a "history of unfair and often grotesque mistreatment" arising from a legacy of "prejudice and ignorance" and continuing well into the 20th century. City of Cleburne, Texas v. Cleburne Living Center, 105 S. Ct. 3249, 3262 (Stevens, J., joined by Burger, C.J., concurring), 3266 (Marshall, joined by Brennan & Blackmun, JJ., concurring)(1985).

Congress clearly understood this history when, in 1990, it enacted the ADA, the basic civil rights statute for people with disabilities. After extensive hearings, Congress made extensive

---

[31] Studies reveal that many physicians, a majority in some specialities, oppose lifesaving surgery for babies with lifelong disabilities. A.Shaw, et al., Ethical Issues in Pediatric Surgery, 60 Pediatrics 588, 590 (1977); R.H. Gross, et al., Early Management and Decision-Making for the Treatment of Myelomeningocele, 72 Pediatrics 450, 456 (1983) (reporting on the results of selection of handicapped newborns for treatment between 1977 and 1982 at Oklahoma University Health Sciences Center that babies were provided - or denied - treatment based on such factors as their ambulatory potential, according to a "formula that also factored in the "contribution anticipated from his home and family and society"); D. Crane, The Sanctity of Social Life at 96-98 (1975) (documenting that surgeons at a teaching hospital were actually less likely to perform surgery on Down syndrome children with heart defects than survey studies would predict).

[32] See e.g., Elizabeth Bouvia, Kenneth Bergstedt, David Rivlin and Larry McAfee, supra at 7-10.

Findings:

historically, society has tended to isolate and segregate individuals with disabilities, and despite some improvements, such forms of discrimination continue to be a serious and pervasive social problem;

unlike individuals who have experienced discrimination on the basis of race, color, sex, national origin, religion, or age, individuals who have experienced discrimination on the basis of disability have often had no legal recourse to redress such discrimination;

individuals with disabilities continually encounter various forms of discrimination, including outright intentional exclusion..., segregation, and relegation to lesser ... benefits...;

census data, national polls, and other studies have documented that people with disabilities, as a group, occupy an inferior status in our society, and are severely disadvantaged...;

individuals with disabilities are a discrete and insular minority..., subjected to a history of purposeful unequal treatment, and relegated to a position of political powerlessness in our society, based on characteristics that are beyond the control of such individuals and resulting from stereotypic assumptions not truly indicative of the individual ability of such individuals to participate in, and contribute to society; and

the continuing existence of unfair and unnecessary discrimination and prejudice denies people with disabilities the opportunity ... to pursue those opportunities for which our free society is justifiably famous.

42 U.S.C. §§12101(a)(2),(4)-(7)and (9)(emphases added).

To address and remedy this pervasive and relentless discrimination, Congress substantively required that "no qualified individual with a disability shall, by reason of such disability, be

excluded from participation in or be denied the benefits of the services, programs, or activities of any public entity...." 42 U.S.C. § 12132. The same prohibition applies to hospitals and physicians. 42 U.S.C. § 12182(b)(2)(A)(iii). Elizabeth Bouvia, Kenneth Bergstedt, Janet Adkins, Marjorie Wantz, Sherry Miller and the other people discussed above had disabilities (or were perceived to have disabilities) and all of them, "by reasons of [their] disability," were denied the state's benefits of suicide prevention and/or enforcement of abuse, neglect, and homicide statutes. The states concluded that their fundamental interests in saving lives applied only to people without severe disabilities.

Pursuant to the ADA's explicit statutory mandate, 42 U.S.C. § 12134, the U.S. Department of Justice promulgated federal regulations elaborating on the statutory definition of discrimination. Specifically, the regulations provide that a state, as well as hospitals and doctors, discriminate when they either deny or do not afford an opportunity for people with disabilities to benefit from services either equal to or as effective as that afforded nondisabled persons. See e.g., 28 C.F.R. § 35.130(b).

Providing assisted suicide only for people with severe disabilities and conversely denying suicide prevention services only for people with severe disabilities violates the ADA in at least four

respects:

1. The presence or absence of a severe disability determines whether state and local governments enforce laws requiring health professionals to protect individuals who pose a danger to themselves. The disability, instead of the risk of suicide, determines the enforcement.

2. The presence or absence of a severe disability determines whether the state and medical practitioners respond to expressions of suicidal intent in people with disabilities with the application of lethal measures that are never applied to people without disabilities. The existence of a severe disability will be the reason for the denial of treatment that nondisabled persons routinely receive. Society's growing support of such discrimination is founded on inaccurate assumptions about the needs of persons with incurable health conditions, the role and authority of physicians, and the nature and significance of requests to die as they are understood and valued by physicians. [33]

3. The presence or absence of a severe disability determines whether state and local governments investigate or enforce potential medical malpractice, such as failure to provide pain medication, failure

---

[33] The clinical aspects of such discrimination are explained in Appendix B, excerpts of Affidavit of Carol Gill, Ph.D. from the record in Lee v. Oregon, 869 F. Supp. 1491 (Ore.D., 1994)

to establish an accurate diagnosis, prognosis and treatment plan, and failure to ensure informed consent. If one has a severe disability, each of these are treated differently than if one were nondisabled, resulting in a double standard that depends only on the existence of a severe disability.

4. The presence or absence of severe disability determines whether and the extent to which state and local governments investigate and enforce abuse and neglect and homicide statutes in cases reported as assisted suicides. Amici's experiences demonstrate that noninvestigation and nonenforcement are common practices when it comes to the death of people with disabilities. [34]

The existence of a disability should never be the basis for these distinctions.

---

[34] There are already documented cases of discriminatory enforcement of homicide statutes. **Myrna Lebov**, a woman with nonterminal multiple sclerosis, was pressured and assisted to die by her husband, Mr. Delury who stated that he had repeatedly told his wife that she was a terrible burden on him, telling her that she was "a vampire sucking [his] life away." Herbert Hendin, Dying of Resentment, N.Y. Times, March 21, 1996 (Op-Ed Page). Mr. Delury plead guilty to a charge of attempted manslaughter and was sentenced to only 6 months in prison.

A mother recently killed her brain injured non-verbal teenage daughter. The judge said her actions were understandable, andt other parents could be expected to react in the same way. She was sentenced to community service. B. Harris,Mom Freed in Mercy Killing, Spokesman-Review, Jan. 10, 1996 at A1, A7.

II. Adequate Safeguards Cannot Be Adopted To Protect People With Disabilities From Assisted Suicide Abuse And Therefore An Unequivocal Rule Must Be Established Prohibiting Assisted Suicide.

A. Any Purported Limitation Of The Right To Assisted Suicide To Terminally Ill Persons Will Not Protect People With Severe Disabilities.

Given the "history of purposeful unequal treatment" to which people with disabilities are subjected and the "continuing existence of unfair ... discrimination and prejudice," 42 U.S.C. § 12101 (a)(7) & (9), adequate assisted-suicide safeguards cannot and will not prevent abuse against people with disabilities. History, contemporary attitudes and biases, the Netherlands, as well as prior judicial decisions, demonstrate that safeguards against abuse in assisted suicide cannot be developed. Amici discussed the current practices which demonstrate that assisted suicide has not and will not be limited to terminally ill persons. [35] As long as society, including the medical profession, demonstrates ignorance and prejudice regarding the lives of people with disabilities, no safeguards can be trusted to contain the torrent of discrimination that will be unleashed by lifting the ban on assisted suicide.

At issue in the present case is nondisabled peoples' intense fear of becoming disabled. When a person with a disability states a

---

[35] See infra at 7 -10.

desire to die, nondisabled people believe the request is natural and reasonable because they believe that living with a severe disability is a life of dependency, indignity and helplessness; in short, worse than death. The wish to die agrees with the nondisabled view that the primary problem for disabled people is the permanent disability and/or dependence on life aids. Medical professionals, jurists and the public consistently ignore underlying treatable depression, lack of health care or other supports, and exhaustion from confronting systemic discrimination. When medical professionals and the media use phrases like "imprisoned by her body," "helpless," "suffering needlessly," and "quality versus quantity of life," purportedly in a humanistic and compassionate way, they are really expressing very primitive human fears of severe disability and a very misguided condemnation, "I could never live like that." Society translates these primitive emotions into a supposedly rational social policy of assisted suicide. Whenever

> permanent disability is [defined] as the problem, death is the solution.... [T]he wish to die is transformed into a desire for freedom, not suicide. If it is suicide at all, it is 'rational' and, thereby, different from suicides resulting from [the same] emotional disturbance or illogical despair [that nondisabled persons face]. [36]

---

[36] C.J.Gill, Suicide Intervention for People With Disabilities: A Lesson in Inequality, 8 Issues in Law & Med.37, 39 (1992).

The medical profession is not immune to these erroneous assumptions. Research shows that doctors frequently project the "quality of life of chronically ill persons to be poorer than patients themselves hold it to be, and give this conclusion great weight in inferring, incorrectly, that such persons would choose to forgo life-prolonging treatment." [37] It is particularly important to note that research on suicidal feelings among people with terminal illnesses demonstrates that such feelings are remediable through other means, including pain management, hospice services and counselling. [38] As long as physicians believe that a person with a severe disability has a "life unworthy of living," [39] lethal errors and abuses will occur.

---

[37] S. Miles, Physicians and Their Patients' Suicides, 271 J.A.M.A. 1786 (1994).

[38] Most death requests, even in terminally ill people are propelled by despair and treatable depression. Herbert Hendin and Gerald Klerman, Physician-Assisted Suicide: The Dangers of Legalization, 150 Am. J. of Psych. 143 (Jan.1993).

[39] It was in Germany in the 1930s, preceding the well-known holocaust of Jewish people , that the Nazis instituted a program to eliminate approximately 200,000 persons with physical and mental disabilities because their lives were "unworthy of living." See e.g., H. Gallagher, By Trust Betrayed (1990); R. Proctor, Racial Hygiene - Medicine Under the Nazis (1988); R. Lifton, The Nazi Doctors - Medical Killing and the Psychology of Genocide (1986) (the medical profession was not coerced but were willing initiators); G.Aly, The Legalization of Mercy Killings in Medical and Nursing Institutions in Nazi Germany from 1938 Until 1941, Int. J. of Law And Psychiatry 145 (1984). The same attitude recently pervaded China's policies in the killing of children with disabilities. Human Rights Watch/Asia, Death by Default - A Policy of Fatal Neglect in China's State Orphanages (1996).

B. Any Purported Limitation Of A Right To Assisted Suicide Only In Cases Of "Voluntary" Requests Will Not Protect People With Disabilities From Abuse.

As long as people with disabilities are treated as unwelcome and costly burdens on society, assisted suicide is not voluntary but is a forced "choice." Amici are profoundly disturbed by the finding of a constitutional right for assisted suicide in a society which refuses to find a right to adequate and appropriate health care to stay alive. Until society is committed to providing life supports, including in-home personal assistance services, health care, and technological supports, then there is not voluntary choice.

Our nation's health care system has not responded adequately or consistently to the health needs of people with disabilities. Now managed health care, with its emphasis on cost containment and the inevitable denial of health care, will further abridge the choices and endanger the lives of people with disabilities.

Without access to competent medical care, options and information about disability, people with severe disabilities are not able to make informed decisions. Without the professional commitment to help make living worthwhile for people with disabilities, which is the core of suicide prevention, people with disabilities will not receive the support necessary for informed and voluntary decisions.

Additionally, there is substantial evidence that physicians and other health care providers will engage in euthanasia in the absence of a patient's clear request to die, and even in opposition to a clear request to live:

1. Recent medical studies indicate that involuntary "do not resuscitate" ("DNR") orders are not uncommon. [40] Many members of your amici have been repeatedly requested and pressured to sign DNR requests. Maria Matzik, a Not Dead Yet and ADAPT member and a 34 year old ventilator user, was told by health care professionals in a hospital that a DNR order would apply to her because she uses a ventilator, despite her express demand to the contrary.

2. Cases have been brought by health care professionals seeking authority to withhold treatment in opposition to express patient and family directives to the contrary. [41]

3. Evidence from the Netherlands demonstrates quite unequivocally that involuntary euthanasia has become widespread and frequent, even with established written safeguards in place. Specifically, according to a 1990 governmental report, 5,941 persons

---

[40] D. Wassel & R. Truog, The Cardiopulmonary Resuscitation Order - - Not - Indicated Order: Futility Revisited, 122 Ann. of Int. Med. 304 (1995).

[41] E. Walsh, Spouse Says He'd Never Agree to Cut Life Support, Wash. Post, May 30, 1991, Sec. A at 3.

were given lethal injections without their consent. Of those, 1,474 were fully competent, according to their physicians. In 8% of the cases, doctors admitted there were unexplored options. Regardless of options, they euthanized unconsenting patients because of such express reasons as "low quality of life," "no prospect of improvement," "and "the family could not take any more." [42] There is no reason to believe that safeguards will work any better in the United States. To the contrary, once assisting disabled people to their deaths becomes routine in medical training and practice, no safeguards are possible behind the closed doctors' doors to protect people with disabilities against well-intentioned, but lethal prejudice exhibited by many physicians.

4. If a right to assisted suicide is created, then, as existing court precedent and state statutes involving refusal of treatment indicate, such a "right" will soon be extended in practice to incompetent persons through the use of advanced directives and surrogate decision-makers. Research shows that families are likely to believe that assisted suicide is a desirable option, and that a disabled family member would want assisted suicide, even though that family member in fact does not

[42] Richard Fenigsen , Euthanasia: The Medicine and Fear, Doctor Assisted Suicide and the Euthanasia Movement,G. McCuen, ed. at 76, 80 (1994); see also Maas, supra at n. 6.

want aid in dying.[43] Amici contend that a right to assisted suicide for competent adults will increase the danger of lethal decisions by families, whether well-intentional or otherwise.

5. The history of discrimination against persons with disabilities in health care settings, coupled with current developments in managed care, demonstrates that assisted suicide is the easiest and most financially profitable way to address the needs of persons with disabilities. With assisted suicide, a doctor under a capitated health care system will not have to exceed his utilization rate on a severely disabled patient. There are no safeguards that can protect against these prejudices and realities.

Finally, no system of safeguards can control conduct which results in the death of the primary witness to any wrongdoing or duress. The only "safeguard" that offers some protection against abuse is that assisted suicide remain illegal and socially condemned for all citizens equally. As assisted suicide becomes more and more acceptable, the threat of criminal prosecution is the only remaining protection to which people with severe disabilities, including terminal illnesses, can turn. For example, 16% of nurses report engaging in the practices,

[43] H.G.Koenig, et al., Attitudes of Elderly Patients and Their Families Toward Physician-Assisted Suicide, 156 Arch. of Int. Med., 2240 (1996).

sometimes without the consent of the patient. [44] In the absence of any potential for criminal liability, no meaningful barrier to active involuntary euthanasia will exist to protect the lives of members of this minority group.

III. If This Court Finds That Either A Constitutional Or Statutory Right To Assisted Suicide Exists, Then This Right Should Be Afforded To Everyone Without Discriminating Against People Because Of Health Or Disability Status.

The proposed right to assisted suicide discriminates, singling out people with severe disabilities as fit to die. Since this discrimination is so pervasive in our society, amici urge that if any right to obtain assistance to control one's death exists, it should apply to everyone in a nondiscriminatory manner and not be limited to persons with severe disabilities, including terminal illnesses.

If the Constitution requires that the state's interest in the preservation of life (through suicide prevention and other laws) is vitiated for some people because of their health status, then why should the state interest not also be discounted for other persons? Why should one's autonomy or right to control one's death be limited to persons with severe disabilities? Why exclude from this right persons enduring extreme, unabating psychological suffering due to the irreversable loss

---

[44] D. A. Asch, The Role of Critical Care Nurses in Euthanasia and Assisted Suicide, 334 N. Eng. J. of Med.,1374 (1996).

of loved ones? There is no constitutional basis for drawing a bright line on a continuum between disabled and nondisabled. Such a distinction would stand on shifting sands of arbitrary classifications and assessments, as well as changing medical and technological expertise and developments.

Moreover, if proponents of assisted suicide believe that adequate safeguards against treatable suicidal feelings can be established, then they should be willing to allow physician assistance for every citizen, regardless of their health status, after those safeguards have been observed.

Amici ask the Court to be believe them when they state that disability-based discrimination in this culture is deep-seated, virtually unconscious, pervasive and overwhelming. This discrimination against millions of Americans must be understood and reversed, in ways that few can even envision, long before we discuss expanding the ways in which society's unwanted can be killed. But if physician-assisted suicide will become a right for some, then it should be for all. The same safeguards, or lack of safeguards, that apply to some must apply to all, without discrimination.

CONCLUSION

The circuit courts' conclusions that people with disabilities are not threatened by physician-assisted suicide is false, based on virtually every court decision to date, as well as on the actual practice in our society. The fact that proponents of assisted suicide continue to dismiss and marginalize the input of the disability rights community on this topic leads amici to believe that they may actually feel that their untimely deaths are ultimately acceptable in the interest of the "greater good," or even only in the interest of their individual need to maintain control in an uncertain and often cruel world.

People with disabilities request this Court protects their lives, to stand as perhaps the last barrier to the "right to die" juggernaut of the recent decade, to recognize that cloaked in the false rhetoric of "personal autonomy," physician assisted suicide threatens the remaining rights of a profoundly oppressed and marginalized people.

Respectfully submitted,

Stephen F. Gold*

APPENDIX A

The following people were Kevorkin's "patients" through September 7, 1966: [1]

NAME, AGE, DATE DIED, STATUS AND CONDITION AT TIME OF DEATH

JANET AKINS, 54, 6/4/90. Not Terminal. Had Alzheimer's disease.
SHERRY MILLER, 43, 10/23/91. Not Terminal. Had multiple sclerosis with disorganization of motor control in legs and arms.
MARJORIE WANTZ, 58, 10/23/91.Not terminal. Had severe pelvic pain.
SUSAN WILLIAMS, 52, 5/15/92.Not terminal. Had multiple sclerosis and was blind.
LOIS HAWES, 52, 9/26/92. Terminal stages of lung cancer.
CATHERINE ANDREYEV, 46, 11/23/92. Terminal stages of breast cancer.
MARCELLA LAWRENCE, 67, 12/15/92. Not terminal. Had heart disease, emphysema and arthritis.
MARGUERITE TATE, 70, 12/15/92.Terminal stages of Lou Gehrig's disease.
JACK MILLER,53, 1/20/93. Terminal stages of bone cancer. Also had emphysema.
STANLEY BALL, 82, 2/4/93. Not terminal. Had pancreatic cancer.
MARY BIERNAT, 73, 2/4/93. Had breast and chest cancer. Unclear whether terminal.
ELAINE GOLDBAUM,47, 2/8/93. Not terminal. Had multiple sclerosis, was blind and use a wheelchair.
HUGH GALE, 70, 2/15/93. Unclear whether terminal. Had emphysema and congestive heart disease.
JONATHAN GRENZ, 44, 2/18/93. Terminal. Had throat cancer.

---

[1] Thomas A. Maier, Waiting at Death's Door, Newsday, September 8, 1996 at A40, A51, & A53.

MARTHA RUWART, 41, 2/18/93. Terminal. Had duodenal and ovarian cancer.
RON MANSUR, 54, 5/16/93. Unclear whether terminal. Had lung and bone cancer.
THOMAS HYDE, 30, 8/4/93. Terminal. Had Lou Gehrig's disease.
DONALD O'KEEFE,73, 9/9/93. Terminal. Had bone cancer.
MERIAN FREDERICK, 72, 10/22/93. Not terminal stage of Lou Gehrig's disease.
ALI KHALILI, 61, 11/22/93.Not terminal. Had progressive bone disease and multiple myeloma.
MARGARET GARRISH, 72, 11/26/94. Not terminal. Had double amputation from chronic degenerative joint disease.
JOHN EVANS, 77, 5/895. Not terminal. Had chronic lung disease.
NICHOLAS LOVING, 27, 5/12/95. Not terminal stage of Lou Gehrig's disease.
ERIKA GARCELLANO, 60, 626/95. Not terminal stage of Lou Gehrig's disease.
ESTHER COHAN, 46 8/25/95. Not terminal. Had multiple sclerosis.
PATRICIA CASHMAN, 58, 11/8/95. Not terminal. Had breast cancer.
LINDA HENSLEE, 48, 1/29/96. Not terminal. Had multiple sclerosis.
AUSTIN BASTABLE, 53, 5/6/96. Not terminal. Had multiple sclerosis.
RUTH NEUMAN, 69, 6/10/96. Not terminal. Was overweight and had diabetes.
LONA JONES, 58, 6/18/96. Not terminal. Had a brain tumor.
BETTE LOU HAMILTON, 67, 6/20/96. Not terminal. Had a degenerative neurological disease.
SHIRLEY CLINE, 63, 7/4/96. Not terminal. Had colon cancer.
REBECCA BADGER,39, 7/9/96. Not terminal. Had multiple sclerosis.
ELIZABETH MERCZ, 59, 8/6/96.Not terminal. Had Lou Gehrig's disease.
JUDITH CURREN, 42 8/15/96. Not terminal. Had chronic

fatigue syndrome and muscle disorder.
DORTHA SIEBENS, 76, 8/20/96. Not terminal. Had Lou Gehrig's disease.
PATRICIA SMITH, 40, 8/22/96.Not terminal. Had multiple sclerosis.
PAT DIGANGL, 66, 8/22/96. Not Terminal. Had debilitating muscle illness.
JACK LEATHERMAN, 73, 9/2/96. Terminal. Had pancreatic cancer.
ISABEL CORREA, 60, 9/7/96.Not terminal. Had severe pain from a spinal cord condition.

****

APPENDIX B

Excerpts from Affidavit of Carol Gill, Ph.D. in record in Lee v. Oregon, 869 F. Supp. 1491 (Ore. D. 1994).

I am a clinical psychologist specializing in issues affecting persons with disabilities, pain, and/or chronic illnesses. . . My former positions include: Director of Rehabilitation Psychology at Glendale Adventist Center; Commissioner in Psychology on the Los Angeles County Commission on Disability ; and Acting Director of the Program in Disability and Society at the University of Southern California . . . In addition . . . I have been physically disabled since contracting polio in childhood and relying on a power wheelchair for mobility and a ventilator for respiration during the night . . .

I have observed that a primary source of depression and despair in clients with disabilities and chronic progressive illnesses is their demoralization by social discrimination in daily life. After struggling with employment bias, unaccommodating and selective health services, lack of accessible and affordable housing, and lack of accessible transportation, many of my clients and research subjects have expressed feelings of severe emotional exhaustion commonly referred to as "burn-out." In fact, the most frequently repeated theme from persons with disabilities and illnesses that I have encountered in the last decade has been, "I can live with my physical condition but I'm tired of struggling against the way I'm treated."

In the case of spinal cord injury, for example . . . [it] is quite common for persons who first learn of their paralysis and are confronted with assistive technology and unfamiliar procedures to express the desire to die; and to express it forcefully and consistently for weeks. Months later, however, most of those patients thank their doctors and families for supporting their lives instead of concluding with their earlier despair . . . .

[W]hen the "critical life stress" involves a life-threatening illness or disability, the process of adjustment often takes considerably longer. Therapists experienced in working with terminally ill and irreversibly disabled individuals report a series of stages - including shock, grief, despair, and resolution - that are navigated before such individuals regain basic emotional control . . . However, emotional disorder can well be hidden and remain undetected unless carefully assessed by properly trained professionals. Most physicians are not trained to identify hidden depression, treatable suicidal intent, and other non-flagrant psychiatric disorders. Studies have revealed that a significant portion of persons who attempt suicide seek medical attention shortly before the event and that their physicians typically remain unaware of their emotional distress and need for psychological intervention . . . Attending physicians, therefore, have not proven to be qualified gatekeepers in determining a patient's need for psychological services.

In my clinical practice and in my subsequent education and research contacts, I have heard repeated complaints from persons with incurable health conditions that their physicians are often unaware of their needs, devaluing their lifestyles, and uninformed about such important options as personal in-home assistance, independent living centers, and assistive technology. These complaints are confirmed by research . . . For example, research ... reveals that health professionals often prejudge the lives of ventilator-users as poor in quality. These negative judgments are not only at odds with the generally high life satisfaction ratings of ventilator-users themselves, but are also associated with a lack of knowledge about options for assisted ventilation and a tendency to withhold such options from patients . . . Those of us who have worked extensively with suicidal persons realize

that the wish to die can sound unwavering and can persist for many weeks and yet be characterized by deep ambivalence. The presence of a terminal illness or even substantial physical suffering does not in any way diminish the possibility of significant conflict between the wish to die and the desire to live.

It is extremely dangerous to respond to the expression of a death wish by providing the means to die. That type of response, especially if it comes from a respected authority or representative of society (e.g., a physician), can unduly influence a vulnerable individual to embrace death as the "right" solution . . .

For example, the desire to die may result from the previously mentioned exhaustion after a struggle to live in the face of thwarting social barriers and discrimination. Self-destructive impulses may also represent an internalization of the stigma and devaluation society inflicts on persons with incurable conditions - an internalization of the pervasive message that physical weakness is "undignified" but that dying is "humane and dignified." Suicide may be a desperate attempt to control one's life when the surrounding environment is dismissive of one's needs or unwilling to support alternative ways to enhance self-determination, e.g., assistive technology and dignified personal assistance in one's own home. Embracing death may be a tragic effort to escape the imprisonment of a nursing home or other intolerable institutional setting. It may be an attempt to ward off impending abandonment or rejection from others who cannot cope with a loved one's physical decline. It may be a self-sacrificing measure to spare family members from the financial strain that often accompanies lingering illness in our society. The expression of a desire to die may be a poignant way of testing the waters to see if others feel it is time for the ill individual to get out of the way. These are all socially mediated reasons for wanting to die. They should be addressed through modifying the social environment, not accepting the individual's self-elimination.

The expressed desire to escape illness by dying can also be a sign of treatable clinical depression, anxiety disorder, or other mental illness. Researchers who studied terminally ill people seeking a

hastened death found that most, in fact, had a psychiatric disorder . . . Preoccupation with physical discomfort and the tendency to express emotional distress in somatic complaints is a common symptom of clinical depression. We cannot assume that simply because a person is physically ill, he or she is immune from the treatable psychiatric problems that visit many physically healthy persons have. . . . Not all persons with incurable conditions enjoy the middle-class ideal of the stable doctor-patient relationship. Many are impoverished and see a series of doctors who are assigned to them. They may opt for death because they cannot afford many of the comforts and options available to others. If they qualify for a lethal prescription, it is likely to come from a stranger who knows little about them instead of the trusted family physician envisioned by many of the more privileged . . .

In light of the disturbing facts presented above, I submit that the Oregon death with Dignity Act singles out a class of persons that society has already too quick to discard and further reduces support for and protections of their lives . . . That bias is an insidious form of prejudice that disability rights activists call "ableism" or "physicalism." A society that weighs the value of a citizen's life according to health or physical attributes is entering risky territory. When physicians are instructed to adopt such a scale with impunity, the silent and far-reaching effects on health care and on society as a whole will be as impossible to predict as to control. One of the most certain and tragic outcomes, however, is that it will lead to the wrongful premature deaths of persons who, if given basic support and reasonable options instead of a socially and medically sanctioned exit, would prefer to live.

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SECOND CIRCUIT

BRIEF *AMICI CURIAE* IN SUPPORT OF PETITIONERS

This brief *amici curiae* is respectfully submitted on behalf of Jerome J. De Cosse, Joseph George, Kenneth Prager, Richard Gallagher,[1] Robert J. Walsh, Alan B. Astrow, Ira Wagner, Mary Elizabeth Lell, Tony Barba, Lorna Cvetkovich, Kim Hardy, James Scheidler, Lynne Kavulich, Linda Long,

---

[1] *Amici* De Cosse, George, Prager and Gallagher submitted affidavits describing their support for New York's prohibition against physician assisted suicide in the district court proceeding.

Steve Najarian, Richard Taylor, Ruth Taylor, Sally White and the Metropolitan Catholic Physicians Guild[2] by the Legal Center for Defense of Life, Inc. in support of Petitioners' brief to reverse the judgment of the United States Court of Appeals for the Second Circuit entered on April 2, 1996.

Pursuant to Rule 37.3 of the Rules of this Court, *Amici* have obtained and file herewith the written consent of each of the parties to the filing of this brief.

INTEREST OF THE AMICI CURIAE

Amici are physicians opposed to the practice of physician-assisted suicide. The decision of the Court of Appeals for the Second Circuit will greatly impact medical professionals, like the *amici*, who are personally and professionally opposed to physician-assisted suicide. There is bitter irony in the fact that members of the same profession that is entrusted by the

[2] The individual members of the Metropolitan Catholic Physicians Guild include Karl P. Adler, Joseph M. Andronaco, John Baker, John D. Cahill, Robert E. Campion, Elvira M. Carota, James P. Casey, Antonio Cavalli, Arnold J. Cerasoli, John A. Cinelli, Joseph B. Cleary, John W. Conroy, Albert De Martino, Joseph D. DeCarlo, Louis R. Del Guercio, Anthony Diagonale, James Doyle, William J. Farrell, Joseph C. Fink, Thomas J. Forlenza, Andrew T. Furey, Robert Furlong, James T. Geddis, Edwin A. Hagerty, Jane Haher, Ralph Imperato, Rita C. Jaeger, James L. Januzzi, Paul L. Juan, Raymond Kiernan, John P. Landi, Michael N. Lavacca, John R. Locascio, Ralph Lucariello, Robert E. Madden, Emil Maffucci, Carolyn A. Martin, Robert E. Martin, Bento R. Mascarehas, Joseph Masdeu, Martin F. McGowan, Edward J. McDermott, Charles K. McSherry, John R. Meharg, Frank A. Migliorelli, Diana I. Monti, Saverio G. Mortati, Joseph Mucci, Alfred W. Murphy, Michael Murphy, Khaschayor Nainzadeh, Nahid Nainzadeh, Thomas F. Nealon, Oscar A. Palatucci, William F. Panke, Joseph T. Pedulla, Peter Pelligrino, Charles Pierre, Louis Piro, Francis J. Porreca, Edward J. Powers, R.F. Procario, Thomas M. Reilly, Benedict M. Reynolds, Anthony Riario, Charles A. Ricciardelli, Dorothy J. Richardson, Charles A. Rizzo, Thomas D. Rizzo, J. Anthony SanFilippo, Ludovit Sevcik, Vincent Squilla, Tullio F. Tartaglia, Carlos T. Tejada, Leslie H. Tisdall, Liliana Trivelli-Alessi, and Paul Tucci.

people of New York State to preserve and protect human life are now blessed by the decision of the court below with the permission to destroy life. Accordingly, to ensure that the ethics of medical practice remain life-oriented, the Center respectfully submits this brief on behalf of *amici curiae* in support of Petitioners' argument to reverse the decision of the court of appeals.

SUMMARY OF ARGUMENT

The decision of the court of appeals is fundamentally flawed and must therefore be reversed. The court of appeals based its decision on the untenable assumption that the withdrawal of extraordinary means of life support is no different than the provision of the means to hasten death. In equating the two without any evidentiary support, the court of appeals disregarded the overwhelming medical, ethical and historical opinion to the contrary.

Even assuming *arguendo* that the court of appeals' assumption is correct and that New York State does not treat those similarly circumstanced people alike, it committed an even more unfathomable error when it held that New York State has no rational basis related to a legitimate state interest for prohibiting assisted suicide while simultaneously allowing "similarly situated" patients to discontinue life-saving treatment. To the contrary, the State has numerous compelling interests which are properly fostered by the penal sanctions against assisted suicide. The State's interests are critical: to preserve human life; to avoid a threat to the lives of those citizens least able to protect themselves against pressure to consent to an early death; to regulate the physician-patient relationship by maintaining the high ethical standards of the medical community; and to protect the members of the medical profession from the compelled violation of their professional standards and individual consciences that require them to prolong and protect human life.

Finally, and most fundamentally, in striking down New York's laws against assisted suicide, the court of appeals usurped the exercise by New York State of its classic police powers to safeguard the lives and welfare of their citizens. There is no conceivable justification either constitutional or otherwise for the decision of the court of appeals to impose its uninformed lay judgment on an issue which the New York Legislature and Executive are competent to and have addressed as recently as 1994.

ARGUMENT

I.

THE COURT BELOW ERRED IN HOLDING THAT NEW YORK'S STATUTE CRIMINALIZING ASSISTED SUICIDE FURTHERED NO LEGITIMATE STATE INTEREST

The Second Circuit held[3]—we submit correctly—that no fundamental right is infringed by New York's criminal prohibition of assisted suicide:

> "[T]he statutes plaintiffs seek to declare unconstitutional here cannot be said to infringe upon any fundamental

[3] Respondents urged the court below to recognize that they have an unfettered constitutional right to commit suicide and to receive (and, in the case of physician-respondents, to render) assistance in the furtherance thereof. Such a right, they urged, was premised on the fundamental rights to privacy and other personal decisions which themselves are tenuous at best and from which Respondents expected the court below to further infer fundamental rights to commit suicide and to receive the assistance of a third party who in turn had a fundamental right to so assist. The court below properly rejected this absurd invitation to recognize a putative right premised on a quadruple implication. *See Bowers* v. *Hardwick*, 478 U.S. 186, 193 (1985) (refusing to take an expansive view of Court's authority to "discover" new fundamental rights imbedded in the Due Process Clause).

> right or liberty. As in *Bowers*, the right contended for here cannot be considered so implicit in our understanding of ordered liberty that neither justice nor liberty would exist if it were sacrificed. Nor can it be said that the right to assisted suicide claimed by plaintiffs is deeply rooted in the nation's traditions and history. Indeed, the very opposite is true." 80 F.3d 716, 724 (2d Cir. 1996).

Having thus properly understood and applied this Court's admonition in *Bowers* v. *Hardwick*, *supra*, 478 U.S. at 194, against "judge-made constitutional law having little or no cognizable roots in the language or design of the Constitution," the court of appeals proceeded to violate that directive under the color of applying the Equal Protection Clause.

The court of appeals erroneously held that New York State "does not treat similarly circumstanced people alike" and that New York has no rational basis for distinguishing between allowing physicians to withdraw life support upon the request of a competent patient and prohibiting physicians from complying with a patient's request for lethal drugs. In equating the withdrawal of extraordinary means of life support with the provision of a vehicle for suicide, the court of appeals unabashedly ignored the overwhelming body of medical and legal opinion to the contrary and its holding is therefore fundamentally flawed.

There is an undeniable distinction between directly causing death by an affirmative act and simply allowing death to occur by withholding treatment. The act of suicide requires the specific intent to die; the refusal of medical treatment evidences only an intent to forego extraordinary measures to sustain life and to allow nature to take its course. This distinction has been recognized by many courts. *See, e.g.*, *Thor* v. *Superior Court*, 5 Cal. 4th 725, 741-42, 21 Cal. Rptr. 2d 357, 367, 855 P.2d 375, 385 (1993) (recognizing distinction between rejection of medical intervention which will prolong affliction

and initiation of a course of events aimed at own demise); *In re Estate of Longeway*, 133 Ill.2d 33, 42, 549 N.E.2d 292, 296 (1989) (noting that termination of artificial means of life support does not deprive patient of life; patient's inability to breathe or swallow as a result of his illness is the "ultimate agent of death"); *Superintendent of Belchertown State School* v. *Saikewicz*, 373 Mass. 728, 743 n.11, 370 N.E.2d 417, 426 n.11 (1977) (noting that patient's refusal of treatment does not mean patient has specific intent to die).

Moreover, even assuming *arguendo* that New York's statutes treat similarly situated persons unequally, the court below erroneously concluded that the state lacks a rational basis "related to [a] legitimate state interest" for distinguishing between patients seeking assistance in committing suicide and those seeking to decline or discontinue their current medical treatment. Although, as the court below correctly recognized, the court need only find a "rational basis" for the different treatment in order to sustain the challenged statutes, *amici curiae* respectfully suggest that the state's interests in banning physician-assisted suicide are in fact compelling.

In addition to the compelling state interests articulated in the Attorney General's brief below (*i.e.*, the preservation of life, the prevention of manslaughter and homicide, and the protection of its most vulnerable citizens), the ban on assisted suicide is clearly justified by the unique state interests in regulating the practice of medicine upon its citizens and maintaining the ethical integrity of the medical profession, as well as protecting the medical profession from the unwarranted medical and ethical dilemmas that would surely result if this Court strikes down the prohibition against assisted suicide.

A. New York Has an Interest in Regulating the Physician-Patient Relationship

The regulation of physician-assisted suicide is inextricably intertwined with the State's interest in regulating the physician-patient relationship and maintaining the high ethical

standards of its medical community. It is well settled that states are empowered under their police power to regulate the practice of medicine upon its citizens. *See, e.g.*, *Williamson* v. *Lee Optical Co.*, 348 U.S. 483 (1955); *Damino* v. *O'Neill*, 702 F. Supp. 949 (E.D.N.Y. 1987).

Consistent with its police power, New York's laws against assisted suicide protect the sanctity of the physician-patient relationship from undue influence beyond the professional judgment of the doctor. For example, the New York State Task Force on Life and the Law recently concluded that allowing physicians to assist suicide or directly kill patients would be profoundly dangerous for many patients, especially poor or socially disadvantaged patients, who might feel pressured to request early death. *See When Death Is Sought: Assisted Suicide and Euthanasia in the Medical Context*, May 1994, at pp. 6-8. The Task Force noted that "no matter how carefully any guidelines are framed, assisted suicide . . . will be practiced through the prism of social inequality and bias that characterize the delivery of services in all segments of society, including health care." *Id.*

New York's assisted-suicide ban also serves to maintain the ethical integrity of the medical profession. *See Donaldson* v. *Lungren*, 2 Cal. App.4th 1614, 1620, 4 Cal. Rptr. 2d 59, 62 (Cal. App. 2d Dist. 1992) (maintaining the ethical integrity of the medical profession is a pertinent state interest). Indeed, New York's prohibition against physician assisted suicide is consistent with the state's prevailing medical ethical standards.[4] As such, the laws against assisted suicide should be

[4] The medical community of New York State has overwhelmingly rejected the practice of assisted suicide. For example, in addition to the recent recommendation against legalizing physician-assisted suicide by The New York State Task Force on Life and the Law, a task force comprising the highest levels of faculty and administration of the University of Rochester Medical Center has unanimously rejected recent proposals that medical professionals should actively assist patients who wish to end their lives. The task force considered and rejected Respondents' arguments in favor of the right they seek to have this Court create. The task

upheld; the ethics of the medical profession have always been and must remain life-oriented.

B. New York Has an Interest in Protecting the Integrity of the Medical Profession

New York State is also justified in banning assisted suicide to protect members of the medical profession from being compelled to kill their patients. The State's interest in protecting its medical professionals has long been recognized by the courts. For example, in *United States* v. *George*, 239 F. Supp. 752 (D. Conn. 1965), the court was confronted with a Jehovah's Witness who had refused blood transfusions for religious reasons. In ordering the transfusions, the court acknowledged the state's interest in protecting the consciences of its medical professionals:

> "In the difficult realm of religious liberty it is often assumed only the religious conscience is imperiled. Here, however, the doctor's conscience and professional oath must also be respected. In the present case the patient voluntarily submitted himself to and insisted upon medical care. Simultaneously he sought to dictate to treating physicians a course of treatment amounting to medical malpractice. To require these doctors to ignore the mandates of their own conscience, even in the name

force's report states: "The act of suicide raises complex psychological, ethical, social and legal issues. Without passing judgment upon these many dimensions of a complex problem, the Task Force does not believe that it is ethical, desirable, or appropriate for members of the healing professions to render assistance to suicide attempts. The historical proscriptions against suicide and euthanasia within the healing professions are very strong. To violate them would risk great harm to the trust and confidence which the public still imposes upon us. If present trends in our society continue, suicide organizations and la[illegible] practitioners may abound, but the healing profession should not participate." *Report of the Task Force of the University of Rochester Medical Center on Practitioner-Assisted Suicide*, January 1994, at p. 2.

> of free exercise, cannot be justified under these circumstances." *Id.* at 754.

Respondents' requested relief, if granted, will necessarily result in severe ethical problems for the overwhelming majority of physicians, who as a matter of conscience will refuse to abide by their patients' "wishes" to be murdered. New York's laws against assisted suicide protect these physicians from the exposure to malpractice liability that would surely result should the court of appeals' decision stand. *See Eichner* v. *Dillon*, 73 A.D.2d 431, 456, 426 N.Y.S.2d 517, 537 (2d Dep't 1980) ("It has also been said that the State has a compelling interest in maintaining the ethical integrity of the medical profession by protecting physicians against the compelled violation of their professional standards and against exposure to the risk of civil or criminal liability"), *aff'd as modified sub nom. Matter of Storar*, 52 N.Y.2d 363, 420 N.E.2d 64, 438 N.Y.S.2d 266, *cert. denied*, *Storar* v. *Storar*, 454 U.S. 858 (1981); *Application of President & Directors of Georgetown College, Inc.*, 331 F.2d 1000, 1009 (D.C. Cir.) (noting that doctors' choice of either administering blood transfusion or letting patient die in hospital bed exposed them and hospital to risk of civil and criminal liability), *cert. denied*, 377 U.S. 978 (1964); Byrn, *Compulsory Lifesaving Treatment for the Competent Adult*, 44 Fordham L. Rev. 1, 29-33 (1975).

C. The Court of Appeals Usurped the Role of the New York Legislature

This Court's established Equal Protection jurisprudence prohibits judicial usurpation of legitimate State legislative power. Where, as here, the State Legislature has exercised its traditional police power to prohibit conduct found to be inimical to its citizens[5], this Court has required Federal judicial

[5] Until the decision of the Second Circuit and that of the Ninth Circuit in *Compassion in Dying* v. *State of Washington*, 79 F.3d 790 (9th Cir. 1996)(en banc), no one would have doubted the power of the several

deference to State law whenever that law has a rational relationship to a matter of legitimate State concern[6]. The expansive reading of the Equal Protection Clause by the court below exceeds the limited judicial power granted by the United States Constitution to the judicial branch.

The New York Court of Appeals, whose Constitution provides more expansive protection of individual liberties than the United States Constitution[7], has repeatedly rejected attempts to restrict the State's interest in preserving life. *Grace Plaza of Great Neck, Inc.* v. *Elbaum*, 82 N.Y.2d 10, 16, 623 N.E.2d 513, 515, 603 N.Y.S.2d 386, 388 (1993) ("Though our rule reserving the right to the patient is more inflexible than that followed by most of our sister States, it is within the power of the individual States to adopt such a rule and also to higher standards of proof for determining the wishes of incompetent persons than for determining the wishes of those who are competent"); *see also Matter of Storar*, 52 N.Y.2d 363, 438 N.Y.S.2d 266, 420 N.E.2d 64 (1981), *cert. denied*,

---

States to protect the lives of citizens by prohibiting conduct which has been the subject of criminal prohibition since the time of adoption of the Fourteenth Amendment. As this Court recognized in *Cruzan* v. *Director, Missouri Department of Health*, 497 U.S. 261, 280-81 (1990):

> "As a general matter, the States—indeed, all civilized nations—demonstrate their commitment to life by treating homicide as a serious crime. Moreover, the majority of States in this country have laws imposing criminal penalties on one who assists another to commit suicide. We do not think a State is required to remain neutral in the face of an informed and voluntary decision by a physically able adult to starve to death." (Footnote omitted.)

[6] *See, e.g. United States* v. *Lopez*, ___ U.S. ___, 115 S. Ct. 1624 (1995); *Heller* v. *Doe*, 509 U.S. 312 (1993); *City of Dallas* v. *Stanglin*, 490 U.S. 19 (1989); *Kovacs* v. *Cooper*, 336 U.S. 77 (1949); *McNaughton* v. *Johnson*, 242 U.S. 344 (1917); *Murphy* v. *California*, 225 U.S. 623 (1912); *Welch* v. *Swasey*, 214 U.S. 91, 29 S. Ct. 567, 53 L. Ed. 923 (1909).

[7] *See, e.g., People* v. *Scott*, 79 N.Y.2d 474, 490-91, 593 N.E.2d 1328, 1337-38, 583 N.Y.S.2d 920 (1992), and cases cited therein.

454 U.S. 858 (1981); *Matter of Westchester County Medical Center on behalf of O'Connor*, 72 N.Y.2d 517, 531 N.E.2d 607, 534 N.Y.S.2d 886 (1988). These are judgments properly left under the United States Constitution to the political process in the several States. In the absence of a clear restriction on a fundamental constitutional right the federal courts lack the power to interfere in these judgments. What the Second Circuit did here usurped the judgment of generations of duly-elected members of the New York Legislature and effectively disenfranchised the citizens of New York.

II.

THE DECISION OF THE COURT OF APPEALS PROCEEDS UPON A FUNDAMENTALLY ERRONEOUS ASSUMPTION AS TO THE RELATIONSHIP BETWEEN PAINFUL TERMINAL ILLNESS AND THE PATIENT'S DESIRE FOR PHYSICIAN-ASSISTED SUICIDE

As is true for most of the non-medical experts involved in the public debate on physician-assisted suicide, the court below appears to accept the premise that terminally ill patients suffering unremitting pain are most likely to desire to end their life or seek physician assistance with respect thereto:

> "And what business is it of the state to require the continuation of agony when the result is imminent and inevitable? What concern prompts the state to interfere with a mentally competent patient's 'right to define [his] own concept of existence, of meaning, of the universe, and of the mystery of human life,' *Planned Parenthood* v. *Casey*, 505 U.S. 833, 112 S. Ct. 2791, 2807, 120 L. Ed. 2d 674 (1992), when the patient seeks to have drugs prescribed to end life during the final stages of a terminal illness?" 80 F.3d at 730..

The court's emotive appeal to the public's fear of pain and suffering at the end of life is obvious. But it is submitted that the visceral logic involved is fatally flawed when measured against the evidence of what actually happens among terminally ill patients with unremitting pain.

A very recent study of attitudes toward euthanasia and physician-assisted suicide among terminal cancer patients, oncologists and the general public presents a remarkably different picture than that invoked by the court below:

> "One of our most striking findings is that patients who had seriously considered and prepared for euthanasia or physician-assisted suicide were significantly more likely to be depressed. Depressed patients were more likely than non-depressed patients to find that discussions of euthanasia or physician-assisted suicide increased trust in their physician. This finding does not imply that every patient who wants euthanasia or physician-assisted suicide is depressed. Nevertheless, these data, combined with studies on suicidal thoughts among patients with cancer and refusal of life-sustaining treatment among AIDS patients, imply that interest in and actions relating to ending life among patients with life-threatening illnesses are frequently associated with depression and psychological distress.
>
> "Patients experiencing pain were not inclined to euthanasia or physician-assisted suicide. This finding is consistent with data from the Netherlands demonstrating that pain was the only reason for euthanasia in just 10% of cases and a contributing factor in fewer than 50% of cases. It is also consistent with data from American physicians who had carried out euthanasia. The lack of interest in euthanasia or physician-assisted suicide among patients with pain may contribute to oncologists' opposition to these interventions and their sense that discussions of them will reduce patient trust. The results

> suggest that having pain does not predispose a person to desire or take actions to end his or her life. Patients with pain do not seem to view euthanasia or physician-assisted suicide as the appropriate response to poor pain management. Indeed, oncology patients in pain may be suspicious that if euthanasia or physician-assisted suicide are legalised, the medical care system may not focus sufficient resources on provision of pain relief and palliative care.
>
> "These data indicate a conflict between attitudes and probable practices related to euthanasia and physician-assisted suicide. The interventions were approved of for terminally ill patients with unremitting pain, but these are not the patients most likely to request such interventions. This discrepancy between attitudes and likely practices warrants a critical re-examination of the purpose and probable use of euthanasia or physician-assisted suicide." (Footnotes omitted)

Emanuel, Fairclough, Daniels and Clarridge, *Euthanasia and Physician-Assisted Suicide: Attitudes and Experiences Among Oncology Patients, Oncologists, and the Public*, Lancet 1996; 347 (9018): 1805-1810 (June 29, 1996), at pp. 14-15.

The above study strongly supports this Court's repeated admonitions to the federal courts to avoid usurpation of the exercise by the States of classic police powers to safeguard the lives and welfare of their citizens. There is no conceivable justification for the decision of the court below to impose its uninformed lay judgment on an issue which the New York Legislature and Executive are competent to and have addressed as recently as 1994.

III.

THE CONSTITUTION IS NOT THE SOURCE OF OUR FUNDAMENTAL HUMAN RIGHTS

There is an even more fundamental error in the approach of the court below—acceptance of the twentieth century judicial theory which posits that fundamental rights are found in the Constitution and are, therefore, subject to "discovery" or "elucidation" within the four corners of the Constitution itself. The political history of our country makes clear that a fundamental idea which united the otherwise disparate individuals who signed the Declaration of Independence was a rejection of the political notion that the King was the source of all individual rights (see Magna Carta). Rather, although there was a deep disagreement as to the form of government which should be formed to protect those rights, there was agreement that the rights themselves inhered in each individual and any form of government which violated those rights was illegitimate and could be overthrown, by force if necessary. This truly revolutionary idea found support in the foundational concept that the source of individual rights could not be any governmental authority, be it King or Parliament, nor any positive law or constitution. Only by accepting this concept could the signers of the Declaration legitimize their decision to sever ties with England by force of arms, which *de facto* was already under way, at least in the northern colonies.

The English philosopher whose work stands most behind the Framers of the Declaration of Independence was, as is well known, John Locke.[8] Locke's *Second Treatise of Government* is most relevant here; scholars of the Revolution gen-

[8] "[T]he great virtuosi of the American Enlightenment—Franklin, Adams, Jefferson—cited the classical Enlightenment texts . . . . In pamphlet after pamphlet the American writers cited Locke on natural rights and on the social and governmental contract." BERNARD BAILYN, THE IDEOLOGICAL ORIGINS OF THE AMERICAN REVOLUTION 27 (1967).

erally have agreed that it is this work which influenced Jefferson the most in drafting the Declaration of Independence.[9] When Jefferson wrote that "all men . . . are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness," it seems plain that Locke was his source, "but Jefferson, as is well known, departed from Locke's trinity of 'life, liberty, and estate' and substituted 'the pursuit of happiness' for the third of these."[10]

To understand what Jefferson meant by inalienable rights to life and liberty, it is useful to look to the *Second Treatise*, where Locke, in his chapter on "The State of Nature," observes:

> "though this be a State of Liberty, yet it is not a State of License, though Man in that State have an uncontrollable Liberty, to dispose of his Person or Possessions, yet he has not liberty to destroy himself, or so much as any Creature in his Possession, but where some nobler use, than its bare Preservation calls for it. . . . Every one as he is bound to preserve himself, and not to quit his Station wilfully; so by the like reason when his own Preservation comes not in competition, ought he, as much as he can, to preserve the rest of Mankind, and may not unless it be to do Justice on an Offender, take away, or impair the life, or what tends to the Preservation of the Life, the Liberty, Health, Limb or Goods of another."[11]

Later in the *Second Treatise* Locke returns to the theme that "a Man" does not have "the Power of his own Life":

[9] "That the central argument of the Declaration is based mainly upon John Locke's *Second Treatise* is indisputable." Forrest Macdonald, Preface to *Novus Ordo Seclorum* ix (1985).

[10] *Id.* at ix.

[11] John Locke, *Two Treatises on Government*, Second Treatise, at 270-71.

> "This Freedom from Absolute, Arbitrary Power, is so necessary to, and closely joyned with a Man's Preservation, that he cannot part with it, but by what forfeits his Preservation and Life together. For a Man, not having the Power of his own Life, cannot, by Compact, or his own Consent, enslave himself to any one, nor put himself under the Absolute, Arbitrary Power of another, to take away his Life, when he pleases. No body can give more Power than he has himself; and he that cannot take away his own Life, cannot give another Power over it."[12]

Locke's firmly repeated anti-suicide theme expressed in another way—one more familiar to Americans—is that these rights are "inalienable"—*i.e.*, Jefferson's formulation is an expression of the demands of Locke's theory of natural rights.

This generally accepted understanding of the source of individual human rights and the function of the Constitution in protecting those rights somehow has been lost. As a result, we have reached a stage where the Constitution has been enshrined as the source of all individual human rights, thus permitting imperfect men and women, appointed to the federal judiciary for life, to "find" in the Constitution new rights as their individual vision of the good of the Nation informs them. This is, however, precisely the sort of unfettered power that the Founders sought to avoid granting to any governmental authority.

The impact of this flawed constitutional vision has been and continues to be the acceptance, even by jurists who purport to reject so-called "judicial activism" in favor of "strict construction" or "original intent," of the notion that the political compromise that was and is the Constitution, is the document to which the Nation must look as the source of individual rights. However, the authors of the Constitution had a much more limited view of their purpose, as the Preamble makes clear:

---

12 *Id.*, Chapter IV, Sec. 23, at 284.

> "We the people of the United States, in order to form a more perfect union, establish Justice, insure domestic Tranquility, provide for the common defense, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity . . . ."

As a consequence, this Court—a creature of the very Constitution it interprets[13]—has in its history gotten things very wrong indeed. A glaring example, but far from the only one, is *Scott* v. *Sandford*, 60 U.S. (19 How.) 393 (1856), in which Chief Justice Roger Taney and the majority of his cool and rational brethren held that Dred Scott, a black man then residing in Missouri, was and always would be "property" without the constitutional right to challenge his being dragged back into slavery with his family by his owner pursuant to the Fugitive Slave Act. Mr. Scott was no less a human person in 1856 than he was after the Emancipation Proclamation, and the Fugitive Slave Act of 1850, Ch 60, 9 Stat. 462 (1850), was never a law to which any citizen was morally compelled to adhere, Congress and the Supreme Court notwithstanding. *See, e.g.*, Michael Stokes Paulsen, *Captain James T. Kirk and the Enterprise of Constitutional Interpretation: Some Modest Proposals from the Twenty-Third Century*, 59 Albany L. Rev. 671, 687-89 (1995).

An apt statement of the jurisprudential approach which could have served to avoid the lurid spectacle of the *Scott* decision is that of Justice Stephen Johnson Field, a former member of the California Legislature, in his dissent in *Powell* v. *Pennsylvania*, 127 U.S. 678, 692 (1888):

> "With the gift of life there necessarily goes to every one the right to do all such acts, and follow all such pursuits, not inconsistent with the equal rights of others, as may support life and add to the happiness of its possessor.

---

13 *See* U.S. Const. art. III, § 1 ("The judicial Power of the United States, shall be vested in one supreme Court, and in such inferior Courts as the Congress may from time to time ordain and establish").

> The right to pursue one's happiness is placed by the Declaration of Independence among the inalienable rights of man, with which all men are endowed, not by the grace of emperors or kings, or by the force of legislative or constitutional enactments, but by their Creator; and to secure them, not to grant them, governments are instituted among men."

To the same effect is Justice Field's concurring opinion in *Butchers' Union Slaughter-House & Live-stock Landing Co.* v. *Crescent City Live-Stock Landing & Slaughter-House Co.*, 111 U.S. 746, 756-67 (1884):

> "As in our intercourse with our fellow-man certain principles of morality are assumed to exist, without which society would be impossible, so certain inherent rights lie at the foundation of all action, and upon a recognition of them alone can free institutions be maintained. These inherent rights have never been more happily expressed than in the Declaration of Independence, that new evangel of liberty to the people: 'We hold these truths to be self-evident'—that is so plain that their truth is recognized upon their mere statement—'that all men are endowed'—not by edicts of Emperors, or decrees of Parliament, or acts of Congress, but 'by their Creator with certain inalienable rights'—that is, rights which cannot be bartered away, or given away, or taken away except in punishment for crime—"and that among these are life, liberty, and the pursuit of happiness, and to secure these'—not grant them but secure them—'governments are instituted among men, deriving their just powers from the consent of the governed.' "

It was to such principles of natural rights that Justice Curtis also appealed in his dissenting opinion in *Scott* v. *Sandford*, *supra*, 60 U.S. at 624 ("Slavery, being contrary to natural right, is created only by municipal law").

In the Twentieth Century one most often finds these principles expressed in the dissenting opinions of this Court. *See, e.g.*, Justice Marshall's dissent in *Massachusetts Board of Retirement* v. *Murgia*, 427 U.S. 307, 322 (1976):

> "Whether 'fundamental' or not, ' "the right of an individual . . . to engage in any of the common occupations of life" ' has been repeatedly recognized by this Court as falling within the concept of liberty guaranteed by the Fourteenth Amendment. . . . As long ago as *Butchers' Union Co.* v. *Crescent City Co.*, 111 U.S. 746, 4 S.Ct. 652, 28 L.Ed. 585 (1884), Mr. Justice Bradley wrote that this right 'is an inalienable right; it was formulated as such under the phrase "pursuit of happiness" in the declaration of independence . . . . This right is a large ingredient in the civil liberty of the citizen." *Id.*, at 762, 4 S.Ct., at 657 (concurring opinion)."

See also Justice Ginsburg's dissent in *Sandin* v. *Conner*, ___ U.S. ___, 115 S. Ct. 2293 (1995):

> "I see the Due Process Clause itself, not Hawaii's prison code, as the well-spring of the protection due Conner. Deriving protected liberty interests from mandatory language in local prison codes would make of the fundamental right something more in certain States, something less in others. Liberty that may vary from Ossining, New York, to San Quentin, California, does not resemble the "Liberty" enshrined among 'unalienable Rights' with which all persons are 'endowed by their Creator." Declaration of Independence; *see Meachum* [v. *Spano*], 427 U.S. 215, at 230, 96 S.Ct. [2532], at 2541 (STEVENS, J., dissenting) ('[T]he Due Process Clause protects [the unalienable liberty recognized in the Declaration of Independence] rather than the particular rights or privileges conferred by specific laws or regulations.')."

Nevertheless, these first principles are an essential starting point for any reasonable attempt to articulate a rights-based

constitutional jurisprudence, and without them "rights" become, in Mr. Dumpty's words, whatever the speaker says they mean.

Thus, our history teaches that whenever the federal Judiciary, at the height of their assumed powers, ignore the true source of the rights guaranteed by the Constitution, the result is inevitably a disaster. In addition to the obvious example of *Scott* v. *Sandford*, *supra*, numerous other judicial *bete noirs* may be recounted. In each such instance, application of the constitutional jurisprudence suggested herein could have avoided the heinous result. For example, in *Plessy* v. *Ferguson*, 163 U.S. 537 (1896), the Court upheld a Louisiana law requiring "separate but equal" intrastate railroad coaches, and thus permitted legislated public racial discrimination to persist half a century until *Brown* v. *Board of Education*, 347 U.S. 483 (1954) explicitly put an end to the fraudulent "separate but equal" doctrine.

We also seem too ready to forget that prior to the Nineteenth Amendment, women were denied the right to vote (and, often, other fundamental rights), despite the enactment of the Fourteenth Amendment. *See, e.g.*, *United States* v. *Anthony*, 24 F. Cas. 829 (C.C. N.D.N.Y. 1873), upholding the criminal conviction of Susan B. Anthony for the federal crime of voting in a Congressional election in 1872 in New York. In that case, Circuit Justice Hunt wrote:

> "The right of voting, or the privilege of voting, is a right or privilege arising under the constitution of the state, and not under the constitution of the United States. . . . If the state of New York should provide that no person should vote until he had reached the age of thirty years, or after he had reached the age of fifty, or that no person having gray hair, or had not the use of all his limbs, should be entitled to vote, I do not see how it could be held to be a violation of any right derived or held under the constitution of the United States." 24 F. Cas. at 830.

During the same period, the Supreme Court, forgetting the lesson of *Scott* v. *Sandford*, twice upheld the denial of fundamental rights to women, thus demonstrating a social blindness that it took the First World War to remedy. *Bradwell* v. *Illinois*, 83 U.S. (16 Wall.) 130 (1873) (holding that the Fourteenth Amendment did not entitle a woman to admission to practice as an attorney in Illinois); *Minor* v. *Happersett*, 88 U.S. (21 Wall.) 162 (1875) (unanimously upholding denial of registration to vote in the 1872 general election to a Missouri woman). The very fact that these rulings today make us properly uncomfortable strongly counsels against the sort of judicial law-making engaged in by the court below.

Nor are such events confined to the Nineteenth Century. Consider the spectacle of a majority of this Court upholding the criminal conviction of a loyal native-born American citizen of Japanese ancestry for the "crime" of failing to leave his home in California in violation of an evacuation order of the local military commander directed only to Americans of Japanese ancestry. *Korematsu* v. *United States*, 323 U.S. 214 (1944). Justice Murphy's dissent is a powerful indictment of this modern failure to apply a proper constitutional analysis:

> "I dissent, therefore, from this legalization of racism. Racial discrimination in any form and in any degree has no justifiable part whatever in our democratic way of life. It is unattractive in any setting but it is utterly revolting among a free people who have embraced the principles set forth in the Constitution of the United States. All residents of this nation are kin in some way by blood or culture to a foreign land. Yet they are primarily and necessarily a part of the new and distinct civilization of the United States. They must accordingly be treated at all times as the heirs of the American experi-

ment and as entitled to all the rights and freedoms guaranteed by the Constitution." 323 U.S. at 242.

The decision of the court below blatantly substitutes the personal views of three federal judges for the deliberations of elective members of New York's Legislature for over two decades—

> "At oral argument and in its brief, the state's contention has been that its principal interest is in preserving the life of all its citizens at all times and under all conditions. But what interest can the state possibly have in requiring the prolongation of a life that is all but ended? Surely, the state's interest lessens as the potential for life diminishes. . . . And what business is it of the state to require the continuation of agony when the result is imminent and inevitable? What concern prompts the state to interfere with a mentally competent patient's 'right to define [his] own concept of existence, of meaning, of the universe, and of the mystery of human life,' . . . , when the patient seeks to have drugs prescribed to end life during the final stages of a terminal illness? The greatly reduced interest of the state in preserving life compels the answer to these questions: 'None.' " 80 F.3d at 729-30 (Citations omitted).

A more obvious example of impermissible judicial law-making cannot be imagined. There is no fundamental right or suspect classification involved in New York's long-standing penal prohibition against assisted suicide. The New York Executive Branch appointed a blue-ribbon panel which investigated and reported on this very question in 1994. The New York State Task Force On Life and the Law concluded that no exception to the penal law against assisted suicide should be made for physicians requested by competent terminally ill adults to end their life. As is proper in the political process, the broad-based Task Force considered the moral, regulatory and political ramifications of the issue in the context of the conditions actually

prevailing in the State of New York at the end of the Twentieth Century. There is neither constitutional power nor warrant for usurpation of this process by the federal judiciary. This Court must reverse the pernicious denial of the right of the citizens of New York to have their will, as expressed for over two hundred years through their duly-elected legislative representatives, respected by the federal judiciary.

CONCLUSION

The decision of the Court of Appeals should be reversed.

Respectfully submitted,

Michael P. Tierney

INTEREST OF *AMICI*

In this extraordinary case, this Court must decide whether, consistent with the Equal Protection Clause, New York may apply its laws against assisted suicide equally to everyone, including physicians who provide persons in the final stages of a terminal illness with lethal drugs to commit suicide. The Court below held it may not, resting its opinion on an erroneous construction of the Equal Protection Clause, New York law, and medical evidence. Representatives of diverse religious communities, *amici curiae* here, share grave concerns about these unprecedented conclusions. As New York law and medical practices recognize, there is a great difference between letting nature take its course for a gravely ill patient, and intervening in that course by intentionally providing a lethal agent to cause death. All citizens are entitled to laws that protect their lives, even from those who may wish to "assist" their suicides. The common good of our society requires that the life of each person be treated as having inherent worth. Individual statements of interest follow.

The United States Catholic Conference is a nonprofit corporation organized under the laws of the District of Columbia. Its members are the active Roman Catholic Bishops in the United States. The Catholic Bishops of New York, Washington, Oregon, California, and Michigan are, in addition, members of the State Catholic Conferences of those respective states. The Conferences are vehicles through which the Bishops speak cooperatively and collegially on matters affecting the Catholic Church and its people. Roman Catholicism is the largest religious denomination in the United States, with over 60 million members in this country. The Conferences advocate and promote the pastoral teaching of the Church on diverse issues, including the protection of human rights and the sanctity and dignity of human life. Each Conference has been active in supporting state laws that protect persons from assisted suicide.

The Christian Life Commission is the moral concerns and public policy agency for the Southern Baptist Convention, the nation's largest Protestant denomination, with over 15.2 million members in over 38,000 autonomous local churches. The Commission is charged with addressing public policies affecting the sanctity of human life.

The National Association of Evangelicals ("NAE") is a nonprofit association of evangelical Christian denominations, churches, organizations, institutions and individuals. It includes some 42,500 churches from 75 denominations, and 300 parachurch ministries. NAE has joined in this and many other *amicus* briefs in the defense of human rights, including the right to life.

The Lutheran Church-Missouri Synod is the second-largest Lutheran denomination in the United States. It has about 6,000 member congregations and about 2.6 million individual members. In 1995, as a result of their deeply-held religious beliefs on the sanctity of life, the congregations of the Synod passed a resolution expressing the Synod's objection "to medical personnel having any part in actively inducing death, even at the patient's request." The Synod resolved "to speak against any attempt to legalize physician-assisted suicide."

The Wisconsin Evangelical Lutheran Synod-Lutherans for Life is a para-synod organization in fellowship with the 400,000 member Wisconsin Evangelical Lutheran Synod ("WELS") and the 10,000 member Evangelical Lutheran Synod. WELS-Lutherans for Life is a specialized ministry seeking to make known God's will on life and to provide assistance to others on life issues. God's will concerning euthanasia and suicide is clear, recognizing that God acknowledges the absolute value of human life despite its varying or diminished quality. WELS-Lutherans for Life stands by the conviction that it is contrary to the will of God to take one's own life or to assist in such a task.

The Evangelical Covenant Church ("ECC") is a Protestant denomination with 92,000 members in 600 churches

throughout the United States. It operates a university, two hospitals, twelve continuing care retirement communities, and twelve nursing homes as a Christian ministry. ECC has adopted an ethical guideline on death and euthanasia. The guideline affirms the ECC's commitment to provide "the best palliative measures we can to relieve the pain, discomfort and suffering of our patients. . . . We do not act in any way intentionally to cause, assist, or accelerate the death of patients."

The American Muslim Council ("AMC") is a nationally recognized organization representing the interests of the American Muslim community. AMC is a committed advocate of human rights. It participates in interfaith and multiethnic dialogue with the hope of promoting an environment in which tolerance and justice will thrive. AMC's opposition to assisted suicide is rooted in Islamic belief, which strongly affirms the sanctity of human life.

Through their counsel, the parties have consented to the appearance of these *amici*.

SUMMARY OF ARGUMENT

In this case, this Court is asked to reverse an extraordinary ruling—that "terminally ill persons" in the "final stages of dying," as a class, constitutionally must be *excluded* from the mandatory protection of generally applicable homicide laws. This conclusion contravenes the very principle of equal protection under law upon which the Second Circuit below purported to ground its decision. Excluding people from the protection of the homicide laws based on the condition of their health is a particularly serious departure from the principle of equal justice for all. It is a grave injustice to deprive any person of the protections against deadly harm that are extended to all others under the criminal law. Indeed, withholding such protections is an injustice of unspeakable magnitude, for it leads to the literal destruction of the very lives that government is charged with protecting.

The decision below is based on at least five erroneous assertions. First, the court erred by subjecting to equal

protection scrutiny New York homicide laws that create no classification whatsoever. Second, contrary to this Court's declaration that the Equal Protection Clause is not a source of substantive rights, the court below created a new "right to hasten death" that has never been recognized by the New York legislature or New York courts. Third, disregarding precedent and common sense, the court erroneously declared that there is no rational difference between complying with a person's decision to decline medical treatment and providing that person with a lethal poison to commit suicide. Fourth, disregarding this Court's own admonitions, the court below incorrectly found that New York has a "greatly reduced" interest in protecting the lives of persons who are in the "final stages of a terminal illness," thereby removing this ambiguously-defined and vulnerable class of persons from the protections of an unambiguous and generally applicable homicide statute. Fifth, by concluding that persons who fall within this ambiguous category can choose only between self-destruction or continued "agony," the court erroneously suggested, as a matter of law and for the entire Nation, that this class of citizens is simply and unalterably beyond the reach of modern-day medical and palliative care—a suggestion that is as false as it is cynical.

This case is not about respecting a person's desire to be free of an unwanted or burdensome medical treatment. It is about providing those who appear to be terminally ill with a death-producing agent for the express purpose of causing their death. The Second Circuit erroneously concluded that the Constitution forbids States to recognize a difference between the two. The court thus cast aside as "irrational" a distinction that has achieved nearly universal recognition in the common law, statutory law, the medical profession, and countless court decisions, including the law of New York. A 1994 Task Force appointed by the Governor of New York cited the distinction between declining medical treatment and administering a lethal agent with the intentional purpose of causing death, as one of many reasons for retaining the State's

laws prohibiting assisted suicide. On this basis, the New York legislature acted reasonably in leaving its law unchanged.

In the last analysis, the ruling below manufactures a "right" that would radically alter society. The rule of law reflects the idea of "ordered liberty." There is no right for one person to provide another with the means of taking his or her life. The decision below must be reversed.

ARGUMENT

This Term, the Court confronts what, without exaggeration, may be the most profound and far-reaching federal constitutional question ever to have demanded its attention. At issue is whether a centuries-old tradition and prohibition—*we will not take the life of another even if asked*—should be abandoned. No departure from that proscription should be allowed by this Court. Indeed, the very uniformity of that tradition suggests a serious and fundamental error at the heart of the lower court's analysis.[1]

I. THE NEW YORK HOMICIDE LAWS COMPLY WITH THE EQUAL PROTECTION CLAUSE BECAUSE THEY APPLY EQUALLY TO EVERYONE.

The New York homicide statutes struck down in this case create no classifications whatsoever. In New York, no one may assist another person to commit suicide or obtain another person's "assistance" in committing suicide. Since the statutory prohibition against assisted suicide applies to everyone equally, it clearly complies with the Equal Protection Clause. *New York City Transit Authority v. Beazer*, 440 U.S. 568, 587 (1979) (laws that apply evenhandedly to all persons "unquestionably comply" with the Equal Protection Clause).

What is more, the Second Circuit's decision *creates* an equal protection problem where none had existed before.

---

[1] This Court has agreed to hear *State of Washington v. Glucksberg*, No. 96-110, raising the same conceptual questions but from a different legal perspective.

The court's conclusion that the Equal Protection Clause requires *unequal* application of a generally applicable criminal law, depending on the health condition of the victim and whether the defendant has a medical license, contradicts the very principle of equal protection upon which the court below purported to ground its decision. It is abhorrent to the principle of equal justice under law to withhold from terminally ill patients "the same protections from suicide the majority enjoys." *Lee v. Oregon*, 891 F. Supp. 1429 (D. Or. 1995), *appeal pending*, No. 95-35804 (9th Cir.) (*sub judice*).

There is a second and equally fundamental problem with the Second Circuit's decision. The court relied upon the Equal Protection Clause to create what it called a "right to hasten death"—a new substantive right that is not recognized by the New York legislature or the New York courts. As this Court has declared, "[i]t is not the province of [the federal courts] to create substantive constitutional rights in the name of guaranteeing equal protection of the laws." *San Antonio Independent School District v. Rodriguez*, 411 U.S. 1, 33 (1973). There is, moreover, a contradiction between New York law and this judicially invented "right to die" or "right to hasten death"—a "right" which, stripped of euphemism, would more aptly be called a "right to assisted suicide" because that is the conduct at issue here. The contradiction is obvious: assisted suicide is *proscribed* by the very New York legislature that the Second Circuit claimed had implicitly *created* a "right to hasten death." Conduct cannot be explicitly banned under state criminal law and at the same time constitute a state-created "right" subject to "equal application" under the Equal Protection Clause.[2]

[2] New York law rejecting a "right to hasten death" is clear. *Matter of Storar*, 420 N.E.2d 64, 71 n.6 (N.Y. App.), *cert. denied*, 454 U.S. 858 (1981). But for the Second Circuit's declaration of such a "right," which is contrary to New York's view, there would be no equal protection problem. In *Leavitt v. Jane L.*, 116 S. Ct. 2068 (1996), this Court summarily reversed the Tenth Circuit's invalidation of the entire Utah statute regulating abortion based on the court of appeal's failure to apply a clear legislative severability clause. *Id.* at 2070. By disregarding clear state law and creating the classification, the Second Circuit's action is analogous and calls for the same remedy here. *See id.* at 2073.

For the Second Circuit to declare who may be charged with a homicide in New York and under what circumstances is a radical departure from the proper judicial role. A declaration by a court that assistance in self-destruction is a "benefit" or "right" for one particular class of citizens, while remaining a crime when inflicted upon all other citizens, would be tantamount to deciding that some persons are truly better off dead than alive. How such a mandate could be rooted in the Constitution defies reasoned explanation. Our Constitution does not mandate that state-licensed healing professionals be permitted to assist in the self-destruction of any class of citizens.

II. EVEN IF THE EQUAL PROTECTION CLAUSE WERE IMPLICATED, THERE IS A PROFOUND DISTINCTION BETWEEN WITHDRAWING MEDICAL TREATMENT AND ASSISTING IN A SUICIDE.

The Second Circuit, substituting its judgment for that of the New York legislature, erred by denying that there is any rational difference between assisting a suicide and acceding to a decision to forego medical treatment. The legislature saw the distinction clearly. Under New York law, everyone is permitted to accept or refuse his or her own medical treatment, yet no one is permitted to enlist another person's assistance in committing suicide. *See, e.g., Matter of Storar*, 420 N.E.2d 64, 71 n.6 (N.Y. App.) (distinguishing a natural death from self-inflicted killing), *cert. denied*, 454 U.S. 858 (1981); *id.* at 74 (Jones, J., dissenting) ("I explicitly disclaim any intention, expressly or by implication, to invite consideration of . . . the deliberate use of a life shortening agent for the termination of life").

The distinction between withdrawing treatment and assisting a suicide is supported by both authority and reason. Courts and legislatures, including those of New York, have uniformly and consistently recognized the distinction.[3] When courts began to extend the right to forego treatment to incompetent and comatose patients, they did so precisely *because* it was different from committing suicide, and they cautioned explicitly that these decisions were not to be taken as blurring or violating that distinction. *Matter of Quinlan*, 355 A.2d 647, 665 (N.J. 1976) ("We would see . . . a real distinction between the self-infliction of deadly harm and a self-determination against artificial life support"), *cert. denied sub nom. Garger v. New Jersey*, 429 U.S. 922 (1976). The difference between foregoing treatment and assisting

[3] *Barber v. Superior Court*, 195 Cal. Rptr. 484, 487 (Cal. App. 1983) ("Euthanasia, of course, is neither justifiable nor excusable in California"); *Superintendent of Belchertown v. Saikewicz*, 370 N.E.2d 417, 426 n.11 (Mass. 1977) (distinguishing a "competent, rational decision to refuse treatment when death is inevitable" from an act of intentional self-destruction); *Bartling v. Superior Court*, 209 Cal. Rptr. 220, 225-26 (Cal. App. 1984) (suicide is distinguishable from death from natural causes which results from disconnecting a respirator from a comatose, terminally ill patient); *Matter of Conroy*, 486 A.2d 1209, 1224 (N.J. 1985) (declining life-sustaining medical treatment is distinguishable from suicide because it "merely allows the disease to take its natural course; if death were eventually to occur, it would be the result, primarily, of the underlying disease, and not the result of a self-inflicted injury"); *Bouvia v. Superior Court*, 225 Cal. Rptr. 297, 306 (Cal. App. 1986) (a "decision to allow nature to take its course is not equivalent to an election to commit suicide with . . . parties aiding and abetting therein"); *Brophy v. New England Sinai Hospital*, 497 N.E.2d 626, 635 n.29, 638 (Mass. 1986) ("the law does not permit suicide," which is distinguishable from the decision to remove life-sustaining treatment from a patient who is in a persistent vegetative state and unlikely to regain cognitive functioning); *Donaldson v. Van de Kamp*, 4 Cal.Rptr.2d 59, 63 (Cal. App. 1992) ("Here there are no life-prolonging measures to be discontinued. Instead, a third person will simply kill [the plaintiff]"). *See also* Edward R. Grant & Paul Benjamin Linton, *Relief or Reproach?: Euthanasia Rights in the Wake of Measure 16*, 74 Oregon L. Rev. 449, 465-66 n.59 (1995) (citing additional cases).

suicide is explicitly recognized by 45 state legislatures, including New York, and the District of Columbia, in the living will and power of attorney laws of these jurisdictions.[4]

The American Medical Association ("AMA") likewise recognizes a "fundamental difference between refusing life-sustaining treatment and demanding a life-ending treatment." AMA Council on Ethical and Judicial Affairs, *Report I-93-8*, at 2.[5] So do other medical associations.[6] To state the AMA position:

> When a life-sustaining treatment is declined, the patient dies primarily because of an underlying disease. The illness is simply allowed to take its natural course. With assisted suicide, however, death is hastened by the taking of a lethal drug or other agent. Although a physician cannot force a patient to accept a treatment against the patient's will, even if the treatment is life-sustaining, it does not follow

[4] Edward R. Grant & Paul Benjamin Linton, *Relief or Reproach?: Euthanasia Rights in the Wake of Measure 16*, 74 Oregon L. Rev. at 462-3 (listing statutes).

[5] Individual health care professionals understand the difference as well, with 87% of physicians and nurses in a recent study agreeing that "to allow patients to die by forgoing or stopping treatment is ethically different from assisting in their suicide." Mildred Z. Solomon, *et al., Decisions Near the End of Life: Professional Views on Life-Sustaining Treatments*, 83 Am. J. of Pub. Health 14, 17-18 (Jan. 1993).

[6] The World Medical Association, American Nurses Association, National Hospice Organization, American Geriatrics Society, Canadian Medical Association, and British Medical Association oppose physician-assisted suicide. Edward R. Grant & Paul Benjamin Linton, *Relief or Reproach?: Euthanasia Rights in the Wake of Measure 16*, 74 Oregon L. Rev. at 469 n.70; Leah L. Curtin, *Nurses Take a Stand on Assisted Suicide*, 26 Nursing Management 71 (May 1995); Bill Wallace, *The Right to Die Rightly*, 3 Hospice 10-11, 28 (Summer 1992). According to the National Hospice Organization's position statement: "Euthanasia is different in kind, not degree, from treatments that allow death to occur or even those which unintentionally hasten it." Wallace, *supra* at 11.

> that a physician ought to provide a lethal agent to the patient. The inability of physicians to prevent death does not imply that physicians are free to help cause death.

Id. The Second Circuit's elimination of this distinction therefore overrides not only a legislative judgment but the medical profession's own longstanding ethical judgment, thus undermining the profession's "unqualified opposition to physician-assisted suicide." Brian McCormick, *Continued Opposition: House Refuses to Open Door on Physician-Assisted Suicide*, Am. Med. News, Dec. 20, 1993, at 7; American Medical Association Press Release, "AMA Soundly Reaffirms Policy Opposing Physician-Assisted Suicide" (June 25, 1996).

The American Bar Association's Commission on Legal Problems of the Elderly also recognizes that decisions to refuse treatment are "legally and ethically distinct" from decisions to provide "a lethal agent with the intentional purpose of terminating life." American Bar Association ("ABA"), Commission on Legal Problems of the Elderly, Memorandum of Jan. 17, 1992, *reprinted in* 8 Issues in Law & Med. 117, 118 (Summer 1992). Assisted suicide, as one commentator on the law has observed, "involves not letting the patient die, but making the patient die. . . ." Stephen L. Carter, The Culture of Disbelief 236 (1993).[7]

Like the AMA, ABA, and countless courts, New York knows (and argued below) that there is a material difference between declining medical treatment and assisting a suicide. In 1994, a 25-member Task Force on Life and the Law appointed by the Governor of New York concluded that the distinction was one of many reasons for retaining the existing New York ban on assisted suicide. The Task Force wrote:

---

[7] *See also* Robert Byrn, *Compulsory Lifesaving Treatment for the Competent Adult*, 44 Fordham L. Rev. 1 (1975) ("suicide means something quite different in the law" from refusing lifesaving treatment).

> As . . . courts have recognized, the fact that the refusal of treatment and suicide may both lead to death does not mean that they implicate identical constitutional concerns. The imposition of life-sustaining medical treatment against a patient's will requires a direct invasion of bodily integrity and, in some cases, the use of physical restraints, both of which are flatly inconsistent with society's basic conception of personal dignity. . . . It is this right against intrusion—*not a general right to control the timing and manner of death*—that forms the basis of the constitutional right to refuse life-sustaining treatment. Restrictions on suicide, by contrast, entail no such intrusions, but simply prevent individuals from intervening in the natural process of dying.

New York State Task Force on Life and the Law, When Death Is Sought: Assisted Suicide and Euthanasia in the Medical Context 71 (1994) (emphasis added).

The distinction between declining treatment and assisting suicide is likewise supported by reason. There are at least four critical differences. Assisted suicide (1) does not implicate the interest in being free of bodily invasion, an interest that is central to the refusal of medical treatment, (2) has been consistently criminalized under the common law and by statute, (3) does not involve death from natural causes, and (4) involves a direct and unambiguous intention to cause death. *Any one of these differences is sufficient* to demonstrate the rationality of the distinction.

A. Assisted Suicide Does Not Implicate the Interest in Being Free of Bodily Invasion.

The interest of a competent adult in being free of bodily invasion at the hands of another has been a mainstay of English and American law for centuries. The law protects this interest by imposing a duty upon everyone to refrain even from touching another, absent his or her consent. Doctors who violate this duty by administering medical treatment to unwilling patients are subject to civil damages, even if the treatment might have been thought

beneficial or life-saving to the patient. *E.g., Matter of Storar,* 420 N.E.2d at 71 (New York imposes "civil liability on those who perform medical treatment without consent, although the treatment may be beneficial or even necessary to preserve the patient's life"). An assisted suicide, by contrast, posits a right to *insist* upon a bodily invasion—one so radical that it invariably and deliberately causes death.

It was precisely the interest in being free of bodily invasion—not any right to self-destruction—that was at issue in *Cruzan v. Director, Missouri Department of Health,* 497 U.S. 261 (1990). In deciding that Missouri could require clear and convincing evidence of an incompetent patient's past wishes before allowing the discontinuation of artificially administered nutrition and hydration, this Court observed that a liberty interest "in *refusing unwanted medical treatment* may be inferred from our prior decisions." *Cruzan,* 497 U.S. at 278 (emphasis added); *id.* at 279 (petitioner claimed that "the forced administration of life-sustaining medical treatment . . . would implicate a competent person's liberty interest"); *id.* at 287 (O'Connor, J., concurring) ("I agree that a protected liberty interest in refusing unwanted medical treatment may be inferred from our prior decisions"). As Justice O'Connor observed, the liberty interest in refusing medical treatment "flows from decisions involving the State's invasions into the body." 497 U.S. at 287 (O'Connor, J., concurring). It was "state incursions into the body," Justice O'Connor wrote, that were repugnant to the Due Process Clause. *Id.*[8] At the same time, this Court recognized that

[8] Other decisions of this Court also recognize the interest in being free of bodily invasion. *Washington v. Harper,* 494 U.S. 210, 221-22 (1990) (liberty interest in avoiding the unwanted administration of anti-psychotic drugs); *Jacobson v. Massachusetts,* 197 U.S. 11, 24-30 (1928) (liberty interest in declining an unwanted smallpox vaccine is outweighed by the common good); *Rochin v. California,* 342 U.S. 165, 172 (1952) ("forcible extraction of . . . stomach's contents" in criminal search offends due process); *Winston v. Lee,* 470 U.S. 753, 759 (1985) ("compelled surgical intrusion into an individual's body for evidence" implicates the Constitution).

> As a general matter, the States—indeed, all civilized nations—demonstrate their commitment to life by treating homicide as a serious crime. Moreover, the majority of States in this country have laws imposing criminal penalties on one who assists another to commit suicide.

Id. at 280. The fact that one may forego medical treatment "even if" treatment might have prolonged life suggests how misleading it is to speak of a "right to die." Patients have a right to refuse treatment *despite* the fact that treatment might have extended their lives, not *because* the refusal will shorten their lives.

The difficulty in speaking of a "right to die" or a "right to hasten death" is also demonstrated by the relation between the principle of informed consent and the overarching aim of tort law to protect people from harm. The principle of informed consent historically provided a remedy for people who were injured when their physicians failed to adequately disclose relevant risks and dangers, or failed to obtain any consent at all, before carrying out a medical procedure. This was the foundation of the common law principle of informed consent.

> Ordinarily, where the patient is in full possession of all his mental faculties and in such physical health as to be able to consult about his condition without the consultation itself being fraught with dangerous consequences to the patient's health, and when no emergency exists making it impracticable to confer with him, it is manifest that his consent should be a prerequisite to a surgical operation.

Pratt v. Davis, 79 N.E. 562, 564 (Ill. 1906). That the principle of informed consent is grounded in concern for the preservation of bodily health is evident from its exceptions. When its application does not serve the goal of preserving life and health, the principle of informed consent may give way to exceptions that will. This occurs,

for example, (1) when, in an emergency, immediate remedial treatment must be undertaken to preserve the patient's life or health and the patient's decision on the treatment cannot be obtained, or (2) when it is apparent that full disclosure regarding the proposed treatment or procedure will only harm the patient's health. *Canterbury v. Spence*, 464 F.2d 772, 788-89 (D.C. Cir.), *cert. denied*, 409 U.S. 1064 (1972); *Pratt v. Davis*, 79 N.E. at 564; *see Schloendorff v. Soc. of N.Y. Hosp.*, 105 N.E. 92 (N.Y. 1914). That patients may refuse treatment (over the objection of a physician who believes treatment would be beneficial) is simply a corollary of the rule that the patient has ultimate responsibility to decide the direction of his or her health care. That the power to resolve disagreements about whether to accept health care resides with the patient does not mean that the patient has a constitutional right to obtain from a physician something which is the very antithesis of health care—the means of inflicting deadly self-harm.

B. Assisted Suicide Has Consistently Been Treated as a Criminal Offense Under English and American Law.

As the Second Circuit itself observed, it cannot be said that a right to assisted suicide is rooted in the nation's traditions or history:

> Indeed, the very opposite is true. The Common Law of England, as received by the American colonies, prohibited suicide and attempted suicide. Although neither suicide nor attempted suicide is any longer a crime in the United States, 32 states, including New York, continue to make assisted suicide an offense. Clearly, no "right" to assisted suicide ever has been recognized in any state in the United States.

Quill v. Vacco, 80 F.3d 716, 724 (2d Cir. 1996) (citations omitted). Today a "majority of States in this country have laws imposing criminal penalties on one who assists another to commit suicide." *Cruzan v. Director, Missouri Department of Health*, 497 U.S. at 280. In recent years, in fact, that number has increased. In 1996, Iowa and Rhode Island joined the ranks of states with specific statutes against assisting a suicide.[9] Since 1994, at least seventeen states have considered and rejected proposals to legalize assisted suicide.[10]

"American law has always accorded the State the power to prevent . . . suicide," let alone assisted suicide. *Cruzan*, 497 U.S. at 293 (Scalia, J., concurring). The right to decline medical treatment, by contrast, has a long pedigree in the common law and is recognized in every state.

C. In an Assisted Suicide, Death Does Not Result From Natural Causes.

A patient's death by assisted suicide is caused not by any underlying disease, but by an intervening lethal act.

---

[10] Alaska, HB 371 (died in House State Affairs Committee, 1996); Arizona, S.B. 1007 (negative vote in Senate Health Committee, Jan. 1996); California, A. 1080 (withdrawn by sponsor in 1995) and A. 1310 (died without a hearing, Jan. 1996); Colorado, H.B. 1308 (tabled by House Committee on Health, Environment, Welfare and Institutions, Feb. 1995) and H.B. 1185 (defeated 7-to-4 in the same committee, Feb. 1996); Connecticut, S.B. 361 (died in committee, April 1995); Maine, L.D. 748 (rejected by House Judiciary Committee 10-to-3 and by full House 105-to-35, June 1996); Maryland, H.B. 933 (rejected by House Environmental Affairs Committee 15-to-4 in 1995) and H.B. 474 (rejected by same committee 16-to-5 in 1996); Massachusetts, H.B. 3173 (died in House Judiciary Committee, May 1995); Michigan, H.B. 4134 (died in committee, 1995); Mississippi, H.B. 1023 (died in House Judiciary Committee, 1996); Nebraska, L.B. 1259 (died in Judiciary Committee, 1996); New Hampshire, H.B. 339 (rejected by House of Representatives 256-to-90, Jan. 1996); New Mexico, S.B. 446 (tabled 6-to-1 by Senate Judiciary Committee, Feb. 1995); New York, S. 1683, S. 5024-A, A. 6333 (died without a hearing in 1995); Vermont, H.B. 335 (died in House Committee on Health and Welfare, 1995); Washington, S.B. 5596 (died in committee, March 1995); Wisconsin, S.B. 90 and A.B. 174 (died in committee).

If, for example, a doctor does not put a patient on a respirator or feeding tube because the patient has decided to forego such treatment, death may occur if the patient's disease or injury prevents adequate respiration or nutrition. But American courts have long recognized that what impedes the patient's ability to breathe or eat adequately on his or her own is the underlying disease, not an intervening act by the physician.[11]

On this point, the Second Circuit was simply mistaken. It wrote:

> [T]here is nothing "natural" about causing death by means other than the original illness or its complications. The withdrawal of nutrition brings on death by starvation, the withdrawal of hydration brings on death by dehydration, and the withdrawal of ventilation brings about respiratory failure. By ordering the discontinuance of these artificial life-sustaining processes or refusing to accept them in the first place, a patient hastens his death by means that are not natural in any sense. It certainly cannot be said that the death that immediately ensues is the natural result of the progression of the disease or condition from which the patient suffers.

80 F.3d at 729. The court's analysis is faulty and, not surprisingly, the court offered no supporting authority. "Nat-

[11] Again, New York law on this point is clear. *Delio v. Westchester County Medical Center*, 516 N.Y.S.2d 677, 692 (N.Y. S. Ct. 1987) (death following withdrawal of a patient's feeding tube "will be the end result of his inability to chew and swallow spontaneously and not the result of a self-inflicted injury"). *See also Matter of Conroy*, 486 A.2d 1209, 1226 (N.J. 1985) (death following removal of feeding tube "would result, if at all, from [the patient's] underlying medical condition, which included her inability to swallow"); *In re Estate of Longeway*, 549 N.E.2d 292, 296 (Ill. 1989) (withdrawal of feeding tube "does not deprive the patient of life; rather the inability of the patient to chew or swallow, as a result of his illness, is viewed as the ultimate agent of death"); *In re Gardner*, 534 A.2d 947, 955-56 (Me. 1987) (patient's death following removal of feeding tube is caused by "his accident and his resulting medical condition, including his inability to ingest food and water").

ural" means "produced or existing in nature, not artificial or manufactured." Webster's New World Dictionary 903 (3d College ed. 1988). A respirator or feeding tube is an *artificial* or manufactured device that is intended to overcome a *natural* incapacity to breathe or eat adequately on one's own. Thus, the law recognizes that one who dies because of a natural incapacity to breathe or eat adequately dies of natural causes.

A death that may or may not *follow* after a patient's refusal of ventilator assistance,[12] for example, is plainly different from a death that is *caused* by placing a pillow over a patient's face and deliberately smothering him (even if he consents). The first is natural, for in that case one dies because of a disease or injury that was not brought on by the physician's intervention.[13] Strangling

[12] Of course, death does not always occur following the removal of a respirator or feeding tube. For example, Karen Ann Quinlan lived for nine years after her respirator was removed. Yale Kamisar, *The Real Quinlan Question Lives On*, Minneapolis Star Tribune, June 18, 1985. Likewise, a patient capable of ingesting even small amounts of food or water on his or her own may continue to live. Ronald E. Cranford, *The Persistent Vegetative State: The Medical Reality (Getting the Facts Straight)*, 18 Hastings Center Report 27, 28, 31 (Feb./March 1988).

[13] *McKay v. Bergstedt*, 801 P.2d 617, 627 (Nev. 1990) (refusing medical intervention merely allows the disease or effects of an injury to take its natural course); *Matter of Conroy*, 486 A.2d 1209, 1224 (N.J. 1985) (assisted suicide is different from refusing medical intervention because the latter "merely allows the disease to take its natural course"); *Brophy v. New England Sinai Hospital, Inc.*, 497 N.E.2d 626, 638 (Mass. 1986) (death following refusal of medical intervention "merely allows the disease to take its natural course"); *McConnell v. Beverly Enterprises-Connecticut, Inc.*, 553 A.2d 596, 605 (Conn. 1989) ("death [following removal of feeding tube] will be by natural causes underlying the disease, not by self-inflicted injury"); *Bartling v. Superior Court*, 209 Cal.Rptr. 220, 225 (Cal. App. 1984) (disconnection of respirator merely allows "death by natural causes"); *In re Browning*, 568 So.2d 4, 14 (Fla. 1990) ("suicide is not an issue when . . . the discontinuation of life support 'in fact will merely result in death, if at all, from natural causes'") (citation omitted), *aff'd*, 379 So.2d 359 (Fla. 1980); *Leach v. Akron Gen. Medical Ctr.*, 426 N.E.2d 809, 815 (Ohio Ct.

or poisoning a patient, on the other hand, even if he consents, is not by any means natural. One must therefore reject the Second Circuit's conclusion that withholding or withdrawing medical treatment is an "unnatural" cause of death.

To hold otherwise leads to absurd results. In most cases of illness, some form of modern medical technology could be found which may briefly extend life.[14] If a failure to initiate or continue such technology cannot rationally be distinguished from causing an "unnatural" death, then there is no such thing as death by "natural" causes.[15] Or rather, the *only* "natural" death would be one in which every possible *artificial* life-sustaining treatment was aggressively maintained but unable to delay death.

Common Pleas 1980) ("Withdrawal of a respirator . . . allows the processes of nature to run their course"); *In re Colyer*, 660 P.2d 738, 743 (Wash. 1983) ("A death which occurs after the removal of life sustaining systems is from natural causes"); *Superintendent of Belchertown v. Saikewicz*, 370 N.E.2d 417, 426 n.11 (Mass. 1977) (in case of withdrawing treatment, "the cause of death [is] from natural causes"); *Matter of Quinlan*, 355 A.2d at 669-70 (death following withdrawal of medical treatment "would not be homicide but rather expiration from existing natural causes").

[14] One commentator has noted that "where humans were once helpless onlookers in the presence of death, we are now increasingly able to intervene in the process, using technological resources to direct or delay the inevitable." Robert M. Veatch, Death, Dying, and the Biological Revolution 2 (Yale Univ. Press. 1989).

[15] The Second Circuit is on solid ground, however, in treating the withholding and withdrawal of treatment as similar. To establish a special obligation to continue treatment once begun would have "serious adverse consequences" for many patients. President's Commission for the Study of Ethical Problems in Medicine and Biomedical and Behavioral Research, Deciding to Forego Life-Sustaining Treatment: A Report on the Ethical, Medical, and Legal Issues in Treatment Decisions 75 (March 1983). For example, physicians would fail to offer or initiate many potentially beneficial treatments if there were a chance that treatment might later become futile or burdensome, thus placing them in an impossible ethical and legal situation.

D. Assisted Suicide Involves an Intention to Cause Death.

If a patient should die after refusing treatment, the attending physician is not liable for homicide for he or she did not intend death. When a doctor accedes to a patient's request to provide the means of committing suicide, however, death is always the intention. *Matter of Storar*, 420 N.E.2d 64, 71 (N.Y. 1981) (doctor cannot be held criminally liable "when he honors the right of a competent adult patient to decline medical treatment"). The absence of a deadly intention in the former case is most obvious when treatment is merely *withheld* at the patient's request rather than provided to the patient and then later *withdrawn*. In withholding treatment, a physician need not "intend" anything, for he or she has not acted at all, lacking authorization from the patient to do so. His or her intention is simply to respect the patient's informed decision to decline medical treatment, as the physician legally must. But the absence of a deadly intention is also clear when treatment is withdrawn. When, for example, a patient unexpectedly survives following withdrawal of life-sustaining treatment, families and courts do not then seek a way of ensuring the patient's death, for that was not the intention.[16] Rather, the intent was simply to discontinue a treatment considered to be futile, invasive, or burdensome.[17]

---

[16] *Karen Ann Quinlan Still Lingers On*, Newsweek, March 3, 1980, at 14 (parents' only intent was to forego one invasive procedure).

[17] By contrast, the intent to ensure death is absolutely clear in assisted suicide. Some proponents, conceding that attempts to commit suicide by orally ingesting drugs may sometimes fail to achieve that result, have declared that the law should also authorize lethal injections so that a physician can always be standing by "to administer the *coup de grace* if necessary." D. Humphry, *Oregon's Assisted Suicide Law Gives No Sure Comfort to Dying*, N.Y. Times, Dec. 3, 1994, at 22 (letter to the editor). The Ninth Circuit accommodated this concern by refusing to find any "principled distinction" between assisted suicide and active euthanasia. *Compassion in Dying v. State of Washington*, 79 F.3d 790, 831 (9th Cir. 1996).

A request to withdraw treatment generally involves a judgment by that patient about the positive and negative effects *of that particular treatment* on that patient in light of his or her ability to benefit from it and endure its burdens. "Both as a matter of law and as a matter of medical ethics, the right to refuse unwanted medical intervention is properly seen not as part of a right to become dead but rather of a *right protecting how we choose to live*, even while we are dying." Leon Kass, *Dehumanization Triumphant*, 65 First Things 16 (August/Sept. 1996). For example, in rejecting a final round of chemotherapy, the effectiveness of which is in doubt, a cancer patient chooses how to spend the rest of his or her life (*e.g.*, in relative comfort, at home with family), not that he or she is better off dead. By contrast, the clear purpose of assisted suicide is to cause the patient's death.

To be sure, there are extreme cases in which a refusal of treatment may seem tantamount to the implementation of a suicidal wish. It is precisely in such cases that the right to refuse treatment reaches its legal and logical limit, as noted by this Court. *Cruzan*, 497 U.S. at 279 (stating that the "dramatic consequences" involved in refusing artificially-delivered nutrition and hydration "would inform the inquiry as to whether the deprivation of that interest is constitutionally permissible").[18] At times such a decision can justify a judgment that the person is not fully competent and requires protection from self-harm. When the malicious intent to cause death is clear, even withdrawal of a respirator may be prosecuted as a

[18] In recent years, an ethical debate has arisen as to whether medically assisted nutrition and hydration is best seen as a form of care generally owed to helpless patients. The Catholic moral tradition, in particular, opposes "euthanasia by omission"—that is, a withdrawal of sustenance or other basic support that disregards the benefits and burdens of a particular procedure and aims simply at ensuring the death of a patient. Sacred Congregation for the Doctrine of the Faith, *Declaration on Euthanasia* 8 (Boston: St. Paul Books 1980).

homicide.[19] But such cases are extreme and rare, and certainly do not render the general distinction between withdrawing treatment and assisting suicide either invalid or irrational. If there is any "twilight" in the category of decisions to decline medical treatment, it should not lead this Court to conclude that there is no difference between the day and night of declining treatment and assisting suicide.

Some argue that assisted suicide is indistinguishable from the depression of respiration that may be a side-effect of large dosages of pain control medication.[20] In fact, when dosages are properly calibrated to relieve pain, this side-effect is extremely rare,[21] if it occurs at all. Those

[19] Linda Miller Terman, *Triple Murderer Gets Death Sentence*, The Washington Times, Oct. 17, 1995, at C3 (man sentenced to death for killing a disabled boy by disconnecting his respirator).

[20] According to the president-elect of the American Academy of Hospice and Palliative Medicine, that assertion is "out of touch with biologic and pharmacologic reality" because morphine given to control pain "simply does not hasten someone's death." Diane M. Gianelli, *Assisted Suicide or Pain Relief?: Recent Court Rulings Discount Age-Old Ethical Distinction*, American Med. News, July 1, 1996, at 3.

[21] "Addiction among patients who receive narcotics for pain is exceedingly unlikely; the incidence is probably no more than 0.1 percent . . . . The incidence of serious respiratory depression in patients who receive narcotics for pain is similarly low. As tolerance develops to the analgesic effects of narcotics, so it does to respiratory effects. No more than 1 percent of patients who receive narcotics for pain develop serious respiratory depression." Marcia Angell, *The Quality of Mercy*, 306 New Eng. J. Med. 99 (Jan. 14, 1982). *See also* American Pain Society, Principles of Analgesic Use in the Treatment of Acute Pain and Cancer Pain 23 (3d ed. 1992) ("[R]espiratory depression is rare in patients who have been receiving chronic opioid treatment"); Michael H. Levy, *Pharmacologic Treatment of Cancer Pain*, 335 New Eng. J. Med. 1124, 1129 (Oct. 10, 1996) ("Appropriate titration of the opioid dose rarely results in respiratory depression or cardiovascular collapse"); E. Cassidy, *et al.*, *As Life Ends: Professional Care Givers on Terminal Care and Euthanasia*, in I. Gentles, ed., Euthanasia and Assisted Suicide: The Current Debate 52 (Stoddart 1995) ("[I]t is well

very rare cases in which pain medication may risk an earlier death from respiratory depression are distinguishable from assisted suicide because the intent in administering these drugs is not to cause death, but to relieve pain. In the very unlikely event that death may occur, it is an *unintended* consequence, not the intended result. Assisted suicide and euthanasia, on the other hand, involve an intention to cause death. Thus, a doctor who suddenly administers a massive dose of barbiturates with the *intention* of causing death is liable for a homicide.[22] On the other hand, a doctor who administers medication only with the intention of relieving pain and whose conduct is not reckless, would not be liable for a homicide if death occurs any more than he or she would be criminally liable under the same conditions if death resulted from a risky surgery.[23]

The difference between intention and foreseeability is central to our system of criminal and civil law:

> The distinction between what is intended and what is not intended but brought about as a side-effect is

known by practitioners in the field of terminal care that deaths from narcotics are extremely rare in terminal patients").

[22] Michael Berry, *Doctor Found Guilty in Patient's Death*, The Wichita Eagle, Jan. 27, 1996, at 1A; Robert D. McFadden, *Hospital Patient's Fatal Overdose is Ruled a Homicide*, N.Y. Times, July 2, 1993, at B3; *Nurse Pleads Guilty to Killing Three Patients*, N.Y. Times, Apr. 10, 1992, at A23; *Nurse's Death Sentence Upheld*, American Med. News, Sept. 14, 1992, at 2; *Nurse's Aide Gets 20 to 40 Years for Helping Kill Elderly Patients*, The Washington Times, Oct. 2, 1989, at A-7.

[23] This analogy to potentially life-saving surgery is especially valid in light of modern medical knowledge that unrelieved pain can itself weaken a patient and even undermine his or her immune system, thus hastening death. A "new development" in the field of pain management is "the idea of killing pain before it kills the patient." Marsha F. Goldsmith, *Pain Speaking—And Anesthesiologists Answer*, 267 J. of the Am. Medical Association 1578 (March 25, 1992). "Unrelieved agony will shorten a life more surely than adequate doses of morphine." Catholic Health Association, Care of the Dying: A Catholic Perspective 30 (1993).

> at the basis of the vast modern law of tortious liability in negligence; it is the focus, too, of the criminal law's long accepted distinction between murder and manslaughter. As those facts suggest, it is not the esoteric preserve of some sectarian moral teaching, but a morally significant distinction which is intrinsic to practical reasonableness.[24]

The Second Circuit's decision is based on the radical notion that the intended/unintended distinction is not a meaningful one, a notion that this Court should resoundingly reject.

III. NEW YORK HAS A RATIONAL BASIS FOR APPLYING ITS UNIFORM PROHIBITION OF ASSISTED SUICIDE TO PERSONS WHO ARE TERMINALLY ILL.

New York acted rationally in prohibiting assisted suicide for persons in the final stages of a terminal illness who are not on life support, just as it does in prohibiting such assisted suicide generally. Conceptualizing clearly the category of persons who are in the "final stages of a terminal illness but not receiving life-sustaining treatment" is inherently problematic. That category would seem to encompass persons who *are* sick enough to be thought of as "terminally ill"—a term almost impossible to define in itself[25]—but *not* sick enough to require life-sustaining treatment. Curiously, none of the named terminally ill plaintiffs in this lawsuit appear to fall into the "protected" category, for all of them were receiving life-extending treatment which they could have declined but chose to accept. *Quill v. Vacco*, 80 F.3d at 720-21.

Furthermore, since the right to refuse medical treatment applies to everyone, it is unclear why the claimed "right" to assisted suicide would or could be confined to persons who are terminally ill. Indeed, this newly crafted

[24] John Finnis, *Intention and Side-Effects*, in R.G. Frey and Christopher Morris, eds., Liability and Responsibility: Essays in Law and Morals 32 (Cambridge University Press 1991).

[25] *See* notes 26 and 27, *infra*.

"right" arguably creates a new quagmire of equal protection problems, *Lee v. Oregon*, 891 F. Supp. 1429 (D. Or. 1995), *appeal pending*, No. 95-35804 (9th Cir.), and may also violate other laws, including the Americans with Disabilities Act. *Lee v. Oregon*, 869 F. Supp. 1491 (D. Or. 1994) (preliminary injunction).

Finally, as experience has taught, there is no clear-cut definition of terminal illness,[26] and even if there were, such diagnoses are notoriously inaccurate.[27] As this Court has observed, "it is often impossible to identify a patient as terminally ill except in retrospect. . . . Even critically ill individuals may have unexpected remissions and may respond to conventional treatment." *United States v. Rutherford*, 442 U.S. 544, 556-57 (1979) (upholding federal regulations restricting use of unsafe drugs by terminally ill patients and noting the particular vulnerability of such patients to "resourceful entrepreneurs" peddling such drugs).

Even if these several difficulties could be surmounted, the Second Circuit's analysis of the rationality of New York's prohibition of assisted suicide is seriously flawed. Empirically there is no rational relationship among (a) terminal illness, (b) suicide requests, and (c) pain. Most people who request or attempt suicide are not terminally ill.[28] The vast majority of people who are terminally ill

---

[26] "[S]eventeen years of experience with State Living Will statutes that have used 'terminal condition' as a prerequisite to patient directives have demonstrated that 'terminal' lacks any truly objective, operational definition. The terminal requirement is an . . . unworkable requirement." American Bar Association, Commission on Legal Problems of the Elderly, Memorandum of January 17, 1992, *reprinted in* 8 Issues in Law & Med. 117 (Summer 1992).

[27] Joanne Lynn, *et al., Defining the "Terminally Ill": Insights from SUPPORT*, 35 Duq. L. Rev. 311 (1996); Eric Chevlen, *The Limits of Prognostication*, 35 Duq. L. Rev. 337 (1996).

[28] "The major studies all agree in showing that the fraction of suicide victims struggling with a terminal illness at the time of their death is in the range of 2% to 4%." David Clark, "*Rational*" *Suicide and People with Terminal Conditions or Disabilities*, 8 Issues in Law & Med. 151 (Fall 1992). Two major studies suggest that more people commit suicide under the *mistaken* belief that they have cancer than commit suicide and really have cancer. *Id.* at 159.

do not request or attempt suicide for any reason.[29] In the vast majority of cases, people who request suicide—terminally ill or not—do so for reasons other than pain.[30]

Thus, there is no reasonable correlation among these three categories of terminal illness, pain, and suicide requests. Even if there were, suicide would *not* be a rational answer to the problem of pain. The reasonable response to human needs or problems is to address the need or the problem, *not to destroy the person*. Suicide is neither a "solution" to a problem, nor a "benefit"; it takes away the one good—life itself—that makes all other goods possible. Death itself is not a benefit or a "right," but simply a fact of the human condition. Life, however, *is* a right. U.S. Const., amend. 14 (no state shall deprive any person of life without due process of law). It is, according to the Declaration of Independence, an inalienable right.

Moreover, for terminally ill patients who are in pain, the choice is not the specious one between death and the "continuation of agony" (80 F.3d at 370) that the Second Circuit posits.[31] The president-elect of the American

---

[29] *Id.* at 160-61; *see also* Ezekiel J. Emanuel, *et al., Euthanasia and Physician-Assisted Suicide: Attitudes and Experiences of Oncology Patients, Oncologists, and the Public*, 347 The Lancet 1805 (June 29, 1996).

[30] A 1990 study showed that in the Netherlands, the only Western nation currently to permit euthanasia, pain was the only reason for requesting euthanasia in only 10 of 187 cases, and a contributing factor in less than half of the cases. P.J. van der Maas, *et al., Euthanasia and Other Medical Decisions Concerning the End of Life* 44 (Elsevier Science Publishing 1992).

[31] The same unfounded and uninformed negative assumptions about persons who are terminally ill appear throughout the Ninth Circuit's opinion in *Compassion in Dying*. Such persons, the Ninth

Academy of Hospice and Palliative Medicine emphatically writes:

> As a doctor who has been involved in hospice care for more than 14 years, I can state without equivocation that the physical sources of suffering associated with dying all can be controlled. Most often, such symptoms as pain, shortness of breath and nausea, yield to routine evaluation and straightforward interventions. Even the pain of end-stage cancer commonly can be managed with oral medications. In a small percentage of cases, pain or other bothersome symptoms do require advanced interventions. Rarely, sedation is required to effectively alleviate pain, breathlessness or terminal agitation.
>
> Symptom management is not always easy. Effective therapy may require the efforts of a physician with special interest in palliative medicine and a team of hospice-trained nurses, consultant pharmacists and others. Yet I want to state again clearly that in *all* cases the physical distress of the dying can be controlled.

Ira Byock, *Kevorkian: Right Problem, Wrong Solution*, The Washington Post, January 17, 1994, at A23 (original emphasis). Pain medication is available even in the end stages of cancer.[32] Experts agree that unmanaged pain is generally due not to the unavailability of effective pain relief, but to the failure of health care providers to learn and use available techniques. New York State Task Force on Life and the Law, *supra* at 43-44. These techniques are being more fully disseminated. *Id.* at 46-47. But such progress could be forestalled if physicians were licensed to facilitate a patient's suicide rather than ease his or her pain.

Circuit supposed, face a "painful, undignified and inhumane ending to their lives," 79 F.3d at 810, are "reduced at the end . . . to a childlike state of helplessness, diapered, sedated, incontinent," *id.* at 814, and "can only be maintained in a debilitated and deteriorating state." *Id.* at 821. It is as if the court had decided that making demands upon one's community ("a childlike state of helplessness") or losing certain bodily functions ("diapered . . . incontinent") make life unworthy of being lived.

[32] "No patient with cancer needs to live or die with unrelieved pain." Michael H. Levy, *Pharmacologic Treatment of Cancer Pain*, 335 New Eng. J. Med. 1124 (Oct. 10, 1996).

Permitting physicians to prescribe drugs so patients can take their own lives has an especially grotesque twist when contrasted with the Second Circuit's desire to relieve the dying of their "agony." Supporters of assisted suicide concede that in a large number of cases (25%) an intentional overdose of prescription medication does not result in an immediate death but only leaves the patient in *greater* agony than if suicide had not been attempted. A well-known advocate of assisted suicide has admitted that a law facilitating an overdose of such drugs could have "disastrous" consequences. D. Humphry, *Oregon's Assisted Suicide Law Gives No Sure Comfort to Dying*, New York Times, Dec. 3, 1994, at 22 (letter to the editor). Humphry relied upon a Dutch study in which over 20 out of 90 people given barbiturates by mouth "lingered as long as four days." *Id.* In "15 instances the doctor gave a lethal injection because the oral drugs were causing protracted suffering to the patient, the family, and himself." *Id.*[33] Thus, permitting physicians to prescribe lethal drugs for their patients may only create suffering, not relieve it, and lead physicians to take an even more active role in causing the deaths of their patients. *See also* American Association of Suicidology, *Report of the Committee on Physician-Assisted Suicide and Euthanasia*, 26 Suicide & Life-Threatening Behavior 15 (1996 Supp.) (patients attempting physician-assisted suicide by oral medication can choke to death on their own vomitus,

[33] Twenty-five percent of those who try to kill themselves with an oral overdose prescribed by a physician are "likely to experience a lingering death that could go on for hours, maybe days." M. O'Keefe, *Dutch Researcher Warns of Lingering Deaths*, The Oregonian, Dec. 4, 1994, at A1. Dutch physician and euthanasia practitioner Pieter Admiraal says that witnessing such a death presents an "agonizing dilemma" for relatives, who will be "tempted to suffocate loved ones by putting plastic bags over their heads" when the drugs do not work quickly enough. *Id.*

"experience terror, panic, or become assaultive" as a result of intoxication from the ingested drugs, or change their mind altogether and "beg for rescue").

Finally, there is no basis for the Second Circuit's claim (80 F.3d at 729-30) that New York has a "greatly reduced" interest in protecting the lives of sick people when the state prohibitions in question are against intentional acts of killing. Judicial decisions that speak of the state's interest in preserving life as being "reduced" or "weakened," including *Quinlan*, concerned disputes about the extent to which the state could insist on affirmative efforts to prolong life despite a patient's wish to be free of unwanted medical treatment and physical intrusions. It was in *that* context that *some* courts considered the state's interest in actively prolonging life to be less serious *when weighed against the patient's wishes to be free of unwanted treatment. See, e.g., Matter of Quinlan,* 355 A.2d at 664 ("We think that the State's interest . . . weakens and the individual's right to privacy grows *as the degree of bodily invasion increases* and the prognosis dims") (emphasis added). In fact, even in the withdrawal of treatment context, this Court has completely rejected the notion that the state must have a "reduced interest" in protecting a person's life, or that this interest fluctuates with the patient's health. The state may assert "an *unqualified* interest in the preservation of human life"—that is, an interest that does not vary with the person's health condition or "quality of life." *Cruzan*, 497 U.S. at 282 (emphasis added). If, as this Court declared in *Cruzan*, the interest in protecting life is *unqualified*, then it cannot at the same time be "greatly reduced" even when the patient's medical condition is as debilitated as Nancy Cruzan's.

Moreover, any notion that the state has *less* interest in protecting a person's life against a lethal intervention when that person is very sick would itself do violence to the principle of equal justice under the law. It would mean that the law has a greater interest in protecting those who are "fit" and "healthy" than those who are sick and dependent. This is simply another way of saying that

(a) the state may decide in the first place whose life warrants greater or lesser protection (a dangerous proposition by any standard), and (b) as a matter of constitutional law, sick people, in particular, have lives less worth protecting than others. Such a governmental determination would be a direct assault on the fundamental equality and dignity of each and every person. Excluding people from the protection of the criminal law based on the condition of their health is an abdication of the Court's responsibility to ensure equal justice for all.[34] To graft such a result into the *Constitution* is simply unthinkable.

The New York State Task Force, *supra*, expressed grave reservations about the impact legalization of assisted suicide would have on those who lie on the fringes of society. The Task Force concluded that the poor and socially marginalized would most likely be pressured to resort to physician-assisted suicide if such conduct were legalized. These are precisely the people whom the Constitution was intended to protect from majoritarian impulses. Others have noted the disproportionate impact that legalization of assisted suicide would have on women.[35]

> In the United States more elderly women than elderly men are poor, widowed, live alone, suffer from chronic illness, and have limited access to medical insurance and family care. They would appear to be at great risk either to be pressured, or to feel pressured, into

---

[34] The poor condition of a person's health does not remove criminal liability for his or her homicide. "The lives of all are equally under the protection of the law . . . to their last moment." *Cruzan*, 497 U.S. at 296 (Scalia, J., concurring), *quoting Blackburn v. State*, 23 Ohio St. 146, 163 (1873). In fact, under the federal sentencing guidelines, crimes against the sick and vulnerable warrant an *enhanced* sentence. United States Sentencing Commission, Guidelines Manual, Pt. A, ch. 3, § 3A1.1.

[35] Sidney Callahan, *A Feminist Case Against Self-Determined Dying in Assisted Suicide and Euthanasia*, 1 Studies in Pro Life Feminism 303-317 (Fall 1995); Nancy J. Osgood & Susan A. Eisenhandler, *Gender and Assisted and Acquiescent Suicide: A Suicidologist's Perspective*, 9 Issues in Law & Med. 361 (Spring 1994).

suicide or euthanasia to relieve others of the financial and emotional burden of caring for them.

American Association of Suicidology, 26 Suicide & Life-Threatening Behavior at 9.[36]

Thus, far from bringing about equal justice under the law, the Second Circuit's decision creates a fundamental inequity in which citizens who are most socially and economically marginalized will be least protected from their own and others' deadly intentions. Our Constitution does not require such a tragic result.

CONCLUSION

For the foregoing reasons, the judgment of the Second Circuit should be reversed.

Respectfully submitted,

Of Counsel:
JEFFREY HUNTER MOON
Solicitor

INTEREST OF AMICUS CURIAE

Choice In Dying, Inc., ("Choice In Dying") as amicus curiae, takes no position with respect to the holdings in the two cases under review by this Court, nor does it take a position with respect to the legality or constitutionality of physician-assisted suicide. Numerous briefs exploring the constitutional and legal aspects of these cases have been filed with the Court. Choice In Dying does not wish to duplicate the work done by other amici. However, to establish an empirically based framework by which these important issues may be considered, Choice In Dying deems it crucial that the Court also be fully informed about:

(1) the limitations of available empirical evidence concerning physician-assisted suicide;

(2) the important distinction between physician-assisted suicide and other accepted options for end-of-life medical care;

(3) the gap between available technology for managing pain and other symptoms associated with terminal illness and actual physician practices; and

(4) the gap between the availability of effective care for the terminally ill and its accessibility to the general public.

Choice In Dying is in a unique position to provide the Court with this information. It is the oldest and the only national organization devoted solely to a broad range of end-of-life issues. Its mission is to secure the right of patients to make decisions about their end-of-life medical care and to promote quality care of dying patients. The organization's work includes providing a professionally staffed national hotline to re-

spond to the three-to-five thousand people contacting it each month with requests for facts, counseling, consultation and crisis resolution. Choice In Dying also provides public, physician and other professional education, and monitors changes in state and federal legislation related to all end-of-life issues.

Choice In Dying respectfully submits this brief to provide the Court with a synthesis and analysis of empirical evidence available as a result of scholarly study and the organization's unique access to the actual experience of thousands of dying individuals and their surrogates.

JURISDICTIONAL STATEMENT

Amicus curiae takes no position as to any jurisdictional statements contained in the petitioners' or the respondents' briefs.

STATEMENT OF FACTS

Amicus curiae takes no position as to any statements of fact contained in the petitioners' or the respondents' briefs.

POINTS RELIED ON

I.
THERE IS PUBLIC AND PROFESSIONAL CONFUSION ABOUT END-OF-LIFE LEGAL AND MEDICAL ISSUES

A. THERE IS MISINFORMATION AND MISUNDERSTANDING ABOUT LIFE-SUSTAINING TREATMENTS

B. THERE ARE IMPORTANT DISTINCTIONS BETWEEN THE WITHHOLDING OR WITHDRAWAL OF LIFE-SUSTAINING TREATMENT AND PHYSICIAN-ASSISTED SUICIDE

C. IN BOTH CASES UNDER REVIEW, THE SECOND AND NINTH CIRCUIT COURTS HAVE BLURRED THE DISTINCTION BETWEEN PHYSICIAN-ASSISTED SUICIDE AND THE POTENTIAL DOUBLE EFFECT OF PAIN MEDICATION IN CERTAIN CIRCUMSTANCES

D. THERE IS A LACK OF CONSENSUS AS TO THE DEFINITIONS OF TERMINAL ILLNESS

E. INDIVIDUALS' RIGHT TO FORGO TREATMENT IS POORLY UNDERSTOOD BY THE PUBLIC AND INSUFFICIENTLY HONORED BY PROVIDERS

II.
PAIN AND OTHER PHYSICAL SYMPTOMS ASSOCIATED WITH TERMINAL ILLNESS ARE OFTEN NOT ADEQUATELY MANAGED

A. THERE IS OVERUSE OF POTENTIALLY PAINFUL LIFE-SUSTAINING TREATMENT IN DYING PATIENTS

B. DATA SUGGEST THAT DYING WITHOUT LIFE SUPPORT CAN BE A PEACEFUL PROCESS

C. TECHNOLOGY IS AVAILABLE FOR MANAGING PAIN AND OTHER SYMPTOMS ASSOCIATED WITH TERMINAL ILLNESS

D. STATE-OF-THE ART CARE FOR SYMPTOMS ASSOCIATED WITH TERMINAL ILLNESS IS NOT ROUTINELY PROVIDED

E. PUBLIC MISCONCEPTIONS ABOUT MANAGEMENT OF PAIN AND SUFFERING DISTORT DEBATE ABOUT PHYSICIAN-ASSISTED SUICIDE

III.

THE NATIONAL CONTROVERSY CONCERNING PHYSICIAN-ASSISTED SUICIDE IS RELATED TO SERIOUS GAPS IN EMPIRICAL DATA

A. EMPIRICAL DATA ABOUT PHYSICIAN ATTITUDES AND PRACTICES CONCERNING PHYSICIAN-ASSISTED SUICIDE IS LIMITED

B. EMPIRICAL DATA ABOUT PATIENT ATTITUDES AND PRACTICES CONCERNING PHYSICIAN-ASSISTED SUICIDE IS LIMITED

PRELIMINARY STATEMENT

Multiple factors contribute to the current controversy about medical care at the end of life. Among the most significant of these factors is the misapplication of medical technology for dying patients and the potential limitations in access to appropriate care at the end of life. Other factors include developing reform in the way that health care is organized and delivered,[1] evolution in the laws governing health care[2] and changes in the

[1]Ezekiel J. Emanuel, Cost Savings at the End of Life, 275 JAMA 1907, 1912 (1996).

[2]See Cruzan v. Director, Missouri Dept. of Health, 497 U.S. 261 (1990); See also Patient Self-Determination Act, 42 U.S.C. §1395 cc(f) (1)-(3) (1990) (the Act provides that health care facilities that receive Medicaid or Medicare funds must provide written information at the time of admission about patients' rights under state law to make decisions about medical care, including the right to accept or reject medical treatment and to create advance directives); Colo. Rev. Stat. §§ 15-18-101 to 15-18-113 (1987 & Supp. 1996) (which provides for proxy decision-makers for medical treatment; N.Y. Pub. Health Law §§ 2980 to 2994 (McKinney 1994 & Supp. 1996) (which provides for health care agents and proxies).

nation's demographics, including the aging of the population[3] and ethnic and cultural shifts.

Current medical technology can prevent or cure many diseases and significantly improve the quality of life for those suffering from chronic disorders. However, the same technology is often used to distort and prolong the dying process. Problems raised by the misapplication of technology and its lack of accessibility are compounded by widespread public and professional confusion or ignorance about the provision of such care.

In addition, significant gaps exist in the available empirical evidence concerning physician-assisted suicide, and public debate is at a comparatively formative stage. Reasonable consensus on these complex issues is unlikely until knowledge is more complete and widespread. As with any emerging body of thought and practice, there is inherent instability which augurs both progress and risk.

Thus, it is vitally important to differentiate among knowledge about physician-assisted suicide and medical technology that is fact-based, the fundamental questions remaining unanswered and the implication of such uncertainties.

SUMMARY OF ARGUMENT

I.

THERE IS PUBLIC AND PROFESSIONAL CONFUSION ABOUT END-OF-LIFE LEGAL AND MEDICAL ISSUES

A. THERE IS MISINFORMATION AND MISUNDERSTANDING ABOUT LIFE-SUSTAINING TREATMENTS

[3]Lakshmipathi Chelluri et al., Intensive Care for Critically Ill Elderly: Mortality, Costs, and Quality of Life, 155 Archives Internal Med. 1013, 1013 (1995).

Patients frequently misunderstand the benefits and burdens of cardiopulmonary resuscitation, which has an extremely poor outcome in dying patients.[4] Research has demonstrated that when this is clarified, patients are far less likely to choose this life-sustaining intervention.[5]

Artificial nutrition and hydration are medical treatments that can be refused like any other treatments.[6] However, there is substantial misinformation and misunderstanding regarding these particular life-sustaining treatments.[7]

Both the Ninth Circuit in Compassion in Dying v. Washington,[8] ("Compassion"), and the Second Circuit in Quill v. Vacco,[8] ("Quill"), imply in their respective opinions that artificial nutrition and hydration are qualitatively different from other forms of life-sustaining treatment. Indeed, both courts use language about refusal of artificial nutrition that is often misconstrued, including the term "starvation."[9] In addition to being medically inaccurate, the term "starvation" is often emotion-laden and raises frightening images of hungry, otherwise healthy people who are prevented from obtaining desired

[9]Compassion, 79 F.3d at 822 (the court notes that states permit patients to discontinue artificial nutrition and hydration, "thus permitting the patients to die by self-starvation." The court also referred to Cruzan, where the removal of the feeding and hydration tube would allow her to "starve to death"); Quill, 80 F.3d at 729 (the court indicated that "the withdrawal of nutrition brings on death by starvation" and "the withdrawal of hydration brings on death by dehydration").

food.[10] The opinions further refer to forgoing artificial nutrition and hydration as "death by starvation," and "death by dehydration."[11] At the same time, the opinions fail to indicate that the nutritional deficiencies of starvation are insufficient to cause death early on.[12]

Artificial nutrition and hydration are medical treatments and should not be distinguished from other forms of life-sustaining treatment. The imposition of artificial nutrition and hydration may actually contribute to an uncomfortable death.[13] There is no evidence that individuals who are dependent upon artificial nutrition and hydration, whether alert and aware or with partial or severe neurological impairments, would experience any discomfort if these treatments were forgone. Indeed, extensive indirect evidence indicates that forgoing artificial nutrition and hydration facilitates natural death without discomfort.[14]

[14]Id. at 385.

Specifically, direct evidence indicates that competent hospice patients eat and drink little at the end of their lives and do not experience additional discomfort by avoiding artificial nutrition and hydration.[15]

The majority of case calls[16] regarding unwanted treatment received by Choice In Dying involve artificial nutrition and hydration.[17] These calls range from complex points of clarification to conflict resolution. This direct experience further highlights the misconceptions and continuing controversy surrounding this treatment.

Thus, despite the established constitutional right of the individual to forgo life-sustaining treatments, including artificial nutrition and hydration, ignorance of the law and misunderstanding about the treatments themselves indicates a far-reaching societal concern.

B. THERE ARE IMPORTANT DISTINCTIONS BETWEEN THE WITHHOLDING OR WITHDRAWAL OF LIFE-SUSTAINING TREATMENT AND PHYSICIAN-ASSISTED SUICIDE

The Second Circuit in Quill, supra, and the Ninth Circuit in Compassion, supra, confused the distinctions between physi-

cian-assisted suicide and the forgoing of life-sustaining treatment.

In Quill, the court repeatedly refers to termination of life support as the "hastening of death."[18] In Compassion, the court looks to the Cruzan case as a recognition that the termination of life-support is the hastening of death.[19]

The forgoing of life-sustaining treatment refers to the avoidance of a medical treatment that is necessary to sustain life. These treatments include cardiopulmonary resuscitation when heartbeat or breathing stops; mechanical ventilation when the patient can no longer breathe without artificial support; artificial nutrition and hydration when a person cannot eat or drink enough by mouth to sustain life; or a procedure to take the place of a malfunctioning vital organ, such as dialysis for failed
kidneys.[20]

These life-sustaining treatments artificially postpone natural death, and the withholding or withdrawing of these treatments removes the obstacle. The Ninth Circuit, when discussing Cruzan, noted that Nancy Cruzan lived with artificial nutrition and hydration for 8 years. A person in a persistent vegetative state[22] ("PVS") cannot live without artificial nutrition and hydration. The existence of individuals in PVS continues far beyond the time they would have died a natural death

[19]Compassion, 799 F.3d at 816 (the court viewed Cruzan as a case that hastened death: "...Cruzan, by recognizing a liberty interest that includes the refusal of artificial provision of life-sustaining food and water, necessarily recognizes a liberty interest in hastening one's own death.").

[20]When these treatments prolong life in someone with serious underlying illness, such as cancer or Alzheimer's disease, they will enable the patient to survive into a more advanced and debilitating stage of the disease.

[21]Cruzan v. Director, Missouri Dept. of Health, 497 U.S. 261 (1990).

[22]The Multi-Society Task Force on PVS, Am. Acad. of Neurology, No. 21, Pt. 1, Medical Aspects of the Persistent Vegetative State, 330 New Eng. J. Med. 1499-1502 (1994).

because of the artificial prolongation of life.

By contrast to the above, physician-assisted suicide is a specific intervention that actively hastens death. A failure to comply with a request to withhold or withdraw life-sustaining treat- ment would subject an individual to unwanted treatment and, as such, make him or her a virtual''prisoner of medical technology."[23] A failure to comply with a request for physician-assisted suicide would restrict patient autonomy, but would not amount to a bodily invasion.[24]

C. IN BOTH CASES UNDER REVIEW, THE SECOND AND NINTH CIRCUIT COURTS HAVE BLURRED THE DISTINCTION BETWEEN PHYSICIAN-ASSISTED SUICIDE AND THE POTENTIAL DOUBLE EFFECT OF PAIN MEDICATION IN CERTAIN CIRCUMSTANCES

The term "double effect" refers to the administration of pain medication with the intention of providing relief from suffering, with the possible secondary effect of hastening death. However, such hastening of death is theoretical.[25]

In the two cases under review, both courts have confused the distinction between physician-assisted suicide and double effect,[26] treating them as though they are equivalent. These

[24]Id. at 10.

[25]Compassion, 79 F.3d at 823 (the court, in discussing double effect, notes that the medication "will" cause death, although citing language from physicians that it "may" cause death).

[26]Compassion, 79 F.3d at 824 (the court notes that there was little or no difference "for constitutional or ethical purposes between providing medication with a double effect and providing medication with a single effect, as long as one of the known effects in each case is to hasten the end of the patient's life).

[27]David A. Asch, The Role of Critical Care Nurses in Euthanasia and

concepts also have been blurred by professionals, as witnessed in a recent study of intensive care nurses, some of whom considered administration of symptom-controlling medication to be the same as euthanasia.[27]

Among ethicists and within the law there is widespread consensus that the "double effect" is a morally acceptable risk in the context of the great suffering of the terminally ill.[28] By contrast, there is persistent controversy over the provision of medications in order to deliberately hasten death, as in physician-assisted suicide, regardless of the extent of the patient's suffering.[29]

The medications administered to relieve suffering may also lower blood pressure and depress respiration, and become "risky" in patients with low blood pressure or respiratory failure. However, it is not possible to prove whether the disease or the medication is responsible for the precise moment of death. A patient undergoing terminal respirator withdrawal, also known as "terminal weaning," is likely to have intense fear, anxiety and breathlessness unless precautions are taken, such as adjustment of the respirator settings or administration of sufficient sedation, for example, with morphine. Either method increases carbon dioxide levels in the blood, and produces respiratory failure. However, since withdrawal of the respirator with or without palliation will inevitably result in death, it is not possible to know if the morphine or the disease produced the actual moment of death.[30]

In contrast to the theoretical hastening of death in someone with low blood pressure or respiratory failure, the effect of a

lethal dose of medication (either a known lethal dose in someone who has not developed tolerance to that medication, or an extremely large incremental dose in someone who already has been taking the medication) is predictable when it is given to someone who is not physiologically near death.

D. THERE IS A LACK OF CONSENSUS AS TO THE DEFINITIONS OF TERMINAL ILLNESS

In Quill, supra, the court indicated that physicians would agree on when the "final stages" of a "terminal illness" would occur,[31] and in Compassion, supra, the court stated that "[W]hile defining the term 'terminally ill' is not free from difficulty, the experience of the states has proved that the class of the terminally ill is neither indefinable nor undefined..."[32] Notwithstanding these opinions, Choice In Dying has often found profound disagreement among professionals and others concerning the definition of terminal illness.

Terminal illness has been variously defined by the states. New York has defined the term by applying a time of of one year.[33] New Jersey defines terminal condition as requiring a life expectancy of six months or less, with or without the provision of life-sustaining treatment."[34] Colorado defines terminal condition as one in which the administration of life-sustaining procedures will serve only to postpone the moment of death.[35]

[37]Ill. Comp. Stat. 110 1/2, §702(h) (West 1995).

[38]Mo. Ann. Stat. §459.010(6) (1992).

California defines terminal condition as a condition that results in death within a relatively short time without the administration of life-sustaining treatment[36] and Illinois as one in which death is imminent.[37] Lastly, Missouri requires that death will occur within a short time regardless of the application of medical procedures.[38]

Furthermore, it recently has been reported[39] that 14.9% of patients referred to hospice actually lived longer than 6 months, which is the maximum projected life expectancy that satisfies the hospice definition of "terminal illness." Additional studies have documented the uncertainties involved in predicting survival among patients with a variety of serious illnesses.[40]

The variety of existing definitions of "terminal illness" and the inability to accurately predict the time of death illustrates confusion, not clarity, regarding what constitutes terminal illness.

E. INDIVIDUALS' RIGHT TO FORGO TREATMENT IS POORLY UNDERSTOOD BY THE PUBLIC AND INSUFFICIENTLY HONORED BY PROVIDERS

Choice In Dying's experince over time illustrates that patients frequently receive unwanted medical treatments that prolong their lives, and conflict often continues to occur between

providers and patients.

Among 922 case calls received during a recent 30-month period, 65% involved concerns over unwanted treatments, and in 74% of these instances there was a dispute, usually between a patient or family member and the health care provider over the use of life-sustaining treatments.

In approximately 75% of case calls, the caller states that the patient in question has executed a formal advance directive. This rate is much higher than among the public at large (15%-25%) and even higher than selected groups with terminal illness (more than 50%).[41] Because patients with advance directives tend to be better educated and more affluent,[42] the problem of unwanted treatment may well be much broader demographically than is suggested by Choice In Dying's experience.

Furthermore, earlier published experience from Choice in Dying regarding conflicts over artificial nutrition and hydration illustrated that patients represented by case calls were much older and reflected a broader range of clinical situations than those represented by case law on which legal theory has been based.[43]

This organization's actual experience and the most recent studies on physician-patient communication and physician biases highlight the need for the courts to be thoroughly apprised of patient-based attitudes and experiences.

II.
PAIN AND OTHER PHYSICAL SYMPTOMS

ASSOCIATED WITH TERMINAL ILLNESS ARE OFTEN NOT ADEQUATELY MANAGED

A. THERE IS OVERUSE OF POTENTIALLY PAINFUL LIFE-SUSTAINING TREATMENT IN DYING PATIENTS

Many terminally ill patients are overtreated with invasive and sometimes painful procedures and treatments that prolong their lives.

According to a recent multicenter study, death often is preceded by protracted hospital stays involving invasive treatments, with possibly 50% of patients dying in pain.[44] In one series of incurably ill hospitalized patients, one or more invasive nonpalliative treatments was instituted in 47% of the cases.[45]

Overtreatment of terminally ill patients with invasive and sometimes painful procedures may be, in part, the result of poor attention by physicians to patient preferences about certain end-of-life treatment decisions.[46] Physician biases are implicated as well, including a preference for withdrawing certain life-sustaining treatments over others, despite similar clinical circumstances.[47]

Poor communication between physicians and patients and physician's biases may have significant ramifications for pa-

tients in terms of personal autonomy and ultimately for appropriate palliative care. It is imperative that the court understand these dynamics as they bear upon the issue of physician-assisted suicide.

B. DATA SUGGEST THAT DYING WITHOUT LIFE SUPPORT CAN BE A PEACEFUL PROCESS

Severe discomfort is not invariably associated with the final stages of a terminal illness.[48]

Many people remain alert or semi-alert until the end, but many develop coma[49] prior to death. Coma has many causes but can stem from potentially reversible medical illness.[50] The treatment and reversal of medically induced coma can restore alertness without improving the prognosis of the underlying illness.

In dying patients, coma may act as a natural form of anesthesia so that the hours or days before death are devoid of pain, fear or suffering.[51] This disease-induced ("natural") condition resembles a drug-induced sleep similar to anesthesia. Avoiding treatment that would revers coma allows death to occur naturally and peacefully.

C. TECHNOLOGY IS AVAILABLE FOR MANAGING

Care 7 (1990).

PAIN AND OTHER SYMPTOMS ASSOCIATED WITH TERMINAL ILLNESS

Pain and other physical symptoms can be appropriately controlled, in the vast majority of cases, within the confines of standard medical practice.

In approximately 90% of cancer patients, pain can be adequately controlled when standard, accepted measures are used.[52] Although potent medications sometimes can reduce alertness, psychostimulant medications are available that can ameliorate that problem.[53] Furthermore, a variety of management techniques are available that can ameliorate other physical symptoms associated with terminal illness, such as vomiting and breathing difficulties.[54] These approaches, along with a large and evolving body of knowledge, are embodied in the discipline of "palliative medicine."[55]

Despite the advances that have been made in symptom control, physical symptoms remain uncontrolled in some individu-

[59]Kathleen M. Foley, The Relationship of Pain and Symptom Management to Patient Requests For Physician-Assisted Suicide, 6 J. Pain

als and relief will not be adequate unless these patients receive treatment that will suppress consciousness.[56] Although commentators have noted that patients are likely to feel reassured that this option is available,[57] some patients wish to remain alert, and would find suicide preferable to suppression of consciousness.

Although fear of unremitting pain is an important public concern that could increase the resort to assisted suicide in some individuals,[58] adequate control of pain and physical symptoms may lead to a decrease in requests for suicide.[59] In one series, only one half of one percent of hospice patients persistent requests to hasten death,[60] suggesting that in supportive settings, where pain is well managed, a reduction in suicide requests would occur.

A critical dichotomy exists between pain or other physical symptoms and the phenomenon termed "suffering." Suffering is a highly subjective, individual experience, which may, but does not always, evolve from pain or other physical symptoms.[61]

Moreover, psychiatric illness or other psychosocial factors,

even more than intolerable physical symptoms, may increase interest in physician-assisted suicide, or may increase the desire to die among the terminally ill.[62] Psychiatric illness may also be the primary cause of unremitting suffering.

Psychiatric disorders, especially depression, increase the risk of suicide among the terminally ill.[63] In addition, disease or drug-induced delirium also may increase the risk.[64] Although the desire for death in terminally ill patients is closely associated with clinical depression, even depression associated with dying can be treated adequately.[65]

Finally, discussion regarding unremitting pain and symptoms must include those individuals with chronic illnesses who are not "terminally ill," including patients with diseases such as multiple sclerosis, stroke, Alzheimer's disease or severe autoimmune disease. Any ruling on the narrow question before this Court may not necessarily address the intractable and intolerable suffering of those who do not have a medical illness or whose condition has not been defined as "terminal."

D. STATE-OF-THE ART CARE FOR SYMPTOMS ASSOCIATED WITH TERMINAL ILLNESS IS NOT ROUTINELY PROVIDED

Studies have indicated that pain is undertreated in people with serious illnesses,[66] despite the availability of appropriate treatments. Although the means exist to address and alleviate psychiatric illness in incurable disease, little empirical evi-

[66]William Breitbart et al., The Undertreatment of Pain in Ambulatory AIDS Patients, 65 Pain 243, 247 (1996); Charles S. Cleeland et al., Pain and Its Treatment in Outpatients with Metastatic Cancer, 330 New Eng. J. Med. 592, 593-594 (1994).

[67]Jamie H. Von Roenn et al., Physician Attitudes and Practice in Cancer Pain Management: A Survey From the Eastern Cooperative Oncology Group, 119 Annals Internal Med. 121 (1993); Kathleen M. Foley, The Relationship of Pain and Symptom Management to Patient Requests For

dence exists about the extent to which management of these symptoms is practiced.

There are remediable reasons for the undertreatment of pain and suffering associated with terminal illness, including, but not limited to, a lack of third-party insurance coverage, a lack of professional education, unwarranted fears of addiction and concerns regarding legal restrictions in the use of controlled substances.[67]

Access to effective palliative care may be limited. The lack of access is due in part to the limited number of sites where this care is provided and to lack of adequate third-party insurance coverage.

Estimates are that the 2,000 certified hospices in the United States are involved in managing fewer than 15% of deaths.[68] In addition, these programs are largely home-based, requiring able-bodied caregivers in the home, a criterion not always met in today's society. Medicare does provide coverage for hospice care, but the availability of the benefit and mechanics of electing it are often poorly understood by beneficiaries. Similarly, there is lack of awareness and understanding of hospice benefits under private plans because this coverage also is a fairly new addition to many policies.

Only recently the Health Care Financing Administration began to study reimbursement of palliative or terminal care in the acute care setting.[69] Such coverage would address a critical need because approximately 60% of adult Americans currently die as inpatients in acute-care hospitals.[70]

E. PUBLIC MISCONCEPTIONS ABOUT MANAGE-

Physician-Assisted Suicide, 6 J Pain & Symptom Mgmt 289 (1991).

[68]Hospice Fact Sheet, (National Hospice Organization), July 1, 1996.

[69]Christine K. Cassel & Bruce C. Vladek, ICD-9 Code for Palliative or Terminal Care, 335 New Eng. J. Med. 1232, 1232 (1996).

MENT OF PAIN AND SUFFERING DISTORT DEBATE ABOUT PHYSICIAN-ASSISTED SUICIDE

Most individuals with terminal illness do not have to experience undue suffering. However, pain and physical symptoms are primary concerns patients have about dying, even though medical technology is available to relieve severe pain and other physical symptoms. In Compassion, supra, the court reflected the prevailing feeling that extreme pain and physical symptoms are inevitably associated with terminal illness.[71] Public education is critical to dispelling this misconception and enhanced professional education is necessary to ensure that competent pain management is among accessible end-of-life care options.

III.
THE NATIONAL CONTROVERSY CONCERNING PHYSICIAN-ASSISTED SUICIDE IS RELATED TO SERIOUS GAPS IN EMPIRICAL DATA

EMPIRICAL DATA ABOUT PHYSICIAN ATTITUDES AND PRACTICES CONCERNING PHYSICIAN-ASSISTED SUICIDE IS LIMITED

A.

The surveys concerning physicians' attitudes toward participating in hastening patients' death and their actual practices vary considerably in the specificity of the questions, the characteristics of the physicians surveyed, the response rates, the results and the methodologic quality. In

[70]National Center for Health Statistics, U.S. Dep't of Health and Hum Services, Vol. II- Mortality, Pt.A, Vital Statistics of the United States, 380, 381 (1993).

[71]Compassion, 79 F.3d at 812 ("Americans are living longer, and when they finally succumb to illness, lingering longer, either in great pain or in a stuporous, semi-comatose condition that results from the infusion of vast amounts of pain killing medications.").

terms of their generalizability to the country overall, most of the studies have inherent limitations and/or serious methodologic flaws.

In general, response rates in these surveys have increased over the years apparently since the debate has become more public and physicians less concerned about responding to questions in this area.[72]

B. EMPIRICAL DATA ABOUT PATIENT ATTITUDES AND PRACTICES CONCERNING PHYSICIAN-ASSISTED SUICIDE ARE LIMITED

Although studies indicate that the desire for death is not uncommon among terminally ill patients,[73] there has been little study of patients who actually request assistance from their physicians in hastening their death. The limited data available are based primarily on reports from physicians.[74]

Approximately 11% of Choice In Dying case calls are inquiries about assisted dying. Among 95 recent cases, fewer than half were calling on their own behalf; 59 (63%) were inquiring about assistance for others, usually family members or close friends. Among the group for whom family or close friends were seeking assistance, only 31 reportedly were able to communicate their wishes, 17 could not do so, the capacity of 9 was uncertain, and 2 had psychiatric disease rather than medical illness. Although most calls involved people with terminal illness, including cancer and AIDS, 8 had chronic medical illness, 10 had dementia, 5 had strokes, 3 had prolonged unconsciousness and 3 had other severe neurological impairments. Two calls involved impaired newborns. None of these calls involved inquiries about withholding or withdrawing life support.

Thus, Choice In Dying's experience is consistent with the notion that societal concerns about aid in dying are very broadly based. Concerns extend not only to an array of illnesses but also to patients with limited or lack of capacity.

[72]A significant amount of the data came from Washington and Oregon, where physician-assisted suicide has been the subject of public referenda.

[73]Chochinov et al., supra (44.5% of terminally ill hospice patients indicated that they had occasional desires for death.)

[74]Paul J. van der Maas et al., Euthanasia and Other Medical Decisions Concerning the End of Life, 338 Lancet 669, 670 (1991); Anthony L. Back et al., Physician-Assisted Suicide and Euthanasia in Washington state, 275 JAMA 919, 922 (1996).

IV. CONCLUSION

Choice In Dying takes no position with respect to the holdings in the two cases before the Court, nor with respect to the legality or constitutionality of physician-assisted suicide. However, when this Court decides these cases and the important constitutional issues that underlie them, we respectfully ask that it consider the data we have presented in this submission. From such data, we respectfully submit the following conclusions should be drawn:

- There is a crucial distinction between a patient's decision to forgo medical treatment at the end of life and his decision to seek the assistance of a physician in committing suicide.
- There is no public or professional consensus by which "terminal illness" may be defined, nor does the term even encompass many individuals who are not "terminally ill" who seek to forgo life-sustaining treatments, These distinctions are central to any thorough analysis of physician--assisted suicide.

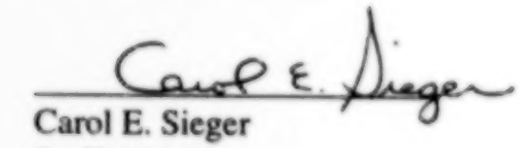
Contrary to public and judicial opinion, there is effective technology available for managing pain and other symptoms associated with terminal illness. There no longer is any technologic reason for most people to die in agony.

- There is preliminary evidence that when pain and other symptoms of terminal illness are managed effectively, desire and requests for physician-assisted suicide are reduced.

- There is evidence that potentially painful life-sustaining treatments are vastly overused among dying patients, and that withdrawing these treatments properly in individuals close to death causes little or no discomfort.

- Contrary to some public and professional opinion, forgoing artificial nutrition and hydration contributes to comfort in dying patients.

- Cardiopulmonary resuscitation has negligible or no benefit in individuals close to death and frequently is refused when patients and their families are informed of the burdens and lack of benefit associated with this life-sustaining treatment.



- Treating pain and other symptoms associated with terminal illness and withholding or withdrawing life sustaining treatments permits a natural death to occur. The process of natural death can be pain-free in many cases.

- Despite technologic capacity, palliative care is not widely provided and there is limited third-party coverage for such services.

- Evidence from Choice In Dying's direct contact with patients and providers indicates that many patients still receive unwanted treatment, and that unwanted treatment, as a concern, may far outweigh desire for assisted suicide among the dying.

We respectfully submit that the opinions under review do not adequately consider the factors enumerated above. Indeed, both Quill and Compassion rely significantly upon some of the serious misconceptions that we have sought to clarify in this submission. We respectfully ask the Court, in resolving the important issues at bar, to consider the data we have presented and the important conclusions drawn therefrom.

Respectfully Submitted,

Carol E. Sieger

INTEREST OF THE *AMICI* STATES..... 1

SUMMARY OF ARGUMENT 2

ARGUMENT..... 5

I. NEW YORK'S PROHIBITION OF ASSISTED SUICIDE DOES NOT TREAT SIMILARLY SITUATED PERSONS IN AN UNEQUAL MANNER 5

A. The Refusal of Unwanted Life-Sustaining Medical Treatment Is Not The Equivalent Of Suicide Or Assisted Suicide, And Thus, New York's Prohibition Of Assisted Suicide Does Not Create A Class of Similarly Situated Persons 7

B. The New York Authorities Relied Upon By The Second Circuit Do Not Support Its Conclusion That New York Has Recognized A Right To Commit Suicide Or "Hasten Death"..... 13

II. NEW YORK'S PROHIBITION OF ASSISTED SUICIDE IS RATIONALLY RELATED TO NUMEROUS IMPORTANT GOVERNMENTAL OBJECTIVES..... 16

III. THE SECOND CIRCUIT'S CONSTITUTIONAL ANALYSIS WAS FUNDAMENTALLY FLAWED BY THE IMPROPER INSERTION OF QUALITY-OF-LIFE CONSIDERATIONS 23

IV. THE DECISION BELOW SHOULD BE REVERSED IN ORDER TO PRESERVE THE ESSENTIAL ROLE OF THE STATES IN OUR FEDERAL SYSTEM OF GOVERNMENT AND THE POWER OF THE PEOPLE TO DIRECTLY GOVERN THEIR OWN AFFAIRS 27

CONCLUSION 30

INTEREST OF THE *AMICI* STATES

The decision below represents a return to an era, long since past, when the principles of federalism were all but eliminated by the mistaken notion that the Fourteenth Amendment authorizes courts to substitute their judgment for that of the States in matters of economic and social welfare. In an opinion which significantly departs from this Court's present-day equal protection jurisprudence, the Second Circuit has declared that New York's prohibition of assisted suicide violates the Equal Protection Clause of the Fourteenth Amendment to the extent that it prohibits a physician from prescribing a lethal dose of medication for self-administration by a mentally-competent, terminally ill patient in the final stages of his or her illness. *Quill v. Vacco*, 80 F.3d 716, 731 (2d Cir. 1996) (hereinafter "*Quill*"), *cert. granted*, ___U.S.___ (1996 WL 282544) (1996). In so holding, the Second Circuit found that New York's prohibition of assisted suicide did not further, and thus was not rationally related to, ***any*** legitimate state interest. *Quill*, 80 F.3d at 729-731.

More troubling than the serious flaws in the Court's analysis is the impact of its holding which negates the ability of the States to protect the lives of their citizens and, at the same time, undercuts accepted understandings of federalism. The protection and preservation of human life is, without question, the quintessential duty and responsibility of the sovereign States in our federal system of government. The power of the States to fulfill this most important of responsibilities, through the exercise of the police power, is likewise unquestionable.[1] Indeed, as Justice Harlan observed in his famous dissent in *Lochner v. New York*, "[a]ll the cases agree that . . . [the States' police] power extends at least to the protection of the lives, the health, and the safety of the public against the injurious exercise by any citizen of his own

---

[1] "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people." U.S. Const. amend. X.

rights."[2] *Lochner v. New York*, 198 U.S. 45, 65 (1905) (Harlan, J., dissenting). "[A]ll states provide for the involuntary commitment of persons who may harm themselves as the result of mental illness, and a number of states allow the use of nondeadly force to thwart suicide attempts." *People v. Kevorkian*, 447 Mich. 436, 479, 527 N.W.2d 714, 732 (1994) (footnotes omitted), *cert. denied*, 115 S.Ct. 1795 (1995). The overwhelming majority of States impose criminal penalties on one who assists another to commit suicide. *See* n.19, *infra*.

At stake in this case are, first and foremost, the lives of the people, both those who wish to die and those who wish to live no matter what their circumstances. Also at stake is the sovereign power of the States to protect and preserve those lives without a federal requirement that the State "make judgments about the 'quality' of life that a particular individual may enjoy, . . . " *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261, 282 (1990). The Court's decision in this case will directly affect the people of all the States of the Union. It will also determine whether "the States *as States* have [any] legitimate interests which the National Government is bound to respect even though its laws are supreme." *Garcia v. San Antonio Metro.*, 469 U.S. 528, 581 (1985) (O'Connor, J., dissenting) (italics original, citation omitted, insert added).

SUMMARY OF ARGUMENT

The question presented in this case is whether the State of New York's prohibition of assisted suicide violates the Equal Protection Clause of the Fourteenth Amendment. The resolution of this question will have profound implications for the continued viability of the States in our federal system of

---

[2] "The powers delegated by the proposed Constitution to the federal government are few and defined. Those which are to remain in the State governments are numerous and indefinite. . . . The powers reserved to the several states will extend to all the objects which, in the ordinary course of affairs, concern the lives, liberties, and properties of the people, and the internal order, improvement, and prosperity of the State." James Madison, *The Federalist* No. 45, at 2:82 (1788).

government. Over a century ago, this Court, describing the dual sovereignty of the States and Federal Government, declared that:

> The preservation of the States, and the maintenance of their governments, are as much within the design and care of the Constitution as the preservation of the Union and the maintenance of the National government. The Constitution, in all its provisions, looks to an indestructible Union, composed of indestructible States.[3]

A proper balance of power between the States and National government "preserves to the people numerous advantages", not the least of which "is a check on abuses of government power." *Gregory v. Ashcroft*, 501 U.S. 452, 458 (1991). However, as Justice O'Connor, writing for the majority in *Gregory*, cautioned, "[t]hese twin powers will act as mutual restraints only if both are credible. In the tension between federal and state power lies the promise of liberty." *Id.*, at 459. While the question presented in this case is one of equal protection,[4] the real question is whether the States will continue to retain their sovereign authority in a system in which "[t]he Federal Government holds a decided advantage . . . the Supremacy Clause." *Id.*, at 460.

In the case below, the Second Circuit declared that New York's prohibition of assisted suicide violates the Equal Protection Clause of the Fourteenth Amendment. *Quill*, 80 F.3d

---

[3] *Texas v. White*, 7 Wall. 700, 725 (1869), *quoting Lane County v. Oregon*, 7 Wall. 71, 76 (1869). *See also Tafflin v. Levitt*, 493 U.S. 455, 458 (1990) ("We begin with the axiom that, under our federal system, the States possess sovereignty concurrent with that of the Federal Government, subject only to limitations imposed by the Supremacy Clause.")

[4] *San Antonio School District v. Rodriguez*, 411 U.S. 1, 44 (1973) ("It must be remembered, also, that every claim arising under the Equal Protection Clause has implications for the relationship between national and state power under our federal system. Questions of federalism are always inherent in the process of determining whether a State's laws are to be accorded the traditional presumption of constitutionality, or are to be subjected instead to rigorous judicial scrutiny.").

at 731. The centerpiece of the Second Circuit's opinion was its conclusion that terminally ill persons on life support who wish to "hasten death"[5] by directing the withdrawal of such systems are similarly situated with others who wish to "hasten death by self-administering prescribed drugs." *Quill*, 80 F.3d at 729. However, "those courts that have found a right to refuse to begin or to continue life-sustaining medical treatment have done so only after concluding that such refusal is wholly different from the act of suicide."[6] Legislatures in forty-seven of the fifty States (including New York) have likewise recognized this fundamental distinction. *See* ns. 14-16, *infra*. Notwithstanding this overwhelming authority to the contrary, the Second Circuit erroneously concluded the two situations are indistinguishable. *Quill*, 80 F.3d at 729. By doing so, it created a class of similarly situated persons where, in fact, none existed. As will be seen, the Second Circuit's failure to recognize this critical distinction infected its constitutional analysis, contributed to its misplaced reliance on right-to-refuse treatment cases, and led directly to its ultimate erroneous conclusion.

In the case below, the Second Circuit correctly found that New York's statutes prohibiting assisted suicide neither impinge upon fundamental rights nor create suspect classifications and, thus, that the rational-basis standard of review

---

[5] There is a danger in using euphemistic language such as "hasten death" when referring to the act of suicide. The term "hasten death" incorrectly implies a natural process being hurried along as opposed to the intentional act of terminating life artificially. Such language has a tendency to obfuscate the reality of the important questions which end-of-life cases generally present. *See People v. Kevorkian*, 447 Mich. 436, 464 n.27, 527 N.W.2d 714, 725 n.27 (1994), *cert. denied*, 115 S.Ct. 1795 (1995), and *Cruzan v. Harmon*, 760 S.W.2d 408, 412 (Mo. banc 1988), *aff'd sub nom. Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261 (1990).

[6] *People v. Kevorkian*, 447 Mich. 436, 480, 527 N.W.2d 714, 732 (1994) (footnote omitted), *cert. denied*, 115 S.Ct. 1795 (1995). *See* n.12, *infra*, and cases cited therein. *But see Compassion in Dying v. State of Washington*, 79 F.3d 790 (9th Cir. 1996), *cert. granted*, ___ U.S. ___ (1996 WL 411596) (1996).

applied. *Quill*, 80 F.3d at 726-727. However, it failed to properly apply that standard in accordance with the clear precedents of this Court. Simply put, while the Second Circuit invoked rational-basis language, that was not the standard it applied.

The Second Circuit's analysis was further flawed by the improper insertion of quality-of-life considerations which it used to discount the State's important interests in the protection and preservation of human life. *Quill*, 80 F.3d at 729-730. In addition to being contrary to the Court's holding in *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 262, 282 (1990), such an analysis also disregards the irrefutable principle that all lives, from beginning to end and irrespective of physical or mental condition, are under the full protection of the law.

Finally, the Second Circuit suggested several alternative methods by which the State of New York could achieve its legitimate objectives. However, the fact that a State may, if it chooses, seek to achieve its legitimate objectives through other means does not, in any way, establish that the means actually selected are either irrational or arbitrary. In short, had the Second Circuit applied the rational-basis standard of review in accordance with the precedents of this Court, New York's prohibition of assisted suicide clearly would have passed constitutional muster.

ARGUMENT

I. NEW YORK'S PROHIBITION OF ASSISTED SUICIDE DOES NOT TREAT SIMILARLY SITUATED PERSONS IN AN UNEQUAL MANNER

The Equal Protection Clause "is essentially a direction that all persons similarly situated should be treated alike." *Cleburne v. Cleburne Living Center, Inc.*, 473 U.S. 432, 440 (1985) (citation omitted). In order to establish an equal protection violation, there must be a showing that the State has adopted a classification which treats similarly situated

persons in an unequal manner.[7] That cannot possibly be established here. First, under the plain language of the statutes at issue, *all* persons, regardless of their circumstances, are prohibited from intentionally aiding another person to attempt or commit suicide.[8] Thus, on their face, the challenged statutes create no classifications at all.[9] Second, neither statute has been applied in this case, *i.e.*, none of the respondents have been charged with any violation of section 125.15(3) or 120.30.[10] Thus, to the extent that New York law classifies at all, that classification is clearly neutral.[11]

---

[7] *Yick Wo v. Hopkins*, 118 U.S. 356, 373-374 (1886). *See also In re Eric J.*, 25 Cal.3d 522, 530, 159 Cal.Rptr. 317, 320 (1979) ("The first prerequisite to a meritorious claim under the equal protection clause is a showing that the state has adopted a classification that affects two or more *similarly situated* groups in an unequal manner. [italics original, citation and footnote omitted]").

[8] Section 125.15 of the New York Penal Law, entitled "Manslaughter in the second degree," provides in pertinent part that "A person is guilty of manslaughter in the second degree when: . . . (3) He intentionally causes or aids another person to commit suicide. Manslaughter in the second degree is a class C felony." N.Y. Penal Law § 125.15(3) (McKinney 1987). Section 120.30 of the New York Penal Law, entitled "Promoting a suicide attempt," provides that "A person is guilty of promoting a suicide attempt when he intentionally causes or aids another person to attempt suicide. Promoting a suicide attempt is a class E felony." N.Y. Penal Law § 120.30 (McKinney 1987).

[9] To the extent that the Second Circuit's opinion can be viewed as being based on the concept of overbreadth, *i.e.*, that the challenged statutes sweep too broadly, it is plainly inconsistent with previous holdings of this Court. While a finding of overbreadth or " 'overreaching' " may be significant where First Amendment considerations are present, the concept has no application here. *Dandridge v. Williams*, 397 U.S. 471, 484-485 (1970).

[10] While a grand jury proceeding was instituted against one of the respondents in this case, Dr. Quill, no indictment was returned. *Quill v. Koppell*, 870 F.Supp. 78, 82 (S.D.N.Y. 1994), *aff'd in part and rev'd in part sub nom. Quill v. Vacco*, 80 F.3d 716 (2d Cir. 1996).

[11] Of course, the fact that a neutral statute may have a disproportionate negative impact on a particular group does not, standing alone, establish a violation of equal protection. *Personnel Administrator of Massachusetts v. Feeney*, 442 U.S. 256, 271-273 (1979). *See also Washington v. Davis*, 426 U.S. 229, 242 (1976) ("[W]e have not held that a law, neutral on its face and serving ends otherwise within the power of government to pursue, is invalid under the Equal Protection Clause simply because it may affect a greater proportion of one race than of another.") Rather, in such a situation it must also be shown that the affected group has historically been the victim of discrimination and, further, that the statute was enacted for a discriminatory purpose. *Feeney*, 442 U.S. at 273-274. That cannot possibly be established here. In the case below, the Second Circuit did not find that terminally ill persons had experienced "a history of purposeful unequal treatment" (*San Antonio School District v. Rodriguez*, 411 U.S. 1, 28 (1973)), or that New York's prohibition of assisted suicide was enacted for the purpose of discriminating against terminally ill persons. "[T]he Fourteenth Amendment guarantees equal laws, not equal results." *Feeney*, at 273.

In *Quill*, the Second Circuit found a classification created not by the plain language of the challenged statutes, or by their application in a particular case, but rather based on its conclusion that the refusal of unwanted life-sustaining medical treatment is the equivalent of suicide and assisted suicide. *Quill*, 80 F.3d at 729. That conclusion, the centerpiece of the Second Circuit's opinion, was error.

A. The Refusal of Unwanted Life-Sustaining Medical Treatment Is Not The Equivalent Of Suicide Or Assisted Suicide, And Thus, New York's Prohibition Of Assisted Suicide Does Not Create A Class of Similarly Situated Persons

The Equal Protection Clause permits the States to determine, in the first instance, which persons are similarly situated and which are not. Indeed, it is well-settled that "[t]he initial discretion to determine what is 'different' and what is 'the same' resides in the legislatures of the States." *Plyer v. Doe*, 457 U.S. 202, 215 (1982). In the instant case, the States have made that determination: terminally ill persons who refuse unwanted life-sustaining medical treatment

are not similarly situated with other persons who wish to commit suicide or assisted suicide.

In landmark case of *In re Quinlan*, the New Jersey Supreme Court recognized that there is "a real distinction between the self-infliction of deadly harm and a self-determination against artificial life support or radical surgery, for instance, in the face of irreversible, painful and certain imminent death." *In re Quinlan*, 70 N.J. 10, 43, 355 A.2d 647, 665, *cert. denied*, 429 U.S. 922 (1976). Since *Quinlan*, courts which have recognized a right to refuse unwanted life-sustaining medical treatment have, at the same time, recognized that such refusal is fundamentally different from the act of suicide.[12] A typical example of this can be found in *People v. Kevorkian* wherein the Michigan Supreme Court stated that:

> [P]ersons who opt to discontinue life-sustaining

[12] *See, e.g., Satz v. Perlmutter*, 362 So.2d 160, 162-163 (Fla. DCA 1978), *aff'd*, 379 So.2d. 359 (Fla. 1980); *Von Holden v. Chapman*, 87 A.D.2d 66, 450 N.Y.S.2d 623, 627 (1982) ("essential dissimilarity" between right to decline medical treatment and any right to end one's life); *In re Conroy*, 98 N.J. 321, 351, 486 A.2d 1209, 1224 (1985) ("[D]eclining life-sustaining medical treatment may not properly be viewed as an attempt to commit suicide. Refusing medical intervention merely allows the disease to take its natural course; if death were to eventually occur, it would be the result, primarily, of the underlying disease, and not the result of a self-inflicted injury. [footnote omitted]"); *Bouvia v. Superior Court*, 179 Cal.App.3d 1127, 1145, 225 Cal.Rptr. 297, 306 (1986); *Bartling v. Superior Court*, 163 Cal.App.3d 186, 196, 209 Cal.Rptr. 220, 225-226 (1984); *People v. Adams*, 216 Cal.App.3d 1431, 1440, 265 Cal.Rptr. 568, 573-574 (1990); *Donaldson v. Lungren*, 2 Cal.App.4th 1614, 1619-1623, 4 Cal.Rptr.2d 59, 61-64 (1992) and cases cited therein; *Thor v. Superior Court*, 5 Cal.4th 725, 742, 21 Cal.Rptr.2d 357, 367-368 (1993) ("[A] necessary distinction exists between a person suffering from a serious life-threatening or debilitating injury who rejects medical intervention that only prolongs but never cures the affliction and an individual who deliberately sets in motion a course of events aimed at his or her own demise and attempts to enlist the assistance of others."); *DeGrella v. Elston*, 858 S.W.2d 698, 706-707 (Ky. 1993). *See also* Thomas J. Marzen, *et al.*, *Suicide: A Constitutional Right?*, 24 Duq. L. Rev. 1, 10 n.34 (1985), and cases cited therein.

> medical treatment are not, in effect, committing suicide. There is a difference between choosing a natural death summoned by an uninvited illness or calamity, and deliberately seeking to terminate one's life by resorting to death-inducing measures unrelated to the natural process of dying.[13]

Likewise, in *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261 (1990), this Court "assume[d] that the United States Constitution would grant a competent person a constitutionally protected right to refuse lifesaving hydration and nutrition" but, at the same time, recognized Missouri's important interest in the protection and preservation of human life, noting that "the majority of States in this country have laws imposing criminal penalties on one who assists another to commit suicide." *Cruzan*, 497 U.S. at 279-280 (footnote omitted). Plainly, the majority in *Cruzan* had no difficulty at all distinguishing the right to refuse unwanted life-sustaining medical treatment from suicide and assisted suicide.

Today, forty-seven state legislatures also make the fundamental distinction between the refusal of unwanted life-sustaining medical treatment and the acts of suicide and assisted suicide in their natural death/living will statutes,[14] or their

[13] *People v. Kevorkian*, 447 Mich. 436, 472-473, 527 N.W.2d 714, 728-729 (1994) (*citing McKay v. Bergstedt*, 106 Nev. 808, 820, 801 P.2d 617 (1990)), *cert. denied*, 115 S.Ct. 1795 (1995). *See also* Yale Kamisar, *Are Laws against Assisted Suicide Unconstitutional?*, 23 Hastings Center Report, No. 3, 32, 33 (1993) ("The only right or liberty that the *Karen Ann Quinlan* case and subsequent so-called 'right to die' rulings have established is the right under certain circumstances to be disconnected from artificial life support systems or, as many have called it, the right to die *a natural death*. [16] *See* notes 14 and 15, *supra*. *See also* Conn. Gen. Stat. Ann. § 19a-575 (West Supp. 1996) (form declarations); N.J. Stat. Ann. § 26:2H-54(d)-(e) (West 1996) (legislative findings); N.M. Stat. Ann. § 24-7A-13(C) (Michie Supp. 1995).

between the two situations. When a terminally ill person accepts life-sustaining treatment, he or she is authorizing the invasion of bodily integrity which necessarily accompanies that treatment. The fact that this class of persons must sacrifice their bodily integrity in order to continue living plainly demonstrates they are not similarly situated with any other class. Furthermore, "[a] person may refuse life-sustaining medical treatment because the treatment itself is a violation of bodily integrity."[17] In sharp contrast, suicide and assisted suicide do not implicate a person's right to protect bodily integrity or right to refuse unwanted medical treatment.

Our Nation's history and tradition fully supports the States' determination that these two situations are not the same. The right to refuse unwanted medical treatment is derived from the common-law doctrine of informed consent which embodies the "notion of bodily integrity." *Cruzan*, 497 U.S. at 269 and 270. As the Court observed in *Cruzan*, "[t]he informed consent doctrine has become firmly entrenched in American tort law." *Id.* In sharp contrast, opposition to suicide is deeply rooted in our Nation's history and tradition,[18] and assisted suicide remains a crime in the overwhelming majority of States.[19]

---

[17] *People v. Kevorkian*, 447 Mich. 436, 480 n.59, 527 N.W.2d 714, 732 n.59 (1994), *cert. denied*, 115 S.Ct. 1795 (1995).

[18] *See In re Joseph G.*, 34 Cal.3d 429, 433-435, 194 Cal.Rptr. 163, 165 (1983) (reviewing development of the law with respect to suicide and related crimes); *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261, 294-295 (1990) (Scalia, J., concurring) (reviewing our Nation's historical and traditional opposition to suicide and assisted suicide); Thomas J. Marzen, *et al.*, *Suicide, A Constitutional Right?*, 24 Duq. L. Rev. 1, 100 (1985) (concluding that "the weight of authority in the United States, from colonial days through at least the 1970's has demonstrated that the predominant attitude of society and the law has been one of opposition to suicide.").

[19] The following States, plus Puerto Rico and the Virgin Islands, expressly prohibit assisted suicide by statute: Alaska Stat., § 11.41.120(a)(2) (Michie 1989); Ariz. Rev. Stat. Ann., § 13-1103(A)(3) (West Supp. 1995); Ark. Stat. Ann., § 5-10-104(a)(2) (Michie 1993); Cal.

In summary, suicide and assisted suicide are so obviously different from the refusal of unwanted medical treatment, and its legal underpinnings, that persons exercising the right to refuse such treatment simply cannot be considered similarly situated with those who wish to commit suicide or assisted suicide. By failing to recognize the obvious factual differences between the two situations, and our Nation's history and tradition with respect to each, the Second Circuit created a class of similarly situated persons where, in fact,

Code Ann., § 97-3-49 (1994); Mo. Ann. Stat., § 565.023(1)(2) (West Supp. 1996); Mont. Code Ann., § 45-5-105 (1995); Neb. Rev. Stat. Ann., § 28-307 (Michie 1995); N.H. Rev. Stat. Ann., § 630:4 (1996); N.J. Stat. Ann., § 2C:11-6 (West 1995); N.M. Stat. Ann., § 30-2-4 (Michie 1994); N.Y. Penal Law, §§ 120.30, 125.15(3) (McKinney 1987); N.D. Cent. Code, § 12.1-16-04 (Supp. 1995); Okla. Stat. Ann., tit. 21, §§ 813, 814, 815 (West 1983); Pa. Cons. Stat. Ann., tit. 18, § 2505(b) (West 1983); P.R. Laws Ann., tit. 33, § 4009; R.I. Pub. Act 96-133, *to be codified as* R.I. Gen. Stat., tit. 11, ch. 60; S.D. Codified Laws Ann., § 22-16-37 (Michie 1988); Tenn. Code Ann., § 39-13-216 (Supp. 1995); Tex. Penal Code Ann., § 22.08 (West 1994); V.I. Code Ann., tit. 14, § 2141; Wash. Rev. Code Ann., § 9A.36.060 (West 1988); and Wis. Stat. Ann., § 940.12 (West 1996). *See also* Or. Rev. Stat. § 163.125(1)(b) (1993) (prohibiting assisted suicide generally), *but see* Or. Rev. Stat. § 127.800 *et seq.* (1996) (permitting physician-assisted suicide in certain circumstances). The following states impose criminal penalties by case law for assisting a suicide: *Commonwealth v. Mink*, 123 Mass. 422, 428-429 (1877); *People v. Kevorkian*, 447 Mich. 436, 493-497, 527 N.W.2d 714, 738-739 (1994), *cert. denied*, 115 S.Ct. 1795 (1995); *Blackburn v. State*, 23 Ohio St. 146, 163 (1872); *State v. Jones*, 86 S.C. 17, 22, 47, 67 S.E. 160, 162, 165 (1910); and *State v. Willis*, 255 N.C. 473, 477, 121 S.E.2d 854, 856-857 (1961).

none existed. "The Constitution does not require things which are different in fact or opinion to be treated in law as though they were the same." *Tigner v. Texas*, 310 U.S. 141, 147 (1940).

B. The New York Authorities Relied Upon By The Second Circuit Do Not Support Its Conclusion That New York Has Recognized A Right To Commit Suicide Or "Hasten Death"

Even the New York authorities relied upon by the Second Circuit do not support its conclusion that New York has recognized a right to commit suicide, or as the Second Circuit phrased it, a right to "hasten death." The first case cited by the Second Circuit in its effort to create a bridge between the right to refuse medical treatment and a right to "hasten death" was *Schloendorff v. Society of New York Hospital*, 211 N.Y. 125, 105 N.E. 92 (1914). *Quill*, 80 F.3d at 727. However, *Schloendorff* is simply an "informed consent" case, the pertinent portion of which this Court discussed in *Cruzan* as follows:

> Justice Cardozo, while on the Court of Appeals of New York, aptly described this doctrine [of informed consent]: "Every human being of adult years and sound mind has a right to determine what shall be done with his own body; and a surgeon who performs an operation without his patient's consent commits an assault, for which he is liable in damages." *Schloendorff v. Society of New York Hospital*, 211 N.Y. 125, 129-130, 105 N.E. 92, 93 (1914).

Cruzan, 497 U.S. at 269. Plainly *Schloendorff*, which simply recognizes the doctrine of informed consent, does not support a right to "hasten death." Neither did Justice Cardozo.[20]

---

[20] Margaret E. Hall, *Selected Writings of Benjamin Nathan Cardozo*, Law and Literature, III, *What Medicine Can Do for Laws*, 371, 388-390 (1947) ("Every now and then there crops up in popular journals a discussion of the problem of euthanasia. The query is propounded whether the privilege should be accorded to a physician of putting a patient painlessly out of the world when there is an incurable disease, agonizing

The Second Circuit then cited *Matter of Storar* and *Eichner v. Dillon* (decided together), 52 N.Y.2d 363, 420 N.E.2d 64, *cert. denied*, 454 U.S. 858 (1981), for the proposition that "[i]n both these cases, the New York Court of Appeals recognized the right of a competent, terminally-ill patient to hasten his death upon proper proof of his desire to do so." *Quill*, 80 F.3d at 727. *Storar* and *Eichner*, however, are both right to refuse treatment cases. The phrase "hasten his death" incorrectly implies that the New York Court of Appeals approved not only the right to refuse unwanted medical treatment, but also the act of suicide. It did not. Moreover, in relying on these cases, the Second Circuit ignored the far more relevant part of the majority opinion which recognized that "[t]he State has a legitimate interest in protecting the lives of its citizens. . . . It may, by statute, prohibit them from engaging in specified activities, including medical procedures which are inherently hazardous to their lives." *Matter of Storar*, 52 N.Y.2d 363, 377, 420 N.E.2d 64, 71 (citation omitted, insert added), *cert. denied*, 454 U.S. 858 (1981).

Further review of the majority opinion reveals even more evidence that the New York Court of Appeals did not impliedly approve of suicide (*i.e.*, "hastening death"). First, the New York Court of Appeals specifically noted that the State's interest in preventing suicide was *not* implicated in the *Eichner* case. *Matter of Storar*, 52 N.Y.2d at 377 n.6. Second, noting the need for judicial restraint, the majority found it unnecessary on the facts of the cases before it to address the dissent's endorsement of a limited form of passive euthanasia. *Matter of Storar*, 52 N.Y.2d at 370 n.2. In view of the foregoing, the Second Circuit's reliance on *Storar* and *Eichner* was clearly misplaced.

---

suffering, and a request by the sufferer for merciful release. No such privilege is known to our law, which shrinks from any abbreviation of the span of life, shaping its policy in that regard partly under the dominance of the precepts of religion and partly in the fear of error or abuse. Just as a life may not be shortened, so its value must be held as equal to that of any other, the mightiest or the lowliest.").

The Second Circuit also relied on *Rivers v. Katz*, 67 N.Y.2d 485, 495 N.E.2d 337 (1986), for the proposition that the New York Court of Appeals had "recognized the right to bring on death by refusing medical treatment not only as a fundamental common-law right but also as coextensive with [a] patient's liberty interest protected by the due process clause of our State Constitution." *Quill*, 80 F.3d at 727 (internal quotes and citation omitted, insert original). Again, this is incorrect. In *Rivers*, the New York Court of Appeals did not mention any "right to bring on death," a phrase which again incorrectly implies approval of the act of suicide. Rather, the right which the court recognized, as evidenced from the text of the opinion itself, was *the right to refuse unwanted medical treatment*. *Rivers*, 67 N.Y.2d at 493.

The Second Circuit also relied on both Article 29-B of New York Public Health Law, entitled "Orders Not to Resuscitate", sections 2960-2979, and Article 29-C, entitled "Health Care Agents and Proxies", sections 2980-2994, for the proposition that "the New York legislature [has] placed its imprimatur upon the right of competent citizens to hasten death by refusing medical treatment and by directing physicians to remove life-support systems already in place." *Quill*, 80 F.3d at 727 (insert added). Again, this is incorrect. As a review of these statutes plainly reveals, the New York legislature did not recognize any right to "hasten death," rather, it recognized the right to refuse medical treatment.[21] Moreover, in relying on these statutes, the Second Circuit ignored the far more relevant statute, New York Public Health Law, Article 29-C, § 2989(3), which specifically provides that:

> This article is not intended to permit or promote suicide, assisted suicide, or euthanasia; accordingly, nothing herein shall be construed to

---

[21] *See, e.g.*, New York Public Health Law, Article 29-B, § 2964 (recognizing right of adult with capacity to consent to an order not to resuscitate), and Article 29-C, § 2981 (allowing for appointment of an agent "to make health care decisions on the principal's behalf").

> permit an agent to consent to any act or omission to which the principal could not consent under law.[22]

This statute directly contradicts the Second Circuit's contention that the New York legislature has either expressly or impliedly approved of suicide or assisted suicide. Plainly, it has not. In summary, none of the New York authorities discussed above support the contention that the State of New York has recognized a right to commit suicide or, as the Second Circuit phrased it, a right to "hasten death." Rather, what the State of New York has recognized is the right to refuse unwanted medical treatment, regardless of the consequences of that refusal.

The final authority relied upon by the Second Circuit in its effort to equate the withdrawal of life-sustaining medical treatment with the act of suicide is *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261 (1990). However, like its reliance on New York law, that reliance is entirely misplaced. While the Second Circuit discussed several portions of the *Cruzan* opinion at length, it ignored the far more relevant portion of the opinion for present purposes, *i.e.*, the recognition by the majority that even in the face of a right to refuse medical treatment, the State may properly assert important interests in the protection and preservation of human life, and in the prevention of both suicide and assisted suicide. *Cruzan*, 497 U.S. at 280. In summary, none of the authorities relied upon by the Second Circuit support its attempt to create a bridge between the right to refuse unwanted medical treatment, including that necessary to sustain life, and a right to commit suicide or assisted suicide.

II. NEW YORK'S PROHIBITION OF ASSISTED SUICIDE IS RATIONALLY RELATED TO NUMEROUS IMPORTANT GOVERNMENTAL OBJECTIVES

Should this Court find a state-determined class of similarly situated persons, it then becomes necessary to test

---

[22] *See also* New York Public Health Law, Article 29-B, § 2962 (creating a presumption in favor of resuscitation, thus, further evidencing New York's strong state policy in favor of preserving life).

whether that classification "has been drawn in such a manner as to bear some rational relationship to a legitimate state end."[23] Part of the answer to this question "lies in remembering that our Constitution is an instrument of federalism" and that "maintenance of the principles of federalism is a foremost consideration in interpreting any of the pertinent constitutional provisions under which this Court examines state action." *Allied Stores of Ohio v. Bowers*, 358 U.S. 522, 532 (1959) (Brennan, J., concurring).

It is well-settled that "[t]he Equal Protection Clause allows the States considerable leeway to enact legislation that may appear to affect similarly situated people differently." *Clements v. Fashing*, 457 U.S. 957, 962-963 (1982) (plurality opinion).

> [W]here individuals in the group affected by a law have distinguishing characteristics relevant to interests the State has the authority to implement, the courts have been very reluctant, as they should be in our federal system and with our respect for the separation of powers, to closely scrutinize legislative choices as to whether, how, and to what extent those interests should be pursued. In such cases, the Equal Protection Clause requires only a rational means to serve a legitimate end.

Cleburne v. Cleburne Living Center, Inc., 473 U.S. 432, 441-442 (1985). *See also FCC v. Beach Communications, Inc.*, 508 U.S. 307, 313-314 (1993) ("This standard of review is a paradigm of judicial restraint.")

Indeed, this Court has repeatedly observed that " . . . [The rational-basis standard] is true to the principle that the Fourteenth Amendment gives the federal courts no power

---

[23] *Clements v. Fashing*, 457 U.S. 957, 963 (1982) (plurality opinion). *See also Kadrmas v. Dickinson Public Schools*, 487 U.S. 450, 457-458 (1988) ("Unless a statute provokes strict judicial scrutiny because it interferes with a fundamental right or discriminates against a suspect class, it will ordinarily survive an equal protection attack so long as the challenged classification is rationally related to a legitimate governmental purpose. [internal quotes and citations omitted]").

to impose upon the States their views of what constitutes wise economic or social policy." *Dallas v. Stanglin*, 490 U.S. 19, 27 (1989) (insert original, internal quotes omitted), *citing Dandridge v. Williams*, 397 U.S. 471, 485-486 (1970). Review under the rational-basis standard "is the most relaxed and tolerant form of judicial scrutiny under the Equal Protection Clause." *Dallas v. Stanglin*, 490 U.S. 19, 26 (1989).

> Although no precise formula has been developed, the Court has held that the Fourteenth Amendment permits the States a wide scope of discretion in enacting laws which affect some groups of citizens differently than others. The constitutional safeguard is offended only if the classification rests on grounds wholly irrelevant to the achievement of the State's objective. State legislatures are presumed to have acted within their constitutional power despite the fact that, in practice, their laws result in some inequality. A statutory discrimination will not be set aside if any state of facts reasonably may be conceived to justify it.

McGowan v. Maryland, 366 U.S. 420, 425-426 (1961). *See also Dandridge v. Williams*, 397 U.S. 471, 485 (1970).

As Justice Stewart observed in his concurring opinion in *San Antonio School District v. Rodriguez*, 411 U.S. 1, 60 (1973), "[t]his doctrine is no more than a specific application of one of the first principles of constitutional adjudication – the basic presumption of constitutional validity of a duly enacted state or federal law. [citation omitted]" Thus, under the rational-basis standard, legislation is first presumed valid and then, shielded by that presumption, tested to determine if the classification it creates is rationally related to a legitimate state interest.[24]

In discussing this presumption in *Quill*, the Second Circuit stated: "[t]he general rule . . . is that state legislation

---

[24] *See Cleburne v. Cleburne Living Center, Inc.*, 473 U.S. 432, 440 (1985) ("The general rule is that legislation is presumed to be valid and will be sustained if the classification drawn by the statute is rationally related to a legitimate state interest. [citations omitted]").

carries a presumption of validity *if* the statutory classification is 'rationally related to a legitimate state interest.' [citation omitted]" *Quill*, 80 F.3d at 725 (emphasis added). This is incorrect. The existence of the presumption of validity is not conditioned upon a subsequent finding of rational relationship; rather, the presumption *precedes* application of the standard itself.[25] The Second Circuit's apparent failure to accord New York's statutes the presumption of validity to which they are entitled may provide at least some explanation why the Court utilized such a strict, skeptical, means-end analysis to review the challenged statutes.

While the Second Circuit did identify several important state interests implicated by New York's prohibition of assisted suicide, it went on to conclude that "[t]he New York statutes prohibiting assisted suicide, which are similar to the Washington statute, do not serve any of the state interests noted, *in view of the statutory and common law schemes allowing suicide through the withdrawal of life-sustaining treatment.*"[26] *Quill*, 80 F.3d at 730 (italics added).

This holding, like its misidentification of a similarly situated class, is based on the Second Circuit's failure to differentiate between the refusal of unwanted life-sustaining medical treatment and the acts of suicide and assisted suicide. Once this recurrent error is removed from the analysis, however, it immediately becomes clear that New York's prohibition of assisted suicide directly furthers, and thus is rationally

---

[25] *See Heller v. Doe*, 509 U.S. 312, 319-320 (1993) ("For these reasons, a classification neither involving fundamental rights nor proceedings along suspect lines is accorded *a strong presumption of validity*. [emphasis added]"); *FCC v. Beach Communications, Inc.*, 508 U.S. 307, 314-315 (1993) ("On rational-basis review, a classification in a statute such as the Cable Act comes to us bearing *a strong presumption of validity*, . . . and those attacking the rationality of the legislative classification have the burden 'to negate every conceivable basis which might support it,' . . . [citations omitted, emphasis added]").

[26] It is noteworthy that, at this point in its opinion, the Second Circuit abandoned the euphemism "hasten death" and, in its place, substituted the word "suicide."

related to, several important state interests. Those interests include, but are not limited to: (1) the protection and preservation of human life;[27] (2) the prevention of suicide;[28] (3) preventing the fraud, errors and abuse which would accompany acceptance of suicide and assisted suicide;[29] (4) maintaining the ethical integrity of the medical profession;[30] (5) protecting the poor and minorities from

---

[27] *Cruzan*, 497 U.S. at 280.

[28] "Suicide is the eighth leading cause of death in the United States." New York State Task Force Report, *When Death is Sought – Assisted Suicide and Euthanasia in the Medical Context* (May 1994), at 9 (footnote omitted) (hereinafter "*When Death is Sought*"). "Studies that examine the psychological background of individuals who kill themselves show that 95 percent have a diagnosable mental disorder at the time of death." *Id.*, at 11. Furthermore, "[l]ike other suicidal individuals, patients who desire suicide or an early death during a terminal illness are usually suffering from a treatable mental illness, most commonly depression." *Id.*, at 13 (footnote omitted).

[29] *Cruzan*, 497 U.S. at 281 ("[E]ven where family members are present, [t]here will, of course, be some unfortunate situations in which family members will not act to protect a patient. A State is entitled to guard against potential abuses in such situations. [citation and internal quotes omitted]"). *See also Donaldson v. Lungren*, 2 Cal.App.4th 1614, 1623, 4 Cal.Rptr. 59, 64 (1992) ("The state's interest must prevail over the individual because of the difficulty, if not the impossibility, of evaluating the motives of the assister or determining the presence of undue influence."), and *Donaldson*, 2 Cal.App.4th at 1624 ("Third parties, even family members, do not always act to protect the person whose life will end.").

[30] *Cf. Middlesex Ethics Committee v. Garden State Bar Association*, 457 U.S. 423, 434 (1982) (important state interest in "maintaining and assuring the professional conduct of professional attorneys it licenses"). *See also Donaldson v. Lungren*, 2 Cal.App.4th 1614, 1620, 4 Cal.Rptr.2d 59, 62 (1992) (recognizing state interest in maintaining the ethical integrity of the medical profession). In reaffirming its long-standing opposition to physician-assisted suicide, the American Medical Association has declared that physician-assisted suicide "threatens the very core of the medical profession's ethical integrity" and is "fundamentally inconsistent with the physician's professional role." American Medical Association, Council on Ethical and Judicial Affairs, *Code of Medical Ethics Reports*, Vol. V, No. 2

exploitation;[31] (6) protecting handicapped persons from societal indifference;[32] and (7) protecting innocent third parties.[33] Under the rational-basis standard, this should have been more than enough to establish the constitutionality of the challenged statutes.[34] However, in the case below, there was much more.

In 1985, then New York Governor Mario Cuomo convened the New York State Task Force on Life and the Law which he charged with responsibility to develop public policy recommendations on issues raised by medical advances. In May of 1994, the Task Force issued its 181 page report, *When Death is Sought: Assisted Suicide and Euthanasia in the Medical Context*, which has been characterized by one federal Court of Appeals as "[t]he most comprehensive study of our subject by a governmental body . . . " *Compassion in Dying v. State of Washington*, 49 F.3d 586, 591-592 (9th Cir. 1995), *superseded by* 79 F.3d 790 (9th Cir. 1996). The Task Force unanimously recommended that New York's laws prohibiting assisted suicide and euthanasia should not be changed. *When Death is Sought*, at vii.

> After lengthy deliberations, the Task Force unanimously concluded that the dangers of such a dramatic change in public policy would far outweigh

(July 1994), Report 59, *Physician-Assisted Suicide*, 269 and 274, respectively.

[31] *Quill*, 80 F.3d at 730, *citing Compassion in Dying v. State of Washington*, 49 F.3d 586, 592 (9th Cir. 1995), *superseded by* 79 F.3d 790 (9th Cir. 1996).

[32] *Quill*, 80 F.3d at 730, *citing Compassion in Dying v. State of Washington*, 49 F.3d 586, 592-593 (9th Cir. 1995), *superseded by* 79 F.3d 790 (9th Cir. 1996).

[33] *Application of President & Directors of Georgetown College, Inc.*, 118 U.S.App.D.C. 80, 331 F.2d 1000, 1008 (1964), *cert. denied*, 377 U.S. 978 (1964). *See also Bartling v. Superior Court*, 163 Cal.App.3d 186, 195 n.6, 209 Cal.Rptr. 220, 225 n.6 (1984).

[34] *Cf.* n.37, *infra*, and cases cited therein. *See also Heller v. Doe*, 509 U.S. 312, 320 (1993) ("A State, moreover, has no obligation to produce evidence to sustain the rationality of a statutory classification.").

> any possible benefits. In light of the pervasive failure of our health care system to treat pain and diagnose and treat depression, legalizing assisted suicide and euthanasia would be profoundly dangerous for many individuals who are ill and vulnerable. The risks would be most severe for those who are elderly, poor, socially disadvantaged, or without access to good medical care.[35]

While the Second Circuit was certainly aware of the Task Force Report (*see Quill*, 80 F.3d at 724, 730, and n.3), it plainly rejected it as an explanation of the "state of facts reasonably . . . conceived to justify [New York's prohibition of assisted suicide]." *McGowan v. Maryland*, 366 U.S. 420, 426 (1961). That was error. It is difficult to imagine a more comprehensive explanation for a legislative decision. It is also difficult to imagine what is required under the rational-basis standard if the Task Force Report is insufficient.[36] In summary, had the Second Circuit applied the rational-basis standard of review in accordance with the precedents of this Court, New York's prohibition of assisted suicide clearly would have passed constitutional muster.[37]

---

[35] *When Death is Sought*, at ix. *See also Id.*, at vii-viii. Since publication of the Task Force Report, the New York Legislature has taken no action to amend or repeal New York's prohibition of assisted suicide, N.Y. Penal Code, §§ 125.15(3) and 120.30.

[36] *Cf. Gregory v. Ashcroft*, 501 U.S. 452, 473 (1991) (finding Missouri mandatory retirement age of 70 for most state judges to be rationally related to a legitimate state interest, but noting that it "is founded on a generalization" which "may not be true at all."). *See also Heller v. Doe*, 509 U.S. 312, 321 (1993) ("Finally, courts are compelled under rational-basis review to accept a legislature's generalizations even when there is an imperfect fit between means and ends.").

[37] *Cf. McGowan v. Maryland*, 366 U.S. 420, 426 (1961); *Dandridge v. Williams*, 397 U.S. 471, 486 (1970); *San Antonio School District v. Rodriguez*, 411 U.S. 1, 44-55 (1973); *Washington v. Davis*, 426 U.S. 229, 245 (1976); *Massachusetts Board of Retirement v. Murgia*, 427 U.S. 307, 314 (1976); *Vance v. Bradley*, 440 U.S. 93, 98-102 (1979); *Bowen v. Owens*, 476 U.S. 340, 348-350 (1986); *Kadrmas v. Dickinson Public Schools*, 487 U.S. 450, 457-465 (1988); *Dallas v. Stanglin*, 490 U.S. 19, 27 (1989); *Gregory v. Ashcroft*, 501 U.S. 452, 470-473 (1991).

III. THE SECOND CIRCUIT'S CONSTITUTIONAL ANALYSIS WAS FUNDAMENTALLY FLAWED BY THE IMPROPER INSERTION OF QUALITY-OF-LIFE CONSIDERATIONS

The Second Circuit's application of the rational-basis standard was further flawed by the improper insertion of quality-of-life considerations which it used to discount the State's important interests in the protection and preservation of human life. *Quill*, 80 F.3d at 729-730. In this regard, the Second Circuit stated: "[w]hat interest can the state possibly have in requiring the prolongation of a life that is all but ended? Surely, the state's interest lessens as the potential for life diminishes." *Quill*, 80 F.3d at 729-730 (citation omitted). The Second Circuit's characterization of the life at stake as one "that is all but ended" is based on the mistaken notion that the life at stake is of little, if any, value. Moreover, it is at this critical time, when life is "all but ended," that the person whose life is at stake is in greatest need of the State's protection. Indeed, as the Court observed in *Cruzan*, "even where family members are present, [t]here will, of course, be some unfortunate situations in which family members will not act to protect a patient. A State is entitled to guard against potential abuses in such situations."[38]

Such improper quality-of-life considerations are also directly contrary to this Court's holding in *Cruzan* that "a

---

[38] *Cruzan*, 497 U.S. at 281 (citation and internal quotes omitted). *See also Donaldson v. Lungren*, 2 Cal.App.4th 1614, 1623, 4 Cal.Rptr. 59, 64 (1992) ("The state's interest must prevail over the individual because of the difficulty, if not the impossibility, of evaluating the motives of the assister or determining the presence of undue influence."), and *Donaldson*, 2 Cal.App.4th at 1624 ("Third parties, even family members, do not always act to protect the person whose life will end."). Of course, individual interests are not afforded any less protection simply because the government, rather than the individual, is defending them. *Cruzan*, 497 U.S. at 282 n.10.

State may properly decline to make judgments about the 'quality' of life that a particular individual may enjoy, and simply assert an unqualified interest in the preservation of human life to be weighed against the constitutionally protected interests of the individual." *Cruzan*, 497 U.S. at 282. The dangers inherent in using such quality-of-life considerations are well-recognized.[39] "Were quality of life at issue, persons with all manner of handicaps might find the state seeking to terminate their lives." *Cruzan v. Harmon*, 760 S.W.2d 408, 420 (Mo. banc 1988), *aff'd sub nom. Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261 (1990). An analysis such as that engaged in by the Second Circuit also disregards the irrefutable principle that all lives, from beginning to end and irrespective of physical or mental condition, are under the full protection of the law.

> The life of those to whom life has become a burden – of those who are hopelessly diseased or fatally wounded – nay, even the lives of criminals condemned to death, are under the protection of the law, equally as the lives of those who are in the full tide of life's enjoyment, and anxious to continue to live.

Blackburn v. State, 23 Ohio St. 146, 163 (1872).

In discounting the State's important interests in the protection and preservation of human life, the Second Circuit also relied upon broad generalities from the Court's opinion in *Planned Parenthood v. Casey*, 505 U.S. 833, 851 (1992), on the nature of the liberty protected by the Fourteenth Amendment. *Quill*, 80 F.3d at 730. That reliance was particularly surprising since *Casey* itself reaffirms the States' "legitimate interests from the outset of the pregnancy in protecting the

---

[39] *See, e.g., Mack v. Mack*, 618 A.2d 744, 760 (Md. 1993) ("As a logical progression from that precedent [patients in a persistent vegetative state], cases eventually would be presented submitting that the best interest of the most severely retarded and feebleminded, who require extended care, who have practically no cognition, and who are too disabled to feed themselves, would be to have sustenance withheld. [citation omitted]").

health of the woman and the life of the fetus that may become a child." *Casey*, 505 U.S. at 846. Nevertheless, the Second Circuit relied on *Casey* when it posed the following question:

> What concern prompts the state to interfere with a mentally competent patient's "right to define [his] own concept of existence, of meaning, of the universe, and of the mystery of human life," *Planned Parenthood v. Casey*, 505 U.S. 833, 851, 112 S.Ct. 2791, 2807, 120 L.Ed.2d 674 (1992), when the patient seeks to have drugs prescribed to end life during the final stages of a terminal illness? The greatly reduced interest of the state in preserving life compels the answer to these questions: "None."

Quill, 80 F.3d at 730 (insert original).

There are at least two fundamental flaws in the Second Circuit's reliance on *Casey* for this proposition. First, "[i]t is not the province of [the courts] . . . to create substantive constitutional rights in the name of guaranteeing equal protection of the laws." *San Antonio School District v. Rodriguez*, 411 U.S. 1, 33 (1973) (insert added). That, however, was precisely what the Second Circuit did in this case. Within the broad generalities on the nature of liberty contained in *Casey*, the Second Circuit created a new right "to have drugs prescribed to end life during the final stages of a terminal illness." *Quill*, 80 F.3d at 730. The creation of this new right – substantive due process in disguise – was error.

> Unlike other provisions of the Constitution, the Equal Protection Clause confers no substantive rights and creates no substantive liberties. The function of the Equal Protection Clause, rather, is simply to measure the validity of *classifications* created by state laws.

San Antonio School District v. Rodriguez, 411 U.S. 1, 59 (1973) (Stewart, J., concurring) (italics original, footnote omitted). Second, this is precisely the sort of "unlimited right to do with one's body as one pleases" which this Court has consistently and soundly rejected. *See Roe v. Wade*, 410 U.S. 113, 154 (1973); *Bowers v. Hardwick*, 478 U.S. 186, 191 (1986); and *Paris Adult Theatre I v. Slaton*, 413 U.S. 49, 68

(1973), *citing*, *inter alia*, constitutionally unchallenged laws against suicide.

Finally, in *Quill*, the Second Circuit suggested that New York could achieve its objective of avoiding " 'psychological pressure' " on the elderly and infirm to choose death by "establish[ing] rules and procedures to assure that all choices [to commit assisted suicide] are free of such pressures." *Quill*, 80 F.3d at 730 (inserts added). With respect to the definition of "terminal illness," the Second Circuit suggested that "New York may define that stage of illness with greater particularity, require the opinion of more than one physician or impose any other obligation upon patients and physicians who collaborate in hastening death." *Quill*, 80 F.3d at 731 (footnote omitted). In the footnote which accompanies the above-quoted text, the Second Circuit went on to suggest numerous other ways in which the State of New York could achieve its objectives but still allow assisted suicide. *Quill*, 80 F.3d at 731 n.4.

This same argument – that the State may be able to achieve its objectives through alternative means – was rejected by the Court in *Dallas v. Stanglin* and, as in that case, "misapprehend[s] the nature of rational-basis scrutiny, which is the most relaxed and tolerant form of judicial scrutiny under the Equal Protection Clause." *Dallas v. Stanglin*, 490 U.S. 19, 26-27 (1989). The fact that a State may, if it chooses, seek to achieve its legitimate objectives through other means does not, in any way, establish that the means actually selected are either irrational or arbitrary.[40]

---

[40] *See San Antonio School District v. Rodriguez*, 411 U.S. 1, 51 (1973) (Texas system of financing public education does not fail, under rational basis standard, simply because other "less drastic" methods of satisfying the State's interest might be conceived); *Vance v. Bradley*, 440 U.S. 93, 102-103 n.20 (1979) ("irrelevant to equal protection analysis [under rational-basis standard] . . . that other alternatives that might achieve approximately the same results, . . . [insert added]"); *Heller v. Doe*, 509 U.S. 312, 329-330 (1993) (alternative methods of achieving state objective "irrelevant in rational-basis review.").

Moreover, "[t]he very complexity of the problems. . . suggests that there will be more than one constitutionally permissible method of solving them, and that, within the limits of rationality, the legislature's efforts to tackle the problems should be entitled to respect." *San Antonio School District v. Rodriguez*, 411 U.S. 1, 42 (1973) (internal quotes and citation omitted). Simply stated, it is not the business of this Court to attempt to resolve the myriad of complex ethical, moral, social, religious, medical, and philosophical problems presented by the issue of physician-assisted suicide.[41] In this regard, the words of the Court in *San Antonio School District v. Rodriguez*, 411 U.S. at 43, have equal application here:

> In such circumstances, the judiciary is well advised to refrain from imposing on the States inflexible constitutional restraints that could circumscribe or handicap the continued research and experimentation so vital to finding even partial solutions to educational problems and to keeping abreast of ever-changing conditions.

IV. THE DECISION BELOW SHOULD BE REVERSED IN ORDER TO PRESERVE THE ESSENTIAL ROLE OF THE STATES IN OUR FEDERAL SYSTEM OF GOVERNMENT AND THE POWER OF THE PEOPLE TO DIRECTLY GOVERN THEIR OWN AFFAIRS

With the ever-increasing power of medical science to prolong life, even in the face of what would otherwise be terminal illness, the States have had to strike a balance between the rights of the individual and "the demands of

---

[41] *Cf. Dandridge v. Williams*, 397 U.S. 471, 487 (1970) ("the intractable economic, social, and even philosophical problems presented by public welfare assistance programs are not the business of this Court."). *See also* Daniel Callahan & Margot White, *The Legalization of Physician-Assisted Suicide: Creating a Regulatory Potemkin Village*, 30 U. Rich. L. Rev. 1 (1996) (surveying legislative activity in the United States regarding physician-assisted suicide and discussing why successful regulation would be impossible in both principle and practice).

organized society." *Poe v. Ullman*, 367 U.S. 497, 542 (1961) (Harlan, J., dissenting). That balance is grounded in the States' recognition of their responsibility to protect both individual liberty and, at the same time, the lives of the people, both those who wish to die and those who wish to live no matter what their circumstances. In striking that balance, the States have drawn a line between an individual's right to refuse unwanted medical treatment and killing oneself, with or without the assistance of another. That balance, now a national consensus, is represented by statutes in a majority of States which both recognize an individual's right to refuse unwanted medical treatment and, at the same time, reject any affirmative act to end life. *See* ns. 14-16, *supra*. Whether that balance should be abandoned and the line redrawn to permit an individual to commit suicide without state interference, and then redrawn yet again to permit assisted suicide, is a matter appropriately left for the people to decide, through their duly elected representatives or by initiative ballot.[42] The principles of federalism embodied in our Constitution require no less.

As the States grapple with the difficult questions presented by the ever-increasing ability of medical technology to prolong life, the corresponding need to allow the States to serve as laboratories for change becomes paramount.[43] Indeed, as this Court has recognized, "[t]he science of government . . . is the science of experiment, . . . " *Garcia v. San Antonio Metro.*, 469 U.S. 528, 546 (1985) (citation and internal quotes omitted). While "[t]his Court has the power to prevent experiment" (*New State Ice*

---

[42] *See People v. Kevorkian*, 447 Mich. 436, 481-482, 527 N.W.2d 714, 733 (1994), *cert. denied*, 115 S.Ct. 1795 (1995), and *Donaldson v. Lungren*, 2 Cal.App.4th 1614, 1623, 4 Cal.Rptr.2d 59, 64 (1992).

[43] *Cf. San Antonio School District v. Rodriguez*, 411 U.S. 1, 50 (1973) ("No area of social concern stands to profit more from a multiplicity of viewpoints and from a diversity of approaches than does public education."). *See also Gregory v. Ashcroft*, 501 U.S. 452, 458 (1991) ("federalist structure of joint sovereigns preserves to the people numerous advantages" including "allow[ing] for more innovation and experimentation in government; . . . [insert added]").

Co. v. Liebmann, 285 U.S. 262, 311 (1932) (Brandeis, J., dissenting)), it should refrain from doing so here.[44]

> To stay experimentation in things social and economic is a grave responsibility. Denial of the right to experiment may be fraught with serious consequences to the Nation. It is one of the happy incidents of the federal system that a single courageous State may, if its citizens choose, serve as a laboratory; and try novel social and economic experiments without risk to the rest of the country.

Id.

A decision affirming the Second Circuit's opinion in *Quill* will effectively extinguish the power of the States to continue to serve as laboratories for change on an issue that

---

[44] Just such an experiment may soon take place in the State of Oregon where, in November of 1994, the people voted to accept Measure 16, a ballot initiative allowing a terminally ill, mentally competent adult to obtain a physician's prescription for the purpose of ending his/her life. While Measure 16 has been declared unconstitutional as violative of the Equal Protection Clause, and its operation permanently enjoined by the district court (*Lee v. State of Oregon*, 891 F.Supp. 1421, 1438-1439 (D.Or. 1995)), that decision is presently on appeal to the United States Court of Appeals for the Ninth Circuit, which recently heard oral argument in the case. Should Measure 16 ever take effect, the eyes of the Nation will turn to Oregon to see whether a State can safely walk down a road which history has taught us is fraught with danger. *See When Death is Sought*, at 133-134 (reporting abuses, including nonvoluntary euthanasia, which have occurred in the Netherlands where, since 1984, guidelines have tacitly allowed the practice and concluding that "If euthanasia were practiced in a comparable percentage of cases in the United States, voluntary euthanasia would account for about 36,000 deaths each year, and euthanasia without the patient's consent would occur in an additional 16,000 deaths.") *See also Rodriguez v. Attorney General of Canada, et al.*, 3 S.C.R. 519, 603 (1993) (decision upholding Canada's ban on assisted suicide, noting: "Critics of the Dutch approach point to evidence suggesting that involuntary active euthanasia (which is not permitted by the guidelines) is being practised to an increasing degree. This worrisome trend supports the view that a relaxation of the absolute prohibition takes us down 'the slippery slope'. [insert original]") (Sopinka, J., writing for the majority).

arguably will affect more lives than any other issue the States will face in the foreseeable future. It will also "invite[] an unelected federal judiciary to make decisions about which state policies it favors and which ones it dislikes." *Garcia v. San Antonio Metro.*, 469 U.S. 528, 546 (1985). At the same time, it will "relegate the States to precisely the trivial role that opponents of the Constitution feared they would occupy."[45] *Garcia, supra*, 469 U.S. at 575 (Powell, J., dissenting) (footnote omitted). In the words of Circuit Judge Kleinfeld, "[t]he Founding Fathers did not establish the United States as a democratic republic so that elected officials would decide trivia, while all great questions would be decided by the judiciary." *Compassion in Dying v. State of Washington*, 79 F.3d 790, 858 (9th Cir. 1996) (Kleinfeld, C.J., dissenting).

CONCLUSION

For all the foregoing reasons, the judgment of the United States Court of Appeals for the Second Circuit in No. 95-1858 should be reversed.

Respectfully submitted,

DANIEL E. LUNGREN

INTEREST OF *AMICI CURIAE*: Damage to the liberty and property rights of nurses 1

SUMMARY OF ARGUMENT 3

ARGUMENT: The Courts of Appeal granted an entitlement to assisted suicide which inculpates nurses, thereby denying liberty and property rights of nurses to practice a profession undamaged by assistance in suicide 3

1. Legal assisted suicide would inculpate all nurses in assisted suicide, denying nurses the liberty and property interests in their profession 4

   a. Legal assisted suicide would inculpate nurse practitioners as prescribers of drugs used in suicide 6

   b. Nurses other than nurse practitioners would be affected by legal assisted suicide 8

      (1) The practice of every nurse would be changed by legal assisted suicide (which seeks to solve a nonexistent problem) 8

      (2) Hospice and home health nursing practice would be changed under legal assisted suicide 11

      (3) Hospital and long term care nursing practice would be changed under legal assisted suicide 13

   c. Anticipation of legal assisted suicide in one state has caused its nurses to accept involvement 15

TABLE OF CONTENTS – Continued

INTEREST OF *AMICI CURIAE*:

The decisions of the Courts of Appeal damage the liberty and property rights of nurses.

Letters of the parties consenting to file this brief *amici curiae* have been filed with the Court. Descriptions of each group filing this *amici* brief are set forth in the Appendix.

By striking state laws criminalizing assisted suicide, the decisions of the Courts of Appeal, if affirmed, would make assisted suicide legal. The *amici curiae* will be uniquely and directly affected by the Court's decision in this case. To demonstrate their unique interest, *amici* will present evidence that nurses would be 1) involved, and 2) detrimentally affected, if assisted suicide were made legal.

The decisions of the Courts of Appeal on review grant an entitlement not only to "physician-assisted suicide" but also (a fact unknown to many) to "nurse-assisted suicide." The practitioner most likely to be with the patient as he dies, is his nurse. A large difference exists between the professions of nursing and other professionals in illness care, regarding the care of terminal patients. The patients who are the subject of assisted suicide almost always require nursing care, not always medical care. At the very time when medicine may have little to offer the patient, the nurse can give comfort, concern, and care. The interest of nurses in what happens to their dying patients is unique, even among other professionals.

The nurses' interest differs from other professionals in another way: nurses are almost always employees. They will not have the luxury that other professions might have, abstractly and coolly to deliberate on whether to assist a patient in suicide. Nurses rarely can choose their patients; they are assigned to them. Because of their societal and employment status, nurses would be vulnerable to pressures to assist in suicide against their professional or ethical judgment. They are often in the unenviable position of being responsible for executing decisions in which they have no voice. The nursing coat of arms in some instances might well read: "Responsibility without Authority."

The effect of inculpating nurses in the self-killing of their patients will not be addressed by any other *amici* or Party. The effect is this: If assisted suicide is made legal, nurses will be asked to assist suicide. All nurses care for patients who die, and some of their patients might die by prescription. That nursing care would be nurse assistance in suicide, because the definition of "assist" cannot be narrowly limited only to providing medication. Those nurses and thus the whole profession would be inculpated in nurse-assisted suicide. Further, Nurse Practitioners (NPs) in several states now legally prescribe the medications that would be used to cause death in patients.

The Nurses' concern for their *patients* who would be harmed, will be addressed by other *amici*. Nurses add that the harm done to the profession of nurses, the largest group of practitioners who care for patients, would affect not only current patients but all who would need nursing care in the future.

All nurses would be involved intimately in the death of their patients who might self-kill. The decision of one of the Courts of Appeal contemplates this, together with an assumption that at some future time euthanasia may be delegated:

> "We recognize that in some instances, the patient may be unable to self-administer the drugs [for suicide] and that administration by the physician, **or a person acting under his direction or control** may be the only way the patient may be able to receive them." [Emphasis and material in brackets added]. *Compassion in Dying* v. *State of Washington*, 79 F.3d 790 at 831 (9th Cir.1996).

The inevitable inculpation of nurses in legal assisted suicide would erode the personal and professional ethics of nurses, expose them to criminal and civil sanctions, and destroy the confidence of the public in the profession. Thus the nurses' rights to liberty and property in the practice of their profession would be violated.

SUMMARY OF ARGUMENT

The decisions of the Courts of Appeal grant the entitlement to suicide with assistance and approval and thereby deny liberty and property rights of nurses in their profession, damaged irrevocably by nurse assistance in the deliberate deaths of patients. Nurses would be 1) inculpated, and 2) harmed, by legal assisted suicide:

1. Under legal assisted suicide, nurse practitioners and all other nurses would be inculpated in nurse-assisted suicide. One association of nurses already has advised its members that nurses would be involved in assisting suicide if it were legal.
2. Legal assisted suicide would harm irrevocably the ethical and legal basis of the nursing profession; current ethical standards of nurses would be eroded; and the public's perception of the profession would deteriorate, all causing damage to the liberty and property rights of nurses in practicing their profession.

ARGUMENT

To commit suicide with assistance and approval is not a right but an entitlement. Making assisted suicide legal does not merely allow the ability to do an act by one person, but confers the power to involve another person in the act.

Nurses leave to other *amici* the elaboration of the certain fact that the vast majority of people who seek suicide are psychologically impaired. Even terminal patients in pain do not seek death (and *amici* assert this pain can be relieved, under current standards of care). E.J. Emanuel, *et al, Euthanasia and physician-assisted suicide: attitudes and experiences of oncology patients, oncologists, and the public*, 347 Lancet 1805 (1996).

Terminally ill patients who seek to die are almost invariably depressed and ambivalent about dying, and those patients can be helped with medication. If encouraged, such ambivalent patients will choose to live. For the rare patient who is terminal, competent, non-depressed and seeking suicide with help (and even that patient is likely ambivalent about dying):

Before these Courts of Appeal decisions, prescriptions have been written with knowledge that their purpose was suicide. Though that information has been acknowledged, no prescribers have ever been convicted of assisting suicide. T.H. Stone & W.J. Winslade, *Physician-assisted suicide and euthanasia in the United States*, 16 J. Leg. Med. at 492 (1995).

The aim of making assisted suicide legal, then can be seen. It is not merely to allow a prescription for the few competent, terminal, non-depressed patients who would commit suicide with such drugs. Instead, it provides a prescription *with approval of its purpose*. This prescription would be visible evidence of approval of the act from the doctor or nurse practitioner. Legal assisted suicide confers the entitlement to suicide with approval, by inculpating the professions. The intent is to give to the act the imprimatur and approval of the law, and of the professional.

The tacit tolerance of assisted suicide already creates the perception that some special cases exist that warrant assisted suicide. This tolerance would become explicit if legal. The nurse would be forced to act either in compliance with her conscience (to safeguard her patient, profession, and opinion of herself), or to act in compliance with what would then be the law. She would have to be silent or even assist suicide.

1. Legal assisted suicide would inculpate all nurses in assisted suicide, denying nurses the liberty and property interests in their profession.

The relationship of nurses to their patients has been called a social contract with the public. That is, the public/patient knows in general what a nurse is, and what she is expected to do. People who are currently in the profession entered that work with the knowledge of, and expectation of, what their work would be. They have a property interest in their occupation; and they have a liberty interest in being able to practice the profession as it exists without arbitrary government interference. Both interests have been found to rise to the level of fundamental rights, deserving Constitutional protection.

> " . . . [T]he right to work for a living in the common occupations of the community is of the very essence of the personal freedom and opportunity that it was the purpose of the Amendment to secure."

Truax v. *Raich*, 239 U.S. at 41 (1915); and

> "[T]he right to hold specific private employment **and to follow a chosen profession** free from unreasonable governmental interference comes within the 'liberty' and 'property' concepts of the Fifth Amendment."

Greene v. *McElroy*, 360 U.S. at 492 (1959) [Emphasis and material in brackets added].

The liberty and property interests asserted here are not merely in a specific job, though specific employment also may be endangered for the nurse who will not participate. The nurse who will not participate in assisting suicide cannot merely go to another nursing job that is unaffected by legal assisted suicide. Any and all nurses would find their profession damaged by the inculpation of nurses in assisted suicide. All jobs, all nurses, would be tainted.

The practice of nursing does evolve and change; but the underlying values expressed in the ethics of nursing, and enforced in the minimum of the law, have not changed in thousands of years. The *amici* assert that it has not ever been the legitimate work of their profession to assist patients to kill themselves. Legal assisted suicide would make those acts part of the work of nurses.

Courts have always considered the effect of their decisions on all the people involved in a case. Under these decisions, the nurses are immediately and intimately and detrimentally involved. In particular, the impact of their decisions on the integrity of the professions has been of major concern to courts. *Superintendent of Belchertown* v. *Saikewicz*, 370 N.E.2d at 426 (Mass.1977), *Satz* v. *Perlmutter*, 362 So.2d at 163 (Fla.1980).

Other courts have expressed concern for nurses asked to assist in causing death in their patients (in the case quoted below, by denying nursing care).

> I find it difficult to understand how we can order nursing professionals with an abiding respect for their patients to cease to furnish the most basic of human needs to a patient in their care. [Such an order] may impinge on the privacy rights of those nursing professionals.

In re Jobes, 529 A.2d at 464 (N.J. 1987) (O'Hern, J., dissenting). [Material in brackets added].

Another court worried about the ethics of nurses asked to assist in deliberately dehydrating to death a comatose patient:

> . . . for almost all concerned the adoption of the proposed course will be a merciful relief, [but] this will not be so for the nursing staff, who will be called on to act in a way which must be contrary to all their instincts, training and conditions. They will encounter the ethical problems, not in a court or in a lecture room, but face to face.

Lord Mistill, House of Lords. *Airedale NHS Trust (Respondents)* v. *Bland* (Acting by his guardian *ad litem*) (Appellant) London: House of Lords, 1993 [Material in brackets added].

a. Legal assisted suicide would inculpate nurse practitioners as prescribers of drugs used in suicide.

If assisted suicide were legal, nurse practitioners in many states would be affected in exactly the same way as physicians. They would be seen as practitioners who could prescribe death instead of promoting life. In some states nurse practitioners potentially can prescribe all the drugs that patients seeking to suicide most likely would be prescribed to kill them. Drugs that might be prescribed are used at present for pain, sleep, anxiety, or depression, all of which categories some nurse practitioners legally can prescribe now. See, for example, Or. Rev. Stat. 678.385.

Patients who could legally obtain drugs for the purpose of suicide from physicians could get a prescription for the same or similar drug from a nurse practitioner. This is so, even if the NP technically could not prescribe for the *purpose* of suicide. If prescriptions from the physician for the purpose

of assisted suicide were legal, patients would be encouraged (and perhaps even more likely) to ask for the same drugs from their nurse practitioner. Patients who formerly might not have sought a prescription for suicide might be encouraged to do so if it were legal. The legality of the prescription would remove the stigma from suicide or at least spread it onto the prescriber.

Nurse practitioners in the future likely would be included as "prescribers" if assisting suicide were legal. The equal protection clause of the Fourteenth Amendment to the Constitution would prohibit the exclusion of Nurse Practitioners from prescribing drugs for self-killing. The limitation of such prescriptions to physicians would discriminate without rational basis, since nurse practitioners too could prescribe the drugs most likely to be used to kill the patient.

To assert that the prescription of killing drugs could be limited to physicians because they are better qualified to judge the mental status of the patient, has no factual basis. Comparison of the curricula of their respective educational programs would demonstrate that nurse practitioners (especially those working in mental health) are even more likely than doctors to have been educated in psychosocial components of care. Thus nurse practitioners are at least as able as physicians to assess patients for their competency in making a request to die. Nurse practitioners would be inculpated in legal nurse-assisted suicide as prescribers. Their exclusion will not meet the rational basis standard of Amendment Fourteen of the Constitution.

Nurse practitioners unwilling to assist the patient in suicide likely would be required to transfer medical records to the next practitioner chosen to assist suicide, just as physicians would be. This participation would be required, regardless of the religious or moral or professional objections of the nurse to inculpation in the self-killing. The nurse's objection that suicide was inappropriate for this patient, based on her assessment of the patient, would be no bar to enforcing such

transfer of records. An example of such requirement to transfer patient records in a law with "safeguards" as recommended by the decisions of the Courts of Appeal, is Oregon Ballot Measure 16, Section 4.01(4).

b. Nurses other than nurse practitioners would be affected by legal assisted suicide.

(1) The practice of every nurse would be changed by legal assisted suicide (which seeks to solve a nonexistent problem).

Legal assisted suicide would affect all nursing practice; most nurses care for terminal patients on a daily basis. Some of those patients (those who are depressed and ambivalent) might seek suicide with assistance. Participating in assisted suicide would become part of the practice of nursing. The consequences of legal assisted suicide noted below support that conclusion, and it is admitted by the position of the Oregon Nurses Association (ONA) discussed more fully below. Oregon Nurses Association, *Death with Dignity Act Position Statement* (1995).

If assisted suicide were legal, according to the ONA paper discussed below, even the nurse who is morally opposed to assisted suicide would be required to inform the patient of his right to referral to a physician (or nurse practitioner) who would prescribe a lethal dose. For some nurses, supplying this information would be assisting the patient's suicide. They would assist, as surely as did German nurses under National Socialism assist euthanasia. Those German nurses identified some children as retarded, knowing the result of the diagnosis would be death.

From the research done on attitudes and behavior of patients who are terminally ill, it is evident that the Courts of Appeal have written law to solve a problem that does not exist. Data cited above (Emanuel) show that patients who seek suicide are depressed and at least ambivalent about their wish to die. Practitioners are notoriously bad at diagnosing

and treating depression[1] (a reason to educate practitioners, not a reason to assist depressed patients to suicide). The data also show that competent terminal patients, even those (unnecessarily) in pain, are very unlikely to seek suicide.

According to research studies, a large majority of patients want heroic efforts made if they die. They may overestimate the success rate of heroic efforts, but patients who are very seriously ill, even those that might be classed as "terminal," want to live. R.S. Phillips *et al, Choices of seriously ill patients about cardiopulmonary resuscitation: correlates and outcomes*, 100 Am. J. Med. 128 (1996).

At present, the nurse's duty toward a depressed patient dying in pain is to alleviate the pain and treat the depression, both remediable conditions. If assisted suicide were made legal, the nurse's practice would be changed, perhaps to assist the patient to suicide in order to relieve depression and pain. Effective (non-lethal) treatment is available right now for depression and pain. *Amici* know it is not necessary to end the patient, to end his pain.

The Courts of Appeal have confused withdrawing treatment that patients do not want, with suicide, assisted suicide, and euthanasia. Researchers too have confused refusing treatment with suicide, resulting in studies that seem to indicate that intensive care nurses already assist suicide or euthanize patients. D.A. Asch, *The role of critical care nurses in euthanasia and assisted suicide*, 334 N. Eng. J. Med. 1374 (1996). In reality, only treatment that the patient rejects is removed. Often the treatment rejected would not have prolonged the patient's life in any event. The public (including jurists and researchers) overestimate also the success rate of medicine and nursing in prolonging life with heroic efforts.

---

[1] Purported safeguards in legislation such as those in Oregon's Measure 16, ask the practitioner to refer the patient who may be depressed for counseling. But many practitioners cannot recognize the diagnosis in the first place, so they cannot refer. New York State Task Force on Life and the Law, *When Death is Sought: Assisted Suicide and Euthanasia in the Medical Context* (May 1994) p. 127.

Though it may be blurry to the Courts of Appeal, the line is very clear and bright between withdrawing treatment which would not prolong life, and actively causing death. Nurses are adamant that care that is not useful, and is not wanted, be ended. The nurse is very often the patient's greatest advocate in such situations. She will take whatever measures are needed to see that the patient's wishes are honored. These measures may include conversations (even confrontations) with doctors, ethics committees and employers. But for the nurse, it is a thousand leagues distance from honoring her patient's wish to stop treatment – to being her patient's agent of death.

Under legal assisted suicide a nurse would encounter a family pressuring the terminal patient to die (subtly or not, and done for the patient's benefit or not). Currently, this behavior might rise to the level of neglect or abuse of an elderly or dependent patient, and the nurse's obligation is to report it. Under legal assisted suicide, the nurse's practice would be changed (perhaps to refer the patient and family to a practitioner who would prescribe a lethal dose).

Under legal assisted suicide, federal law might require nurses to inform the patient who is even possibly "terminal," of his right under state law to assisted suicide. The Patient Self-Determination Act 42 U.S.C. Sec.1395cc(a)(1) *et seq.* requires recipients of Medicare funds (hospitals, skilled nursing facilities, home health agencies, and hospice programs) to provide information to each patient concerning

> "an individual's rights under State law . . . to make decisions concerning such medical care, including the right to accept or refuse medical or surgical treatment and the right to formulate advance directives."

Even government employers may require practitioners to give information preferred by the employer's policy. *Rust* v. *Sullivan*, 500 U.S. 173 (1991). Private employers surely would be able to dictate information to be given. For employers of nurses such as managed care companies or their contractors (virtually all employers of nurses are included in the latter category), the patient's suicide or euthanasia might

be a very cost effective procedure. If the procedures were legal, nurses would be under pressure to assist suicide and euthanize. Nurses might be expected to suggest such "alternatives" to expensive care.

Nurses could be directed by their employers to tell patients that help in killing themselves is available, or be at risk of losing their jobs. Some nurses from strong religious and ethnic tradition, and other nurses who also place primary value on the life of the patient, would be especially at risk. If legal, such nurses who work on oncology and AIDS units, in long term care, hospice, and home health would find their job opportunities limited if they declined to participate in assisted suicide.

Nurses could be forced to choose between job and conscience in a time of shrinking job opportunities in nursing. Most nurses work as "at will" employees, vulnerable to covert and overt pressures to conform to employer goals. Nurses are career professionals, whose jobs usually provide the main source of income in their families. Many could not afford the luxury of maintaining their ethical standards at the cost of losing their livelihood.

(2) Hospice and home health nursing practice would be changed under legal assisted suicide.

Under legal assisted suicide, some hospice or home health nurse would visit her patient to find he had obtained a massive overdose of drugs. (If legal, it would be considered not an overdose but a "correct" dose to kill himself.) Before legal assisted suicide, the nurse would have assumed her duty was to help the patient live. After legal assisted suicide, the nurse's duty could conceivably be to counsel how best to take the drugs to assure death.

Under legal assisted suicide, some nurse who made a visit to check on her patient would find the patient had already ingested the prescribed overdose. (If legal, the dose would be called the "correct" dose – to kill the patient.) Currently, the nurse's duty is to call 911 and resuscitate.

Under legal assisted suicide, the nurse's duty might be to remain passively with the patient/family until the death. The ONA paper [cited below] suggests that if no other nurse were available, legal assisted suicide would create a duty to stay passively with the patient until death, regardless of the nurse's strong intent *not* to assist suicide.

The nurse whose patient would die by legal prescription would be inculpated in the death, because such a death is not so swift or sure or painless as might be assumed.[2] The patient may not die immediately or even within several hours or days. In addition to taking the prescription, proponents of suicide advise placing a plastic bag over the patient's head to assure asphyxiation if the patient awakens. This course of events is said to be not uncommon.

The ONA paper below suggests that even the nurse who did not wish to assist the patient in suicide, still would have to assume the patient's "end of life care" if assisted suicide were legal. If she were unable to transfer the suiciding patient to another nurse, she would have no choice but to participate.

Under legal assisted suicide, the nurse's duty might be changed horribly, perhaps extending to placing the plastic bag over the patient's head if the patient were unable to do so.

---

[2] Prescribers for legal assisted suicide would not be competent to prescribe for a totally new purpose – to kill. To illustrate the problem: Excellent pain control measures are available, but many physicians and nurse practitioners are still unable to prescribe appropriate pain control for terminal patients. (This is not an excuse to kill the patient to relieve the pain, but a reason for more education of prescribers about the near 100% effective relief available.) Considering that current failing, it would be long before prescribers were good at killing. There is no scientific basis for this practice and doctors and nurse practitioners have had no experience in doing it. A new era of research would result if assisted suicide were legal. Such investigation of how to kill people yielded the Guillotine in the 18th Century, and the gas chamber in the 20th. It might well be asked what rough science slouches toward the 21st Century to be unearthed.

Eyewitnesses assert that it is sometimes necessary to hold the suiciding person's hands as he smothers, to keep him from forcefully removing the bag. The nurse's duty could extend to doing that.

If assisted suicide were legal, a hospice or home health nurse would find a suiciding patient alone and with no plastic bag. Currently the nurse's duty is to call 911 and resuscitate. Under legal assisted suicide the nurse's duty might be changed, to placing a plastic bag herself as noted above. Or her duty might be seen as passive, to leave the patient in a comatose state, visiting later to see if the patient died in the interim. It is highly impractical to say that the nurse would be obligated to stay with such a patient. Patients in a coma may take 11-14 days to die of dehydration (known from the experience of deliberately dehydrating to death, non-dying patients). Ruth Phillips, *The legacy of Nancy Cruzan*, 6(2) Living World 16 (1992).

A failed attempt could result in a very damaged patient, which would encourage or even mandate the nurse to ascertain that her patient does not fail. Nursing practice eventually might extend to directly killing the patient who failed in the suicide attempt. Legal assisted suicide does not prohibit active euthanasia; initially, it merely does not "authorize" it. For example see Oregon Ballot Measure 16, Section 3.14.

(3) Hospital and long term care nursing practice would be changed under legal assisted suicide.

Under legal assisted suicide, some patients prescribed a lethal dose would choose to take the drug in the hospital or long term care facility. One proposed "safeguard" legislation recognizes that possibility on its face.

> "If the patient [who wishes to suicide] is an inpatient at a health care facility, one of the witnesses [to the request for suicide] shall be an individual designated by the facility."

Oregon Ballot Measure 16, Section 6, "FORM OF THE REQUEST." [Material in brackets added.] The nurse designated by the facility would be faced with assisting suicide at least to the extent of witnessing the patient's request, regardless of her moral, ethical and professional objections.

If the nurse on duty in a hospital or other inpatient facility knows of the patient's plan to suicide beforehand, her duty might change from trying to save the patient's life – to assisting with his death. Currently the nurse continues nursing care for the patient who is dying; turning the patient, suctioning secretions, administering medications, etc., to help the patient *live* comfortably. Under legal assisted suicide, the nurse's practice would change. The duty logically might be to do whatever would cause the patient to die sooner.

Under legal assisted suicide, the "worse" the nurse by present standards (that is, the faster and better at killing), the better for the patient. The "better" the nurse by present standards (that is, the more life-saving, caring), the worse for her patient under legal assisted suicide. The *amici* assert: This situation stands nursing practice on its head.

These vignettes look macabre, but they are not worst-case scenarios; they are the likely situations that nurses would encounter if the Courts of Appeal are affirmed. Immediately, intimately and inextricably, nurses would be inculpated in assisted suicide.

Nursing "care" would be redefined to include the killing of the patient, and assistance as the patient self-kills. Nursing theory would be developed to teach students how to "care" (or, in every accurate usage of the word, how *not* to "care") for patients committing suicide. Continuing education would be needed for current nurses, on how to assist patients being killed by self-administration of drugs. If assisted killing were extended to people unable to self-administer the drugs (as would be likely), nurses would be taught to kill patients directly.

Nursing education and curricula would be changed to incorporate the "new" ethic and law and nursing practice: Some patients would be given good care. Some patients' "good care" would include giving them prescriptions to kill

themselves. And some patients' "care" would include killing them.

c. Anticipation of legal assisted suicide in one state has caused its nurses to accept involvement.

The threat of legal assisted suicide in one state already has prompted a paper in which the nurses association accepts that nurses will be involved in their patients' suicide. In anticipation that legal assisted suicide would be implemented, and to prepare their members for that reality, the Oregon Nurses Association (ONA) adopted a position statement to guide nurses in the care of terminal patients under legal assisted suicide. Oregon Nurses Association, *Death with Dignity Act Position Statement* (1995).

The ONA document asserts that the nurse's role under legal assisted suicide would be "to share information about health choices **that are legal**." [Emphasis added] Oregon Nurses Association, p. 3. This statement is evidence that nurses will be involved if assisted suicide is legal. Nurses would be expected to teach patients about the option of killing themselves. Mere legality (not any higher ethical standard) would be the defining parameter of the nurse's behavior.

Theoretically, under the Oregon "safeguard" legislation which proposed to make assisted suicide legal, the nurse could refuse to care for a patient who chooses to kill himself. But the ONA paper admits that if she couldn't transfer the patient, "the nurse has the responsibility to provide for ongoing end of life care." Oregon Nurses Association, p. 3. Transfer might be impossible if the nurse discovered the suicide attempt after the patient had taken the poison. Requesting and securing a replacement nurse from her agency (if even granted) could take longer than the patient had to live. Nurses could not opt out of legal assisted suicide, no matter what the language of any "safeguard" legislation adopted by a state legislature.

Nurses are competent to make professional judgments about the mental and physical status of their patients that would affect the appropriateness of a request for suicide.

Further, they are competent to make moral judgments for themselves, about the appropriateness of suicide for any person at any time. Regardless, under legal assisted suicide, the ONA paper asserts that the nurse would be involved and would be muzzled:

> "You may not subject your patients or their families to unwarranted, **judgmental** comments or actions because of the patient's choice [to kill himself]."

Oregon Nurses Association, p. 4. [Emphasis and material in brackets added].

The nurse would be involved, her professional judgment would be thwarted and her freedom of speech compromised under legal assisted suicide.

The ONA position paper is evidence that legal assisted suicide would inculpate nurses fully in assisted suicide, and to the detriment of the practice of the profession.

2. Legal assisted suicide would harm the ethics and law of nursing; the threat already has done harm.

a. Legal assisted suicide would erode the ethics and law of nursing.

The inculpation of nurses in assisting patients to kill themselves causes the degeneration of the ethics and law of nursing, which are based on six values (elaborated below): Doing No Harm, Doing Good, Being Free, Being Fair, Being True, and Life. The position of the American Nurses Association (ANA) states the ethical foundation of nursing practice:

> "The goals of nursing are the promotion, maintenance, and restoration of health, the prevention of illness, and the alleviation of suffering. The social contract between nursing and society to meet these goals is based upon a code of ethics that is grounded in the basic ethical principles of respect for persons, the noninfliction of harm, and fidelity to recipients of nursing care. These principles command that nurses protect or preserve life, avoid doing harm, and create a relationship of trust and loyalty with recipients of nursing actions."

American Nurses Association, *Position Statement on Capital Punishment* (1988).

The ethical standards of conduct (a higher ideal) are used by lawmakers in making lower, legal minimum mandates. Nursing law is the minimum enforcement of nursing ethic. It is the arbitrarily drawn line that separates desired behavior (ethics) from mandated behavior (law). The law exists to guide people who have no higher ethic. People who will not do right voluntarily, can be made to do at least a minimum of "not wrong" with law.

Those people, and others who have no moral compass, will take the law as the highest, not the lowest, standard of behavior. For them, the law becomes the ethic. "It's legal, therefore it must be ethical" is the reasoning. If the nurse who assists suicide were acting legally, some then would assume that she was acting ethically, too.

As noted below regarding nurse participation in executions, the nursing profession nationally has not succumbed to that lowest level of behavior. The national nursing associations, such as the American Nurses Association (ANA) and the National Association of Prolife Nurses, set and promote professional standards of ethics. Those standards cannot be varied according to popularity poll, nor may they descend to whatever acts the popular will has made temporarily legal. As an analogy to assisted suicide: Nursing leaders have suggested that nurses who participate in executions – even if the act is legal – are so far below the ethical standard required of nurses, that their licenses should be revoked.

Assisting a patient to kill herself, merely because it is legal, should not change the standards of nursing practice and ethics; but it would. The legal standard of nursing would be so low that merely to meet it would violate nursing ethics. The standard of nursing ethics and nursing practice would inevitably be ratcheted down to a lower level commensurate with the law.

Some nurses would do whatever is legal. That is why it is not sufficient to say that nurses can protect the ethics of the nursing profession simply by voluntarily refusing to participate in legal assisted suicide. Unlike the isolated participation

in legal executions by a few nurses, *all* nurses are intimately involved in the lives and deaths of dying patients. Under legal assisted suicide, nurses would be inextricably inculpated in their patients' suicides. The erosion of the law would corrupt the ethic correspondingly. Law would lead instead of follow the ethic, and would irreparably harm the profession of nursing.

The ethics and the resulting law of nurses are based on the following six values held by nurses (and all the illness care professions): Doing No Harm, Doing Good, Being Free, Being Fair, Being True, and Life. J.K. Hall, *Nursing Ethics and Law* (1996). Discussion of each value follows with its resulting ethic and law and the changes that legal assisted suicide would cause. As the law deteriorates, so do the ethics.

DOING NO HARM

Legal assisted suicide would damage the nursing ethic and law based on the value, *Doing No Harm* (Non-maleficence). That value is enforced by criminal law, civil intentional tort law and licensure law. Currently, nurses can be prosecuted under their licensure law which in most states allows license revocation for conduct which can be characterized as gross incompetence or gross negligence. See, for example, Or. Rev. Stat. 678.111(b). Presently, assisting deliberately caused death in a patient could be characterized at least as gross incompetence or as gross negligence, if not intentional harm. If assisting suicide were legal, the nursing licensure law would have been dramatically changed.

Assisting deliberately caused death now would surely be "conduct derogatory to the standards of nursing," also grounds for licensure discipline in most states. See for example, Or. Rev. Stat. 678.111(f). Again, legalizing assisted suicide would change the licensure law. As noted above, the standards of nursing have been national parameters, not community or state standards subject to the vagaries of what lawmakers set. But the law will lead those who have no ethical guide, and if assisted suicide is legal, nurses who

assist will seem to meet the minimum standard of nursing practice.

Presently, the nurse whose terminal patient is being pressured to commit suicide may be obligated to report that as neglect or abuse of an elderly or dependent patient. See for example Or. Rev. Stat. 410.610 *et seq*. (elderly) and Or. Rev. Stat. 441.630 *et seq*. (nursing home). If assisted suicide were legal, such encouragement might be considered the right thing for family or nurse to do.

Under legal assisted suicide the enforcement of these laws preventing harm to the patient would change. "Safeguard" legislation (such as that passed in Oregon) would have to provide that nurses would not be subject to criminal or civil liability or professional disciplinary action for assisting suicide. Such law would erode the authority of the board that regulates nursing, and any other agencies that enforce the law that prohibits and punishes harm to patients. Allowing nurses to assist in suicide would erode the minimum ethic enforced by the law, and correspondingly lower the standards expected of nurses generally.

DOING GOOD

The nursing ethic based on the value *Doing Good* (Beneficence) is enforced in malpractice law. Currently, when nurses fail to do good (as a reasonable prudent nurse would do), even unintentionally, they are subject to liability. Currently, nurses are not relieved of their own liability for their actions by physician orders and actions or patient wishes; nurses are morally and legally liable for their own malpractice. See generally, *Nurse Liability for Own Malpractice*, 51 ALR 2d 970.

Legal assisted suicide would change the nursing malpractice law. The standard of care of the "reasonable prudent nurse" would be changed from obligation to *save* the patient's life, to obligation to help *end* it in some situations. As noted above, under legal assisted suicide, the nurse would be obligated to inform the patient about the availability of assisted

suicide. Regardless of her personal moral convictions or professional assessment that the patient can be helped short of suicide, the patient or survivors might bring an action for subsequent pain and suffering based on a negligence theory if she did not so inform.

On the other hand, nurses who did refer or assist the patient who sought assisted suicide, might also be liable. The theory of liability could be failure to assess adequately for depression or decisional capacity, or failure to challenge the prescriber's assessment and prescription if they were faulty.

The family member or the estate who learns about the nurse's involvement in the attempt might have a cause of action for malpractice or wrongful death. The family might notify the licensure board of the nurse's action, alleging failure of nursing care. (Though as noted above, the licensure board might be powerless to enforce standards after legal assisted suicide.)

BEING FREE

Legal assisted suicide would damage the nursing ethic based on the value *Being Free* (Autonomy), enforced by consent law. The nurses leave to other *amici* to elaborate on the obvious fact: The patient's autonomy must *not* be honored and he must be protected from himself, if he is not competent to make decisions. That is the situation if the patient is depressed or suffering from mental illness, which almost all suicidal patients are.

The right of the patient to refuse treatment is stronger than the grant of an entitlement (as in legal assisted suicide), but even that power of refusal is not absolute. The right is conditioned on the impact on other people; for example, the power to refuse a transfusion may be conditioned on the patient's responsibility for another person.

Nurses have some rights to their own autonomy. The patient's demand for treatment which transgresses the professional's ethics cannot be honored. For example, the patient's demand to remove a healthy body part (because the person wanted to qualify as disabled) must be declined by the ethical

physician. Even an *un*ethical doctor would face legal sanctions for performing such a procedure. Government cannot arbitrarily inculpate the professions in such entitlement, to the detriment of their fundamental liberty and property rights to practice their profession with autonomy.

A rough analogy to the damage to nurses' autonomy under legal assisted suicide: Imagine a law granting the entitlement to assisted suicide with the help of a police officer to accomplish the killing. The damage is obvious to the ethic of police officers, whose professional responsibility is to protect innocent life. As noted above, the reason to have a professional assist is to put her imprimatur on the act.

Another analogy of damage, to another profession that might serve as provider of assisted suicide (and whose ethics much of the public already consider to be below reproach) is the legal profession. A recent article describes the perception that lawyers will do whatever their clients order, without reservations based on personal integrity or professional ethics. The authors suggest, perhaps not tongue-in-cheek, that the legal profession might be the ideal suicide assistants. R.M. Sade & M.F. Marshall, *Legistrothanatry: A new specialty for assisting in death,* 39(4) Perspectives in Biology and Medicine 547 (1996).

The American Nurses Association addresses the fine line separating the patient's autonomy from the moral mandates and integrity of his nurse:

> "Though there is a profound commitment both by the profession and the individual nurse to the patient's right to self-determination, limits to this commitment do exist. In order to preserve the moral mandates of the profession and the integrity of the individual nurse, nurses are not obligated to comply with all patient and family requests. The nurse should acknowledge to the patient and family the inability to follow a specific request and the rationale for it."

American Nurses Association, *Position Statement on Assisted Suicide* (1994) p.4.

BEING FAIR

Legal assisted suicide would damage the nursing ethic based on the value *Being Fair* (Justice), enforced by laws requiring equal treatment under the law. Other *amici* will discuss the laws that enforce fairness toward patients in this country. They include the due process and equal protection clauses of the Fifth and Fourteenth Amendments to the Constitution, the Americans with Disabilities Act, and the prohibition against discrimination toward some groups who are more likely to experience pressure to die if assisted suicide were legal.

Amici assert, as detailed above, that the fundamental fairness due nurses under the Fifth Amendment would be violated under legal assisted suicide.

BEING TRUE

Legal assisted suicide would damage the nursing ethic based on the value *Being True* (Loyalty), enforced at a minimum in law by contract law, confidentiality, informed consent, and by law requiring nurses to be advocates for patients. Nursing law mandates that nurses must be advocates for the patient, even if their action is counter to the physician or employer's order.

The changes in nursing practice that legal assisted suicide would force (elaborated above in descriptions of nurse involvement under 1.b.) are severe dislocations of the nurse's ethical and legal duties of loyalty to the patient. Under legal assisted suicide, the nurse's duty to advocate for the patient might become the duty to advocate death for the patient.

LIFE

Legal assisted suicide would damage the nursing ethic based on the value *Life*, enforced by all law that outlaws killing. Though mentioned last, this is the first value of nurses, or the one that underlies all others. The *sine qua non* of nursing ethic is promoting the life of the patient in all aspects, including the comfort of the patient and her value as

an individual. This is so, even and especially as the patient is dying. Promoting and protecting the dying patient's life cannot be subverted to mean assisting her deliberately to kill herself.

At present, the life of the individual is protected by the law, overridden only in extreme circumstances. For example, killing is justified only under narrow conditions such as self-defense, executions, or war.

Under the decisions of the Courts of Appeal, some lives would *not* be protected by law. People who are diagnosed "terminal" would not be protected from assisted suicide. But people who were not dying, *would* be protected from assisted suicide. The assumption underlying that situation: People who are not dying are more valuable than the dying.

Nurses do not discriminate in their care, between patients whose lives are less valued and more valued. This stratification of lives into levels of protection – some more valued, some less valued – is not a new concept. The framers wrote the U.S. Constitution, and courts subsequently have interpreted that Constitution, precisely to *prohibit* laws that classify lives in that way. Yet one of the decisions on review, responding to the state's contention that its principal interest is in preserving the life of all its citizens, answers:

> "[W]hat interest can the state possibly have in requiring the prolongation of a life that is all but ended? Surely, the state's interest lessens as the potential for life diminishes."

Quill v. *Vacco*, 80 F.3d at 729 (2d Cir.1996).

b. The national standard of ethics for nurses is that nurses do not assist patients to kill themselves, but threat of legal assisted suicide in one state has caused erosion of that standard.

To state the obvious: The consensus of nursing ethics is that nurses do not assist patients to kill themselves.

The maintenance of the ethical integrity of the professions involved is one of the primary interests Courts weigh in

such cases as these. *Superintendent of Belchertown* v. *Saikewicz*, 370 N.E.2d at 426 (Mass.1977), *Satz* v. *Perlmutter*, 362 So.2d at 163 (Fla.1980). The court in *Superintendent of Belchertown* took care to find that its decision was in accord with the "prevailing ethical practice" of the profession. The prevailing ethical practice of the nursing profession is *not* to assist patients to deliberate death, evidenced by the following statements of ethics of American nurses.

The American Nurses Association maintains that nurses may not ethically assist suicide (as they would be asked to do under legal assisted suicide):

> "Nurses, individually and collectively, have an obligation to provide comprehensive and compassionate end-of-life care which includes the promotion of comfort and the relief of pain, and at times, foregoing life-sustaining treatments. The American Nurses Association (ANA) believes that the nurse should not participate in assisted suicide. Such an act is in violation of the Code for Nurses With Interpretive Statements (Code for Nurses) and the ethical traditions of the profession."

American Nurses Association, *Position Statement on Assisted Suicide* (1994) p.1.

The national Oncology Nurses Society endorsed the ANA position in 1995. Oncological Nurses Society, *Endorsement of ANA Position Statement on Active Euthanasia and Assisted Suicide* (1995). The American Association of Critical Care Nurses has endorsed as well.

The National Association of Prolife Nurses and its affiliates oppose assisted suicide in the strongest terms, believing it tantamount to euthanasia:

> "The public must be assured that we will not participate in euthanasia or refer people to individuals and organizations supporting euthanasia, and that we consider euthanasia to be medical murder."

Nancy Guilfoy Valko, *National Nurses Group Supports Resistance to Euthanasia*. National Association of Prolife Nurses (1994).

Though addressed to the prohibition against nurses' participation in executions, the following encompasses the ethical standard of the ANA for causing death in patients:

> "Regardless of the personal opinion of the nurse on the moral appropriateness of capital punishment, either generally or specifically, it is a breach of the ethical tradition of nursing, and its Code for Nurses, to participate in taking human life, even through a legally authorized civil or military execution."

American Nurses Association, *Position Statement on Capital Punishment* (1988).

The *amici* would add that it is a breach of the ethical tradition of nursing to participate in taking human life, even through a legally authorized nurse assisted suicide as would be possible under legal assisted suicide.

Further nurse ethical standards:

> "The nurse acts to safeguard the client and the public when health care and safety are affected by incompetent, unethical, or illegal practice of any person."

American Nurses Association, *Code for Nurses* (1986).

The nurse mandate to safeguard the patient from "any person" must include physicians or other nurses who prescribe or administer drugs to cause death.

And yet another ethical standard that nurses must not aid death:

> "Nurses . . . must take all reasonable means to protect and preserve human life when there is hope of recovery or reasonable hope of benefit from life-prolonging treatment. The nurse does not deliberately act to terminate the life of any person."

American Nurses Association, *Code for Nurses with Interpretive Statements* (1986).

As noted above under 1.c., the anticipation of legal assisted suicide in Oregon has resulted in a position statement by the Oregon Nurses Association. That paper admits that nurses would have to participate or assist in their patient's suicide in several ways –

> informing patients of "choices that are legal" (as noted above, to some nurses this would be tantamount to encouraging suicide),
> "providing for ongoing end of life care" for suiciding patients if the patient couldn't be transferred (very likely if the nurse learned of the suicide attempt after the prescription were ingested), and the nurse could make no "judgmental comments or actions because of the patient's choice [to kill himself]," muzzling the nurse's ethical or professional assessment of the patient's choice.

Oregon Nurses Association, *Death with Dignity Act Position Statement* (1995) p. 4 [Material in brackets added]. As can be seen, the threat of legal assisted suicide in Oregon resulted in a position paper from the ONA which copes with that potential reality, by lowering ethical standards to the minimum ethic: Whatever might be made legal is ethical.

In addition to the assault on their professional ethics, many nurses would have personal ethical problems in assisting suicide – though as outlined above and noted under the ONA paper, they would have little choice under legal assisted suicide. Considering the shrinking job market faced currently, nurses would be under great pressure to comply with the employer who requires them to participate with patient suicide.

Some nurses already have been disciplined with job suspension for six weeks for reporting (or for not reporting fast enough – the employer's version) an active euthanasia performed on a child by the physician. *Death at U.C. Med Center,* San Francisco Chronicle, 3 April 1995, A20; *UCSF suspends nurses who delayed reporting incident*, NURSEweek, First April 1995, 3, 20. Under legal assisted suicide, the pressure would increase on the nurse to look away from patient abuse or to lose her job.

Under legal assisted suicide nurses who are religious would face a compromise to the very fundamentals of their morality – encompassed in any version of "Thou shalt not kill." Exodus Chapter 20, Verse 13. Nurses who are not formally religious are no less spiritual, and no less harmed by such an egregious violation of their personal ethic.

Other *amici* will inform the Court of the fact that all medical associations in the world (save Holland's) oppose assisted suicide. They will describe the experience in Holland in which even the tacit legal approval of euthanasia and assisted suicide – far short of the outright legal assisted suicide as proposed by the Courts of Appeal – has become a large problem, for the society, the professions, and most of all the patients of that country.

3. Legal assisted suicide would inculpate nurses in assisting suicide, damaging the profession in the eyes of the public.

a. Under legal assisted suicide, some nurses *would* assist in patient killing.

No illusions may be indulged; under legal assisted suicide, some nurses would be ready, willing and able to assist suicide. Some would kill patients directly if assisted suicide were extended to the disabled who are unable to self-administer the drugs.

The experience of nurses in the 1930's under Germany's National Socialism is instructive. Though some would wish it not so, 1990's American nurses too would be vulnerable to pressures if killing were made legal. Under National Socialism, some nurses and their associations collaborated when Hitler's euthanasia program was legal.

Some German nurses deliberately administered barbiturates to mentally retarded children that they had selected; the children slept for long periods, developed pneumonia as a result, and died a "natural" death. The death certificates read "Pneumonia," but in the consensus of world opinion, ten and now fifty years after, those nurses caused the deaths of those children. *Testimony of Dr. Valentin Falthauser, 22-23 April 1948; and Nurse Mina Worle, 7 May 1948 (Kaufbeuren asylum)*, Heyde Trial, pp. 143-47, in Robert Jay Lifton, *The Nazi Doctors* (1986) p.55.

The nurse associations of Germany collaborated in changing the ethics of the profession to conform to the legal mandates of the National Socialist government. Hilde Steppe,

Nursing in Nazi Germany 14(6) West. J. Nurs. Res. 744 (1992). Some nurses were not, would not be, immune to pressures to eliminate the problem patient instead of eliminating the patient's problem.

b. If legal, future killing would be delegated to nurses.

In addition to the immediate consequences of legal assisted suicide to the profession, the *amici* have reason to worry about their even worse role in the future. Under legal assisted suicide *amici* believe assisted suicide would be extended to actual administration of "suicide" to the disabled and incompetent. Allowing only competent able patients to kill themselves with prescribed drugs inevitably would be held to discriminate against the disabled who can't self-administer the drugs, and against the incompetent who can't request the killing drugs. At that point, prescribing suicide or even direct euthanasia would fall to the nurses as does other dirty work.

In support of that prediction: Technical procedures always are delegated eventually. When blood pressure measurements were first available, only doctors were allowed to perform them. At present, the *amici* are confident that few members of the Court have ever had their blood pressure measured personally by a doctor. When first developed, the technology of intravenous medication was limited to doctors (as late as the 1970s it was not taught in nursing curricula), as was administration of chemotherapy, and virtually all intensive care technology, including interpretation of electrocardiograms.

Today, in various states, nurses can perform all those procedures; in addition, nurse practitioners may set broken bones, suture wounds, and prescribe almost all drugs that physicians can. Under legal assisted suicide, it would be a short matter of time before this last worst "technique" of assisting suicide would be delegated to the nurse.

c. Allowing nurses legally to assist suicide would result in deterioration of the public's trust in their profession.

The public's perception of nurses would change under legal assisted suicide as nurses came to be seen as people who assist with killing. The public would lose confidence in nurses, and would be suspicious of the nurse's intent when she nursed patients labeled "terminal." The social contract that nurses have with the public would be breached. The ANA believes that trust to be essential:

> "Nursing has a social contract with society that is based on trust and therefore patients must be able to trust that nurses will not actively take human life. The profession's covenant is to respect and protect human life (Nursing: A Social Policy Statement). Nurse participation in assisted suicide is incongruent with the accepted norms and fundamental attributes of the profession."

Position Statement on Assisted Suicide, p.4.

Assisting in deliberate killing of patients, either by prescribing self-administered medications (nurse practitioners), or by tacitly approving of the patient's decision to die by participating in their care as they suicide – would violate the nurses' social contract with their patients and result in the public's loss of trust in the profession.

If nurses could assist suicide legally, the public's perception of nurses would change. Nurses who could assist in suicide would be seen not as trusted advocates but as people who carry out orders regardless of their effect. They would not be seen as professionals with autonomy and independent judgment, but as lackeys who do the patient's or doctor's bidding no matter how heinous the morality of the order.

Patients would not trust nurses who were handmaidens to physicians prescribing death, and who were unquestioning, "nonjudgmental" servants to any patient with a prescription. At present, the wish to die to the nurse is a cry to help the patient to find reason to live. Under legal assisted suicide, it

would be a mandate to nurse the patient to deliberate death. The public's opinion of nurses could not help but decay.

The nurse's liberty to practice nursing as she knew it and chose it and learned it would be curtailed. Her property interest in working at her profession would deteriorate. Hers then would be a profession with an ethic of promoting or assisting patients to deliberate death, instead of to life.

CONCLUSION

Legal assisted suicide creates an entitlement to assistance with, and approval of, suicide. It inevitably will inculpate nurses in the killing of their patients. It would destroy the public's confidence in the profession of nursing, damaging the nurses' liberty and property rights to practice that profession. It purports to help patients who either do not wish to die (terminal patients, even those in pain) or who are treatable and would be treated if society valued their lives (terminal patients who are depressed and ambivalent). That unwanted, unneeded entitlement is granted to the awful detriment to the fundamental rights of nurses who wish to practice their profession uncorrupted.

Based upon the above, the decisions of the Courts of Appeal should be reversed and the cases remanded for disposition in accordance.

Respectfully submitted,

JACQULYN KAY HALL

APPENDIX

Statements of Interest

This brief *amici curiae* is submitted to the Court by people who will be uniquely and directly affected by the Court's decision in this case. *Amici Curiae* are:

The National Association of Prolife Nurses, nurses who promote and protect the lives of patients at all stages of life, was formed in 1973 with state affiliates and members in all states. Their activities on behalf of patients, and on behalf of nurses who protect patient lives, include legal representation, education, and organization. The members have supported an *amicus* brief to the Ninth Circuit in the case challenging the legalization of assisted suicide in Oregon still pending there.

The National Association of Directors of Nursing Administration in Long Term Care, the managers of facilities where some patients are cared for who would be subject to assisted suicide if legal, was formed in 1986, and has 30 state affiliates with 4000 members from all states. Their code of ethics mandates they support and promote quality of care for those individuals receiving long term care, and concern for those delivering long term care.

The Philippine Nurses Association of America, nurses of Philippine ethnicity who live and work in the U.S., was formed in 1979, and has 25 state affiliates with over 2000 individual members. Their endorsement of the Code of Ethics of the International Council of Nurses mandates they protect, promote and restore health when possible, prevent illness when possible, and alleviate suffering; thus

they believe the legalization of nurse assisted suicide and euthanasia will change the very essence of nursing practice.

The Scholl Institute of Bioethics, a group of professionals in medicine, law, psychology and religon, was established in 1986 because of concern for the increasing difficulty of bioethical decisions that both individuals and the medical profession are facing in relationship to today's modern advances in medicine and the growing euthanasia movement.

California Nurses for Ethical Standards, a non-profit educational and professional organization of nurses who promote in all respects ethical standards of health care, was established ten years ago in the state of California. The members believe that euthanasia and assisted suicide violate all nursing ethics codes.

INTEREST OF AMICUS CURIAE [1]

The American Geriatrics Society (AGS) is comprised of professional health care providers focused upon serving the health care needs of elderly persons. Founded in 1942, the AGS has 6,000 dues-paying members. The AGS sponsors conferences and seminars, articulates policy and practice guidelines, publishes a preeminent professional journal (*The Journal of the American Geriatrics Society*), and encourages improved health care services for elderly persons and research on the illnesses from which they suffer. As practitioners specializing in the care of the elderly, AGS members are particularly dedicated to improving how people live at the end of life and consequently have abiding concerns with the issues raised by initiatives to legalize physician-assisted suicide (PAS).

The AGS and its members have worked diligently to assure that even elderly persons with severe dependency and limited personal and family resources can count on reliable and effective diagnosis, treatment, prevention, rehabilitation and supportive care. The AGS has encouraged care providers, the elderly, and their families to adopt an optimistic and energetic approach to treatment of illness. However, geriatricians (including physicians, nurse practitioners, and other health-care professionals) also realize that all elderly persons die, and that serving people well in their old age requires incorporating that fact into judging various strategies for care. Just as we must strive to make available all potentially beneficial treatment, we must also strive to avoid interventions that are more harmful than beneficial.

Legalization of PAS would create a moral dilemma for geriatricians. Most elderly persons experience serious and

---

[1] Each party has given its consent, in writing, to the filing of this brief amicus curiae. Their consent letters have been filed with the Clerk of the Court. Counsel gratefully acknowledges the valuable contributions made to this brief by Joanne Lynn, M.D., and Felicia Cohn, Ph.D. Dr. Lynn, a recognized authority on the care of the dying, is a board member of the AGS and chair of its Ethics Committee. Dr. Cohn is associated with Dr. Lynn in the Center to Improve the Care of the Dying.

progressive illness for extended periods before death and need significant social, financial and medical supports.[2] These resources too often are not available, are of inadequate quality, are not covered by insurance, and are not provided by public entitlement programs.[3] By collaborating in causing early deaths, when continuing to live has been made so difficult, geriatricians would become complicit in a social policy which effectively conserves community resources by eliminating those who need services. By refusing to assist with suicides because a patient's relative poverty and disadvantaged social situation is seen as coercive, geriatricians would condemn their patients, and themselves, to live through the patients' undesired difficulties for the time remaining.

This conundrum has prevented defining a defensible role for geriatricians in any legalized practice of PAS. These concerns have driven the members of the AGS to address this issue at a time when few professional organizations have done so. The AGS position statements on PAS and euthanasia are attached.[4] The AGS opposes legalization of PAS at this time. Elderly and frail persons would be put at risk, yet their interests and concerns have not been adequately addressed in the public discussion of these issues.

[4] *See* Appendix and AGS Ethics Committee, *The Care of Dying Patients*, 43 J. Am. Geriatrics Soc'y 577-578 (1995); AGS Ethics Committee, *Physician-Assisted Suicide and Voluntary Active Euthanasia*, 43 J. Am. Geriatrics Soc'y 579-580 (1995). *See also* Greg A. Sachs, M.D., et al., *Good Care of Dying Patients: The Alternative to Physician-Assisted Suicide and Euthanasia*, 43 J. Am. Geriatrics Soc'y. 553-562 (1995).

The AGS urges this Court to note that improving life at its end has only recently become the subject of research and innovation. The potential consequences of accepting or tolerating PAS are unknown. The AGS believes that continued debate on these issues is essential if there is to be wise policy. The AGS takes no position on the merits of PAS for the patients in the cases before the Court. Instead, the AGS urges this Court not to recognize a constitutional right to the practice of PAS. At this time, the Court should exercise restraint in deciding a matter that would be more appropriately left to the states and the people. The AGS adopts the legal argument advanced in the *amicus* brief of the Project on Death in America of the Open Society Institute, which contends that the matter is not yet ripe for constitutional adjudication. The AGS limits this *amicus* brief to a presentation of a medical perspective on the uncertainties that require study and resolution before PAS could be implemented as the policy of any jurisdiction, or recognized as a constitutional right.

SUMMARY OF ARGUMENT

The courts for the Second and Ninth Circuits relied on three serious misperceptions in overturning state laws prohibiting PAS.[5] First, the courts were misinformed as to how people live while dying in the United States. Contrary to the courts' apparent assumptions, the plaintiff-patients in *Quill* and *Compassion in Dying* do not represent the usual situation of persons facing the end of life; severe pain and other symptoms can be relieved for persons near death; and health care generally and at the end of life is undergoing major changes.

Second, the lower courts mistakenly concluded that there is no significant difference between PAS and foregoing life-sustaining treatment. From a medical standpoint, however, clinical, definitional, and procedural considerations reveal important distinctions. These differences add

to the legal, ethical, and historical distinctions identified by this court in *Cruzan*.[6]

Third, the courts below mistakenly condition their holdings upon the erroneous assumption that six restrictive criteria or safeguards can be easily identified and implemented: that the patients be (a) terminally ill, (b) competent, (c) suffering, (d) acting voluntarily and (e) seeking assistance in obtaining a means of suicide (f) which will be available only from a physician. In fact, as the discussion that follows makes clear, the medical profession has no adequate definitions for some of these criteria and lacks experience with all of them, making it unreasonable to believe that legislatures or courts could easily design procedures to ensure that each criterion could be met and could be sustained.

In view of the misperceptions upon which the decisions below were based, and the dearth of experience and knowledge that would be necessary to implement the exercise of a right to PAS, the AGS respectfully submits that a decision by this Court to constitutionalize PAS would be, at best, seriously premature.

ARGUMENT

I. THE COURTS WERE MISLED BY MISPERCEPTIONS ABOUT END-OF-LIFE EXPERIENCES.

A. The Patient-Plaintiffs Are Not Representative of Dying Persons Generally.

The named patients in the cases before the Court are dying in ways that do not characterize how people generally die in the United States. The identified patients all have a single, well-defined disease: three suffer from AIDS, two from cancer, and one from emphysema. Their situations thus fail to reflect the multiple diseases and uncertain prognoses that are much more common in advanced old age. Patient-plaintiffs' ages average 56 years. Not

[6] *Cruzan v. Director, Missouri Dept. of Health*, 497 U.S. 261 (1990).

one of the named plaintiffs is as old as the median age of death in the United States, 77 years.[7] None is characterized as poor, without family, or living in nursing homes. All have physicians, and none mention problems of access due to inadequate health insurance. This sample thus falls far short of representing the array of problems and concerns which should inform a determination of the constitutionality, or even the wisdom, of allowing PAS. The relative simplicity of the medical and social situations of these patients appears to have misled the lower courts into believing that PAS is the only or best response to those patients' problems.

Much has changed about how people come to the end of their lives in the United States. No more than a century ago, dying afflicted every decade of adult life, nearly evenly.[8] The most common causes of death were infections and accidents, which generally allowed little time between onset and death. Even cancer and heart disease were discovered late and the lack of effective treatment meant that death often occurred shortly after diagnosis.

Average life spans have also increased. Now, median life expectancy is 79 for women and 72 for men. Among those who survive to age 65, median age at death is 84 for women and 80 for men.[9] The usual causes of death now include cancer, heart disease, other organ system failures, and dementia, all of which are illnesses that ordinarily cause progressive disability over more than a year.[10] Typically, persons dying in their eighties and older succumb to a combination of loss of reserve capacity in aging

[7] Projection for the year 2000 is 76.7 years. *See* U.S. Bureau of the Census, *Statistical Abstract of the United States: 1995*, 86 (115th ed. 1995).

organs, deficiencies in daily functioning, and diseases with specific etiology.[11]

Modern society must learn how to assure that dependent and disabled persons can live well, despite living for a long time with eventually fatal illnesses. Prognosis is ordinarily uncertain. Poverty and isolation are common. Nearly one in five dies in a nursing home.[12] Depression and other psychiatric problems are common and largely unrecognized.[13] Characterizing the issue as simply acquiescing in the patient's request to end his suffering, as the courts below did, is much more difficult when one imagines a slowly failing elderly widow who is blind, nearly deaf, disabled, and in a Medicaid nursing home, than when the claimant is a younger patient with a predictably fatal illness.

B. Dying Is Mischaracterized as Unavoidably Dreadful.

Contrary to the apparent assumptions of the courts below, fatal illness does not have to mean severe pain and suffering. The Ninth Circuit's opinion repeatedly describes dying as "painful, protracted, and agonizing."[14] The Ninth Circuit then contrasts this fate with death by assisted suicide which lets a patient: "end his life peacefully and with dignity."[15]

However, most people die quietly, most often in their sleep.[16] Hospice and palliative care programs have demonstrated that no dying person must live with overwhelming pain or other severe physical symptoms. Severe and persistent pain affects about half of cancer patients[17] and one quarter of dying persons generally.[18] Sophisticated palliative care relieves pain for most of these patients without confusion or substantial sedation. Intractable pain that can be relieved only by inducing sedation affilicts less than 3%, mostly very near the end of life.[19] Aggressive palliative care and sedation near death are already permissible. So is the removal of artificial nutrition and hydration[20] that were mentioned as sustaining two of the plaintiff-patients.

However, the standard of care lags behind what is possible to achieve, due both to barriers meant to limit the availability of narcotics and to delay in the adoption of

better practices by the health care professions.[21] Public policy should more vigorously encourage reliable relief of symptoms, but PAS is never the only option to relieve uncomfortable symptoms in a person near death.

How society arranges services to support care of those at the end of life has profound effects upon how that life can be lived. Life just before death can be especially precious and important. When supported and comfortable, dying persons ordinarily accomplish important tasks, such as saying farewells, disposing of property, completing life projects, and enjoying their remaining days. The courts below do not seem to have taken account of this possibility. *See, e.g., Quill,* 80 F.3d at 729.

Many persons consider suicide or wish for early death while they are angry or suffering. Since persons feeling worthless often test others to see whether these views are shared, encountering agreement actually functions to affirm the denigration of value. To offer PAS at this time does not merely offer an option but also affirms feelings of worthlessness or devaluation.[22] Since, when comfortable and comforted, most patients feel that this was an unexpectedly important time,[23] encouraging supportive care

and discouraging suicide seems well within the purview of wise public policy.

C. The Lower Courts Misperceived Current Shortcomings in Care at the End of Life as Persistent and Unchanging.

Discussions about PAS are clouded by the paucity of reliable information regarding death in the United States.[24] Nevertheless, this is clearly a time of great ferment. Research in palliative care has developed considerably in the past twenty years.[25] About 61% of Americans die in hospitals and 17% in nursing homes, with the proportion of deaths in nursing homes increasing and those in hospitals decreasing.[26] In 1970, the standard of practice was to attempt resuscitation for virtually every person who died.[27] Now, foregoing life-sustaining treatment is commonplace,[28] especially for those with poor prognoses for survival. Resuscitation is now attempted for only about 10% of seriously ill persons who die in hospitals.[29] In the past, treatments were often continued for patients with poor prognoses and small chances of recovery.[30]

[24] Indeed, the only description of sequential seriously ill patients dying in hospitals in the United States was done in 1904. W. Osler, *Science and Immortality* (The Riverside Press 1904). *See also supra* note 8.

[25] Derek Doyle, et al., eds., *Oxford Textbook of Palliative Medicine,* 4 (Oxford University Press 1993). One recent study of certain seriously ill persons in hospitals has been influential, but it addressed only a small subset of the dying, *supra* note 18.

[29] *Supra* note 18.

[30] E.g., *Cruzan,* 497 U.S. 261.

It is important to consider the major changes that are now reshaping health care generally. The rise of managed or capitated arrangements for service delivery and financing and the shift toward competing on costs rather than quality are rearranging relationships and roles. The impact on end-of-life care is not yet clear, but it is likely to include more reluctance to provide expensive care or to encourage patients and families to seek prolonged survival.[31]

The lower courts accepted a descriptive claim that PAS already exists as a clandestine but widely acknowledged practice.[32] AGS leadership is not familiar with situations in which this is true, and it seems unlikely. Three-quarters of all deaths happen in institutions where a regularized practice would require the collusion of a large number of persons, which seems implausible. Little reliable evidence characterizes the rate and nature of actual instances of PAS.[33] Courts should not rely upon presumptions and unsubstantiated reports in such a matter.

The constitutionality of PAS should not be resolved by reference to atypical situations and reliance upon misperceptions, as happened in these cases. Consideration of the role of PAS must be part of a broader examination of how this society should care for people with fatal illness and is therefore an endeavor more properly undertaken

Meier, *Physician-Assisted Dying: Fashioning Public Policy with an Absence of Data*. Generations 48-53 (Winter 1994).

by state legislatures and professional and lay organizations than by the federal judiciary.

II. THE COURTS BELOW MISTAKENLY CONCLUDED THAT PHYSICIAN ASSISTED SUICIDE IS NO DIFFERENT FROM FOREGOING LIFE-SUSTAINING TREATMENT.

The lower courts erred in finding no justification for distinguishing PAS from foregoing (withdrawing and withholding) life-sustaining treatment (FLST). However, significant medical, legal, and societal distinctions exist between the two practices and fatally undermine the conclusion that they are entitled to the same legal status. The AGS defines PAS as "[w]hen a physician provides either equipment or medication, or informs the patient of the most efficacious use of already available means, for the sole purpose of assisting the patient to end his or her own life." FLST is defined as "[w]hen medical intervention is either not given or the on-going use of the intervention is discontinued, allowing natural progression of the underlying disease state."[34] Major American medical associations and public committees and commissions[35] have recognized the distinctions between PAS and FLST.

A. Descriptive Aspects Differentiate the Two Situations.

In addition to definitional differences and historical precedent, the situations involving PAS and FLST are associated with important moral and practical differences, including differences in access to medical care, in the practical effects of decisions, and in clinical intent.

Patients wishing to forego treatment are generally already receiving medical attention, and they have life-sustaining treatment available if desired. Thus, FLST decisions are implemented only when the life-sustaining treatment is unwarranted. However, for those seeking PAS, suicide may become a substitute for valuable but inaccessible medical attention. Persons seeking PAS may not know about, nor have available, other options for treatment, whether because of financial need, because their physician has inadequate skills,[36] or because social or ethnic barriers intervene.

Patients receiving life-sustaining treatment are usually very sick and close to death, so that even aggressive intervention is unlikely to lengthen their lives appreciably. With PAS, however, an individual may be giving up a more extended period of life. Fear of suffering and of losing dignity, along with a desire to control circumstances of death, may prompt a request for assistance in suicide before suffering might become unbearable.[37]

In FLST, the intent is not to bring about the patient's death but to respect the patient's wishes not to be subjected to undesired treatment. Once medical treatment is withdrawn or withheld, the underlying disease process usually leads to the patient's death, though some survive. Although a physician sometimes physically removes the life support, the underlying disease and not the physician's action is ordinarily considered the cause of death. Failure to remove the undesired treatment would amount to battery, an unconsented touching. In PAS, the physician may be acting in accord with the patient's wishes, but death results from a drug overdose rather than a natural course of dying.

The Second Circuit's opinion also appears to suggest that PAS follows from aggressive pain management (80 F.3d at 729). Good pain management, however, usually prolongs life, and even very high doses of opioids rarely cause respiratory depression in patients who have been taking them for more than a few days.[38] Further, good palliative care aims to eliminate the suffering, whereas PAS succeeds only by eliminating the sufferer.

B. Rights Against Interference Are Stronger Claims Than Those for Assistance.

This Court has established that patients have the authority to forego life sustaining treatment, based on the requirement that the patient's informed consent is required for medical intervention.[39] The authority to

---

[38] *"Respiratory depression.* This rarely presents a problem if the oral morphine dose is titrated carefully against the patient's pain, for pain is a respiratory stimulant. Tolerance to respiratory depression develops rapidly so that high doses of morphine can be used if necessary, without significant risk." Cicely Saunders et al., *Living with Dying: A Guide to Palliative Care* 23 (3rd ed. Oxford University Press 1995); *see also* American Pain Society, *Principles of Analgesic Use in the Treatment of Acute Pain and Cancer Pain*, 23 (3rd ed. American Pain Society 1992; Marcia Angell, M.D., *The Quality of Mercy*, 306 New Eng. J. Med. 99 (1982).

[39] *Cruzan*, 497 U.S. 261 (1990). *See also In re Quinlan*, 355 A.2d 647 (1976); Mark E Williams, M.D., *The American Geriatrics*

forego life-sustaining treatment is thus a right to prevent unwanted bodily intrusion. Withdrawing or withholding a treatment to honor the patient's refusal of consent is not a matter of providing a patient with assistance but one of leaving the patient alone. Physicians may not impose treatment on a patient who refuses that treatment, even if the physician believes that the treatment will benefit the patient. This right to be left alone does not imply any corollary right to receive a form of assistance such as PAS.

C. The Restriction of Physician Assisted Suicide to a Narrow Class of Persons Highlights Its Differences From Foregoing Life-Sustaining Treatment.

FLST is an option for all treatments and all patients, just like any other medical decision. If PAS were equivalent to FLST, it should be available to all patients. Yet both courts below and all current legislative proposals restrict the right to PAS to a certain category of patients—those that are terminally ill, competent, acting voluntarily, and suffering. Unlike FLST, no proposal allows PAS to be directed in advance or by surrogate decision makers. The uniform agreement on such restrictions clearly suggests that the courts, the legislatures, and the policymakers recognize clear distinctions between PAS and FLST.

D. The History of Familiarity With Foregoing Life-Sustaining Treatment Contrasts Sharply With the Lack of Experience With Physician Assisted Suicide.

As this Court recognized in *Cruzan*, the right to reject life-sustaining medical treatment has had a long history of public acceptance, from legal, ethical, and medical perspectives.[40] Rooted in the common law doctrine of informed consent and recognized by courts, legislatures,

---

Society's Complete Guide to Aging & Health, 119 (Harmony Books 1995); *supra* note 34.

[40] *Cruzan*, 497 U.S. 261 (1990); *see also In re Quinlan*, 355 A.2d 647 (1976); *see also* Alan Meisel, *The Right to Die* (2d ed. 1995).

and the health care professions, a consensus has emerged that persons generally have the right to refuse medical interventions, even though death may result.

In sharp contrast, no such consensus surrounds the practice of PAS. It has no common-law basis and has not been recognized widely by courts, legislatures, the public, or the medical profession. Most states have statutes prohibiting the practice of PAS—similar to the New York and Washington statutes struck down by the courts below in these cases. The practice has been approved by the voters in only one state, Oregon, where an initiative passed by a narrow margin but has not yet been implemented. The lack of any substantive experience with PAS, and the myriad restrictions attached to every proposed formulation of a right to request it, show that PAS is considered quite differently by all—its proponents, the law, health care providers, and the public.

III. THE CONSTRAINTS PROPOSED FOR THE PRACTICE OF PHYSICIAN ASSISTED SUICIDE PRESENT INTRACTABLE PROBLEMS.

As noted above, the plaintiffs below sought PAS only for a limited class of persons. Accordingly, the right to assisted suicide recognized in both cases is confined to adult patients who have terminal illnesses; are mentally competent; suffer from chronic and/or severe pain; and make a voluntary request for PAS. In addition, the only authorized method of assistance is through a physician's prescription of lethal medication which the patient must self-administer.

The Second and Ninth Circuits found a constitutional right to PAS conditioned upon these criteria, which they assumed would also function as safeguards to prevent mistakes or abuse. As the discussion below demonstrates, however, those decisions were based upon erroneous assumptions about the feasibility of both defining and applying the eligibility criteria. In fact, if PAS were to be implemented, determining the eligible population

would be intractably difficult and the proposed constraints would likely fail to provide the safeguards upon which the lower courts' decisions were based.

A. Terminal Illness.

Various statutory proposals and the cases before this Court contemplate that PAS will be authorized only for those who are "terminally ill." [41] The opinions below suggest that limiting the category to "terminal illness" helps to make the shortening of life acceptable and presume that the category can be clearly delineated. The Second and Ninth Circuits dismissed arguments asserting the difficulty of determining when a patient is "terminally ill," noting that "terminal illness" and "terminal condition" have been "defined repeatedly . . . in a model statute, the Uniform Rights of the Terminally Ill Act, and in over 40 state natural death statutes." [42] In actuality, such judgments are notoriously difficult to make. Indeed, because terminal illness or terminal condition is so difficult to define, the new Uniform Health-Care Decisions Act,[43] which supersedes the Uniform Rights of the Terminally Ill Act, upon which the Ninth Circuit partially relied, omits any reference to terminal condition

[41] Courtney Campbell, et al., *Conflicts of Conscience: Hospice and Assisted Suicide*, Hastings Center Report 36-43 (May-June 1995); Charles H. Baron, et al., *A Model State Act to Authorize and Regulate Physician-Assisted Suicide*, 333 Harvard Journal on Legislation 1-34 (Winter 1996); Oregon Death with Dignity Act, Ballot Measure 16 (passed Nov. 8, 1994); *Quill*, 80 F.3d at 731; *Compassion in Dying*, 79 F.3d at 838.

[42] "[W]hile defining the term 'terminally ill' is not free from difficulty, the experience of the states has proved that the class of terminally ill is neither indefinable nor undefined," *Compassion in Dying*, 79 F.3d at 831. *See also Quill*, 80 F.3d at 731 (stating that "it seems clear that most physicians would agree" on when the condition of "final stages" of terminal illness occurs).

[43] Uniform Health-Care Decisions Act, approved by the National Conference of Commissioners on Uniform State Laws at its conference held July 30-August 6, 1993, and approved by the American Bar Association on February 7, 1994.

and does not attempt to define terminal illness. The reasons for this omission have been explained as follows by David English, the reporter for this new Uniform Act: "Most existing advance directive legislation becomes effective only if a patient is in a 'terminal condition,' or is 'permanently' unconscious. Such restrictions have severely limited the usefulness of many state statutes and, indeed, have rendered them virtual nullities." [44]

As the drafters of this new Uniform Act thus recognized, terminal illness is notoriously difficult to define, and the working definitions of "terminal illness" for hospice or advance directive legislation are neither relevant nor reassuring, as the courts below erroneously concluded.

Hospice programs, for example, enroll mostly persons with some particular cancers.[45] Referral to hospice is most often initiated when such a patient experiences a deterioration in function, weight and comfort, usually three to six weeks ahead of death.[46] For cancer, then, the clinical course dictates timing, which is much shorter than the hospice statutory prognosis requirement of six months. Other illnesses do not regularly have such a final, relatively distinct, phase of clinical deterioration and they are engendering problems when referred into hospice.[47]

[44] See English and Meisel, *Uniform Health-Care Decision Act Gives New Guidance*, 21 Estate Planning 355, 359 (1994).

[47] Hospice programs are being scrutinized by the Dept. of Health and Human Services' Office of the Inspector General, with disagreements on prognosis as hospice expands to enroll patients dying of chronic diseases. J.G. Brown, *Review Of Medicare Hospice Beneficiary Eligibility In The Commonwealth Of Puerto Rico* (DHHS, OIG, March 1996). *See also* Standards and Accreditation Commit-

A more rigorous definition of terminal illness seems necessary for PAS, since PAS has such significant and irreversible consequences. Three general approaches might be used in attempting to define the category "terminally ill": subjective judgment, statistical criteria, or a disease severity threshold. An examination of each of these reveals crippling problems.

1. *Subjective Determination.*

Some person or persons could be designated to judge whether a patient is "terminally ill," using information about the patient's situation, prognosis, care needs, and preferences. At present, the patient, family, and professional caregivers negotiate the designation while discussing plans and making decisions. The label then marks a change from a strategy of correcting abnormalities with the expectation of long survival to a strategy focusing on function, comfort, and emotional and spiritual support with the expectation of death.

In routine patient care, the timing of this change in focus does not much matter. The various participants can arrive at the designation at somewhat different times. However, the obvious variation in and diffuseness of this process would be troubling in the context of determining eligibility for authorizing PAS, and the fact that availability of PAS would be contingent on a designation of being terminally ill may result in pressure to accelerate or resist the label.

2. *Statistical Determination.*

Defining terminal illness with an explicit statistical threshold seems to offer clarity: a person is either below or above that threshold. However, this approach fails as it encounters at least four serious barriers.

First, the data necessary to calculate estimates which can be compared with a legislated statistical threshold is

tee, Medical Guidelines Task Force, *Medical Guidelines for Determining Prognosis in Selected Non-Cancer Diseases* (2d ed. National Hospice Organization 1996).

only rarely available. Very little research addresses the issue.[48] Most people will die of conditions that are not predictable with a statistical model.[49]

Second, the threshold is unavoidably arbitrary, with many borderline cases and unavoidable errors of over-inclusion and underinclusion. Any threshold will include people who will live a long time; the rate increases with more inclusive thresholds. A population in which each person has exactly a 25% chance to live six months will have one in four persons still alive at six months. The threshold should include all who will soon die of a serious chronic disease. However, some diseases are intrinsically unpredictable, even very close to death.[50] No reason justifies setting the threshold at any particular point, thus rendering any threshold arbitrary and subject to dispute.

Third, any specific threshold is inconsistent with current usage of the category. The popular conception of "termi-

[48] APACHE III and similar systems estimate the risks of dying during a particular hospitalization for very seriously ill patients in hospital intensive care units. W.A. Knaus et al., *The APACHE III Prognostic System. Risk Prediction of Hospital Mortality for Critically Ill Hospitalized Adults*, 100 Chest 1619-1636 (1991). SUPPORT's formula allows estimation of survival throughout the ensuing six months, but only for certain seriously ill patients with nine specific diseases, treated in hospitals. W.A. Knaus, *et al.*, *The SUPPORT Prognostic Model: Objective Estimates of Survival for Seriously Ill Hospitalized Adults*, 122 Ann. Internal Med. 191-203 (1995). Other available formulae are even more restricted in population, setting, or data required.

[49] The estimate varies also because other predictions can arise from one research database.

[50] Prognoses are surprisingly optimistic very near to death. Lung cancer patients in one study had a median prognosis of 17% to live two months on the day before death, and 50% just one week before death. Those dying of congestive heart failure, however, had a prognosis of more than 60% to live two months, and more than 40% to live six months, on the day before death. So, any criterion requiring less than a 50-50 chance to live two months would exclude virtually all of those who die with congestive heart failure. J. Lynn et al., *Defining the "Terminally Ill": Insights from SUPPORT*, 35 Duquesne L. Rev. 311-336 (1996).

nal illness" mainly deals with cancer, neurological degenerative disease, and AIDS patients, all persons who have no available treatment, are losing weight and function, and who are psychologically "ready" to die. Most persons dying of chronic organ system failure will be excluded with a restrictive threshold and many persons with substantial opportunities for treatment and prolonged survival will be encompassed within an inclusive threshold.[51]

Fourth, the prognosis for survival can depend upon patient and physician choice and availability of treatment. A person with diabetes could stop insulin, a person with a feeding tube could stop its use, or a person with heart disease could be refused for transplant. If thereby such a person becomes "terminally ill," then the category is disquietingly dependent upon volitional actions rather than patient status.

Thus, defining the category of terminal illness with a statistical threshold would be arbitrary and certain to overinclude and underinclude substantial populations.

3. *Disease Threshold.*

The third way to define "terminal illness" ties the classification to clinically significant and morally important events, such as the recurrence of cancer in a distant site or the onset of fecal incontinence in a demented person.

---

[51] *Id.* Half of all persons who die of lung cancer today will have had a prognosis of better than 30% to live 2 months, just one week ago, so any more restrictive threshold will miss most persons dying of lung cancer. Conversely, such a threshold will include many persons with acute respiratory, cardiac, or liver failure, who usually are vigorously treated. In fact, they qualify for transplantation only when they become so severely ill. If the category were expanded to include everyone with up to a 50% chance to live six months, most nursing home residents would qualify. If the category were restricted to those with a 1% chance to live two months, not only would one exclude virtually all cancer patients but those in the category would be so sick that they would, on average, die within a day. *See also* J.M. Teno, et al., *Prognosis-Based Futility Guidelines: Does Anyone Win?*, 42 J. Am. Geriatrics Soc'y 1202-1207 (1994).

However, an individual's status is not well characterized by the extent of one serious disease. Rather, a person's future is shaped by a variety of illnesses; reserve capacity of various organs; social situation; personal preferences; and treatment availability, use, and response. Thus, many of the patients included will actually have long expected life spans. This method is also afflicted with problems described above with regard to a statistical criterion.

Thus, no approach to defining terminal illness offers a simple and feasible method for determining who should have access to PAS. The problems appear to be intractable and no experience yet shows that they can be overcome.

Finally, even if terminal illness could be satisfactorily defined, it would not last long as a restriction on PAS. The courts below held, for example, that there are no differences between PAS and FLST. If that were true, requiring terminal illness would eventually be dropped, since there is no such requirement for FLST.

B. Competence.

Another criterion, upon which the right to PAS recognized by the courts below is contingent, is competency at the time the request for PAS is made and implemented. This criterion is also problematic. Classifying competence is difficult and sometimes impossible. In addition, the requirement raises troubling questions about PAS, since it may induce patients to choose suicide preemptively, in order to preclude losing the option through a subsequent deterioration in their mental faculties. Furthermore, the competence requirement interacts with the requirement for being terminally ill, since patients tend to lose competence as illness becomes more severe.

Although a variety of legal and medical decisions are predicated on a finding of competency, there is no uniform standard or set of procedures for making this deter-

mination.[52] In practice, such judgments typically are made by health care professionals, in consultation with family members, and may be influenced by many factors, including the purpose of the evaluation. No professional discussion yet addresses appropriate competence standards for PAS, what components of cognitive and emotional functioning should be measured, or how capable the person must be in each component (or all taken together) in order to qualify for PAS.

The seriously ill commonly have deficits in cognitive and emotional functioning which change over relatively short periods of time and correlate strongly with suicide inquiries. Many elderly patients and dying cancer patients experience delirium, a syndrome in which they are confused, unable to maintain attention, and unable to master new information.[53] Most episodes are not detected in usual care. Likewise, depression is common, serious, and often undetected and untreated.[54] Depression, delirium, and mood disorders strongly correlate with suicide. Indeed, most cancer patients now committing suicide have discernible psychiatric illness, and having such an illness corresponds strongly with risk of suicide.[55] Treatment of depression substantially alters an initial inclination to refuse life-sustaining treatment.[56] Excluding these patients from access to PAS would be essential, but that turns

[56] Linda Ganzini, *The Effect of Depression Treatment on Elderly Patients' Preferences for Life-Sustaining Medical Therapy*, 151 Am. J. Psychiatry 1631-1636 (1994).

out to be quite difficult. Most depression, just like most delirium, is not recognized or treated in current practice.[57] The risks of involving persons with diminished capacity in PAS are substantial. Furthermore, a narrow definition of terminal illness will yield high rates of incompetence while a broader definition will yield high rates of long survival.

Moreover, as suggested above, a special problem with a lengthy dying process is fear of the indignity associated with incompetence.[58] If the right to PAS extends only to those with contemporaneous competence, then patients with conditions likely to lead to incompetence may find it appealing to undertake preemptive suicide. This is a special risk in early dementia, when patients retain ability to understand but have failing memory. The rate of progression to cognitive disability is unpredictable. Thus dementia patients hoping to avoid the worst-case scenario may be sacrificing many comfortable and relatively capable years when they seek PAS preemptively.

C. Undue Influence—Coercion.

1. *The Context of Care.*

Proponents of a constitutional right to PAS expect the practice to be limited to persons who are acting voluntarily, without undue influence or coercion. The image is that of an independent, capable person thoughtfully evaluating his or her options, unaffected by biased third parties or other circumstances. This is so far from the experience of dying as to be fanciful. Dying persons are often very weak, prone to strong emotions, and vulnerable to the suggestions, expectations, and guidance of others. In this context, pressure or encouragement from family, friends, and caregivers may cloud or overwhelm the patient's in-

[57] S.R. Rapp, et al., *Detecting Depression In Elderly Medical Inpatients*, 56 J. Consult. Clin. Psychol. 509-513 (1988).

[58] *Supra* note 8; *supra* note 13; *see also* P.J. Van der Maas, et al., *Euthanasia and Other Medical Decisions Concerning the End of Life*, 338 Lancet 669-674 (1991).

dependent judgment and thus amount to inappropriate coercion.[59]

The health care available to the terminally ill may be the most important factor influencing the care provided and may result in requests for PAS that could be avoided if appropriate care were available. Large variations in whether people die at home or in a hospital in various regions of the country are strongly related to hospital bed supply and regional hospice investment, and not to preferences, wealth, family presence, or other patient characteristics.[60]

2. *Financial Considerations.*

Patients nearing death are generally quite disabled and their care is costly. While hospital and physician costs decline past the age of 70, long-term care costs rise, and these are mostly borne privately.[61]

The plaintiff-patients in the cases below do not appear to have been burdened with economic difficulties. Yet, economic influences are among the most important in defining a population eligible for PAS. One-quarter of those over 65 are below 150% of the Federal poverty level, and institutional long-term care has become largely a poverty program under Medicaid.[62] As pressures increase to curtail health care expenses, hospital admissions are limited and hospitalizations are shortened. Decreasing availability and increasing expense in health care and the

[61] A Scitovsky, "*The High Cost of Dying Revisited*," 72 Milbank Mem. Fund. Q. Health Soc. 561-591 (1994).

[62] *Id.*; *see also* Marilyn Moon, *Medicare Now and in the Future* (1996).

uncertain impact of managed care may intensify pressure to choose PAS.

Should financial pressures be considered undue influence or not? This is the special dilemma of those who serve the frail, disabled, and poor. The AGS's concern is that PAS may become inherently coercive in a society in which supportive services and medical care are often unavailable. It would be ironic, indeed, to have a constitutional right to PAS when there is no guarantee of access to health care.

D. Suffering.

The courts below also appear to assume that the right to PAS may be reliably limited to persons who are suffering or in pain. Medical practice has no consensus on how to define or measure such a state. Most patients can be physically comfortable without sedation, and sedation can always eliminate symptoms in persons near death. This course is available at present, without any change in the law, and thus precludes a requirement that the patient must have symptoms that cannot be relieved. While some may view such treatment as undesirable, it is difficult to see why death through PAS should be considered a distinctly better (and constitutionally dictated) policy option.

E. Physician Involvement.

There is little reason to believe that physicians now have expertise in modes of killing, yet all proposals for PAS mandate physician participation. Although the counseling skills and prescription-writing privileges of physicians might at first blush suggest that their involvement in PAS is appropriate, this Court should recognize the practical difficulties this requirement imposes upon medical caregivers. There is no drug approved as safe and effective and therefore no drug legally available for PAS,[63] no in-

---

[63] In a recent survey of Oregon physicians who would be eligible to prescribe under the 'Death with Dignity Act,' 50% of respondents

struction is given in medical texts,[64] and practice standards show pervasive inattention to counseling and symptom management for those near death. Physicians are usually required to inform patients of alternatives which might be advantageous. No proposal has exempted PAS, but the implications of having to broach this subject with seriously ill persons have not been considered in the discussions to date. The potential for engendering distrust and diminishing effectiveness in physician-patient encounters may justify not engaging physicians in this work. Without experience, recognizing a right to commit suicide through the assistance of physicians is clearly premature.

F. The Scope of Assistance.

The constitutional right to PAS articulated by the courts below limits the physician's aid to prescribing medications in lethal doses. Clinical experience suggests that this limit is untenable and will inevitably lead to demands for more active physician involvement in bringing about the patient's death.

If a physician were to prescribe medication in a dose which should be sufficient to cause death, the rulings below require that the patient seeking PAS actually ingest the drugs and do not provide for any further assistance by the physician. Very likely, patients will sometimes take too little of the drug, will be more resistant than expected, or might vomit and lose much of what was ingested. Determining the appropriate response to a partial overdose in the context of legal, assisted suicide would pose difficult problems for physicians, family members, or friends, since survival with brain damage and incompetence could result.

Such difficulties seem likely to lead to pressure to allow intravenous administration of lethal drugs, both because

---

said they did not know what to prescribe for PAS. M.A. Lee, et al., *Legalizing Assisted Suicide - Views of Physicians in Oregon*, 334 New Eng. J. Med. 310-315 (1996).

[64] A. Carron, et al., *What is Taught About Care for the Dying in Three General Medicine Texts?*, 44 J. Am. Geriatrics Soc'y, 533 (1996).

they are more reliable and because they bring about death without apparent symptoms, such as prolonged respiratory distress, that might be difficult for family members or attendants to witness. Limiting the scope of physician assistance to the prescription of lethal drugs is thus unlikely to be sustainable. The experiences of physician assisted death in The Netherlands suggest that a progression from patient self-administration of lethal medication to physician assistance with intravenous routes is a likely consequence of allowing PAS.[65]

In summary, the criteria delimiting the boundaries of the constitutional right to PAS found by the courts below are inherently unstable, difficult or impossible to define, and probably incapable of application at the present time. Without the benefit of further experience, there simply is no way of knowing whether this society could accommodate the exercise of a constitutional right dependent on these eligibility criteria.

IV. THE COURT SHOULD VACATE THE ORDERS OF THE LOWER COURTS.

This Court should reverse the opinions of the lower courts, and decline to recognize a constitutional right to PAS for a limited class of persons at the end of life. This is clearly an issue that is not ripe for consideration by this Court now. We explicitly adopt the legal argument for this position as presented by the Project on Death in America in an *amicus* brief filed in these cases.[66]

As explained above, no jurisdiction in the United States has yet had any experience with the practice that, it is contended, should be recognized as a fundamental right. The AGS has been opposed to legalizing PAS or physician involvement in euthanasia, primarily on the grounds that

---

[65] P.J. Van der Maas, et al., *Euthanasia and Other Medical Decisions Concerning the End of Life*, 338 Lancet 669 (1991).

[66] *See also* Robert A. Burt, *Constitutionalizing Physician-Assisted Suicide: Will Lightning Strike Thrice?*, 35 Duquesne L. Rev. 159-181 (1996).

our frail elderly patients are especially vulnerable to social coercion and that the well-being of those who are old and sick is not being carefully considered in the legislative and judicial discussion of this issue.

This is a very dynamic time with regard to care at the end of life. Only in the last few decades has living past the eighth decade become commonplace, and only recently has dying become a slow process in the setting of progressive chronic disease. New findings about what can be done with regard to relieving symptoms and supporting dying persons and their families are being reported regularly. States continue to debate both their support of the poor and their willingness to allow PAS. This is a time to enhance our understanding of how to care for dying patients, not a time to foreclose further learning by precluding innovation and evaluation.

Instead, we believe that the issue should be left to institutions more able to fashion flexible resolutions, with the benefit of further study and debate, such as state legislatures, the health care professions, and community organizations.

In this connection, we note that, should the Court agree with the Petitioners' arguments that the New York and Washington statutes do not violate the 14th Amendmen, then the 10th Amendment could provide an additional constitutional framework for reversal.[67] Since the Constitution neither delegates to the federal government the power to regulate PAS, nor prohibits its regulation by "the States, [such power is] reserved to the States respectively, or to the people." [68]

---

[67] *See New York v. United States*, 505 U.S. 144, 157 (1992) ("The question is not what power the Federal Government ought to have but what powers in fact have been given by the [States and] the people." (*quoting United States v. Butler*, 297 U.S. 1, 63 (1936)); *see also Mugler v. Kansas*, 123 U.S. 623, 664 (1887).

[68] U.S. Const. amend. X; *see also U.S. Term Limits v. Thornton*, 115 S. Ct. 1842, 1876 (1995) (Thomas, J., dissenting); *Garcia v. San Antonio Metro. Transit Auth.*, 469 U.S. 528, 546 (1985) ("The essence of our federal system is that within the realm of authority left open to them under the Constitution, the States must be equally free to engage in any activity that their citizens choose for the common weal, no matter how unorthodox or unnecessary anyone else —including the judiciary—deems state involvement to be.")

CONCLUSION

For the foregoing reasons, the judgments of the United States Courts of Appeals for the Second and Ninth Circuits should be reversed.

POSITION STATEMENT

Physician-Assisted Suicide and
Voluntary Active Euthanasia

AGS Ethics Committee *

BACKGROUND

The American Geriatrics Society has previously issued a statement on Voluntary Active Euthanasia (VAE). The public debate on this subject has broadened to include Physician-Assisted Suicide (PAS) and reflects the concern of many individuals about control over the terminal phase of their lives. The Society has affirmed that patients have the authority to choose among available plans of care, but their autonomy is limited when there are substantial detrimental effects on the lives of others or their choices conflict with legal or professional standards. (*See* AGS position statement, "Medical Treatment Decisions Concerning Elderly Persons"). Advocates of extending legal and professional standards to include VAE and PAS believe it is the patient's right to choose deliberately to end his or her life, under circumstances of intolerable suffering, when that individual reasonably and voluntarily prefers death to the life that confronts him or her.

DEFINITION OF TERMS

Physician-Assisted Suicide

When a physician provides either equipment or medication, or informs the patient of the most efficacious use of already available means, for the sole purpose of assisting the patient to end his or her own life.

---

* Prepared by Margaret Drickamer, MD; reviewed and approved by the AGS Ethics Committee and the AGS Board of Directors, November 1994. Copies of this position statement may be obtained from the American Geriatrics Society.

Voluntary Active Euthanasia

When, at the request of the patient, a physician administers a medication or treatment, the sole intent of which is to end the patient's life.

Withholding or Withdrawing Treatment

When a medical intervention is either not given or the on-going use of the intervention is discontinued, allowing natural progression of the underlying disease state.

POSITION

1. For patients whose quality of life has become so poor as to make continued existence less preferable than death, the professional standard of care should be that of aggressive palliation, not that of intentional termination of life. It is morally acceptable for a physician to administer a medication with the intent of treating a symptom, knowing that the medication may have the unintended effect of hastening the patient's death. This approach may include the withholding or withdrawing of any medical intervention as well as the specific palliation of symptoms, even if this advances the moment of death. The patient's request for death should trigger the physician's thorough exploration and understanding of the patient's suffering and the reason the request is being made at that particular time.
2. Patients for whom these issues are relevant should be informed of two important facts: a. Profound pain can be relieved with analgesia or sedation, and b. Patients may choose to forgo any life-prolonging intervention, including artificial nutrition and hydration. Because these issues are often misunderstood, the physicians have the responsibility to inform their patients of these alternatives.
3. Laws prohibiting VAE and PAS should not be changed. In giving a patient the means to palliate his

or her symptoms, a physician may inadvertently provide the means for suicide (e.g., by prescribing necessary but potentially lethal medications). The law should differentiate between this situation and the intentional participation in the planning and execution of a suicide. Laws in many states remain very vague as to the extent to which the physician's participation is considered to be a breach of the law. The definition and legal status of PAS should be further clarified.

4. If PAS or VAE are legal in any jurisdiction, the AGS contends that the strongest protection for patients to make a choice free of coercion should be in place and that it should be illegal for professional caregivers to receive financial compensation for assisting in suicide or euthanasia.

RATIONALE FOR CONTINUED PROHIBITION

1. Historically, the fundamental goal of the doctor/patient relationship has been to comfort and to cure. To change the physician's role to one in which comfort includes the intentional termination of life is to alter this alliance and could undermine the trust between physician and patient.
2. Allowing for VAE and PAS (especially in view of the possibility for its use in Advance Directives where patients are no longer competent and their directives are subject to interpretation) opens the door for abuse of the frail, disabled, and economically disadvantaged of society.
3. It is the general consensus of the AGS that most individuals who consider PAS or VAE do so out of fear of the dying process. The vast majority of patients can be appropriately palliated (including the use of general sedation) and would choose this alternative if they had full confidence that the medical profession would do so. A thorough search for the

underlying reason for the request for death may uncover several areas amenable to potential interventions (e.g., undertreated physical symptoms, psychosocial or spiritual crisis, clinical depression, etc.).

4. Legalization of physician-assisted suicide might thwart society's resolve to expand services and resources aimed at caring for the terminally ill, dying patient.

RECOGNITION OF THE CONSEQUENCES OF CONTINUED PROHIBITION

1. By prohibiting physicians from participating in VAE or PAS, we are limiting the patient's autonomy to choose his or her mode of death. For a patient who has intractable suffering and a limited life span, who has turned down general sedation, and who wishes to avail him- or herself of the choice to plan or execute their own demise, we must withhold our professional assistance.
2. Knowing that a small number of patients will choose this alternative despite our professional nonparticipation, the AGS recognizes that its members may choose not to give professional support to the patient in this decision.

FUTURE DEBATE

The medical profession, as well as society as a whole, is continuing to address this issue. We encourage this continued debate as the physician's role in the care of the dying patient is further defined.

POSITION STATEMENT

The Care of Dying Patients: A Position Statement from the American Geriatrics Society

AGS Ethics Committee *

BACKGROUND

Dying is the final portion of the life cycle for all of us. Providing excellent, humane care to patients near the end of life, when curative means are either no longer possible or no longer desired by the patient, is an essential part of medicine. The American Geriatrics Society (AGS) recognizes that most people near the end of life desire and should be able to obtain attentive and effective care directed at relieving symptoms, maximizing comfort, and maintaining dignity and control. Providing excellent care to dying patients and their families is time consuming and requires expertise as well as compassion. Care of patients who are dying is more than just withholding burdensome treatments; it is the provision of a special form of medical care, one in which physicians can take pride and find fulfillment. Making such care regularly available will require improvements in systems for service delivery and in professional education.

DEFINITIONS

Patients Who are Dying

Within this document, people are considered to be dying when they have a progressive illness that is expected to end in death and for which there is no treatment that can substantially alter the outcome. Thus, people are dying when they have illnesses such as advanced dementia

---

* Prepared by Greg A. Sachs, MD; reviewed and approved by the AGS Ethics Committee and the AGS Board of Directors, May 1994. Copies of this position statement may be obtained from the American Geriatrics Society.

or severe congestive heart failure, in addition to illnesses more routinely recognized as terminal, such as advanced cancer. Care of dying patients also encompasses patients who have elected to forgo available treatments that might forestall death, such as dialysis for end stage renal disease.

Palliative Care

Within this document, palliative care, also referred to as comfort care, refers to care directed toward the quality of life of patients who are dying, including the relief of pain and other symptoms, attention to the psychological and spiritual needs of the patient, and providing support for the dying patient's family.

PATIENT CARE ISSUES

Position 1

The care of the dying patient, like all medical care, should be guided by the values and preferences of the individual patient.

Rationale

Optimal medical care of all patients, not just those who are dying, rests on frank and sensitive communication between patients and physicians. For dying patients, this ordinarily entails recognition and discussion of the facts surrounding prognosis and the likely course with a palliative plan of care. The conversations throughout must continue to elicit and respond to the patient's needs. When the patient loses decision-making capacity, care should be guided by these previous conversations as well as by written advance directives, if available.

Position 2

Palliative care of dying patients is an interdisciplinary undertaking that attends to the needs of both patient and family.

Rationale

In caring for dying patients, physicians must themselves develop a broad array of knowledge and skills and an attentiveness to comprehensive care. In addition, whether or not the patient is enrolled in a formal hospice program, physicians most often should function as members of a team. The team may include nurses, social workers, homemakers, home health aides, physical therapists, chaplains, volunteers, and the patient's family. Each team member contributes the special knowledge and the skills of his or her discipline to help meet the needs of dying patients. Together, team members provide care for the patient and assist the family in coping with the patient's dying and death. Family members (with "family" defined by the individual patient) usually play a critical role in both providing care for dying patients and in making decisions for dying patients who have lost decision-making capacity. Providing support for the patient's family, including a period after the patient dies, is an important aspect of the palliative care of dying patients.

Position 3.

Care for dying patients should focus on the relief of symptoms, not limited to pain, and should be addressed by both pharmacologic and nonpharmacologic means.

Rationale

Pain, anxiety, depression, dyspnea, constipation, and other symptoms can all be significantly ameliorated, if not eliminated, in the vast majority of dying patients, provided we employ fully our pharmacologic armamentarium and appropriate nonpharmacologic interventions. Symptoms should be treated vigorously, even if the unintended effect of these efforts is the hastening of death. Though not medical symptoms, dignity and control are central issues for many dying patients.

HEALTH CARE DELIVERY ISSUES

Position 4

Dying patients should be guaranteed access to comprehensive, interdisciplinary palliative care across the spectrum of care settings as part of any federal or state health care reform plan, without care being conditioned on the financial status of the patient.

Rationale

Palliative care is often provided most appropriately in the patient's own home, a setting where reimbursement is inadequate under many existing insurance plans. Dying patients should be able to receive palliative care in the home, the hospital, and the nursing home, depending on the needs and preferences of the patient, without a disruption in the continuity of the patient's care.

Position 5

Reimbursement policies should be modified to enhance the availability of palliative care.

Rationale

Patients and families are presently faced with major financial obstacles to choosing palliative care, while payment for continued highly technological, acute care (e.g., dialysis, ventilator care, etc.) is readily available. Physician reimbursement should also be modified to promote palliative care. Like other forms of primary care, palliative care is time consuming, does not involve highly reimbursed procedures, and requires substantial counseling of patients and families.

Position 6

Administrative and regulatory burdens that may serve as barriers to palliative care should be reduced.

Rationale

Currently, hospices providing care for dying patients face special administrative burdens in addition to the usual paperwork facing all health care institutions. Requirements regarding availability of family and a home for caregiving regularly prevent some patients from receiving palliative care through hospices. Uncertain or unavailable estimates of prognosis also may serve inappropriately to exclude patients in need of palliative care services. Regulations intended to promote adequate nutrition for nursing home residents and laws intended to prevent assisted suicide and euthanasia should be written or revised so that these issues are not confused with proper palliative care decisions and treatment.

EDUCATION ISSUES

Position 7

Physicians, as well as other health care professionals, at all levels of training should receive concrete, insightful, and culturally sensitive instruction in the optimal care of dying patients.

Rationale

Medical students and physicians in training in the United States today rarely receive specific and in-depth instruction on the care of dying patients. This instruction should address attitudes toward and reactions to death and care of the dying, symptom management (especially pain control and adequate use of narcotic analgesics), and communication skills. The importance of knowledge about the care of dying patients should be reinforced by evaluating it on board exams and other specialty certification exams.

Position 8

The public, including our patients and our colleagues, needs to be educated regarding the availability of pallia-

tive care as an important and desirable option for dying patients.

Rationale

It is the position of AGS that this kind of educational effort would benefit many by dispelling the notion that the only options available to dying patients are continued futile therapy in a medical setting or turning to assisted suicide or euthanasia (see related AGS position statement).

RESEARCH ISSUES

Position 9

Adequate funding for research on the optimal care of dying patients should be provided.

Rationale

Much of the information base needed to inform patients and physicians regarding optimal care of dying patients does not yet exist. Studies documenting the outcomes of various types of care plans, medications, and treatment settings, especially ones focused on the experience of the dying patient, should take place. Although traditional biomedical research on symptom relief is needed, much of what is already known about symptom relief is not implemented effectively because of professional ethical concerns about aggressive symptom management and institutional barriers to the provision of palliative care. Research on these matters, including educational approaches and interventions to promote palliative care, is needed.

QUESTIONS PRESENTED

(1) Is there a Fourteenth Amendment substantive due process right to obtain a physician's assistance in committing suicide?

(2) Are patients who refuse or withdraw consent to life-sustaining treatment similarly situated to patients who request that a physician prescribe or administer a lethal dose of medication?

(3) Does the state have a sufficiently important interest in prohibiting the consensual killing of patients by physicians to outweigh any purported right to assistance in suicide?

BRIEF OF THE CATHOLIC HEALTH ASSOCIATION OF THE UNITED STATES AS *AMICUS CURIAE* IN SUPPORT OF PETITIONERS*

INTEREST OF THE AMICUS CURIAE

The Catholic Health Association of the United States ("CHA") represents over 1200 Catholic sponsored health care facilities and organizations that serve millions of people each year.

Catholic health care organizations understand their mission to be far more than simply the delivery of a social good. "Catholic sponsored health ministry, like the church itself, must not only proclaim the gospel but commit to transform the social order according to gospel norms" of love and justice. National Coalition on Catholic Health Ministry, *Catholic Health Ministry in Transition* 4 (1995). This ministry is rooted in and informed by a deeply held commitment to promote and defend human life and human dignity.

CHA's interest in this case stems from its concern for the need to protect vulnerable persons; to insure appropriate care for dying persons; to preserve the integrity of the health care profession; to strengthen the bonds of community; and also to preserve the integrity of Catholic health ministry.

A body of moral principles developed over centuries informs Catholic teaching on health care matters. These moral principles likewise inform the National Conference of Catholic Bishops' *Ethical and Religious Directives for Catholic Health Care Services* (1995) ("*Directives*"), which provide guidance to Catholic health professionals on a range of economic, technological, social and moral challenges. For instance, Catholic health care is required to support patients

* Consents to the filing of this brief have been lodged with the clerk.

and their families who must face the reality of death. *Directives* at 21.

Furthermore, the *Directives* guide Catholic health ministry in its advocacy efforts:

> In accord with its mission, Catholic health care should distinguish itself by service to and advocacy for those people whose social condition puts them at the margins of our society and makes them particularly vulnerable to discrimination: * * * the elderly; [and] those with incurable diseases * * *. In particular, the person with mental or physical disabilities, regardless of the cause or severity, must be treated as a unique person of incomparable worth, with the same right to life and to adequate health care as all other persons.

Id. at 7.

Assisted suicide offends the most basic moral precepts of our culture and, in particular, poses a grave danger to those "at the margins of our society." In fulfilment of its mission, the *amicus* urges this Court to reverse the Courts of Appeals.

SUMMARY OF ARGUMENT

The Ninth Circuit partial *en banc* opinion in *Compassion in Dying v. Washington* (Wash. Pet. App. A-1 to A-117), positing a substantive due process right to physician-assisted suicide, is based on two fundamental misconceptions: first, that this Court's abortion jurisprudence stands for the proposition that any "private" or "intimate" decision by a citizen is entitled to protection under the Due Process Clause; and second, that an instruction to a physician to withdraw life-sustaining treatment, which this Court assumed to merit constitutional protection in *Cruzan v. Director, Missouri Dep't of Health*, 497 U.S. 261 (1990), is equivalent to a request for a physician's assistance in suicide.

The Second Circuit's opinion in *Quill v. Vacco* (N.Y. Pet. App. 1a-62a), likewise erroneously equates a person's

negative right to refuse unwanted treatment with a positive right to be assisted in suicide, holding that New York's permission of the former and prohibition of the latter violates the Equal Protection Clause. The court could see no rational basis for making such a distinction.

Nothing in the Constitution or this Court's jurisprudence entitles citizens to request that a physician prescribe or administer the means to kill. The States of Washington and New York have the duty to protect the lives of their citizens from the consequences of legalized assisted suicide. Similarly, these states have the obligation to protect the fiduciary relationship between doctor and patient, upon which the integrity of the medical profession depends. Once health care professionals are permitted to "assist" people in killing themselves, our society's rationally constructed bright line prohibiting private killing will be obliterated.

ARGUMENT

The courts below seek to create a new constitutional right to assisted suicide based primarily on their fallacious equating of assisted suicide with the withdrawal of treatment. This fundamental error is at odds with our legal and cultural tradition.

As a starting point, we look to the example of Joseph Cardinal Bernardin, Archbishop of Chicago, who announced in October 1996 that he had decided not to continue chemotherapy for his cancer. S. Kloehn, "Bernardin Ends Cancer Care/Chemotherapy Hasn't Reduced Tumor Size," Chi. Trib., Oct. 18, 1996, at 1. In his letter to this Court, Cardinal Bernardin states, "I know from my own experience that patients often face difficult and deeply personal decisions about their care. However, I also know that even a person who decides to forgo treatment does not necessarily choose death. Rather, he chooses life without the burden of disproportionate medical intervention." App., *infra*, 1a. Where life-sustaining interventions are deemed ineffective or

disproportionately burdensome, even in the case of a person on a ventilator, the intervention may be removed. Whether deciding to discontinue chemotherapy or to remove a ventilator, the absence of an intent to kill distinguishes these acts from one in which a person intends to take his own life. Such an act is suicide. Facilitating such an act is assisted suicide.

I. THE DUE PROCESS CLAUSE DOES NOT GUARANTEE A RIGHT TO OBTAIN A PHYSICIAN'S ASSISTANCE IN COMMITTING SUICIDE.

In a sweeping act of positive lawmaking, the Ninth Circuit attempts to create a new substantive due process right to assisted suicide. This Court should not endorse such a dramatic departure from its precedent and from the Nation's legal and moral traditions.

A. The Washington Statute Bans Homicide, Not "Hastening One's Death."

Suicide is "[t]he act of killing oneself intentionally." *Webster's II: New Riverside Dictionary* (1984). Catholic teaching has consistently recognized the difference between killing oneself (suicide) and withholding or withdrawing disproportionate means to sustain life.[1]

However, the Ninth Circuit asks not whether there is a right to be assisted in "killing oneself intentionally," but whether there is a liberty interest in "determining the time and manner of" or "hastening one's death." Wash. Pet. App. A-29. The court's oblique declaration of the constitutional "right" it creates allows it to sweep into the discussion "a whole range of acts that are generally not considered to

[1] "Disproportionate means are those that in the patient's judgment do not offer a reasonable hope of benefit or entail an excessive burden * * *." *Directives* at 22-23.

constitute 'suicide[]' [including] * * * the act of refusing or terminating unwanted medical treatment." *Id.* Indeed, in a total subversion of the English language, the court states that it has "serious doubts that the terms 'suicide' and 'assisted suicide' are appropriate legal descriptions of the specific conduct at issue here." *Id.*

The court's use of words is more than mere semantics. The newly proposed right is quite broad. There is no coherent way to limit a purported right to "assisted suicide" to terminally ill people or to competent people who can communicate. Once the Court affords terminally ill citizens the "right" to have a physician assist them in suicide, it will have to afford such a right at least to all competent adults for, according to the Ninth Circuit, the right is grounded not in the terminal illness, but in the right to determine the time and manner of one's death. Moreover, there is nothing to limit this right to patient-administered medication; the lower courts' reasoning would appear to apply just as readily to those seeking euthanasia (*i.e.*, physician-administered lethal medication). Of course, the Ninth Circuit dismisses this fundamental concern, "consider[ing] it less important who administers the medication than who determines whether the terminally ill person's life shall end." Wash. Pet. App. A-100 to A-101.

Once all competent adults have such a right, the right would have to be extended to incompetent adults, for incompetent persons do not lose their constitutional freedoms simply due to their incompetence. *See* Wash. Pet. App. A-159 (Beezer, J., dissenting). The only issue would be whether and how a surrogate can act for an incompetent person. *E.g.*, *Cruzan*, *supra*. Once incompetent people have the right to assisted suicide (whether or not they are terminally ill), advocates for mature or emancipated minors, and for the legal representatives of minors would urge the extension of the right to them as well. *Cf. Planned Parenthood v. Casey*, 505 U.S. 833, 970-71 (1992); *City of Akron*

v. Akron Center for Reproductive Health, 462 U.S. 416 (1983); *Bellotti v. Baird*, 443 U.S. 622 (1979).

In addition, once this Court recognizes a Substantive Due Process right of physician-assisted suicide, even for healthy adults, it will face the compelling argument of those who do not need a physician's help to commit suicide, but only wish the help of a friend or trusted family member. The purported right to assisted suicide is based on the belief that the law may not prevent a person from ending his own life, and thus that a state may not interfere with the efforts of those who would assist in such an endeavor. There is no implicit limitation in such a right to the assistance of physicians; in theory, a person entitled to "hasten their death" should be able to accept the help of anyone. At this point, assisted suicide is no longer a clinical event occurring in a health care setting; it is nothing more than state-sanctioned killing by private agreement.

B. The Court Should Not Create A New "Right" To Assisted Suicide That Lacks Any Basis In The Text Of The Constitution Or The History And Tradition Of Our Nation.

The Ninth Circuit begins (Wash. Pet. App. A-31 to A-32) by dutifully reciting the standard expressed in what it calls this Court's "highly controversial" opinion in *Bowers v. Hardwick*, 478 U.S. 186, 191-92 (1986) (citations omitted):

> Striving to assure itself and the public that announcing rights not readily identifiable in the Constitution's text involves much more than the imposition of the Justices' own choice of values on the States and the Federal Government, the Court has sought to identify the nature of the rights qualifying for heightened judicial protection. In *Palko v. Connecticut*, it was said that this category includes those fundamental liberties that are "implicit in the concept of ordered liberty," such that "neither liberty nor justice would exist if [they] were sacrificed." A different description of fundamental liberties appeared in *Moore v. East Cleveland*, where they are characterized as those liberties that are "deeply rooted in this Nation's history and tradition."

Unfortunately, the Court of Appeals ignores this standard, all but disregarding the long history and tradition in this country of prohibiting consensual killing. Indeed, the court proceeds to survey "current societal attitudes," citing polls showing public support for "the prerogative [of patients] to accelerate their death by refusing or terminating treatment" and for assisted suicide and euthanasia. Wash. Pet. App. A-48. Relying on its understanding of "our unwritten history" and its own knowledge, the court concludes that suicide and assisted suicide are actually accepted practices in society, justifying enshrining them in the pantheon of constitutionally protected activities which may not be proscribed by legislation. *See id.* at A-51 to A-52.

An accurate reading of the American legal tradition reveals something much different. It demonstrates a consistency between our society's historical rejection of assisted suicide and Catholic teaching. Moreover, Church teaching has been influential in shaping the societal views and practices which inform this Court's due process analysis.[2]

From the earliest times, the Church has condemned

---

[2] Catholic teaching has historically been a major force in the development of Western thought. R.J. Araujo, "Thomas Aquinas: Prudence, Justice, and the Law," 40 Loy. L. Rev. 897, 913-915, 921 (1995); G. N. Herlitz, "The Meaning of the Term 'Prima Facie,'" 55 La. L. Rev. 391, 391 n.5 (1994). On end-of-life issues, courts have referred freely to historical Catholic teachings in their examination of this society's moral traditions. *E.g.*, Wash. Pet. App. A-131 to A-134 (Beezer, J., dissenting); *In re Quinlan*, 355 A.2d 647, 659-60 (N.J.), *cert. denied* 429 U.S. 922 (1976).

suicide.[3] Two figures in the Church's history stand out in this regard. St. Augustine of Hippo (354-430) articulated the principles on which Christianity condemned suicide by arguing that the prohibition against killing applies to all persons, including oneself. St. Augustine, *City of God*, Book I, ch 20. Building upon that foundation, St. Thomas Aquinas (c.1225-1273) further explained the reasoning behind the prohibition, arguing that suicide is contrary to the natural inclination that persons love themselves, that suicide injures the community, and that God alone has the power over life and death. St. Thomas Aquinas, *Summa Theologica II-II*, Q. 64, art. 5. Significantly, Aquinas also argued that suicide is an offense because it is an act of injustice against the community.

In this century, the Second Vatican Council reiterated the Church's powerful opposition to suicide:

> The varieties of crime [against the human person] are numerous: all offenses against life itself, such as murder, genocide, abortion, euthanasia and wilful *suicide* * * * all these and the like are criminal: they poison civilization; and they debase the perpetrators more than the victims and militate against the honor of the creator.

"Pastoral Constitution on the Church in the Modern World" (*Gaudium et spes*), *Vatican Council II*, at 926 (A. Flannery, ed. 1992) (emphasis added).

More recently, the Vatican reiterated the Church's opposition to suicide:

> Intentionally causing one's own death, or suicide, is therefore equally as wrong as murder; such an action on

[3] *E.g.*, the Council of Arles (452), the Council of Braga (563), the Antisidor Council (590) and the Synod of Nimes (1274). T. Marzen, M. O'Dowd, D. Crone & T. Balch, "Suicide: A Constitutional Right?" 24 Duquesne L. Rev. 1, 57, 60 (1985).

> the part of a person is to be considered as a rejection of God's sovereignty and loving plan.

Sacred Congregation for the Doctrine of the Faith, *Declaration on Euthanasia* 7 (1980). *See also Directives* at 21 ("Suicide and euthanasia are never morally acceptable options").

Most recently, the *Catechism of the Catholic Church* emphasizes the broad social consequences of killing oneself. Suicide "offends love of neighbor because it unjustly breaks the ties of solidarity with family, nation, and other human societies to which we continue to have obligations." United States Catholic Conference, *Catechism of the Catholic Church* § 2281, at 550 (1994). In sum, the Catholic tradition's aversion to suicide is so strong that the American Bishops insist that those associated with the Catholic health care ministry neither condone nor participate in assisted suicide. *Directives* at 23.

Our own legal tradition has also consistently condemned suicide, and thus assisted suicide. Henry de Bracton's 1220 treatise and Sir Edward Coke's 1644 treatise, *Third Institute of the Law of England,* identified the common law crime of suicide and its severe property penalties. *See* T. Marzen, M. O'Dowd, D. Crone & T. Balch, Suicide: A Constitutional Right?" 24 Duquesne L. Rev. 1, 57, 60 (1985). In *Hales v. Petit*, 75 Eng. Rep. 387 (1561-62), the English Court applied sanctions against suicide. In the United States, *Massachusetts Commonwealth v. Bowen*, 13 Mass. 356 (1816), illustrates the early American common law prohibition against assisted suicide. The fact that states later abolished criminal penalties for unilateral suicide does not reflect societal approval of these acts. "These changes occurred, rather, because punishment was seen as unfair to innocent relatives of the suicide and because those who committed or who attempted to commit the act were thought to be prompted by mental illness." Y. Kamisar, "Are Laws Against Assisted Suicide Unconstitutional?" 23 *Hastings*

Center Report 32, 41 (1993). Indeed, the common law, and in many instances state statutes, prohibited suicide and assisted suicide both at the time of the Revolution and at the time the Fourteenth Amendment was ratified. *See* Wash. Pet. App. A-44 to A-46; *Cruzan*, 497 U.S. at 294 (Scalia, J., concurring), citing Marzen, *et al., supra.* In fact, notwithstanding the Ninth Circuit's research into popular opinion, all but one state today prohibits assisted suicide. *See* Wash. Pet. App. A-48 to A-49.

Because our moral tradition and our law has so uniformly condemned these practices, it is simply inaccurate to say that the right to assist in committing a suicide is a "liberty" that is "deeply rooted in this Nation's history and tradition," or that is "implicit in the concept of ordered liberty." Indeed, it is our proud history to have prohibited such dangerous conduct.

C. This Court's Decisions In *Casey* And *Cruzan* Do Not Protect Consensual Killing Or Assisted Suicide.

The Ninth Circuit relies on *Casey* and *Cruzan* for the unsupportable proposition that there is a liberty interest in "hastening death" which the state may not burden. Neither *Casey* nor *Cruzan*, however, can support the creation of this expansive right. Although in both cases this Court applied a balancing test to state restrictions on actual or assumed liberty interests (the same test the Ninth Circuit purports to apply), the finding of liberty interests in *Casey* and *Cruzan* was itself subject to the larger principles enunciated in *Bowers* and prior cases.

1. *Casey*

According to the Ninth Circuit, *Planned Parenthood v. Casey* requires the conclusion that there is a liberty interest in assisted suicide because "the decision how and when to die is one of 'the most intimate and personal choices a person may make in a lifetime,' a choice 'central to personal dignity

and autonomy.'" Wash. Pet. App. A-57 (quoting *Casey*).

The language in *Casey* about highly personal and intimate decisions cannot be taken out of context to support the awesome breadth of the Ninth Circuit's pronouncement.[4] The Court did not say that *any* intimate decision of importance to the individual ought to be treated as a liberty interest. Many such decisions not only lack constitutional protection, but are in fact proscribed by law:

> Those adjectives might be applied, for example, to homosexual sodomy, polygamy, adult incest, *and suicide*, all of which are equally 'intimate' and 'deep[ly] personal' decisions involving 'personal autonomy and bodily integrity,' and all of which can constitutionally be proscribed because it is our unquestionable constitutional tradition that they are proscribable.

Casey, 505 U.S. at 984 (Scalia, J.) (emphasis added). Suicide—and *a fortiori*, assisted suicide—have long been proscribed, and are not entitled to constitutional protection regardless of their "intimate" or "personal" nature. *Cf.* Bernardin, infra, 1a-2a (assisted suicide not merely a personal matter because it harms society).

---

[4] The Court's decision in *Casey* was heavily influenced by the doctrine of stare decisis, leading certain members of the Court to recognize a liberty interest in having an abortion in deference to *Roe v. Wade*, 410 U.S. 113 (1973), even if they might not have done so in the first instance. 505 U.S. at 853. Thus, the Court set the case apart: "Abortion is a unique act * * *. [T]he liberty of the woman is at stake in a sense unique to the human condition and so unique to the law." *Id.* "[O]ne could classify *Roe [v. Wade]* as *sui generis*." *Id.* at 857 (plurality). *Accord id.* at 952 (Rehnquist, C.J., concurring and dissenting). Indeed, "because *Roe*'s scope is confined by the fact of its concern with postconception *potential* life, * * * any error in *Roe* is unlikely to have serious ramifications in future cases." *Id.* at 859 (emphasis added). The abortion precedents are simply not applicable in other contexts, and cannot provide a basis for extending "privacy" or "liberty" to assisted suicide.

2. *Cruzan*

The Ninth Circuit next cites this Court's decision in *Cruzan* to support its creation of a constitutional right to "hasten death." Wash. Pet. App. A-62. In *Cruzan*, the Court assumed that a patient would have the right to refuse or terminate life-sustaining medical treatment, but held that the state had the right to insist on strict safeguards in cases involving incompetent persons. Accordingly, the Court upheld Missouri's "clear and convincing" standard for proof of an incompetent individual's wishes. 497 U.S. at 284.

Cruzan did not recognize any generalized "right to die," let alone a right to assisted suicide. On the contrary, the Court explicitly noted with approval the fact that assisted suicide was *illegal* under state law:

> States—indeed, all civilized nations—demonstrate their commitment to life by treating homicide as a serious crime. Moreover, *the majority of States in this country have laws imposing criminal penalties on one who assists another to commit suicide*.

497 U.S. at 280 (emphasis added).

Despite this clear language and the expressly narrow grounds of this Court's decision, the Ninth Circuit used *Cruzan* as a springboard to an expansive "right" heretofore unknown to the law:

> *Cruzan*, by recognizing a liberty interest that includes the refusal of artificial provision of life-sustaining food and water, *necessarily* recognizes a liberty interest in hastening one's own death.

Wash. Pet. App. A-62 (emphasis added). To appreciate the magnitude of the lower court's illogical leap from the actual *Cruzan* holding, the Court need look no further than at how the *Cruzan* Court reached its decision.

The Court began with a discussion of the doctrine of

informed consent at common law. 497 U.S. at 269 ("[the] notion of bodily integrity has been embodied in the requirement that informed consent is generally required for medical treatment"). As the Court noted, "[t]he logical corollary of the doctrine of informed consent is that the patient generally possesses the right not to consent, that is, to refuse treatment." *Id.* at 270. *See also id.* at 277 ("As these [state law] cases demonstrate, the common-law doctrine of informed consent is viewed as generally encompassing the right of a competent individual to refuse medical treatment"). This was not anything so broad as a right to "privacy,"[5] but rather the right to be free of compelled surgical intrusions. *E.g.*, *Cruzan*, 497 U.S. at 287-289 (O'Connor, J., concurring):

> Requiring a competent adult to endure [forced medical treatment] against her will burdens the patient's liberty, dignity, and freedom to determine the course of her own treatment. Accordingly, the liberty guaranteed by the Due Process Clause must protect, if it protects anything, an individual's deeply personal decision to reject medical treatment, including the artificial delivery of food and water.

The right assumed to exist in *Cruzan* is thus firmly rooted in the jurisprudence of battery, not some inchoate right to control human destiny in all respects. *Cruzan* does not govern this case.

---

[5] *E.g.*, *Cruzan*, 497 U.S. at 279 n.7:
Although many state courts have held that a right to refuse treatment is encompassed by a generalized constitutional, right of privacy, we have never so held. We believe this issue is more properly analyzed in terms of a Fourteenth Amendment liberty interest. See *Bowers v. Hardwick*, 478 U.S. 186, 194-195 (1986).

II. THE EQUAL PROTECTION CLAUSE DOES NOT GUARANTEE THE RIGHT TO ASSISTANCE IN SUICIDE.

As the Second Circuit observes, the Equal Protection Clause "simply requires the states to treat in a similar manner all individuals who are similarly situated." N.Y. Pet. App. 20a. "The general rule, then, is that state legislation carries a presumption of validity if the statutory classification is 'rationally related to a legitimate state interest.'" *Id.* at 21a, quoting *City of Cleburne v. Cleburne Living Ctr., Inc.*, 473 U.S. 432, 440 (1985).

The Second Circuit struck New York's statutes criminalizing assisted suicide under the Equal Protection Clause on the ground that:

> New York law does not treat equally all competent persons who are in the final stages of fatal illness and wish to hasten their deaths [and] the distinctions made by New York law with regard to such persons do not further any legitimate state purpose.

N.Y. Pet. App. 24a. The court acknowledged that the statute fell "within the category of social welfare legislation and [was] therefore subject to rational basis scrutiny upon judicial review" but could see no "legitimate state purpose" to distinguish between persons who withhold or withdraw their consent for life-sustaining treatment and persons who wish to have physicians assist them in killing themselves. *Id.* at 24a-25a.

A. The Law Regarding Assisted Suicide And Discontinuation Of Treatment Applies Equally To All.

The Second Circuit errs in subjecting New York's legislation to judicial review because New York does not discriminate between "similarly situated" individuals at all. In New York, as almost everywhere, a patient has the right to refuse or discontinue unwanted medical treatment. *See*

N.Y. Pub. Health Law § 2892. As noted in Section I, *supra*, this right derives from the doctrine of informed consent, and is grounded in the Constitution's protection of bodily integrity. *See Cruzan*, 497 U.S. at 277. Arguably, a physician who does not respect this right is guilty of at least a civil battery. *Id.* at 269.

On the other hand, in New York, as almost everywhere, it is illegal to aid or abet a suicide, or to kill another person, even where the individuals involved are a physician and a patient. N.Y. Penal Law §§ 125.15(3), 120.30. *See also Cruzan*, 497 U.S. at 290-291 nn.2-4 (O'Connor, J., concurring) (collecting various state laws). The Court of Appeals equates revocation of consent to life-sustaining treatment and assisted suicide because they both result in the death of the patient. *See Cruzan*, 497 U.S. at 280. "But constitutional law does not work that way." *Cruzan*, 497 U.S. at 286.[6]

For one thing, patients in each example seek to employ vastly different means to their respective ends, and it is those means which New York treats differently. As did the Ninth Circuit, the Second Circuit ignores this, adopting instead the imprecise and misleading descriptor that both patients are "hastening their deaths." N.Y. Pet. App. 29a-30a. One can equate virtually any two situations by defining the terms broadly enough, but that is not the purpose of the Equal Protection Clause. *E.g.*, *Kelley v. Johnson*, 425 U.S. 238 (1976) (right of bodily autonomy does not include right to control personal appearance at the workplace).

---

[6] The assertion that different courses of conduct are equivalent simply because they cause the same result is absurd. Accidents, self defense and murder all cause deaths. Abortion and feticide both kill fetuses. Illegal drugs and alcohol both cause intoxication. The law treats all of these matters differently because they all involve different conduct. Of course, the source of the Ninth Circuit's confusion is that it improperly identifies the effect (*i.e.*, causing death) as the right assumed in *Cruzan* instead of the means (*i.e.*, withdrawal of life-sustaining treatment). *Cf.* Bernardin, App., *infra*, 1a-2a.

Indeed, New York's ban on assisted suicide is a neutral, generally applicable body of law that proscribes conduct; it does not apply unequally to different classes of people. New York does not purport to prohibit "hastening one's own death." New York prohibits aiding and abetting a suicide.

It is true that under New York's scheme some people end up with more control over the precise timing of their deaths than others, but that is not the fault of the law. It is simply due to the biological fact that certain people will die without medical intervention while others will not. The important point for Equal Protection purposes, however, is that both classes of people have precisely the same legal rights and are subject to precisely the same legal prohibitions: the right to refuse or withdraw treatment (regardless of the expected outcome), and the prohibition against aiding and abetting suicide. The fact that results arising from the exercise of the right and from the impact of the prohibition vary with the individual is not only permissible, it is to be expected in any society made up of unique individuals. *Plyler v. Doe*, 457 U.S. 202, 216 (1982) (Equal Protection Clause does not guarantee identical outcomes, just equal treatment under law).

B. Assisted Suicide Is Morally Distinguishable From Forgoing Life-Sustaining Treatment And Pain Management, Both Of Which May Hasten Death.

1. Discontinuation of Treatment and Hastening Death.

In Catholic teaching, assisted suicide is nothing less than killing. The dignity of the human person is not promoted through acts which destroy life. There is thus an important distinction between suicide and the choice to forgo disproportionate life-sustaining treatment.

Cardinal Bernardin is "at the end of [his] earthly life." App., *infra*, 1a. His decision to discontinue chemotherapy will probably hasten his death. Similarly, a decision to forgo

disproportionate life-sustaining treatment (though the person may die) does not necessarily entail an intention to kill. Both decisions are consistent with Church teaching on due proportion in the use of remedies. Sacred Congregation for the Doctrine of the Faith, *Declaration on Euthanasia* 11-12 (1980). As noted in the *Directives* (at 21):

> We have a duty to preserve our life and to use it for the glory of God, but the duty to preserve life is not absolute, for we may reject life-prolonging procedures that are insufficiently beneficial or excessively burdensome.

2. Pain Management And Hastening Death.

In the course of treatment, patients often require increasing doses of medications like morphine to control their pain. In seeking to control pain, the prescribing physician runs the risk of depressing respiration, and thus while trying to manage pain, hastening death. A. Hardie, "Morphine Drip has Little Opposition," *Atlanta Const.*, Mar. 8, 1995, at C3; L. Lamberg, "Treating Depression in Medical Conditions May Improve Quality of Life," 276 JAMA 857 (1996). In such circumstances, there is no intention to kill the patient. Death is not the object of the act. Nor is "hastening death" the *means* used to relieve pain, even though death may be forseen.

The practice of prescribing effective pain relief that may, at the same time, hasten death as a forseen yet unintended consequence is supported by both the medical profession and Catholic teaching:

> Medications capable of alleviating or suppressing pain may be given to a dying person, even if this therapy may indirectly shorten the person's life so long as the intent is not to hasten death.

Directives at 23; *cf. Declaration on Euthanasia*, *supra*, at 7-9; Pius XII, *Address* of 24 February 1957: *Acta Apostolicae Sedis* 49, at 147. *See also* Kathleen M. Foley,

"Pain, Physician-assisted Suicide, and Euthanasia," 4 *Pain Forum* 163, 164 (1995).

This analysis is consistent with the principle of double effect, Thomas O'Donnell, *Medicine and Christian Morality* 29 (1976), as understood in both the Catholic moral tradition and the medical profession. *E.g.*, D. Gianelli, "Assisted Suicide or Pain Relief?" *Am. Med. News*, July 1, 1996, at 3; D. Wintersheimer, "The Role of Courts in Terminating Nutrition and Hydration for Incompetent Patients," 10 *Issues in L. & Med.* 453, 457 (1995). Moreover, it points out the fallacious reasoning of the Ninth Circuit, which concedes its lack of appreciation for the concept:

> More specifically, we see little, if any, difference for constitutional or ethical purposes between providing medication with a double effect and providing medication with a single effect, as long as one of the known effects in each case is to hasten the end of the patient's life. Similarly, we see no ethical or constitutionally cognizable difference between a doctor's pulling the plug on a respirator and his prescribing drugs which will permit a terminally ill patient to end his own life. * * * To us, what matters most is that the death of the patient is the intended result as surely in one case as in the other.

Wash. Pet. App. A-82.

Of course, in the case of palliative care and forgoing disproportionate life-sustaining treatment "the intended result" is *not* death, but the alleviation of pain or burden. The fact that killing and withdrawal of treatment might both "hasten death" does not render them morally equivalent.

Accordingly, those who forgo life-sustaining medical interventions and those who seek a fatal dose of medication from a physician are not "similarly situated." Physicians respecting the right of a patient to refuse life-sustaining treatment are not similarly situated to physicians who comply with a patient's request for the means to accomplish a fatal

drug overdose. Statutory schemes permitting the former and prohibiting the latter simply reflect society's respect for bodily integrity and its condemnation of homicide. As such, they are not subject to judicial review under the Equal Protection Clause.

III. THE GOVERNMENT HAS A PARAMOUNT INTEREST IN PREVENTING THE KILLING OF HUMAN BEINGS THAT (1) OUTWEIGHS ANY PURPORTED LIBERTY INTEREST IN RECEIVING AID FROM A PHYSICIAN TO KILL ONESELF, AND (2) JUSTIFIES TREATING ASSISTED SUICIDE DIFFERENTLY FROM THE WITHDRAWAL OF LIFE-SUSTAINING TREATMENT.

Even if the Court were to find that there is a liberty interest in "hastening one's death" by assisted suicide, or that those seeking to "hasten death" by forgoing life-sustaining treatment and by assisted suicide are "similarly situated," the government may still prohibit assisted suicide if it can demonstrate a sufficient interest in doing so. For Equal Protection purposes, the state need only show a rational basis for the legislation. N.Y. Pet. App. 21a. For Due Process purposes, a balancing test may be employed. *E.g.*, Wash. Pet. App. A-22. In either case, the Washington and New York statutes should be upheld because those states have a compelling interest in prohibiting assisted suicide, sufficient to outweigh any purported liberty interest in private consensual killing, and sufficient to justify distinguishing between revocation of consent to life-sustaining treatment and receiving physician assistance in killing oneself.

A. Preserving Life.

The Ninth Circuit accurately describes the state's unqualified interest in preserving life:

> [T]he State may assert an unqualified interest in preserving life in general. As the Court said in *Cruzan*,

> "we think a State may properly decline to make judgments about the 'quality' of life that a particular individual may enjoy, and simply assert an unqualified interest in the preservation of human life * * *." *Cruzan*, 497 U.S. at 282. Thus the state may assert its interest in preserving life in all cases, including those of terminally ill, competent adults who wish to hasten their deaths.

Wash. Pet. App. A-65. Unfortunately, the court then ignores its own observation, concluding that Washington does *not* have an interest in preserving life simply because, like most states, it permits patients to refuse or revoke consent for life-sustaining medical treatment. *Id.* The Second Circuit employs essentially the same argument. *See* N.Y. Pet. App. 32a.

This approach is flawed in two ways. First, it simply begs the question of whether forgoing life-sustaining treatment can be equated with aiding a person in committing suicide. As demonstrated above, it cannot. Washington and New York do not value life any less simply because their citizens have the right to be free from non-consensual touchings. *See* RCW 70.122.010 (basing right to withdraw treatment on the right to individual autonomy); N.Y. Pub. Health Law § 2892 (codifying state common law to same effect).

Second, after paying lip service to the principle that "'a state may properly decline to make judgments about the "quality of life" that a particular individual may enjoy,'" the Ninth Circuit employs the most dangerous form of utilitarian reasoning, unjustifiably devaluing the lives of terminally ill persons: "When patients are no longer able to pursue liberty or happiness and do not wish to pursue life, the state's interest in forcing them to remain alive is clearly less compelling." Wash. Pet. App. A-72. The Second Circuit is even more blunt (N.Y. Pet. App. 31a) (emphasis added):

> [W]hat interest can the state possibly have in requiring the prolongation of a life that is all but ended? Surely, the state's interest lessens as the potential for life diminishes * * *. What concern prompts the state to interfere with a mentally competent patient's "right to define [his] own concept of existence, of meaning, of the universe, and of the mystery of human life" * * *? The greatly reduced interest of the state in preserving life compels the answer to these questions: *"None."*

Both courts below have fallen into the same conceptual trap. They have looked to language in *Casey* and in this Court's other abortion cases which weigh against the rights of the woman, the variable state interest in protecting the life of a fetus, a state interest which this Court has found to vary with the fetus' increasing "potentiality" for life. *See Casey*, 505 U.S. at 869-73.[7] These precedents are totally inapposite, notwithstanding the fact that they do accord "potential life" at least some weight in the balance. *See Casey*, 505 U.S. at 871 (abortion may be restricted after viability).

In the case of assisted suicide, the value of life is not subject to a sliding scale. There is no disputing the status of terminally ill persons: they are persons at all times and for all constitutional purposes, and their lives have as much value and meaning as the life of any other person. *See Lee v. Oregon*, 891 F. Supp. 1429 (D. Or. 1995) (striking statute permitting physician assisted suicide by terminally ill persons because it denied them equal protection of the law). Thus, Washington and New York each have a paramount interest

---

[7] Of course, this Court's entire abortion discussion proceeds from the assumption that the fetus is something less than a "person" recognized at law. *See Casey*, 505 U.S. at 982 (Scalia, J., concurring and dissenting). The CHA does not agree with the Court's conclusion, nor with its approach to statutes restricting or prohibiting abortion, but the Court's devaluation of the life of the fetus in abortion cases is still distinguishable from this case, involving other living persons.

in preserving life, and in ensuring equal protection of the law for all lives, including the lives of those who are terminally ill.

B. Preventing Suicide.

Washington and New York have decided that suicide is so dangerous to their citizens and to the social order that it ought to be a crime to aid or abet a person attempting to kill themselves. As shown above, these states are not alone, for suicide and assisted suicide have traditionally been prohibited. *See* Wash. Pet. App. A-39 to A-47; N.Y. Pet. App. 18a-19a; Section I.B, *supra*. Indeed, under most states' laws, those contemplating suicide are *per se* subject to involuntary commitment, and citizens have a privilege to interfere with anyone attempting to commit suicide. *Cruzan*, 497 U.S. at 298 (Scalia, J., concurring).

Neither Court of Appeals disputes the state's legitimate interest in preventing suicide. Instead, both courts apply the same flawed reasoning to this interest as they do to the state's interest in preserving life. In both cases, the courts below devalue the lives of terminally ill persons simply because they express a wish to die and are going to die anyway. However, the state's interest in preventing suicide does not diminish simply because a suicidal person "wants" to die.[8]

C. Protecting The Integrity Of The Medical Profession, Especially In A Managed Care Environment.

The state also has an important interest in protecting the integrity of the medical profession or, as Judge Noonan put it, denying to physicians "the role of killers of their

---

[8] Of course, everyone who attempts suicide *claims* to "want" to die. However, as the Ninth Circuit admits, "[s]tudies show that many suicides are committed by people who are suffering from treatable mental disorders." Wash. Pet. App. A-73.

patients." *See Compassion in Dying v. Washington*, 49 F.3d 586, 593 (9th Cir. 1995), *vacated*, 79 F.3d 790 (9th Cir. 1996)(*en banc*). *See also* Edmund D. Pellegrino & David C. Thomasma, *For the Patient's Good* 205-206 (1988); Edmund D. Pellegrino & David C. Thomasma, *A Philosophical Basis of Medical Practice* (1981). The courts below dismiss this by simply assuming that states will adopt safeguards to protect patients, but the states' power to adopt safeguards does not lessen their interest in the first instance in seeking the most effective way to guard against the perversion of the role of a physician. Similarly, a health care environment dominated by managed care might create economic incentives which the state must properly offset through criminal legislation.

In response to the dramatic rise in health care expenditures, cost-conscious insurers have increasingly adopted principles of managed care. AMA, Council on Ethical & Judicial Affairs, "Ethical Issues in Managed Care," 273 JAMA 330 (1995). Managed care plans' techniques to control provider costs include fixed per-patient payments, restricted treatment options and financial incentives to promote efficient care. *Id.* The most tightly managed plans pay fixed sums for enrolling a patient. The amount of the provider's payment, therefore, is not dependent on whether services are rendered to the patient.

Managed care can serve many legitimate health policy purposes. Yet, managed care requirements can place physicians and other providers in situations rife with difficult ethical concerns. The needs of patients can conflict with the financial interests of providers. *Id.* at 331. In managed care settings, providers often accept some financial risk in the treatment of their patients. This risk may be substantial when treating terminally ill patients who often require expensive treatment. In addition, the economic incentives of managed care can be structured so as to inappropriately reward minimum treatment and the shortest possible hospital

stays. *Cf.*, Newborns' and Mothers' Health Protection Act of 1996, P.L. 104-204, 1996 HR 3666, 110 Stat. 2874, 2935 (Sept. 26, 1996) (requiring health plans offering childbirth benefits to provide minimum inpatient coverage for at least 49 hours following vaginal deliveries and 96 hours following cesarean sections). Health care providers feel these economic pressures. Porter Storey, M.D., medical director of the Texas Medical Center's hospice in Houston has stated "[t]he [financial] incentives in managed care make euthanasia the most cost-effective choice." R. Sorelle, "Fear of Pain," Hous. Chron., Oct. 21, 1996, at 1.

Providing constitutional protection for physician-assisted suicide would provide a new treatment "option" for patients. In order to satisfy the doctrine of informed consent, a physician could be legally obligated to disclose an "option" to physician-assisted suicide to terminally ill patients. *See* Barry R. Furrow, *et al.*, *Health Law* § 6-11(e), at 424 (1995). *See also* Patient Self-Determination Act, 42 U.S.C. §§ 1395cc(f)(1)(A)(i)-(ii), 1396a(w)(1)(A)(i)-(ii) (hospitals must inform patients of state law health care rights). Due to the financial incentives inherent in managed care, the physician could benefit financially from a patient's decision to commit suicide. This development may place a physician in a serious dilemma between the ethical constraint to "do no harm" and the ability to gain financially should the patient choose the now "legitimate" treatment option of physician-assisted suicide.[9] Of course, rather than trusting their providers, patients will then have to question the providers' motivations to discern the most appropriate course of treatment.

Recognizing a right to assisted suicide also raises a host

[9] The physician's hippocratic oath states "[I will] abstain from whatever is deleterious and mischievious. I will give no deadly medicine to anyone if asked, nor suggest any such counsel." AMA, *The Health Care Almanac* 120 (1995).

of difficult questions for health care providers which were dismissed by the lower courts as mere regulatory matters. Wash. Pet. App. A-102 to A-104; N.Y. Pet. App. 34a n.4. What if the physician morally objects to assisted suicide? Must hospitals which institutionally object to assisted suicide (*e.g.*, Catholic hospitals) be required to cooperate in the performance of such a procedure or allow physicians on staff who perform these acts? *Cf.* Directive 60 (App. B). How must payors cover assisted suicide costs? These are not merely hypothetical questions. *E.g.*, *Lee*, 891 F. Supp. 1429.

Recognizing a "right" to physician-assisted suicide will subvert the integrity of the medical profession. States not only have an important interest, but a compelling reason, to protect their citizens from abuses and to protect the integrity of the health care profession.

D. Preventing Abuse.

The state can and should prevent the involvement of third parties in so grave a matter as suicide. Even if suicide itself is not illegal, allowing others to take part in the process will increase the risk of abuse, and expose vulnerable patients to family and financial pressures from which they should be insulated.[10]

The state also has an interest, as it always has when enacting criminal legislation, in avoiding the adverse consequences anticipated from the actions it seeks to prohibit. *E.g.*, *People v. Kevorkian*, 210 Mich. App. 601, 534

[10] The Ninth Circuit acknowledges the risk of these pressures, but appears unconcerned:

> we are reluctant to say that, in a society in which the costs of protracted health care can be so exorbitant, it is improper for competent, terminally ill adults to take the economic welfare of their families and loved ones into consideration [in requesting assistance in committing suicide].

Wash. Pet. App. A-87.

N.W.2d 172, 175 (1995)(Dr. Kevorkian's "actions implicate the criminal law and his words and actions amount to an advertisement for criminal and unethical conduct"), *appeal denied*, 549 N.W.2d 566 (Mich. 1996), *cert. denied*, 65 U.S.L.W. 3287 (U.S. Oct. 15, 1996) (No. 96-135). Here, the state can legitimately point to the fear of abuse, undue influence and the improper killing of people in situations that are not truly voluntary. This has already happened in the Netherlands, where assisted suicide has been virtually legal for 15 years. Unfortunately, the attempt in the Netherlands to afford "compassion" to the dying has devolved into state-sanctioned non-voluntary euthanasia.

Between 1981 and 1991, the Dutch inexorably moved along a continuum from a heavily regulated regimen of physician-assisted suicide for the informed, competent adult to the non-voluntary euthanasia of infants. "Physician-Assisted Suicide and Euthanasia in the Netherlands," *Report to the Constitution Subcommittee of the House Committee on the Judiciary*, 104th Cong., 2d Sess. (1996) ("Constitution Subcommittee Report").

In 1991 the Dutch Attorney General issued the Remmelink Commission Report (*id.* at 12), finding that in 1990 there were:

> 2,300 cases of voluntary euthanasia;
>
> 400 cases of physician-assisted suicide; and
>
> *more than 1,000 cases of non-voluntary euthanasia.*

In order to justify these non-voluntary euthanasia cases, the Commission explained that

> [T]he ultimate justification for the intervention is in both cases the patient's unbearable suffering. So, medically speaking, there is little difference between these situations and euthanasia, because in both cases patients are involved who suffer terribly.

Constitution Subcommittee Report at 13, quoting Ministerie van justitie, Netherlands, *Outlines Report Commission Inquiry into Medical Practice with Regard to Euthanasia* 3 (1990). The Commission also found that 14 percent of the non-voluntary euthanasia cases were performed on patients who were fully competent and 11 percent of the patients were partially competent. *Id.*

The Commission also found that of the 8,100 cases of morphine overdose in 1990, in 36 percent of the cases the physician's single intent or partial intent was that the morphine kill the patient. *Id.* In over 50 percent of the cases, the physicians administered the morphine overdose without the patient's consent. *Id.* Twenty-seven percent of these non-consenting patients were fully competent. *Id.* The Commission also reported on 25,000 cases of withdrawal of life-sustaining treatment *without* the patient's consent. *Id.*

Our society has known from its earliest times that it was dangerous to allow any ambiguity in the rule against killing. The "rights" recognized by the Ninth Circuit and the Second Circuit are no innocuous grants of personal freedom. *Compassion in Dying* and *Quill* strike at the most fundamental ethical tenets of Western culture. Indeed, they are an invitation to murder. As Cardinal Bernardin states, "[t]here can be no such thing as a 'right to assisted suicide' because there can be no legal and moral order which tolerates the killing of innocent human life, even if the agent is self-administered. Creating a new 'right' to assisted suicide will endanger society and send a false signal that a less than 'perfect' life is not worth living." App. A at 2a.

CONCLUSION

The decisions of the United States Courts of Appeals for the Second and the Ninth Circuits should be reversed.

Respectfully submitted.

APPENDIX A

STATEMENT OF JOSEPH CARDINAL BERNARDIN

The Supreme Court
of the United States
Washington, D.C.

Dear Honorable Justices:

I am at the end of my earthly life. There is much that I have contemplated these last few months of my illness, but as one who is dying I have especially come to appreciate the gift of life. I know from my own experience that patients often face difficult and deeply personal decisions about their care. However, I also know that even a person who decides to forgo treatment does not necessarily choose death. Rather, he chooses life without the burden of disproportionate medical intervention.

In this case, the Court faces one of the most important issues of our times. Physician-assisted suicide is decidedly a public matter. It is not simply a decision made between patient and physician. Because life affects every person, it is of primary public concern.

I have often remarked that I admire the writings of the late Father John Courtney Murray, who argued that an issue was related to public policy if it affected the public order of society. And public order, in turn, encompassed three goods: public peace, the essential protection of human rights, and commonly accepted standards of moral behavior in a community.

Our legal and ethical tradition has held consistently that suicide, assisted suicide, and euthanasia are wrong because they involve a direct attack on innocent human life. And it

is a matter of public policy because it involves a violation of a fundamental human good.

There can be no such thing as a "right to assisted suicide" because there can be no legal and moral order which tolerates the killing of innocent human life, even if the agent of death is self-administered. Creating a new "right" to assisted suicide will endanger society and send a false signal that a less than "perfect" life is not worth living.

Physician-assisted suicide also directly affects the physician-patient relationship and, through that, the wider role of physicians in our society. As has been noted by others, it introduces a deep ambiguity into the very definition of medical care, if care comes to involve killing. Beyond the physician, a move to assisted suicide and, perhaps beyond that, to euthanasia creates social ambiguity about the law. In civilized society the law exists to protect life. When it begins to legitimate the taking of life as a policy, one has a right to ask what lies ahead for our life together as a society.

In order to protect patients from abuse, and to protect society from a dangerous erosion in its commitment to preserving human life, I urge the Court not to create any right to assisted suicide.

With cordial good wishes, I am

Sincerely yours,

/s/ Joseph Cardinal Bernardin

Archbishop of Chicago

Chicago, Illinois
November 7, 1996

APPENDIX B

The National Conference of Catholic Bishops has directly dealt with euthanasia and assisted suicide. Directive 60 states:

> Euthanasia is an action or omission that of itself or by intention causes death in order to alleviate suffering. Catholic health care institutions may never condone or participate in euthanasia or assisted suicide in any way. Dying patients who request euthanasia should receive loving care, psychological and spiritual support, and appropriate remedies for pain and other symptoms so that they can live with dignity until the time of natural death.

National Conference of Catholic Bishops, *Ethical and Religious Directives for Catholic Health Care Services* 29 (1995).

INTERESTS OF THE AMICI CURIAE 1

SUMMARY OF ARGUMENT 2

ARGUMENT 4

I. Our Nation Is Founded On The Principle That Fundamental Human Rights, Particularly The Right To Live, Are Unalienable; A Ruling Granting Constitutional Protection To An Interest In Obtaining Physician-Prescribed Drugs To Purposely Cause Death Would Abandon This Principle. 4

II. A Constitutional Rule Permitting Persons To Alienate Their Right To Live Because They Have, Or Are Regarded As Having, A Terminal Condition Lacks A Legitimate, Non-Invidious Basis. ... 10

A. *Considerations Under The Criminal Law: The Definition Of Homicide And The "Last Spark Of Life".* 12

B. *Considerations Under The Constitution: Fourteenth Amendment Exemptions And United States v. Rutherford.* 16

III. A Constitutionally-Mandated Policy Permitting The Selective Alienation Of The Right To Live Based On A Suicide Victim's Life Expectancy Threatens The Welfare And Safety Of Vulnerable Persons And Imperils Ordered Liberty. 17

A. *Unlike Any Other Constitutional Freedom, A "Right" To Alienate One's Right To Live Licenses The Intentional Destruction Of Persons' Lives.* .. 17

B. *A Constitutional Rule Establishing The Freedom To Renounce Society's Protection Of One's Right To Live Would Ratify The Most Extreme Form Of Social And Political Alienation.* 21

INTERESTS OF THE AMICI CURIAE

The National Catholic Office for Persons with Disabilities (NCPD is a non-profit organization established in 1982 to promote the inclusion of ten million Catholics with disabilities and their families into the mainstream of our society and the Catholic Church. It fulfills its mission through offering its expertise and resources to a national network of disability offices as well as to the U.S. Catholic Conference and other national Church-related organizations. A critical aspect of this nation office's mission is to highlight the value of each life and to encourage the creation of environments which allow each individual to fulfill their potential. If a "right" to assisted suicide for the terminally ill is lodged in the Constitution, then the goals and programs NCPD is pursuing in the interest of persons with disabilities will be for nought. NCPD opposes the legal and social devaluation of persons with disabilities, many of whom have or are regarded as having terminal conditions. Such devaluation will surely result from a constitutional rule transforming their fundamental right to life from an unalienable right to a merely alienable interest based solely on life expectancy.

The Knights of Columbus is an international Catholic fraternal organization of 1.5 million members dedicated to advancing the ideals of charity, unity, fraternity, and patriotism through its activities around the world. The Knights of Columbus engages in a broad range of social action programs to protect the family, and it devotes a considerable portion of its resources and volunteer efforts to aiding persons with illnesses and disabilities, as well as the less fortunate. This brief was written with the support of funds provided by the Knights.

The parties have consented to the filing of this brief. Pursuant to the Rules of this Court, letters of consent from the parties have been filed with the Clerk of the Court.

SUMMARY OF ARGUMENT

This brief examines the consequences of mandating the selective alienation of the right to live by constitutionalizing an exemption to the homicide code based on the terminal condition of the victim, enabling physicians to assist in suicide by prescribing a lethal drug overdose. Your Amici argue that the decisions in *Compassion in Dying v. Washington*, 79 F.3d 790 (9th Cir. 1996), and *Quill v. Vacco*, 80 F.3d 716 (1996), involving Fourteenth Amendment challenges to Wash. Rev. Code Ann. § 9A.36.060 (West 1975) and N.Y. Penal Law §§ 120.30 & 125.15 (McKinney 1987), should be reversed.

The rulings below threaten the integrity of our Nation's social covenant, founded as it was on the belief that certain human rights are so fundamental in nature that they cannot be alienated. The Declaration of Independence announced to the world that the American colonists could no longer endure British encroachments on their fundamental and unalienable interests, including especially their right to life. So the doctrine of unalienable rights provided the basis for rebellion and launched a new experiment in American self-governance. Bound up as it is within our legal history and tradition, the governmental duty to respect the unalienable rights of the people serves to this day as a safeguard against tyranny.

The constitutional rule proposed by the courts below would radically transform the right to live from an unalienable right to a merely alienable interest for the most vulnerable persons in society — those having or regarded as having terminal conditions. The rule would permit members of this class to renounce the protections of the homicide code by consenting to another's criminal act of providing suicide assistance, and would force the states to treat the lives of all members of this class as less worthy of protection against homicide. The rule would discount the right to live for all members of this class, regardless of whether they seek to die or desire to live.

At the same time, the rule would endorse the purposeful causing of death, a "right" wholly unique in constitutional law because it encompasses an abuse of liberty. Every other protected freedom is closely related to the constitutional objectives of preserving existence and providing opportunities for social participation. By extending this "right" only to persons with terminal conditions, the courts below would further subject members of this class to social alienation and devaluation.

The lower courts misread the common and statutory law by deriving therefrom a line based on the victim's terminal condition to distinguish the supposed "right" to purposely cause death from the criminal wrong of assisted suicide. Their decisions conflict with the criminal law, which rejects criminal defenses based on the victim's life expectancy and consent. The courts impinged upon the states' exclusive authority to define crimes by mandating such defenses as a constitutional rule. Moreover, the rulings below conflict with this Court's decision in the case of *United States v. Rutherford*, 442 U.S. 544 (1979). *Rutherford* rejected the federal courts' authority to carve a terminal condition exception into otherwise uniform laws designed to protect all persons against dangerous drugs regardless of their life expectancy.

A rule that deems the suicides of persons with terminal conditions to be constitutionally permissible, while leaving the states free to continue their protection of all other persons, inserts into the Constitution an invidious double standard. This Court should reject such a rule and uphold the states' authority to protect the lives of all of its citizens, regardless of condition. The Constitution should not be construed as if it were a suicide pact.

ARGUMENT

I. Our Nation Is Founded On The Principle That Fundamental Human Rights, Particularly The Right To Live, Are Unalienable; A Ruling Granting Constitutional Protection To An Interest In Obtaining Physician-Prescribed Drugs To Purposely Cause Death Would Abandon This Principle.

The Ninth and Second Circuits recognized in *Compassion in Dying* and *Quill* a constitutional right to renounce the protections of the homicide code which deter persons from assisting in the suicides of others with terminal conditions. Properly understood, the alienation of the right to live involves the rejection of otherwise applicable protections against direct threats to one's life. As one commentator explains, "What is given up in the case in which the right to life is waived . . . is not life itself; rather it is the *protection* of life that that right bestows on its possessor." Terrence McConnell, *The Nature and Basis of Inalienable Rights*, 3 Law and Philosophy 25, 37 (1984). Consequently, the constitutional claim before this Court asserts in essence that at least some individuals should be empowered to forgo their right to be protected under the homicide code, thereby alienating their right to live.

If adopted by this Court, then a constitutional rule authorizing some individuals to alienate their right to live based on their life expectancy would undermine principles embraced in the Declaration of Independence. The Declaration put the case for the American rebellion against British rule. The American colonists charged England with "injuries" to and "usurpations" of "certain unalienable rights", including "among these . . . life". Because the King and Parliament assumed a form of government "destructive of these ends", the people had the right to "alter" or "abolish" the old and "institute [a] new government". *The Declaration of Independence* para. 2 (U.S. 1776). In sum, the unalienable rights doctrine provided the essential basis for the American Revolution.

The Declaration's principles have acquired a life of their own, extending their influence far beyond the document's four corners. There is universal agreement that it is,

> the greatest absurdity to suppose it in the power of one or any other number of men at the entering of society, to renounce their essential natural rights, or the means of preserving those rights when the great end of civil government . . . is for the support, protection and defence of those very rights [including] life . . . .

Samuel Adams, *The Rights of the Colonists, in* The Founders' Constitution 394, 395 (Philip B. Kurland & Ralph Lerner eds. 1987).

Twenty-nine states have either expressly incorporated the unalienable rights doctrine into their constitutions or adopted constitutional provisions comporting with the doctrine.[1] Furthermore,

> *the Declaration of Independence is . . . funda-*

---

[1]The constitutions of twenty three states refer expressly to the "unalienable" or "inalienable" right to life. *See* Ala. Const. Art. I, § 1 (1975); Ark. Const. Art. 2, § 2 (1987); Cal. Const. Art. 1, § 1 (1984); Colo. Const. Art. II, § 3 (1973); Fla. Const. Art. 1, § 2 (1990); Haw. Const. Art. I, § 2 (1993); Idaho Const. Art. I, § 1 (1993); Ill. Const. Art. I, § 1 (1993); Iowa Const. Art. 1, § 1 (1989); Kan. Const. Bill of Rights § 1 (1980); Ky. Const. Bill of Rights § 1 (1988); Me. Const. Art. I, § 1 (1985); Mass. Const. Pt. 1, Art. I, (1978); Mont. Const. Art. II, § 3 (1995); Neb. Const. Art. I, § 1 (1995); Nev. Const. Art. 1, § 1 (1995); N.J. Const. Art. 1, para. 1 (1971); N.M. Const. Art. II, § 4 (1992); N.C. Const. Art. I, § 1 (1995); N.D. Const. Art. I, § 1 (1981); Ohio Const. Art. I, § 1 (1994); Utah Const. Art. I, § 1 (1991); Vt. Const. Chap. I Art. 1 (1996). Three other state constitutions refer either to a right to life that is "indefeasible" (Pa. Const. Art. I, § 1 (1994), or one that cannot be "divest[ed]". Va. Const. Art. I, § 1 (1995) & W. Va. Const. Art. III, § 1 (1983). New Hampshire's constitution refers to the right to life as "natural", "essential" and "inherent". N.H. Const. Pt. 1, Art. 2 (1988). Two other state constitutions contain provisions that comport with the unalienable rights doctrine. La. Const. Art. 1, § 1 (1996) (prohibiting euthanasia) & Miss. Const. Art. 3, § 19 (1974) (prohibiting duelling).

> *mental to a proper understanding of the [federal] Constitution;* and . . . abundant support for this proposition can be found in the leading writings and debates of the Founding era. Indeed, it would hardly be an exaggeration to say that the most fundamental pronouncements made in connection with the framing and ratification of the Constitution are restatements of the principles articulated in the [Declaration] . . . .

Dan Himmelfarb, Note, *The Constitutional Relevance of the Second Sentence of the Declaration of Independence*, 100 Yale L. J. 169, 170-71 (1990) (emphasis added); *see also Monangahela Navigation Co. v. United States*, 148 U.S. 312, 324 (1893) (noting that the Bill of Rights was adopted to protect "those rights of persons and property which by the Declaration of Independence were affirmed to be unalienable rights"); *Gulf, Colorado & Santa Fe Railway v. Ellis*, 165 U.S. 150, 159-60 (1897); *McGowan v. Maryland*, 366 U.S. 420, 563 (1961) (Douglas, J., dissenting) ("[T]he body of the Constitution as well as the Bill of Rights enshrined those principles [of the Declaration].").

The Fourteenth Amendment was drafted with the Declaration very much in mind. *See* Hermine H. Meyer, *The History and Meaning of the Fourteenth Amendment* 75 (1977) (referring to remarks during congressional debates on the Amendment by a sponsor, Representative Thaddeus Stevens, who observed that "I can hardly believe that any person can be found who will not admit that every one of these provisions is just. They are all asserted, in some form or other, in our DECLARATION or organic law.") (capitalization in original).

Finally, the unalienable rights doctrine serves as an international measure of humane and just governments. *See* Preamble to the Universal Declaration of Human Rights, *reprinted in* Paul Sieghart, *The Lawful Rights of Mankind: An Introduction to the International Legal Code of Human Rights* 172 (1985) (asserting that "recognition of the inherent dignity and

of the equal and inalienable rights of the all members of the human family is the foundation of freedom, justice and peace in the world"); *id.* at 42 (observing that while international human rights law recognizes that some rights can be acquired or renounced through personal transactions, "none of this applies to 'human' rights. . . . [T]he code [of international human rights laws] simply treats us as coming into the world with them. . . . nor can we sell them, mortgage them, or forfeit them").

Assisted suicide and voluntary active euthanasia "can both be viewed as efforts to alienate the inalienable, to give away what cannot properly cannot be given away." Joel Feinberg, *Voluntary Euthanasia and the Inalienable Right to Life*, 7 Philosophy & Public Affairs 93, 93 (1978). In accord with this principle, the states have prohibited the aiding and abetting of suicide, along with other forms of consensual homicide and self-harm. *See, e.g., Paris Adult Theatre I v. Slaton*, 413 U.S. 49, 68 n.15 (1972) (referring to laws against such consensual activities as "bare fist" prize fights and duelling); *Martin v. Commonwealth*, 184 Va. 1009, 37 S.E.2d 43, 47 (1946) (consent is no excuse for homicide because the right to life is unalienable); *State v. Moore*, 25 Iowa 128, 135-36 (1868) (recognizing that the "right to life and to personal safety is not only sacred in the estimation of the common law, but it is inalienable").

Accordingly, this Court should not abandon a core doctrine upon which this Nation was founded, but instead should affirm laws that, by uniformly forbidding suicide assistance, preserve the unalienability of the right to live and thereby respect the equal dignity of all persons. Such laws reflect our founding principles, and they are just as vital to our society today as they were 200 years ago.

As one commentator explained,

> [the Declaration] linked the unalienable rights of individuals with the people's right to rebel. In the background there is the basic idea that a

> social contract of some sort had been made in which the people transferred certain rights to government in return for something. . . . What rights the people transferred is less important than the rights they did *not* transfer because they were not transferable, that is to say, unalienable. Unalienable rights were thought to be held under *any* form of government so that when a government merely showed signs of wishing to invade these rights, it could be regarded as intending to reduce the people under absolute despotism.

Morton White, *The Philosophy of the American Revolution* 239-40 (1978).

In view of the nexus between unalienable rights and the limits on despotic governance, a constitutional policy endorsing the selective alienation of the right to live raises profound questions. As one commentator has observed, "[W]e must recall that [John Locke] puts the inalienability of the right to life to good purposes when he uses it to explain why a government can never legitimately acquire an absolute rule to dispose of the lives of its citizens." Lance K. Stell, *Dueling and the Right to Life*, 90 Ethics 7, 16 (1979). Thus, the right to live is a fundamental human interest "that no man *should* transfer to any person or any government." White, *American Revolution* at 220.

What damage will be inflicted on the inviolability of life by a constitutional rule rejecting its unalienability? Will governments be free to acquire absolute dominion over persons whose fundamental rights are deemed personally transferable and thus disposable? Will society become even more coursened in its disregard for the sanctity of human life? These questions cannot be ignored because constitutional rules cannot be imposed in a vacuum.

Moreover, a rule supposedly grounded in notions of autonomy and individual freedom will unjustifiably alter the

legal status of those who have no desire to kill themselves, but who nevertheless will be swept into the category of persons deemed to have an alienable right to live. The right to live and all rights flowing therefrom will be rendered alienable not because an individual so chooses, but on account of the individual's condition. If some persons with terminal conditions are permitted to alienate their right to live because they are terminally ill, then all persons with terminal conditions will necessarily be free to make the same choice. As a consequence, by virtue of constitutional mandate and irrespective of individual desires, the right to live for all members of this class will be reduced to an inferior, alienable status. Because every member of the affected class will no longer possess an unalienable right to live, each will be left with a weaker claim, or no claim at all, against tyrannical notions of "normalcy" and "quality of life" policy-making.[2]

Finally, a constitutional rule that permits some — but not all — persons to alienate their right to live cannot be squared with the Declaration's finding and the Fourteenth Amendment's proviso that *all* persons are created equal and as a result are equally endowed with unalienable rights. Once it is posited that some persons have only an alienable right to live, then an inequality of human dignity profoundly hostile to our Nation's founding principles not only will threaten the fundamental interests of the vulnerable, but also

---

[2]One commentator has remarked on

> just how dangerous enforced physiological normality is when the definition of its parameters falls into the hands of politicians and bureaucrats. . . . [T]he war against "abnormality" implies a dangerous kind of politics, which begins with a fear of difference and eventuates in a tyranny of the normal. That tyranny, moreover, is sustained by creating in those outside the norm shame and self-hatred — particularly if they happen to suffer from that vast majority of "deformities" which we still cannot prevent or cure.

Leslie A. Fiedler, *The Tyranny of the Normal*, Hastings Center Report, Apr. 1984, at 40, 41, 42.

will imperil the integrity of our constitutional order.

II. A Constitutional Rule Permitting Persons To Alienate Their Right To Live Because They Have, Or Are Regarded As Having, A Terminal Condition Lacks A Legitimate, Non-Invidious Basis.

The Ninth and Second Circuits ruled that at least in some cases suicide assistance is constitutionally protected, and that a line must be drawn between the criminal wrong and the constitutional right based on the victim's life expectancy. The "courts may not", however, "draw lines which appear arbitrary without . . . offering a justification." *Planned Parenthood of Southeastern Pennsylvania v. Casey*, 505 U.S. 833, 870 (1992). The line chosen by the lower courts not only *is* arbitrary, but also is based on the invidious assumption that the lives of persons with terminal conditions are less worthy or deserving of protection.[3]

The Ninth and Second Circuits claimed that the common law and state statutes governing treatment refusals provided the basis for recognizing in the assisted suicide context a diminishing state interest in "preserving" the lives of persons with terminal conditions. The courts misread the law, however, and confused an interest in "preserving" life with the states' separate interest in "protecting" life.

The "terminal condition" line cannot be adduced from an accurate reading of the common law of informed consent, which extends the right to refuse treatment to all persons regardless of life expectancy. 1 Alan Meisel, *The Right to Die* 490-91 (2d ed. 1995) (referring to case law extending the right to refuse treatment to persons who are not terminally

[3] *See City of Cleburne v. Cleburne Living Center, Inc.*, 473 U.S. 432, 440 (1985) (observing that certain classifications "are so seldom relevant to the achievement of any legitimate state interest that laws grounded in such considerations are deemed to reflect prejudice and apathy — a view that those in the burdened class are not as worthy or deserving as others").

ill). Advance directive statutes often limit their scope to cases involving incompetent persons who are terminally ill, but they must be read together with the broader common law rule. Rather than limiting treatment refusals, these statutes establish a legal "safe harbor" for advance directive decision making. *See* 2 Meisel, *The Right to Die* at 85 (noting that most advance directive statutes expressly decline to supersede the common law or to set out the sole means by which the right to refuse treatment may be exercised; also noting that a majority of courts has therefore concluded that such legislation does not preempt or otherwise narrow the common law).

Moreover, whether a person has a terminal condition is relevant to the treatment refusal context only for reasons quite irrelevant to the assisted suicide context. When weighing the benefits and burdens of accepting medical treatment, a patient must necessarily consider the treatment's capacity to extend life. If a patient is terminally ill, so that the treatment will not extend his or her life indefinitely, then the state's interest in preserving life will not be implicated. *See In re Grant*, 109 Wash. 2d 545, 556, 747 P.2d 445, 451 (1987) (observing that state interest in "preserving life" by requiring "lifesaving" treatment "weakens considerably . . . if treatment will merely postpone death for a person with a terminal and incurable condition"). The state's interest in preserving life is measured according to the effectiveness of treatment in question, and does not depend on any value assessment of the lives at stake. *See also Fosmire v. Nicoleau*, 551 N.Y.S. 2d 876, 881, 551 N.E.2d 77, 82-83 (1990) (holding that patients' terminal condition is relevant only "to determine whether [this is] the circumstance[] in which the patients intended to decline the medical care" and not "because the State considered their lives worthless").

In the assisted suicide context, however, the issue is not whether the state has an interest in *preserving* life by providing treatment, but whether the state may seek to *protect* all lives against direct killing. Persons with terminal conditions are still alive, whether or not their lives can be indefinitely extended by life supports. Thus, even when it is impossible

to effectuate the state's interest in preserving their lives because life-sustaining measures are unavailing, the separate issue remains as to whether the state's interest in protecting life against killing should apply.

Consequently, the lower courts engaged in pretextual reasoning by referring to the common law of consent and the statutory law governing advance directives as bases for drawing a line at terminal condition. *See Compassion in Dying*, 79 F.3d at 817-20 and *Quill*, 80 F.3d at 727-28; *but see* 79 F.3d at 819 (quoting preamble to Washington's advance directive statute expressing the legislature's finding that without qualification "adult persons" have the right to control medical decisions, and importantly, that this right is not limited to but "*includ[es]*" those decisions involving "instances of terminal condition", thereby extending the right to refuse treatment both to persons who are and who are not terminally ill) (emphasis added) & *Fosmire*, 551 N.Y.S.2d at 881, 551 N.E.2d at 82 (finding that common law right to refuse treatment in New York extends to all competent adults regardless of condition).

As the next two sections will demonstrate, neither the criminal law nor the constitutional rulings of this Court provide an alternate basis for mandating an exemption from the homicide code based on the victim's life expectancy. To the contrary, our legal history and tradition, as well as this Court, have rejected the victim's condition as constitutionally irrelevant.

A. *Considerations Under The Criminal Law: The Definition Of Homicide And The "Last Spark Of Life".*

Criminal jurisprudence provides an instructive approach to resolving whether a non-invidious foundation exists for using a suicide victim's terminal condition as a constitutional dividing line. Many of the arguments favoring a limited right to assisted suicide for persons with terminal conditions resemble the defenses that might be raised in a trial for homicide. Thus, the definitional elements of causation, intent,

excuse, and justification provide a useful framework for addressing — and ultimately rejecting — any claim that a suicide victim's life expectancy is at all constitutionally relevant.

For example, the Ninth Circuit raised an argument sounding in causation by contending that a decision to hasten death should not be classified as suicide when the victim's "death is already in process". *Compassion in Dying*, 79 F.3d at 824. *But see People v. Moan*, 4 P. 545 (Cal. 1884) ("If a patient is lying in the last stages of consumption, with a tenure upon life that cannot possibly continue for a day, it is homicide to administer a poison to him by which his life is ended almost immediately.")

In addition, an amicus brief filed with the Ninth Circuit asserted that in cases involving suicidal persons with terminal conditions, the participants necessarily lacked the requisite criminal intent. Instead, the suicide assistant "seeks to end the [victim's] dying process", and the victim "does not have the primary goal of ending his life", because "[g]iven the terminal nature of his condition, the [victim] wants to end his suffering by shortening the dying process." Amicus Curiae Brief of the Americans for Death With Dignity and Euthanasia Research & Guidance Organization at 4 n.6, *Compassion in Dying v. Washington*, 79 F.3d 790 (9th Cir. 1996) (No. 94-35534). *But see Gilbert v. State*, 487 So. 2d 1185, 1191 (Fla. App. 1986) (rejecting defense to homicide based on claim that defendant sought only to end the victim's suffering because it would "sanction open season" for the killing of vulnerable persons).

Moreover, assisted suicide is defensible in The Netherlands on the excuse-related ground that a physician charged with a crime should not be convicted if he or she participated in a suicide under emotional duress, and was compelled to end another's misery when confronted with the victim's condition. Herbert Hendin, *Seduced by Death* 94, 103, 109 (1997). *But see State v. Fuller*, 203 Neb. 233, 243, 278 N.W.2d 756, 762 (1979) ("Duress or compulsion is no excuse to the charge of homicide.").

Finally, the respondents in *Glucksberg* raise a justification-related defense by asserting that any conflict between the state's interest in protecting life and an individual's interest in death must tilt in favor of death when the life at stake is of a "limited *quantity*". Opposition to Petition for Writ of Certiorari at 12, *Washington v. Glucksberg* (No. 96-110). *But see State v. O'Brien*, 46 N.W. 752, 753 (Iowa) ("The fact that [the homicide victim] was afflicted with a disease which might have proved fatal would not justify the wrongful acts of defendant . . . .").

The Ninth and Second Circuits would impose these theories on the states as constitutional mandates, contrary to this Court's long line of precedents leaving to the states the authority to define crimes, particularly in reference to the "doctrines of *actus reus, mens rea,* insanity, mistake, justification and duress". *Montana v. Egelhoff*, 64 U.S.L.W. 4500, 4505 (U.S. June 13, 1996) (No. 95-566). Moreover, such mandates would conflict with our legal history and tradition, which unanimously reject any defenses to homicide based on the victim's health status.

One court described the rule of law as follows:

> But though a human body must be alive in order that it may be the subject of homicide, yet the quantity of vitality which it retains at the moment the fatal blow is given, and the length of time life would otherwise have continued, are immaterial considerations. If any life at all is left in the human body, even the least spark, the extinguishment of it is as much homicide as the killing of the most vital being.

State v. Francis, 149 S.E. 348, 364 (S.C. 1929). *Accord State v. Mally*, 366 P.2d 868, 873-74 (Mont. 1961); *People v. Stamp*, 82 Cal. Rptr. 598, 603 (Cal. App.), *cert. denied*, 400 U.S. 819 (1970); *see* Daniel Avila, *Is the Constitution a Suicide Pact?*, 35 Duquesne Law Review 201, 227-230 (1996) (discussing these and other cases).

In light of this rule and its broad acceptance in our law, any attempted justification for abandoning to their suicidal impulses only persons with terminal conditions, and exposing only them to the undeterred efforts of others to assist in their deaths, bolsters the inference that an invidious disregard for the lives of the vulnerable is at play. If "[a]n accused cannot speculate as to how long his victim may live with an incurable malady when he inflicts a shot or a wound that hastens the death or the action of the fatal disease" (*State v. O'Brien*, 46 N.W. 752, 753 (Iowa 1890)), then neither should the Constitution.

If this Court were to adopt the contrary position and hold as a matter of constitutional law that the victim's proximity to death is relevant to the culpability of an individual charged with assisting suicide, then the definitional ramifications would be far-reaching. Assisted suicide cannot be distinguished from other forms of homicide. If the victim's condition is deemed relevant in the assisted suicide context, then it must also be relevant in any case of homicide. As a result, virtually any defendant accused of a homicidal act would have the constitutional right to raise the victim's debilitated condition as a defense.

By definition then, crimes against life would be limited only to those life-threatening acts which imperil the healthy and long-living. Those charged with mortally attacking an individual deemed to be in an accelerated "process of dying" could avoid conviction. Because "process of dying" is an inherently expansive concept — all persons are going to die sometime and many are going to die sooner than expected for a variety of reasons — an assortment of defense claims based on the victim's condition would emerge in a host of cases.[4]

---

[4]Such a rule would also open the door to constitutional defenses based on the victim's consent, thereby overriding state policies rejecting such defenses in cases involving homicide and other crimes. *See, e.g., State v. Fuller*, 203 Neb. at 241, 278 N.W.2d at 761 (holding that "murder is no less murder because the homicide is committed at the desire of the victim"); *Jones v. State*,

B. *Considerations Under The Constitution: Fourteenth Amendment Exemptions And United States v. Rutherford.*

This Court's unanimous decision in *United States v. Rutherford*, 442 U.S. 544 (1979), rejected a similar exemption based on a person's terminal condition. The Court ruled that a uniform federal ban against the interstate transfer of unsafe or unproven drugs reasonably applied to an experimental and potentially harmful substance (laetrile) sought by persons with terminal cancer as a last ditch means of extending their lives. *Id.* at 559. The Court found that "[f]or the terminally ill, as anyone else, a drug is unsafe if its potential for inflicting death or physical injury is not offset by the possibility of therapeutic benefit." *Id.* at 556. Moreover, "it is often impossible to identify a patient as terminally ill except in retrospect." *Id.* at 556. Finally, the Court was unwilling to endorse the proposition "that . . . safety and efficacy standards . . . have no relevance for terminal patients" because this would "deny the [government's] authority over all drugs, however toxic or ineffectual, for such individuals." *Id.* at 557-58. Thus, the Court refused to read an implied exception into an otherwise generally applicable statute since "federal courts do not sit as councils of revision, empowered to rewrite legislation in accord with their own conceptions of prudent public policy." *Id.* at 555.

Rutherford should pose a significant obstacle to any constitutional claim for assisted suicide based on a victim's proximity to death. If Congress may restrict the use of dangerous drugs by persons with terminal conditions seeking to prolong their lives, then surely the states may deter physicians from supplying lethal dosages to members of the same class who want to end their lives. The parallels between the two cases simply cannot be ignored.

---

640 So. 2d 1084 (Fla. 1994) (rejecting claim of a right to such a defense under the state constitution in a case involving charges brought under statutory rape law, even though the victim "did not want the 'protections' advanced by the state").

Thus, in light of *Rutherford*, laws discouraging drug-induced deaths among the terminally ill, as for anyone else, reasonably furthers the states' general goal of protecting life. The constitutional balance between state interests and competing private interests should not be shifted according to the victim's life expectancy. In sum, the terminally ill are similarly situated with everyone else in relation to the states' interest in protecting life. For the Court to hold otherwise, it would have to abandon *Rutherford* and entirely reverse its course with respect to constitutional exemptions generally.

III. A Constitutionally-Mandated Policy Permitting The Selective Alienation Of The Right To Live Based On A Suicide Victim's Life Expectancy Threatens The Welfare And Safety Of Vulnerable Persons And Imperils Ordered Liberty.

To deflect concerns about assisted suicide raised by persons with disabilities and members of other vulnerable populations, the Ninth and Second Circuits responded with assurances that suicide is a constitutional benefit. *Compassion in Dying*, 79 F.3d at 825-26; *Quill*, 80 F.3d at 730. Based on the considerations addressed in the remainder of this brief, your Amici disagree strongly.

A. *Unlike Any Other Constitutional Freedom, A "Right" To Alienate One's Right To Live Licenses The Intentional Destruction Of Persons' Lives.*

In no other case has the Supreme Court been asked to license an individual to assist in the intentional destruction of life at the request of the victim. All other claims of personal freedom granted constitutional protection have related in some meaningful way to the individual's enjoyment of life and continued participation in society. Thus, the Supreme Court has "reject[ed] at the outset the notion that *any* grievous loss visited upon a person by the State is sufficient to invoke" a constitutional remedy. *Meachum v. Fano*, 427 U.S.

215, 224 (1976). Whether an asserted interest to act free from government interference rises to the level of a constitutional right will depend on its "nature" — that is, its relation to the "'whole domain of social and economic fact'" (*Morrissey v. Brewer*, 408 U.S. 471, 481 (1972) (citation omitted)), as well as on its connection to an individual's ability to "'engage in any of the common occupations of life'". *Board of Regents of State Colleges v. Roth*, 408 U.S. 564, 572 (1972) (citation omitted).

Conversely, a "right" or "liberty" to obtain suicide assistance would lack any relation to the capacity to exist, move freely, and form personal attachments in society; it would be entirely antithetical to such exercises of liberty. *See Morrissey*, 408 U.S. at 482 (holding parole to be cognizable Fourteenth Amendment liberty because it "enables [offenders] to do a wide range of things open to persons who have never been convicted of any crime" such as "to return to society", "be gainfully employed", be "free to be with family and friends and to form the other enduring attachments to normal life"). Assisted suicide accomplishes the purposeful destruction of life and, as a result, forever cuts the victim off from all ties to family, friends, and society. It thus fails to achieve any "benefit" of existence or social inclusion ascertainable under the Constitution.

The Ninth and Second Circuits attempted to graft assisted suicide to the outer branches of the right to accept or refuse medical treatment. *Compassion in Dying*, 79 F.3d at 822-23 (discussing acceptance of morphine drips and refusal of tube-feeding); *Quill*, 80 F.3d at 729 (same). They argued that if the Constitution recognizes a right to make medical decisions, then it should recognize the right to assisted suicide. The courts thus contended that the personal and state interests at stake in treatment refusal and assisted suicide cases are indistinguishable, particularly with respect to their relationship to death.

On the contrary, the right to accept or refuse treatment differs significantly from an interest in suicide assistance

precisely because treatment decisions can enable persons to "engage in the common occupations of life". Moreover, the constitutional strength of an interest in making treatment decisions diminishes as the risk of death increases, while the proposed interest in assisted suicide would increase in strength *because* its objective is death.

This Court has acknowledged the existence of a "right to decide independently, with the advice of [a] physician, to acquire and to use *needed* medication [i.e., essential to health]." *Whalen v. Roe*, 429 U.S. 589, 603 (1977) (emphasis added). Treatment may be necessary to prolong life, to alleviate pain, or to overcome any other maladies which might hinder an individual's capacity to work or to engage in social activities. These benefits undoubtedly comport with the Constitution's life-enhancing objectives.

In addition, this Court has recognized an interest "in avoiding the unwanted administration of . . . drugs". *Washington v. Harper*, 494 U.S. 210, 221-22 (1990). This interest also relates to constitutional objectives by directly implicating the freedom to move about in society unimpeded by the intrusive restraint of a technological apparatus or the forced ingestion of pills or medication. *See Cruzan v. Director, Missouri Department of Health*, 497 U.S. 261, 269, 278, 279 (1990) (referring to an interest in avoiding unwanted bodily intrusions).

To the extent that a decision to accept or refuse treatment implicates hastened death, this Court has permitted the states to limit the decision maker's discretion. Thus, the states may "prohibit entirely the use of particular drugs" deemed dangerous to the patient's health and safety (*Whalen*, 429 U.S. at 603), and may consider such "dramatic consequences" as death when weighing the policy implications of refusing treatment. *Cruzan*, 497 U.S. at 279. Far from endorsing in these cases any principle that would support the creation of a right to purposely cause death, the Court has permitted the states to circumscribe the right to accept or refuse treatment in direct proportion to the likelihood that

death will result.

Fundamental rights are protected because they enable individuals to live freely and interact socially, even if at times their exercise involves personal risk.[5] The rights to speak, vote, travel, refuse treatment, and so on, could be equated to assisted suicide only by irrebuttably imputing to the citizen who chooses to exercise them in risky situations an inherent desire to be harmed — and by falsely imputing to the Constitution's framers the intent to recognize death as simply another noble objective.

Instead, a constitutionally protected decision to purposely seek death would be unique among all other protected choices. It would embrace a lethal purpose, while the exercise of other rights merely tolerate certain residual and unavoidable risks. Its objective is death rather than life, and its exercise results in irreversible alienation rather than social participation. While the "recognition of any right creates the possibility of abuse" (*Compassion in Dying*, 79 F.3d at 831), a constitutional policy favoring assisted suicide eliminates any contingency by endorsing what is itself a form of abuse. Indeed, the abuses of other freedoms — involving threats against life and self-expulsion from society — would frame the essence of this new right. The dangers its constitutional enshrinement would pose for persons with terminal conditions, other vulnerable populations, and society itself would be of a far greater magnitude than the risks created by the exercise of any other right.

---

[5]The Supreme Court has noted that "[s]ome cost will be paid by anyone who approves or implements a constitutional decision where it is unpopular, or who refuses to work to undermine the decision or to force its reversal. The price may be criticism or ostracism, or it may be violence." *Casey*, 505 U.S. at 867.

B. *A Constitutional Rule Establishing The Freedom To Renounce Society's Protection Of One's Right To Live Would Ratify The Most Extreme Form Of Social And Political Alienation.*

While the assisted suicide claim before this Court ostensibly concerns individual rights, the Court must also consider the social consequences. In particular, constitutionalizing the right to seek to harm one's self with the assistance of others says just as much about the constitutional status of persons granted this right as it says about the right itself. Thus, the question is broader than "does the life-destroying right to assisted suicide share equal billing with other freedoms that are instead life-enhancing?" The inquiry must also focus on why the right to live of some persons should be slashed in value from an unalienable to an alienable constitutional interest.

The Ninth and Second Circuits tied the strength of one's right to live to one's proximity to death, thereby provoking a profound fear among many of those persons in society whose disabilities leave them with an already precarious hold on life. Every person with a disabling condition is already more intensely aware than most of life's contingent nature, even if his or her present condition is not certifiably terminal. Many persons with disabilities were disabled by accidents and thus have peered through the gates of death before medicine made survival possible. Many persons with disabilities rely on high tech interventions to survive, to breathe or to eat, and they are constantly reminded by the nature of their ongoing care that without proper treatment or care they would soon die. Many persons with disabilities depend on the assistance of family, friends, and professional caregivers and must orchestrate ever-shifting schedules simply to meet the minimum requirements of daily living. Some, like the actor Christopher Reeves, cannot function without substantial medical and personal assistance. Most are far less capable than a wealthy movie star of meeting the financial burdens of their care, however, and few enjoy the same public esteem.

Most members of this class are unquestionably more vulnerable to discrimination and social alienation.

Many persons with disabilities exist in a state of "virtual terminality" because the frailty of their physical condition and the specter of death are so intimately woven together. In turn, a constitutional decision asserting that their right to live is constitutionally disposable makes them "virtual aliens" because their most fundamental right — the protection of life — would hang only by the single thread of their own resolve to keep it. They will be left far less secure against both internal and external pressures to give away this right to the unjust advantage of others.

In the end, a condition-based rule in favor of assisted suicide would pour into the Constitution a poisonous concoction of warm-hearted, misguided pity and cold-hearted utilitarianism. The question of "whether we as a society are willing to excuse the terminally ill for deciding that their lives are no longer worth living" would be mixed inextricably with the question of whether assisted suicide should serve as a means "for housecleaning, cost-cutting and burden shifting — a way to get rid of those whose lives we deem worthless." *Compassion in Dying*, 79 F.3d at 856-57 (Beezer, J., dissenting). Who stands to benefit most from a constitutional policy by which the right to live of vulnerable persons is reduced to an alienable interest? Is it the person with a terminal condition bent on suicide regardless of what the Constitution holds, or is it a cost-conscious society seeking more ways to ration its generosity?

C. *A Constitutional Rule Limiting Assisted Suicide To Persons With Terminal Conditions Offers A False And Dangerous Compromise.*

Proponents of assisted suicide strive to appear moderate and attempt to strike a balance between what they perceive to be extremes on both ends of the spectrum. They claim that, while an across-the-board ban is too restrictive for their

tastes, unrestricted suicide is not their aim. They would agree to the construction of what is, in effect, a brick wall across the slippery slope — supposedly to accommodate both the "hard cases" and society's general abhorrence of intentional killing. The Ninth and Second Circuits extended this call for compromise in the constitutional order by overriding the states' uniform bans against assisted suicide, yet nevertheless recommending the adoption of various legislative safeguards. *Compassion in Dying*, 79 F.3d at 832-33; *Quill*, 80 F.3d at 730.

Such appeals for compromise seek to divide permissible from impermissible suicides according to the victim's proximity to death and quality of life. They assume that the desirability of death can and should be balanced against the desirability of life by referring to a person's physical and mental condition. No matter how desperate for death suicidal individuals may be and no matter how little they may value their own lives, their requests to die will be approved only according to a social, not individual, estimation of the comparative values of their life and death. Through such a calculus, the law and the community would sanction death not because the victim wants it, but because the victim who wants it also happens to have a condition that the law and community identify as unworthy of protection.

Moreover, such a policy would still permit the states to punish suicide assistance when the victim is not terminally ill. The retention of a uniform ban evinces the belief that suicide is a bad thing both for the victim and society, and that the law's protection is a benefit — yet *only* if the victim is healthy and expected to live indefinitely. Because the resulting disparity in the level of protection would create an apartheid based on one's health status, the lower courts' assertion that suicide is a constitutional benefit should be rejected on its face.

Why is it beneficial for persons with terminal conditions but no one else to obtain lethal medications to kill themselves? The question calls for a more compelling response

because one can easily infer from the circumstances an invidious motive.[6] A policy which permits lethal assistance for some, but not for the majority, implicates the view that those provided the lethal assistance are less worthy or deserving of protection, and that their lives have less value under the law. Such a policy would fundamentally alter our country's commitment to providing equal protection to vulnerable persons.

As one commentator has written:

> [Our society's] liberal commitment to limited popular government requires a commitment to the equal worth of each person and to limits on the power of government that are contained in the teaching of inalienable rights, especially an inalienable right to life. This teaching forms the essential horizon of liberal theory and it is only within this horizon that liberal regimes and the policies they endorse can take shape. . . . Given the liberal commitment to equality as the precondition of liberty, the "new consensus" [proposing that certain suicides be sanctioned based on the assumption that some lives are less valuable than others] fails completely in its policy recommendations. The policies these writers wish to see adopted logically entail the creation

---

[6]A Florida statute making consensual sexual activity with "chaste" minors a crime but not with "unchaste" minors created a similar invidious inference, according to an opinion found in *B.B. v. State*, 659 So. 2d 256 (Fla. 1995). Florida Supreme Court Justice Kogan asserted that such a law

> seems to regard unchaste minors as being somehow less deserving of the state's protection than those who are [chaste]. . . . Any statute that purports to grant special status to a favored group . . . over all others, to my mind at least, must be regarded as inherently questionable. On its face this statute suggests discrimination. . . . Laws should protect everyone, not merely a favored group.

Id. at 260-61 (Kogan, J., concurring).

> of a public standard for determining when some lives are in fact not worth living anymore. However, this is a judgment that is fundamentally inconsistent with the premises of the very regime that is supposed to adopt this policy.

Richard Sherlock, *Suicide and Public Policy: A Critique of the "New Consensus"*, 4 Journal of Bioethics 58, 62 (1982-83).

For this reason, the law should not abandon whole categories of the most vulnerable individuals under the guise of protecting individual rights. Instead, as concluded by the British Medical Association,

> the deliberate taking of a human life should remain a crime. This rejection of a change in the law to permit doctors to intervene to end a person's life is not just a subordination of individual well-being to social policy. It is instead, an affirmation of the supreme value of the individual, no matter how worthless and hopeless that individual may feel.

British Medical Association, *Euthanasia: Report of the Working Party to Review the British Medical Association's Guidance on Euthanasia* 69 (1988).

This Court has assured the Nation that "while the Constitution protects against invasions of individual rights, it is not a suicide pact." *Haig v. Agee*, 453 U.S. 280, 309 (1981) (quoting *Kennedy v. Mendoza-Martinez*, 372 U.S. 144, 160 (1963)). Consistent with this assurance, this Court should reject the Ninth and Second Circuit rulings.

CONCLUSION

For the foregoing reasons, the judgments of the Ninth and Second Circuits should be reversed.

ing *Kennedy v. Mendoza-Martinez*, 372 U.S. 144, 160 (1963)). Consistent with this assurance, this Court should reject the Ninth and Second Circuit rulings.

CONCLUSION

For the foregoing reasons, the judgments of the Ninth and Second Circuits should be reversed.

Respectfully submitted,

WHEN DEATH IS SOUGHT[:] ASSISTED SUICIDE AND EHTHANASIA IN THE MEDICAL CONTEXT, New York State Task Force on Life and the Law (May 1994)	1, 27-28

INTEREST OF THE AMICI

Amici curiae are New York and Washington state legislators who strongly support the public policy expressed in their state laws prohibiting assisted suicide and who vigorously oppose efforts to legalize assisted suicide in the legislatures or the courts. *Amici* firmly believe that there is no social, economic or medical need to permit physician-assisted suicide under any circumstances, and that to allow suicide assistance, even for mentally competent, terminally ill adults, would lead to grave abuses and exploitation of the most vulnerable members of our community, as it already has in the Netherlands. *Amici* fully concur with the warning of the New York State Task Force on Life and the Law that creation of a right to suicide "would carry us into new terrain."

> American society has never sanctioned suicide or mercy killing. We believe that the practices would be profoundly dangerous for large segments of the population, especially in light of the widespread failure of American medicine to treat pain adequately or to diagnose and treat depression in many cases. The risks would extend to all individuals who are ill. They would be most severe for those whose autonomy and well-being are already compromised by poverty, lack of access to good medical care, or membership in a stigmatized social group. The risks of legalizing assisted suicide and euthanasia for these individuals, in a health care system and society that cannot effectively protect against the impact of inadequate resources and ingrained social disadvantage, are likely to be extraordinary.
>
> WHEN DEATH IS SOUGHT[:] ASSISTED SUICIDE AND EUTHANASIA IN THE MEDICAL CONTEXT vii-viii (May 1994).

This Court should heed their warning and not recognize a right to suicide or suicide assistance.*

---

* This Brief is filed with the consent of the parties. Letters of consent have been lodged with the Clerk of the Court.

SUMMARY OF ARGUMENT

In a pair of unprecedented opinions, the Second Circuit and the Ninth Circuit have held that New York and Washington are powerless to prevent mentally competent, terminally ill patients from intentionally ending their lives with the assistance of physicians who are willing to prescribe lethal drugs for them. *Quill v. Vacco*, 80 F.3d 716 (2d Cir. 1996); *Compassion in Dying v. State of Washington*, 79 F.3d 790 (9th Cir. 1996). In recognizing a right to commit suicide with the assistance of third parties, the *en banc* majority in *Compassion in Dying* swept aside a uniform tradition of legal and societal opposition to suicide and assisted suicide that dates back to the earliest days of the common law. Contrary to the Ninth Circuit's opinion, nothing in *Planned Parenthood v. Casey*, 505 U.S. 833 (1992), required or allowed the court of appeals to ignore this history in evaluating plaintiffs' wholly novel constitutional claim.

Compounding this error, both the Ninth Circuit and the Second Circuit seriously misread this Court's decision in *Cruzan v. Director, Missouri Dep't of Health*, 497 U.S. 261 (1990). Both courts attempted to derive an interest in deliberately inducing death, which the law always has treated as a crime, from the interest in refusing unwanted medical treatment, which the law traditionally has protected out of respect for the inviolability of the human person. Disregarding critical distinctions between *intending* a result and *knowing* that a result is likely, and between *causing* death artificially and *allowing* death to occur naturally, the lower courts reasoned that because refusing life-sustaining treatment and intentionally ingesting a fatal dose of drugs both result in a person's death, the right to do the former necessarily entails the right to do the latter. *Quill*, 80 F.3d at 725-31; *Compassion in Dying*, 79 F.3d at 820-24. "But constitutional law does not work that way." *Cruzan*, 497 U.S. at 286.

At the outset, *amici* note that this Court has never held that "a competent person has a constitutionally protected liberty interest" in refusing "life-sustaining medical treatment." *Cruzan*, 497 U.S. at 278, 279. In *Cruzan*, the Court *assumed*, for purposes of deciding the case, that the Constitution "would grant a competent person a constitutionally protected right to refuse lifesaving hydration and nutrition." *Id.* at 279. Nevertheless, the Court cautioned that "the dramatic consequences involved in the refusal of such treatment would inform the inquiry as to whether the deprivation of that interest is constitutionally permissible," *id.*, thereby implying that the State's "interest in the protection and preservation of human life," *id.* at 280, might be sufficient to outweigh the patient's interest in refusing unwanted treatment. That implication was made explicit when the Court said, "We do not think that a State is required to remain neutral in the face of an informed and voluntary decision by a physically able adult to starve to death." *Id.*

Even if it is assumed that a competent person has a constitutionally protected liberty interest in refusing life-sustaining treatment, that interest has its origins in the law of battery and the doctrine of informed consent (*see Cruzan*, 497 U.S. at 269-77) which both define its nature and limit its scope. The interest restricts "governmental power to mandate medical treatment or bar its rejection," *Casey*, 505 U.S. at 857, but does not confer a right to insist upon a particular form of treatment, much less one that will cause, and is intended to cause, the person's death. *See United States v. Rutherford*, 442 U.S. 544 (1979) (FDA had authority to proscribe laetrile, even for terminally ill cancer patients). It is the source and the nature of the interest that determine its ultimate reach. Whether the constitutionally protected interest in refusing unwanted medical treatment extends to life-sustaining treatment, a question this Court need not answer here, that interest clearly has reached its furthest

limit when all treatment—life-sustaining or otherwise—has been withheld or withdrawn.

Beyond their multiple errors in analysis, however, the decisions in both *Compassion in Dying* and *Quill* are, in principle, illimitable. If the right to refuse unwanted medical treatment is the doctrinal source of a right to assistance in committing suicide, it is apparent that the latter right cannot be confined to mentally competent, terminally ill patients, as the Ninth Circuit admitted. *See* 79 F.3d at 816, 831-32 & n.120. The lower court decisions, if affirmed, would plunge the country into a generation of constitutional conflict over the nature and extent of the "right," a conflict which would cause irreparable damage to the Nation, to the American People and to this Court. *Amici* ask the Court not to take this precipitous step.

ARGUMENT

I. THE LIBERTY LANGUAGE OF THE DUE PROCESS CLAUSE OF THE FOURTEENTH AMENDMENT PROTECTS ONLY THAT CONDUCT WHICH IS IMPLICIT IN THE CONCEPT OF ORDERED LIBERTY AND WHICH, HISTORICALLY AND TRADITIONALLY, IS CONSIDERED BEYOND THE POWER OF THE STATE TO PROHIBIT.

The Ninth Circuit held that there is "a constitutionally-protected liberty interest in determining the time and manner of one's own death," or, "in common parlance, . . . a right to die." *Compassion in Dying*, 79 F.3d at 793, 799. The court held further that, in the case of mentally competent, terminally ill patients who wish to end their lives by taking a fatal dose of drugs, this liberty interest outweighs the State's "legitimate and countervailing interests, [including] those that relate to the preservation of human life." *Id.* at 793-94. Conceding that there is no "liberty interest in receiving 'aid in killing oneself,'" as such, the court couched the issue in wider terms, whether there is "a right to die," to determine "the

time and manner of one's death" or to "hasten[] one's death," because "it is the end and not the means that defines the liberty interest." *Id.* at 801-02.

The circuit court's phrasing of the issue disregards this Court's admonition that " '[s]ubstantive due process' analysis must begin with a careful description of the asserted right, for '[t]he doctrine of judicial self-restraint requires us to exercise the utmost care whenever we are asked to break new ground in this field.' " *Reno v. Flores*, 507 U.S. 292, 302 (1993) (quoting Justice Stevens' opinion for a unanimous Court in *Collins v. City of Harker Heights, Texas*, 503 U.S. 115, 125 (1992)). In *Cruzan*, this Court declined to answer the broad question as to whether there is a "right to die," focusing instead on the narrower question of whether "a competent person has a constitutionally protected liberty interest in refusing unwanted medical treatment." 497 U.S. at 277-78.

Precision in defining the issue is also required here. The issue is not whether there is "a right to die," or "a liberty interest in determining the time and manner of one's death" or in "hastening one's death," *Compassion in Dying*, 79 F.3d at 801-02, but "whether the constitution encompasses a right to commit suicide and, if so, whether it includes a right to assistance." *People v. Kevorkian*, 527 N.W.2d 714, 730 n.47 (Mich. 1994) (rejecting right to suicide), *cert. denied sub nom. Kevorkian v. Michigan*, 115 S.Ct. 1795 (1995), *Hobbins v. Kelley*, 115 S.Ct. 1795 (1995).[1]

This Court has enunciated various standards for evaluating both substantive and procedural due process claims. Due process protects those rights which are "so rooted in the traditions and conscience of our people as to be ranked as fundamental." *Snyder v. Massachusetts*, 291 U.S. 97,

[1] ". . . the common definition of 'suicide' is the intentional killing of oneself by any means, and the temporal proximity of death is irrelevant to the threshold inquiry into whether the constitution encompasses such a right." *Id.* at 725 n.27.

105 (1934). Alternatively, due process secures those rights which are "implicit in the concept of ordered liberty" such that "neither liberty nor justice would exist if they were sacrificed." *Palko v. Connecticut*, 302 U.S. 319, 325, 326 (1937). In another frequently cited formulation, Justice Powell described fundamental liberties as those liberties which are "deeply rooted in this Nation's history and tradition." *Moore v. City of East Cleveland, Ohio*, 431 U.S. 494, 503 (1977).

Regardless of the precise wording, each of these tests requires an examination of our history and traditions to assess whether the right (or interest) being asserted has enjoyed legal and societal protection. *Compare Roe v. Wade*, 410 U.S. 113, 140-41 (1973) (recognizing right to abortion where, in the Court's view, there was no unambiguous tradition of legal and social opposition to abortion in English and American law), *with Bowers v. Hardwick*, 478 U.S. 186, 192-94 & nn. 5-7 (1986) (refusing to recognize fundamental right of adult homosexuals to engage in consensual acts of sodomy where both English and American law clearly prohibited such conduct for centuries). The Court's reliance on historical tradition in *Bowers* coincided with a less expansive view of its authority "to discover new fundamental rights imbedded in the Due Process Clause." 478 U.S. at 194.

As this Brief demonstrates, there has never been a period in English or American history when suicide (or suicide assistance) was regarded as a "fundamental right," a "protected liberty interest" or even a socially tolerated practice. Perhaps anticipating that its historical survey, 79 F.3d at 806-10, would fail to convince this Court that a right to (or an interest in) suicide (or suicide assistance) can be derived from our history and traditions, the Ninth Circuit, citing *Planned Parenthood v. Casey*, concluded that these factors are no longer controlling or even persuasive in evaluating substantive due process claims. 79 F.3d at 804-06. But that conclusion is unwarranted.

First, in reaffirming *Roe*, the Court in *Casey* stressed the importance of the rule of *stare decisis* and the integrity of the Supreme Court as an institution in the constitutional order. 505 U.S. at 845-46, 854-69. Neither consideration lends any support to the establishment of a heretofore unrecognized constitutional right. Moreover, in reaffirming *Roe*, the Court sought to *end* the "national controversy" over whether abortion should remain a protected right, *id.* at 867, not to *begin* an entirely new debate on the nature and extent of a previously unheard of right.[2]

Second, in *Casey*, the Court referred to abortion as "a unique act," and said that "the liberty of the woman is at stake in a sense unique to the human condition and so unique to the law." 505 U.S. at 852. If abortion is a "unique act" and "so unique to the law," then *Casey* cannot be cited in support of a liberty interest in committing suicide, which has no affinity with this Court's decisions "afford[ing] constitutional protection to personal decisions relating to marriage, procreation, contraception, family relationships, child rearing and education," *id.* at 851, which are "deeply rooted in this Nation's history and tradition." *Moore*, 431 U.S. at 503.

Third, in *Casey*, the Court stated that "the essential holding of *Roe* forbids a State from interfering with a woman's choice to undergo an abortion procedure if continuing her pregnancy would constitute a threat to her health." 505 U.S. at 880. But protection of that core interest differs radically from an asserted interest in self-destruction where not health, but death, is the desideratum.

Fourth, in *Roe*, the Court was able to recognize a right to abortion only after holding that the unborn child is not a person within the meaning of the Fourteenth Amendment. 410 U.S. at 156-59. Nothing in *Roe*, how-

---

[2] The Court's reluctance to state in *Casey* whether *Roe* had been correctly decided as an original matter, 505 U.S. at 869, 871, severely limits the usefulness of looking to either *Roe* or *Casey* as an unexplored source of unenumerated rights.

ever, or in any other decision of this Court remotely suggests that a seriously ill patient, regardless of condition and prognosis, is not a constitutional "person" whose life the State has the right to protect. *See Cruzan*, 497 U.S. at 282 n.10 (recognizing State's interest).

Finally, an examination of *Casey's* analysis of how substantive due process claims are to be reviewed reveals that history and tradition remain critical. "[A]djudication of substantive due process claims may call upon the Court in interpreting the Constitution to exercise that same capacity which by tradition courts always have exercised: reasoned judgment." 505 U.S. at 849. But exercise of that judgment does not allow the Justices "to invalidate state policy choices with which [they] disagree." *Id.* The Court's reliance in *Casey* on Justice Harlan's dissent in *Poe v. Ullman*, 367 U.S. 497, 542 (1961) (Harlan, J., dissenting from dismissal on jurisdictional grounds), *Casey* 505 U.S. at 849-50, makes it clear that in evaluating original claims of constitutional right, recourse to our history and traditions is still necessary. Thus, this Court must decide whether "the asserted right to commit suicide arises from a rational evolution of tradition, or whether recognition of such a right would be a radical departure from historical precepts." *People v. Kevorkian*, 527 N.W.2d at 730.

II. THE COMMON LAW OF ENGLAND, AS RECEIVED BY THE AMERICAN COLONIES, PROHIBITED SUICIDE AND ATTEMPTED SUICIDE.

An understanding of the development of the common law crime of suicide in England is critical to any analysis of the status of suicide in American colonial law.[3] More

[3] Much of what follows in this and the following argument draws upon the research set forth in Thomas J. Marzen, Mary K. O'Dowd, Daniel Crone and Thomas J. Balch, *Suicide: A Constitutional Right?*, 24 DUQUESNE L. REV. 1 (1986) (hereinafter, *Marzen*). Although the Ninth Circuit repeatedly cited the *Marzen* article in its historical survey (79 F.3d at 807-10 & nn. 23-24, 27, 33-37, 39-40, 42-44), it misstated many of its findings and ignored its conclusion that "the weight of authority in the United States, from colonial days through at least the 1970's[,] has demonstrated that the predominant attitude of society and the law has been one of opposition to suicide," *Marzen*, 24 DUQUESNE L. REV. at 100. *See Compassion in Dying*, 85 F.3d 1440, 1445 & n.14 (9th Cir. 1996) (O'Scanniain, J., dissenting from order rejecting request for rehearing *en banc* by the full court).

than 700 years ago, the thirtenth-century commentator Bracton wrote, "Just as a man may commit felony by slaying another so he may do so by slaying himself, the felony is said to be done to himself [*felo de se*]." 2 H. de Bracton (c. 1250), ON THE LAWS AND CUSTOMS OF ENGLAND (S. Thorne trans. 1968) 423 (BRACTON). If the suicide was committed to avoid punishment for a crime he had committed, all of his property—real and personal—was forfeited to the King. *Id.* at 366, 423-24. But if "a man slays himself in weariness of life or because he is unwilling to endure further bodily pain . . . he may have a successor, but his movable goods are confiscated. He does not lose his inheritance, only his movable goods." *Id.* at 424. His heirs could inherit his real property (because he had not committed suicide to avoid punishment for committing a crime) but his personal property was confiscated by the Crown. "The principle that suicide of a sane person, for whatever reason, was a punishable felony was thus introduced into English common law." *Marzen*, 24 DUQUESNE L. REV. at 59. But no penalty applied to the suicide of one who was not sane. "[A] madman bereft of reason[,]" "the deranged, the delirious and the mentally retarded" or "one labouring under a high fever" do not commit felony *de se* "nor do such persons forfeit their inheritance or their chattels, since they are without sense and reason and can no more commit an *injuria* or a felony than a brute animal." BRACTON at 424.

Bracton's contemporaries agreed that suicide was a crime at common law. The commentator known as Brit-

ton wrote that "where a man is a felon of himself, his chattels shall be adjudged ours [the King's], as the chattels of a felon, but his inheritance shall descend entire to his heirs." I Britton, Bk. I, ch. VIII (F. Nicols trans. 1865) (reprinted 1983 W.W. Gaunt) 39. Fleta, writing near the end of the thirteenth century, provided a fuller treatment of the subject:

> Just as a man may commit felony in slaying another, so he may in slaying himself; for if one who has lately slain a man or has committed some like act whence felonies arise, conscious of his crime and in fear of judgement, slay himself in any fashion, his goods accrue to the Crown nor may he have any other heir than the lord of the fee. But should anyone slay himself in weariness of life or because he is unable to support some bodily pain, he shall have his son for his heir, but his movable goods will be confiscate. Those, too, who cast themselves down from a height or drown themselves likewise have heirs, provided they have committed no felony. Similarly, madmen and those who are frenzied, childish, deranged or are suffering from high fever, although they kill themselves, do not commit felony or forfeit their inheritance or chattels, because they lack sense and reason. Their wives, moreover, should receive their dowers.

Fleta (c. 1290), Bk. I, ch. XXXIV, "*Of Suicides,*" Publications of the Selden Society, Vol. 72, p. 89 (1955).

In 1628, Sir Edward Coke published his classic INSTITUTES. In his THIRD INSTITUTE, Coke classified suicide as a form of murder. "*Felo de se* is a man or woman, which being *compos mentis,* of sound memory, and of the age of discretion, killeth himself, which being lawfully found by the oath of twelve men, all the goods and chattels of the party so offending are forfeited" E. Coke, THIRD INSTSTUTE OF THE LAWS OF ENGLAND 54 (1644 ed.). Like his predecessors, Coke noted an exception for persons who had killed themselves while insane. "If a man lose his memory by the rage of sickness or infirmity,

or otherwise, and kill himself while he is not *compos mentis,* he is not *felo de se*: for as he cannot commit murder upon another, so in that case he cannot commit murder upon himself." *Id.* According to Coke, a *felo de se* forfeited only his goods and chattels *Id.* at 55.

In 1716, the first edition of William Hawkins' A TREATISE OF THE PLEAS OF THE CROWN was published. Noting that "our Laws have always had . . . an Abhorrence of this Crime," Hawkins' analysis of "Homicide against a Man's own Life" largely followed Coke. Wm. Hawkins, 1 A TREATISE OF THE PLEAS OF THE CROWN (1716) 67-68. Hawkins rejected the prevailing "Notion" that anyone who kills himself must be mentally incompetent, *id.* at 67, and condemned the killing of another person with his consent or at his request, as well as suicide pacts. *Id.* at 68.

In 1736, Sir Matthew Hale's work, HISTORY OF THE PLEAS OF THE CROWN, was published. Like Hawkins, Hale reflected Coke's views on the criminality of suicide at common law. M. Hale, 1 HISTORY OF THE PLEAS OF THE CROWN, Ch. XXXI, "*Concerning homicide and first of self-killing or* felo de se," (1736) at 411-12. In accord with the earlier commentators, Hale stated, "If he lose his memory by sickness, infirmity, or accident, and kills himself he is not *felo de se,* neither can he be said to commit murder upon himself or any other." *Id.* at 412. But Hale doubted whether every suicide could be treated as an insane act. *Id.*

In 1803, Sir Edward East published his PLEAS OF THE CROWN. East described anyone "who wilfully . . . causes his own death" as a "*felo de se.*" E. East, 1 PLEAS OF THE CROWN (1803), ch. V, § 5, at 219 (1972 reprint). Calling suicide "an heinous offence," East said that "he who voluntarily kills himself is with respect to the public as criminal as one who kills another. It is equally an offence against the fundamental law of society, which is protection." *Id.*

Sir William Blackstone summarized the law of *felo de se* in his classic eighteenth century commentaries. Characterizing suicide as "[s]elf-murder," Blackstone reiterated the common law's condemnation of suicide as "among the highest crimes, making it a peculiar species of felony, a felony committed on one's self." 4 Blackstone, COMMENTARIES ON THE LAWS OF ENGLAND 189 (1769). Like Hawkins and Hale, Blackstone criticized the tendency of coroner's juries to find "that the very act of suicide is an evidence of insanity; as if every man who acts contrary to reason, had no reason at all: for the same argument would prove every other criminal *non compos*, as well as the self-murderer." *Id.* Blackstone noted that the punishment for suicide at common law was forfeiture of all of the suicide's personal property and ignominious burial in the public way. *Id.* at 190. These punishments were threatened in the hope that a potential suicide's "care for either his own reputation, or the welfare of his family, would be some motive to restrain him from so desperate and wicked an act." *Id.* Nevertheless, Blackstone recommended that the severity of the law be tempered by the power of the sovereign "to execute mercy in judgment." *Id.*

The condemnation of suicide at common law was not limited to the commentators; it was also expressed by the courts. In a case decided more than 400 years ago, an English court described the "quality of the offence" committed by the suicide as "a degree of murder." *Hales v. Petit*, 1 Plowd, 253, 261, 75 Eng. Rep. 387, 399-400 (Queen's Bench 1561-1562). English courts treated both assisted suicide and suicide pacts as forms of homicide.[4]

[4] *See Vaux's Case*, 4 Co. Rep. 44a, 76 Eng. Rep. 992 (1591); *Rex v. Dyson*, Russ. & Ry. 523, 168 Eng. Rep. 930 (1823); *Regina v. Alison*, 8 Car. & P. 418, 173 Eng. Rep. 557 (1838); *Regina v. Jessop*, 16 Cox Cr. Cas. 204 (1887); *Regina v. Stormonth*, 61 J.P. 729 (1897); *Rex v. Abbott*, 67 J.P. 151 (1903). *See also Regina v. Gaylor*, 1 Dears. & B. 288, 169 Eng. Rep. 1011 (1857).

And at common law, *attempted* suicide was a misdemeanor, punishable by fine and imprisonment.[5]

The sparse records available indicate that this was also the law in colonial America. At least nine of the original thirteen colonies prohibited, and in some cases punished, suicide and attempted suicide,[6] though the common law

[5] *See Regina v. Moore*, 3 Car. & K. 319, 175 Eng. Rep. 571 (1852); *Regina v. Doody*, 6 Cox. Crim. Cas. 463 (1854); *Regina v. Burgess*, 9 Cox Crim. Cas. 247, 169 Eng. Rep. 1387 (1862); *Rex v. Mann*, 2 K.B. 107, 83 L.J.K.B. 648 (1914). In its survey of English law, the Ninth Circuit minimized the clear condemnation of suicide (by the mentally competent) enunciated by Bracton and Coke, 79 F.3d at 808-09, relegated Blackstone to an obscure footnote, *id.* at 809 n.38, ignored the other great commentators who unequivocally condemned suicide as criminal and overlooked at least a dozen English cases expressing the law's (*and* society's) disapproval of suicide. Although, in the case of *completed* suicides, juries may have been reluctant to return a verdict that would result in a property forfeiture that would punish only innocent survivors, the guilty verdicts returned against persons who *attempted* suicide, *assisted* suicide or *survived* suicide pacts strongly suggest that English juries experienced no comparable difficulty in applying the law where no forfeiture was at stake.

[6] *Connecticut:* 2 Z. Swift, A SYSTEM OF LAWS OF THE STATE OF CONNECTICUT 304 (n.p. 1796) (reprinted 1972) (noting early instances of ignominious burials); Booth, Woodruff, Mather, Baldwin & Turrill, *Preface* to CONN. GEN. STAT. at vi (1875) (noting State's adoption of common law of England).

Georgia: Life Ass'n of America v. Waller, 57 Ga. 533, 536 (1876) (suicide "a species of crime or wickedness—something wrong; a kind of self-murder" at common law).

Maryland: Pope v. State, 396 A.2d 1054, 1072-74 (Md. 1978) (adoption of common law); Note, *Criminal Liability of Participants in Suicide:* State v. Williams, 5 MD. L. REV. 324, 325-26 (1941) (reporting unappealed trial court decision treating suicide as a common law crime).

Massachusetts: THE GENERAL LAWS AND LIBERTIES OF MASSACHUSETTS COLONY (1672), *reprinted in* THE COLONIAL LAWS OF MASSACHUSETTS 137 (W. Whitmore ed. 1887) (statute mandating ignominious burial for suicide).

North Carolina: State v. Willis, 121 S.E.2d 854 (N.C. 1961) (suicide a criminal act at common law, attempted suicide punishable

penalties generally were abolished after the Revolution.[7] The penalties were abolished, not because society no longer regarded suicide as a wrong (much less as a right), but because of an awareness that punishment could not reach the suicide and a moral sense that it was unfair to punish the suicide's innocent survivors. *See Cruzan*, 497 U.S. at 294 (Scalia, J., concurring).

---

as a misdemeanor). *See also* N.C. Laws, ch. XXXI, § VI (1715), *reprinted in* 1 THE FIRST LAWS OF THE STATE OF NORTH CAROLINA 18 (John D. Cushing ed. 1984) (adopting common law).

Pennsylvania: Connecticut Mut. Life Ins. Co. v. Groom, 86 Pa. 92, 97 (1878) (describing suicide as "the crime of self-murder"); *Commonwealth v. Wright*, 11 Pa. D. 144 (Ct. Quarter Sess., Phil. County 1902) (criticizing practice of indicting persons "for the common law offence of attempting to commit suicide"); *Elwood v. New England Mut. Life Ins. Co.*, 158 A. 257, 259 (Pa. 1931) (classifying attempted suicide as "a crime infamous at common law," and a successful suicide as "a species of felony").

Rhode Island: THE EARLIEST ACTS AND LAWS OF THE COLONY OF RHODE ISLAND AND PROVIDENCE PLANTATIONS, 1647-1719, at 19, 59 (John D. Cushing ed. 1977) (adopting common law punishments for suicide).

South Carolina: S.C. Acts, No. 253, § VI (Apr. 9, 1706), *reprinted in* 1 THE EARLIEST PRINTED LAWS OF SOUTH CAROLINA, 1692-1734, at 192 (John D. Cushing ed. 1978), (recognizing criminality of suicide at common law).

Virginia: A. Scott, CRIMINAL LAW IN COLONIAL VIRGINIA 108 n.198, 198-99 nn.15-16 (1930) (noting instances of ignominious burial and forfeiture of property).

[7] *See, e.g.*, DEL. CONST. art. 1, § 15 (1792); MD. CONST., Declaration of Rights § 24 (1776); N.H. CONST. pt. 2, art. 89 (adopted 1789); N.J. CONST. of 1776, art. 17; N.C. Laws, ch. XXXI (1787), *reprinted in* 2 THE FIRST LAWS OF THE STATE OF NORTH CAROLINA 626 (John D. Cushing ed. 1984); an Act to reform the penal Laws, § 53 (1798), *reprinted in* 2 THE FIRST LAWS OF THE STATE OF RHODE ISLAND 604 (John D. Cushing ed. 1983); Act of Mar. 14, 1848 (Criminal Code), tit. II, ch. XI, §§ 23, 25, 1847-48 Va. Laws 124. Contrary to the understanding of the Ninth Circuit, 79 F.3d at 809, the abolition of common law penalties did *not* mean that suicide had been decriminalized. *See Potts v. Barrett Div., Allied Chem. & Dye Corp.*, 138 A.2d 574, 580 (N.J. Super. 1958); *State v. Willis*, 121 S.E.2d 854 (N.C. 1961); *Wackwitz v. Roy*, 418 S.E.2d 861, 864 (Va. 1992).

III. ALTHOUGH THE PENALTIES FOR SUICIDE AND ATTEMPTED SUICIDE ULTIMATELY FELL INTO DISFAVOR IN AMERICAN LAW, THE STATES HAVE RETAINED A STRONG AND COMPELLING INTEREST IN THE PRESERVATION OF HUMAN LIFE AND IN THE PREVENTION OF SUICIDE.

The common law penalties for suicide were abandoned after the Revolutionary War, and attempted suicide was seldom prohibited[8] and more rarely punised.[9] Nevertheless, suicide was regarded as "*malum in se*" and was often referred to as a "crime," a "wrongful

---

[8] At one time or another, eight States prohibited attempted suicide: *Minnesota*: MINN. PENAL CODE, §§ 143, 147 (1885), *codified as* MINN. GEN. STAT. §§ 6428, 6432 (1894), *recodified as* MINN. REV. LAWS, § 4870, *repealed by* an Act of Apr. 20, 1911, ch. 293, § 1, 1911 Minn. Laws 409, 409; *Nevada*: Crimes & Punishments Act of 1911, § 115, *codified as* NEV. REV. LAWS § 6380 (1912), *repealed by* an Act of Mar. 25, 1913, ch. 238, § 1, 1913 NEV. STAT. 362, 362; Act of Mar. 4, 1957, ch. 35, § 1, 1956-57 NEV. STAT. 59, 59-60, *repealed by* an Act of Mar. 31, 1961, ch. 256, § 1, 1961 Nev. Stat. 416, 416; *New Jersey*: Act of May 9, 1957, ch. 34, § 1, 1 N.J. Laws 63, 67 (1957), *codified as* N.J. REV. STAT. § 2A:170-25.6 (Supp. 1967), *repealed by* an Act of Act of Feb. 16, 1972, ch. 450, § 3, 1971 N.J. Laws 1934; *New York*: Act of July 26, 1881, ch. 676, §§ 174, 178, 1881 N.Y. Laws (Vol. 3 Penal Code) at 42-43, *repealed by* an Act of May 5, 1919, ch. 414, § 1, 1919 N.Y. Laws 1193, 1193; *North Dakota*: G. Hand, REV. CODES OF THE TERRITORY OF DAKOTA, PENAL CODE §§ 230, 236 (1877), *repealed by* an Act of Mar. 4, 1967, ch. 108, § 1, 1967 N.D. Sess. Laws 215, 300; *Oklahoma*: Okla. Terr. Stat. 2076 (1890), *repealed by* an Act of Jan. 30, 1976, ch. 6, § 2, 1976 Okla. Sess. Laws 7; *South Dakota*: G. Hand, REV. CODES OF THE TERRITORY OF DAKOTA, PENAL CODE §§ 230, 236 (1877), *recodified as* S.D. CODE, § 13.1903 (1939), *repealed by* an Act of Feb. 17, 1968, ch. 31, § 1, § 13.1901, 1968 S.D. Sess. Laws 47, 47; *Washington*: CRIM. CODE, ch. 249, § 134, 1909 Wash. Laws 11th Sess. 890, 929, codified at REM. & BAL. CODE § 2386 (1910), *repealed by* WASH. CRIM. CODE, 1975, ch. 260, § 9A.92.010(213)-(217) Wash. Laws 817, 866, *codified as* REV. WASH. CODE § 9A.92.010(213)-(217) (1977).

[9] Three courts held that attempted suicide could be charged as a common law crime. *See State v. Carney*, 55 A. 44 (N.J. 1903); *State v. Lafayette*, 188 A. 918 (N.J. Common Pleas 1937); *State v. Willis*, 121 S.E.2d 854 (N.C. 1961).

act," a "grave public wrong," or an act of "moral turpitude," even though it was no longer punishable.[10] Indeed, in a case decided 120 years ago, this Court characterized suicide as "self-murder," and referred to the suicide of a sane person as "an act of criminal self-destruction." *Bigelow v. Berkshire Life Ins. Co.*, 93 U.S. 284, 286 (1876).

---

[10] *See, e.g., McMahan v. State*, 53 So. 89, 90-91 (Ala. 1910); *Pennsylvania Mut. Life Ins. Co. v. Cobbs*, 123 So. 94, 97 (Ala. App. 1929); *Life Ass'n of America v. Waller*, 57 Ga. 533, 536 (1876); *Grand Lodge of Illinois, Indep. Order of Mut. Aid v. Wieting*, 48 N.E. 59, 61-62 (Ill. 1897); *Dickerson v. Northwestern Mut. Life Ins. Co.*, 65 N.E. 694, 696 (Ill. 1902); *Wallace v. State*, 116 N.E.2d 100, 101 (Ind. 1953); *Brown v. Metropolitan Life Ins. Co.*, 7 N.W.2d 21, 24 (Iowa 1943); *Manhattan Life. Ins. Co. v. Beard*, 66 S.W. 35, 37 (Ky. 1902); *Dugan v. Commonwealth*, 333 S.W.2d 755, 756 (Ky. 1960); *Commonwealth v. Mink*, 123 Mass. 422, 426, 428-29 (1877); *Bohaker v. Travelers Ins. Co.*, 102 N.W. 342, 344 (Mass. 1913); *Hale v. Life Indem. & Inv. Co.*, 63 N.W. 1108, 1108 (Minn. 1895); *Shipman v. Protected Home Circle*, 67 N.E. 83, 85 (N.Y. 1903); *Benard v. Protected Home Circle*, 146 N.Y.S. 232, 235 (App. Div. 1914); *State v. Willis*, 121 S.E.2d 854, 855-57 (N.C. 1961); *Wyckoff v. Mut. Life Ins. Co. of N.Y.*, 147 P.2d 227, 229 (Or. 1944); *Elwood v. New England Mut. Life Ins. Co.*, 158 A. 257, 258-59 (Pa. 1931); *State v. Levelle*, 13 S.E. 319, 321 (S.C. 1891), *overruled on other grounds, State v. Torrence*, 406 S.E.2d 315 (S.C. 1991); *Phadenhauer v. Germania Life Ins. Co.*, 54 Tenn. (7 Heisk.) 567, 576 (1872); *State ex rel. Swann v. Pack*, 527 S.W.2d 99, 113 (Tenn. 1975), *cert. denied*, 424 U.S. 954 (1975); *Plunkett v. Supreme Conclave, Improved Order of Heptasophs*, 55 S.E. 9, 10-11 (Va. 1906); *Patterson v. Natural Premium Mut. Life Ins. Co.*, 75 N.W. 980, 983 (Wis. 1898).

In its highly selective use of historical materials, the Ninth Circuit ignored twenty-two decisions from sixteen American jurisdictions (most of which were cited in *Marzen*) condemning suicide and, instead, focused on one, isolated New Jersey Supreme Court decision from 1901 which, in *dicta*, appeared to excuse suicide, at least in some instances. *See Compassion in Dying*, 79 F.3d at 809-10 (quoting *Campbell v. Supreme Conclave Improved Order Heptasophs*, 49 A. 550, 553 (N.J.L. 1901)). The court failed to note that later New Jersey opinions expressly rejected *Campbell's* approbation of suicide. *See State v. Carney*, 55 A. 44 (N.J. 1903); *Potts v. Barrett Div., Allied Chem. & Dye Corp.*, 138 A.2d 574, 580 (N.J. Super. 1958).

Regardless of the status of suicide itself, most States prohibited *assisted* suicide. By the time that the Fourteenth Amendment was approved in 1868, at least twenty-one of the then thirty-seven States, including eighteen of the thirty ratifying States, banned assisted suicide, either as a statutory[11] or common law offense.[12] Whatever may have been the common law ra-

---

[11] *Arkansas:* Act of Feb. 16, 1838, *printed as* ARK. REV. STAT. ch. XLIV, div. III, art. II, § 4, at 240 (1838); *Florida:* Act of Aug. 6, 1868, ch. 1637 (No. 13), subchap. 3, § 9, 1868 Fla. Laws 61, 64; *Kansas:* KAN. TERR. STAT. ch. 48, § 8 (1855); *Minnesota:* MINN. TERR. REV. STAT. ch. 100, § 9, at 493 (1851); *Mississippi:* Act of Feb. 15, 1839, ch. 66, tit. 3, § 7, 1839 Miss. Laws 102, 112, *codified as* MISS. CODE ch. 64, art. 12, tit. 3, § 7, at 958 (Hutchinson 1849); *Missouri:* Act of Mar. 20, 1835, art. II, *codified as* MO. REV. STAT. CRIMES & PUNISHMENTS, art. II, § 8, at 168 (1835); *New York:* 2 N.Y. REV. STAT. pt. IV, ch. I, tit. I, art. 1, § 7 at 661 (1829); *Oregon:* OR. GEN. LAWS 1845-1864 (Deady 1866), CODE OF CRIM. PROC. § 508 at 528; *South Carolina:* 1 THE EARLIEST PRINTED LAWS OF SOUTH CAROLINA 1692-1734, at 190 (John D. Cushing ed. 1978) (statute condemning suicide as a felony and, by implication, *assisted* suicide); *Wisconsin:* REVISED STAT. OF THE STATE OF WIS. ch. 133, § 9 (Albany, N.Y. 1849), *codified as* REV. STAT. OF WIS. ch. 164, § 9 (1858).

[12] *Alabama:* Alabama adopted the common law of crimes, including the law of homicide. ALA. DIGEST, tit. 17, ch. 1, § 45, at 214 (H. Toulmin ed. 1823); PENAL CODE, No. 138, ch. 3, § 2, 1840-41 ALA. ACTS 122 (*codified as* Supplement to AIKEN'S DIGEST PENAL CODE, ch. 3, § 2, at 210 (A. Meek ed. 1836-41)). For the modern statutory codification of common law crimes, *see* ALA. CODE § 13A-6-3 (1994) and *Commentary*. Since "[e]very murder at common law is murder under our statutes," *McMahan v. State*, 53 So. 89, 90 (Ala. 1910), suicide was a felony even though no punishment could be attached. *Id.* at 90-91 ("intentional self-destruction" is "felo de se"). Accordingly, *assisted* suicide would have been criminal, also. *See also Crook v. State*, 160 So.2d 884, 893 (Ala. 1963): "Suicide is murder at Common Law. . . . An agreement compassing it is a criminal conspiracy. If one of the conspirators dies . . . the survivor—if he contributed to the suicide whether present or not—can legitimately be tried for murder."

Connecticut: Connecticut also adopted the common law of crimes. *See* Booth, Woodruff, Mather, Baldwin & Turrill, *Preface to* CONN. GEN. STAT. at vi (1875). Persuading, provoking or counseling

tionale for prohibiting suicide, the States have retained a strong interest in protecting the lives of their citizens. That interest is currently manifested in several ways.

---

another to commit suicide was treated as murder. 2 Z. Swift, A DIGEST OF THE LAWS OF THE STATE OF CONNECTICUT 270 (New Haven 1823).

Georgia: A post-Reconstruction case referred to suicide as "something more than self-sought and self-inflicted death. It is a species of crime or wickedness—something wrong; a kind of self-murder." *Life Ass'n of America v. Waller*, 57 Ga. 533, 536 (1876). This language suggests that *assisted* suicide would have been criminal, too.

Kentucky: In 1904, the Kentucky Court of Appeals held that suicide was a common law felony and that one could be charged and convicted for advising or assisting in the commission of a suicide. *Commonwealth v. Hicks*, 82 S.W. 265 (Ky. 1904).

Maryland: From its earliest days, Maryland adopted the common law of crimes. *See Pope v. State*, 396 A.2d 1054, 1072-74 (Md. 1978) (recognizing common law crime of misprision of felony); *Gladden v. State*, 330 A.2d 176 (Md. 1974) (adopting common law "transferred intent" rule); *State v. Buchanan*, 5 H. & J. 317 (1821) (adopting common law crime of conspiracy). Both suicide and assisted suicide were crimes at common law. An unappealed trial court decision in 1940 upheld the conviction of the survivor of a suicide pact for second-degree murder, essentially holding that active assistance in committing suicide is a form of homicide. *See* Note, *Criminal Liability of Participants in Suicide:* State v. Williams, 5 MD. L. REV. 324 (1941).

Massachusetts: Commonwealth v. Bowen, 13 Mass. 356 (1816) (holding that one prisoner who assisted another prisoner in hanging himself in jail could be charged with murder); *Commonwealth v. Mink*, 123 Mass. 422, 429 (1877) (reviewing cases on suicide and attempted suicide and concluding that while not "technically a felony in this Commonwealth," suicide was nevertheless "unlawful and criminal as *malum in se*," and that "any attempt to commit it is likewise unlawful and criminal").

Michigan: From its earliest days as a territory, Michigan adopted the common law of crimes, in addition to particular statutory crimes. *See* CASS CODE OF 1816, Crimes § 58, *reprinted in* 1 MICH. TERR. LAWS 132-33 (1871). For the modern statutory codification of common law crimes, *see* MICH. COMP. LAWS ANN. § 750.505 (West 1991). In an 1876 decision, the Michigan Supreme Court recognized that the suicide of sane person was a crime at common law. *See John Hancock Mut. Life Ins. Co. v. Moore*, 34

First, almost all of the States (forty-six States) forbid assisted suicide, either by an express statute [13] or by ap-

---

Mich. 41, 45 (1876). In *People v. Roberts*, 178 N.W. 690 (Mich. 1920), *overruled in part, People v. Kevorkian*, 527 N.W.2d at 733-39, the Michigan Supreme Court upheld a murder conviction of a man who provided poison to his wife who committed suicide. In *Kevorkian*, the Michigan Supreme Court held that assisted suicide was punishable as a common law crime even in the absence of special legislation. *Id.* at 739.

North Carolina: In 1961, the North Carolina Supreme Court, noting that the State had adopted the common law of crimes (*see* N.C. GEN. STAT. § 14-1(1) (1993)), held that attempted suicide was an indictable misdemeanor. *State v. Willis*, 121 S.E.2d 854 (N.C. 1961). The court expressly held that one who "aids and abets another in . . . self-murder is amenable to the law." *Id.* at 856-57. After independence, North Carolina readopted the common law. *See* N.C. LAWS, ch. V, § II (1778), *reprinted in* 1 THE FIRST LAWS OF THE STATE OF NORTH CAROLINA 351 (John D. Cushing ed. 1984).

Pennsylvania: In 1878, the Pennsylvania Supreme Court defined suicides as "the crime of self-murder" in "legal acceptation and in popular use." *Connecticut Mut. Life Ins. Co. v. Groom*, 86 Pa. 92, 97 (1878). As a State that adopted common law crimes, *assisting* suicide would have been a criminal offense.

Tennessee: Tennessee adopted the common law. *See State v. Alley*, 594 S.W.2d 381, 382 (Tenn. 1980). In 1872, the Tennessee Supreme Court referred to suicide "a crime of the highest grade." *Phadenhauer v. Germania Life Ins. Co.*, 54 Tenn. (7 Heisk.) 567, 576 (1872). Thus, *assisted* suicide also would have been unlawful.

Virginia: Virginia adopted the common law of crimes. *See* A. Scott, CRIMINAL LAW IN COLONIAL VIRGINIA 27 (1930); VA. CODE ANN. § 18.2-16 (1996); *Plunkett v. Supreme Conclave, Improved Order of Heptasophs*, 55 S.E. 9, 11 (Va. 1906) (referring to suicide as a "crime"). *See also Wackwitz v. Roy*, 418 S.E.2d 861, 864 (Va. 1992) ("[s]uicide . . . remains a common law crime in Virginia as it does in a number of other common-law states").

[13] Thirty-five States have enacted statutes banning assisted suicide. ALASKA STAT. § 11.41.120(a)(2) (Michie 1989); ARIZ. REV. STAT. ANN. § 13-1103(A)(3) (West Supp. 1995); ARK. CODE ANN. § 5-10-104(a)(2) (Michie 1993); CAL. PENAL CODE § 401 (West 1988); COLO. REV. STAT. § 18-3-104(1)(b) (Supp. 1995); CONN. GEN. STAT. ANN. § 53a-56(a)(2) (West 1994); DEL. CODE ANN. tit. 11, § 645 (1995); FLA. STAT. ANN. § 782.08 (West 1992); GA. CODE ANN. § 16-5-5(b) (1996); ILL. COMP. STAT. ANN. CH. 720,

plication of general homicide or common law principles.[14] Although suicide assistance is not as common as suicide

§ 5/12-31(a)(2) (Smith-Hurd Supp. 1996); IND. CODE ANN. § 35-42-1-2.5(b) (Michie Supp. 1996); IOWA S.F. 2066, *to be codified as* IOWA CODE § 707A.2 (Supp. 1996); KAN. STAT. ANN. § 21-3406 (1995); KY. REV. STAT. ANN. § 216.302 (Michie 1995); LA. REV. STAT. ANN. § 14:32.12 (West Supp. 1996); ME. REV. STAT. ANN. tit. 17-A, § 204 (West 1983); MINN. STAT. PENAL CODE ANN. § 9.34(a) (West 1994); WIS. STAT. ANN. § 939.48(5) (West 1996).

porary involuntary commitment of individuals who, as a result of mental disease or illness, may harm themselves.[18] Finally, despite occasional instances of jury nullification or discretionary decisions not to prosecute, acts of "mercy-killing" or active voluntary euthanasia always have been considered as homicide. The law does not accept the consent of the victim as a defense to a charge of homicide,[19] nor benevolent motive as an excuse.[20]

In light of this overwhelming legislative and judicial consensus,[21] which the Ninth Circuit largely ignored, it

State*, 108 S.W. 1139, 1141 (Tenn. 1907); *Goodin v. State*, 726 S.W.2d 956, 957-58 (Tex. Cr. App. 1987); *Martin v. Commonwealth*, 37 S.E.2d 43, 47 (Va. 1946). *See also State v. Mays*, 307 S.E.2d 655 (W. Va. 1983).

[20] *People v. Conley*, 411 P.2d 911, 918 (Cal. 1966) ("one who commits euthanasia bears no ill will toward his victim and believes [that] his act is morally justified . . . nonetheless acts with malice if he is able to comprehend that society prohibits his act regardless of his personal belief"); *Gilbert v. State*, 487 So.2d 1185, 1190 (Fla. Dist. Ct. App. 1986), *rev. denied*, 494 So.2d 1150 (Fla. 1986); *Eichner v. Dillon*, 426 N.Y.S.2d 517, 533 (App. Div. 1980), *aff'd as modified sub nom. In re Storar*, 420 N.E.2d 64 (N.Y. 1981). Anecdotal evidence and polling data that some physicians may assist their patients in killing themselves, *Compassion in Dying*, 79 F.3d at 811 & nn.54-59, does not reflect societal acceptance of such conduct, especially where the conduct is difficult to detect and prosecute.

[21] The Model Penal Code prohibits assisted suicide, even though the Code does not criminalize either suicide or attempted suicide. *See* MODEL PENAL CODE § 210.5(2). In their *Comment*, the drafters said that "the interests in the sanctity of life that are represented by the criminal homicide laws are threatened by one who expresses a willingness to participate in taking the life of another, even though the act may be accomplished with the consent, or at the request, of the suicide victim." *Id.* at 100.

cannot plausibly be argued that a right to commit suicide (or suicide assistance) under any circumstances is "deeply rooted in this Nation's history and traditions," *Moore v. City of East Cleveland, Ohio*, 431 U.S. at 503, or that it is "implicit in the concept of ordered liberty," *Palko v. Connecticut*, 302 U.S. at 325. It would be "an impermissibly radical departure from existing tradition, and from the principles that underlie that tradition, to declare that there is such a fundamental right protected by the Due Process Clause." *Kevorkian*, 527 N.W.2d at 733.

IV. BOTH THE SECOND CIRCUIT AND THE NINTH CIRCUIT ERRED IN EQUATING SUICIDE WITH THE REFUSAL OF UNWANTED LIFE-SUSTAINING MEDICAL TREATMENT.

The key error of both the Second Circuit's equal protection analysis and the Ninth Circuit's due process analysis was to equate suicide, a crime at common law, with the refusal of unwanted medical care, a right protected by the common law and the Constitution. *See Quill*, 80 F.3d at 725-31; *Compassion in Dying*, 79 F.3d at 820-24. They are not equivalent.

> [W]hereas suicide involves an affirmative act to end a life, the refusal or cessation of life-sustaining treatment simply permits life to run its course, unencumbered by contrived intervention. Put another way, suicide frustrates the natural course by introducing an outside agent to accelerate death, whereas the refusal or withdrawal of life-sustaining medical treatment allows nature to proceed, i.e., death occurs because of the underlying condition.
>
> * * * *
>
> [P]ersons who opt to discontinue life-sustaining medical treatment are not, in effect, committing suicide. There is a difference between choosing a natural death summoned by an uninvited illness or

> calamity, and deliberately seeking to terminate one's life by resorting to death-inducing measures unrelated to the natural process of dying.

People v. Kevorkian, 527 N.W.2d at 728-29.

Virtually without exception, state legislators and both state and federal courts have recognized the distinction between directly *causing* death by an affirmative act ending life and *allowing* death to occur by withholding or withdrawing life-sustaining medical treatment. Forty-seven States expressly disapprove of mercy killing, suicide and assisted suicide in either their natural death acts/living will statutes,[22] or their durable power of attorney for

[24] *See* notes 22 and 23, *supra*. *See also* CONN. GEN. STAT. ANN. § 19a-575 (West Supp. 1996) (form declaration); N.J. STAT. ANN. § 26:2H-54(d), -(e) (West 1996) (legislative findings); N.M. STAT. ANN. § 24-7A-13(C) (Michie Supp. 1995).

> In the case of the competent adult's refusing medical treatment such an act does not necessarily constitute suicide since (1) in refusing treatment the patient may not have the specific intent to die, and (2) even if he did, to the extent that the cause of death was from natural causes, the patient did not set the death producing agent in motion with the intent of causing his own death.

Id. at 426 n.11. *See also Thor v. Superior Court*, 855 P.2d 375, 385 (Cal. 1993) ("a necessary distinction exists between a person suffering from a life-threatening disease or debilitating injury who rejects medical intervention that only prolongs but never cures the affliction and an individual who deliberately sets in motion a course of events aimed at his or her demise and attempts to enlist the assistance of others); *Fosmire v. Nicoleau*, 551 N.E.2d 77, 82 (N.Y. 1990) ("merely declining medical care, even essential treatment, is not considered a suicidal act"); *In re Colyer*, 660 P.2d 738, 743 (Wash. 1983) ("[a] death which occurs after the removal of life sustaining systems is from natural causes, neither set in motion nor intended by the patient").

Almost every court recognizing a right to refuse medical treatment has expressly distinguished removal of life support from suicide, and has drawn a clear distinction between *allowing* death to occur by passive means (refusing life-sustaining treatment) and *causing* death by active means (killing the patient by a direct act that ends his life).[25] No court, with the exception of those courts

[25] *See also Rasmussen v. Fleming*, 741 P.2d 674, 685 (Ariz. 1987); *Bouvia v. Superior Court*, 225 Cal. Rptr. 297, 306 (Ct. App. 1986) (quadriplegic's "decision to let nature take its course is not equivalent to an election to commit suicide with real parties aiding and abetting therein"); *Bartling v. Superior Court*, 209 Cal. Rptr. 220, 225 (Ct. App. 1984); *Barber v. Superior Court*, 195 Cal. Rptr. 484, 487 (Ct. App. 1983); *McConnell v. Beverly Enterprises, Inc.*, 553 A.2d 596, 605 (Conn. 1989); *In re Guardianship of Browning*, 568 So.2d 4, 14 (Fla. 1990) ("suicide is not an issue when . . . the discontinuance of life support 'in fact will merely result in [the patient's] death, if at all, from natural causes'") (citing *Satz v.*

whose decisions are under review here, has held otherwise. As these cases demonstrate, suicide cannot be equated with the refusal of medical treatment. They are different in two key respects: First, in the case of removing life-sustaining treatment, there is no intent to end life, but only the knowledge that death may result. Second, regardless of whether there is an intent to end life, the removal of life support is not the actual cause of death; rather, death results from natural causes (*e.g.*, an underlying pathology that renders a patient unable to breathe or eat without mechanical assistance). These distinctions fully justify treating assisted suicide differently from the refusal of unwanted life-sustaining medical treatment. *See FCC v. Beach Communications, Inc.*, 508 U.S. 307, 313-16 (1993). As the New York State Force Report on Life and the Law noted:

> The imposition of life-sustaining medical treatment against a patient's will requires a direct invasion of bodily integrity and, in some cases, the use of physical restraints, both of which are flatly inconsistent

Bergstedt*, 801 P.2d 617, 627 (Nev. 1990) ("there is a substantial difference between the attitude of a person desiring non-interference with the natural consequences of his or her condition and the individual who desires to terminate his or her life by some deadly means either self-inflicted or through the agency of another"); *In re Farrell*, 529 A.2d 40, 411 (N.J. 1987); *Leach v. Akron General Medical Center*, 68 Ohio Misc. 1, 10 (1980); *In re Fiori*, 673 A.2d 905, 910 (Pa. 1996); *In re Guardianship of Grant*, 747 P.2d 445, 455 (Wash. 1987), *modified*, 757 P.2d 534 (Wash. 1988); *In re L.W.*, 482 N.W.2d 60, 71 (Wis. 1992).

> with society's basic conception of personal dignity. . . . It is this right against intrusion—not a general right to control the timing and manner of death—that forms the basis of the constitutional right to refuse life-sustaining treatment. Restrictions on suicide, by contrast, entail no such intrusions, but simply prevent individuals from intervening in the natural process of dying.

WHEN DEATH IS SOUGHT 71.

The decision respondents urge upon this Court not only would overturn the assisted suicide statutes throughout the States, but also would undermine the right of public and private actors to intervene to prevent suicide and jeopardize the authority of public health officials to institutionalize for treatment persons who attempt suicide. Moreover, recognition of a right to suicide assistance could easily lead to the legalization of "homicide by consent." The Ninth Circuit views this possible development with complete equanimity. *Compassion in Dying*, 79 F.3d at 831-32.

Notwithstanding their disclaimers, the right respondents ask this Court to recognize could *not* be limited to mentally competent, terminally ill patients. This is apparent from respondents' reliance upon this Court's abortion jurisprudence and the extensive case law that has developed in support of the right to refuse medical treatment. If abortion jurisprudence is the source of a right to suicide, the States would be powerless to examine the reasons persons would want to kill themselves and then, based on that examination, permit some suicides (the "rational" ones) and forbid others (the irrational ones). *See Casey*, 505 U.S. at 879 ("[the] State may not prohibit any woman from making the ultimate decision to terminate her pregnancy before viability").

The case law recognizing a right to refuse treatment offers even less reason to believe that a right to suicide (or suicide assistance) could be contained. The right to refuse unwanted medical treatment, including life-sustaining medical treatment, may be exercised *by* persons who are not terminally ill and *for* persons who are not competent. *See* Edward R. Grant and Paul Benjamin Linton, *Relief or Reproach? Euthanasia Rights in the Wake of Measure 16*, 74 OREGON L. REV. 449, 459-61 & nn. 36-39 (1995) (listing cases). A right to assistance in commiting suicide, once established, would inevitably expand to include the incompetent and those who are not terminally ill, as the Ninth Circuit freely acknowledged.[26] *See generally* Grant and Linton, *Relief or Reproach?*, 74 OREGON L. REV. at 516-25 & nn. 293-328.

Only three years ago, the Supreme Court of Canada was asked to legalize the same practice of physician-assisted suicide that respondents urge upon this Court. *See Rodriguez v. British Columbia*, [1993] 3 S.C.R. 519. The Court refused to do so in an opinion that bears careful reading. The prohibition of assisted suicide, the Court stated, "is valid and desirable legislation which fulfills the government's objectives of preserving life and protecting the vulnerable." *Id.* at 590. A "blanket prohibition" of assisted suicide is neither arbitrary nor unfair in the sense of being "unrelated to the state's interest in protecting the vulnerable." *Id.* at 595.

> [The law against assisted suicide] has as its purpose the protection of the vulnerable who might be induced in moments of weakness to commit suicide. This purpose is grounded in the state interest in protecting life and reflects the policy of the state that human life should not be depreciated by allowing life to be taken. This policy finds expression . . . in the provisions of our *Criminal Code* which prohibit

---

[26] *See Compassion in Dying*, 79 F.3d at 816: "Our conclusion is strongly influenced by, but not limited to, the plight of mentally competent, terminally ill adults. We are influenced as well by the plight of others, such as those whose existence is reduced to a vegetative state or a permanent and irreversible state of unconsciousness." *Id.* at 832 n. 120 ("we should make clear that a decision of a duly-appointed surrogate decision maker is for all legal purposes the decision of the patient himself").

> murder and other violent acts against others notwithstanding the consent of the victim, ...

Id. The Court declined to sanction assisted suicide, even for the terminally ill, because "the active participation by one individual in the death of another is intrinsically morally and legally wrong" and "there is no certainty that abuses can be prevented by anything less than a complete prohibition." *Id.* at 601. "Creating an exception for the terminally ill might . . . frustrate the purpose of the legislation of protecting the vulnerable because adequate guidelines to control abuse are difficult or impossible to develop." *Id.* The law against assisted suicide "may discourage those who consider that life is unbearable at a particular moment, or who perceive themselves to be a burden upon others, from committing suicide." *Id.* at 608.

To confirm the right of the States to preserve and protect human life, and to prevent the abuses that would arise if assisted suicide were legalized, *amici* ask the Court to uphold the New York and Washington statutes banning assisted suicide.

CONCLUSION

For the foregoing reasons, *amici curiae* respectfully request this Honorable Court to reverse the judgments in Cases 95-1858 and 96-110.

Respectfully submitted,

PAUL BENJAMIN LINTON *

INTEREST OF AMICUS CURIAE	1
SUMMARY OF ARGUMENT	1
ARGUMENT	
I. IN STRIKING DOWN STATE LAWS PROHIBITING ASSISTED SUICIDE, THE SECOND AND NINTH CIRCUITS FAILED TO ADEQUATELY CONSIDER THE ECONOMIC PRESSURES THAT WOULD FORCE INDIVIDUALS TO ACCEPT ASSISTED SUICIDE	3
II. IN DETERMINING WHETHER STATES HAVE BOTH A VITAL AND RATIONAL INTEREST IN PROHIBITING ASSISTED SUICIDE, THIS COURT MUST CONSIDER THE IMPACT OF MANAGED CARE ON THE CONTEXT IN WHICH ASSISTED SUICIDE WOULD BE CARRIED OUT	5
A. Managed Care Has Changed the Very Basis upon which Health Care Is Provided	5
B. Managed Care Programs Use a System of Financial Incentives and Disincentives which Impose Conflicts of Interest between Patients and Their Doctors	7
C. Managed Care Programs Have Created Barriers between Physicians and Patients which Violate Patients' Rights to Receive Complete and Accurate Information about Their Health Care	10
D. To Preserve a Competitive Edge in the Marketplace, Managed Care Organizations Resist Attempts to Assure Patients' Rights	11

TABLE OF CONTENTS—*(Continued)*

	Page
E. Denial of Emergency Care which Often Occurs as a Result of Managed Care Can Create the Very Conditions that May Lead to Assisted Suicide	13
F. Managed Care Programs Often Operate in a Manner that Indicates a Quest for Only Short Term Effectiveness and Maximum Cost Containment	16
G. Patients' Fears of Dependence, Unremitting Pain and Loss of Dignity Are Often Exacerbated by the Practices of Managed Care Programs	18
H. The Appeals Process under Managed Care Is Often So Complex that Patients Could Consider Assisted Suicide to Be Their Only Recourse	22
I. The Policies of Managed Care Corporations Compromise the Quality and Expertise of the Medical Profession, Making It Imperative that States Have the Right to Protect Residents from Assisted Suicide	25
III. POLICIES WHICH PUT COST CONTAINMENT AND HEALTH CARE INDUSTRY PROFITS BEFORE PATIENT WELL-BEING MAKE IT ABUNDANTLY CLEAR THAT STATES HAVE BOTH A VITAL AND A RATIONAL INTEREST IN PROTECTING THEIR RESIDENTS BY PROHIBITING ASSISTED SUICIDE	26
CONCLUSION	28

STATEMENT OF INTEREST

The International Anti-Euthanasia Task Force (IAETF) is the trade name of the Family Living Council, a non-profit corporation formed in 1976 to provide education in matters related to family life, health and related matters. The IAETF, with networkers throughout the world, addresses the medical-ethical issues of death and dying, health care delivery, the rights of the terminally ill, the chronically ill, the elderly, persons with disabilities and their families. Involvement of the IAETF in such matters includes education, advocacy, consultation, legislative analysis and networking. The IAETF is a major resource for individuals and groups seeking information about the rights of medically vulnerable individuals and their families.

This *amicus curiae* brief has been filed with consent of the parties. Letters of consent were filed with this brief with the Clerk of the Court.

SUMMARY OF THE ARGUMENT

The matter at bench is one of the most important constitutional challenges ever to face this Court. At stake is the determination of the very organizational purpose for which our society, under law, exists.

This Court will decide whether the state's foundational role as protector of the lives of all of its citizens is consistent with existing constitutional principle and the law, or whether this traditional state responsibility will be superseded and replaced by new and radical constitutional notions which prohibit states from protecting their citizens and, further, force states to countenance and facilitate the deliberate ending of human lives under the guise of compassion, elimination of suffering, and exercise of individual rights.

The current question before the Court is not whether dying patients have the right to end their suffering, as Respondents argue. (Certainly, the ending of suffering is a laudable goal and, if that were the real issue, there would be no controversy.) Rather, the issue before this Court is whether states

have the right to protect weak and vulnerable individuals as well as the greater societal good by prohibiting assisted suicide.

Strong emotional arguments are made by Respondents who seek to have this Court decide that existing state laws which proscribe assisted suicide are unconstitutional. Proponents of this radical theory of constitutional jurisprudence claim that the state has little or no legitimate interest in prohibiting assisted suicide because the assisted suicide of patients would permit them to determine "the time and manner of one's own death"[1] and would be used as " a treatment of last resort,"[2] to take place only after people have exhausted all treatment and comfort care possibilities.

As this brief will demonstrate, such conclusions and arguments are facile, designed as a veneer to deflect the Court's attention from the context in which legalized assisted suicide would be practiced. This brief argues that assisted suicide, as it would take place in the "real world," demonstrates both the rational and vital state interests promoted by state laws which currently outlaw assisted suicide.

The "last resort" claim is based upon the false premise that virtually every American citizen or resident has access to wanted medical treatment and necessary health care. Further, it mistakenly assumes that all necessary time and health care resources would be at the disposal of each suicidal patient prior to any implementation of physician facilitated death.

The reality of the United States health care delivery system belies these soothing assurances. An increasing number of people are experiencing great difficulty in obtaining necessary medical services, in part because of the ongoing transition from "fee for service" medicine to "managed care." In such a milieu, this brief argues, assisted suicide would be especially dangerous.

Managed care systems often have financial incentives which impose conflicts of interest between patients and their

1. *Compassion in Dying v. Washington*, 79 F.3d 790, 793 (9th Cir. 1996).

2. F. Miller, T. Quill, et al, *Regulating Physician-Assisted Death*, 331 New Eng. J. Med. 119,120 ((1994).

own doctors. These conflicts create the potential for denial of wanted and needed medical care based on pecuniary, rather than medical, considerations. In turn, the suffering caused by denied or delayed care can create a desire for assisted suicide.

The "medical practice" of assisted suicide would not be implemented in a vacuum. There is nothing to indicate that a judicially created transformation of assisted suicide from a crime into a legitimate form of medical treatment would cause the health care delivery system to become more responsible to patient needs, nor would it afford a compassionate means for patients to have their suffering alleviated. If anything, the availability of assisted suicide would likely result in a decreased amount of time and attention given to treating and alleviating significant medical problems, such as pain, particularly when assisted suicide would be far less time-consuming and less costly than interventions which alleviate pain while not taking the patient's life. This latter point is especially pertinent in a health care system dominated by managed care.

It is within the context of the growing managed care system of health delivery and the growing prominence and influence of for-profit health maintenance organizations (HMOs) that the far reaching implications of striking laws which prohibit assisted suicide must be considered. Considering the financial implications of legalizing assisted suicide as it relates to proper patient care, a state not only has the right but the positive responsibility, to protect its citizens by prohibiting assisted suicide.

I. IN STRIKING DOWN STATE LAWS PROHIBITING ASSISTED SUICIDE, THE SECOND AND NINTH CIRCUITS FAILED TO ADEQUATELY CONSIDER THE ECONOMIC PRESSURES THAT WOULD FORCE INDIVIDUALS TO ACCEPT ASSISTED SUICIDE.

The Second Circuit Court in *Quill v. Vacco*[3] erroneously disregarded the importance of the significant economic and psychological pressure that would be placed on individuals if states were barred from prohibiting assisted suicide. In strik-

3. *Quill v. Vacco*, 80 F.3d 716 (2nd Cir. 1996).

ing down New York's laws against assisted suicide, the Second Circuit nonchalantly suggested that any such pressures could be alleviated by state formulated guidelines: "In any event, the state of New York may establish rules and procedures to assure that all choices are free of such pressures."[4] Not only did this suggestion totally ignore the carefully drafted report of the New York State Task Force on Life and the Law,[5] which clearly outlined and documented the peril in which citizens would be placed if assisted suicide were permitted, even under guidelines intended to be protected, it also failed to take note of the reality of the current state of the health care delivery system.

Likewise, the Ninth Circuit, in concluding that state laws against assisted suicide are unconstitutional, paid little attention to this reality.

After a cursory acknowledgment that economic factors and lack of adequate health care may well influence an individual's decision to die by assisted suicide, the Ninth Circuit fastidiously decided to "stand aside from that battle."[6] The Court implied that, if assisted suicide were not available to those who are already injured by the lack of access to adequate health care, they would be further harmed: "On the other hand we are certainly not obligated to pile injury upon injury. . . ."[7]

In fact, by removing the states' rights to protect vulnerable citizens from the considerable economic pressure to die and get out of the way, the Second and Ninth Circuits did pile injury upon injury. In concluding that states should not be able to prohibit assisted suicide, both courts sent a bold message that access to death-producing medical intervention is a constitutional right, but access to life saving or life enhancing medical intervention is not.

II. IN DETERMINING WHETHER STATES HAVE BOTH A VITAL AND RATIONAL INTEREST IN PROHIBITING ASSISTED SUICIDE, THIS COURT MUST CONSIDER THE IMPACT OF MANAGED CARE ON THE CONTEXT IN WHICH ASSISTED SUICIDE WOULD BE CARRIED OUT.

A. Managed Care Has Changed the Very Basis upon which Health Care Is Provided.

In an effort to control unnecessary medical costs and improve the efficiency of health care, a transition of monumental import is currently taking place in the health care system. This transition is from a traditional "fee-for-service" system to a "managed care" system of health care delivery.

Under the fee-for-service system, health providers were paid for each service performed. This sometimes led to patients' being overtreated and subjected to interventions that were futile. In the fee-for-service system, health providers had a financial incentive to exhaust all treatment possibilities or provide unnecessary care since the more treatment that was given, the greater was a provider's income.

Managed care operates in a manner that is almost a reverse of the fee-for-service system. Under managed care, health providers are encouraged by a myriad of incentives and disincentives to control costs by *limiting* treatment and care. Health care professionals now find that their incomes, in large part, depend upon providing fewer, not more, services.

While there is nothing inherently wrong with the concept of managed care, nor with the attempt to appropriately control health care costs, managed care, as it presently operates, has caused enormous problems: "Prodded by large companies fed up with rising medical costs, the new medicine's entrepreneurs have turned health care into a corporate battlefield increasingly governed by the promise of stock market wealth, incentives that reward minimal care and a brand of aggressive competition alien to front-line doctors. . . ."[8]

8. Larson, *The Soul of an HMO*, Time, Jan. 22, 1996, at 45.

The usual and traditional presumptions about health care financing and delivery have been turned inside out, and its effects are being felt by millions of people.

In 1995 up to 130 million people were in some type of managed care program.[9] Among American workers who are covered by health insurance, seventy-one percent are in managed care programs[10] and, according to the Health Care Financing Administration's Office of Managed Care, eighty thousand Medicare beneficiaries are being transferred each month from traditional fee-for-service health plans into managed care programs.[11]

The number of physicians affected by the growth of managed care is also increasing rapidly. Whereas physicians used to be self-employed and, thus, were ultimately in charge of how much time they spent with patients and how much care they wished to provide for a certain fee, more and more doctors are now becoming employees who are subject to control by managed care organizations. According to the American Medical Association, only slightly over half of doctors remained self-employed by 1995.

Indicative of the new way in which medicine is practiced is the terminology now used in conjunction with medical care. Provider-consumer business terminology has largely replaced references to what was formerly called the physician-patient relationship. Such business oriented designations have caused grave concern among physicians.[12]

The agreements used in that provider-consumer relationship have undergone such a significant transformation that the meanings of commonly used words and phrases may now mean something far different to the consumer than they do to

12. See, e.g., J. Olivero, *Why "Providers" Instead of Physicians?*, 156 Arch. Inter. Med. 2148 (1996).

the provider.[13] Additionally, this consumer-provider construct bears striking similarity to one which is contractual in nature. In a contractual relationship, however, there is generally some type of parity as it relates to information. That parity is lacking in the medical realm under managed care. It is the provider who has virtually all of the information. It is the provider who may withhold information on the basis of possible benefit or potential harm to the provider. It is the consumer who often does not have adequate information, because the provider has withheld it.

This presents a clear conflict for physicians and increases the possibility of grave harm to patients, a matter clearly relevant to the matters before the Court. If states were prohibited from banning assisted suicide, patients who were denied full access to information about the availability of treatment could be led to believe that assisted suicide was their only remaining option.

B. Managed Care Programs Use a System of Financial Incentives and Disincentives which Impose Conflicts of Interest between Patients and Their Doctors.

Under the doctrine of informed consent physicians have a common law duty to provide patients with all information that is material to that patient's treatment decisions. This duty encompasses informing patients about all reasonable treatment alternatives, and the risks and benefits of each, regardless of cost.[14]

Additionally, a patient has the right to be told about financial incentives that may exist to induce physicians to manipulate the range of options offered to the patient. The physician has an obligation to "disclose personal interests

13. See, e.g., R. Marker and W. Smith, *The Art of Verbal Engineering*, 35 Duq. L. Rev. 81 (1996).

14. *Cobbs v. Grant*, 8 Cal. 3d 229 (1972).

unrelated to the patient's health, whether research or economic, that may affect the physician's professional judgment."[15]

Despite the existence of clear requirements for such disclosure, managed care programs have created barriers between physicians and patients which threaten a patient's right to receive complete and accurate information and which compromise the professional responsibility of physicians. These barriers arise from a combination of factors: a method for health services payment referred to as "capitation," a combination of financial incentives and disincentives, and the existence of what are called "gag rules" in managed care contracts.

These approaches, used by managed care organizations, hold down costs by controlling physicians' fees and limiting patients' access to services. They could be accurately described as a "carrot and stick" method which compensates physicians in direct proportion to how little they do for patients.

Under the "capitation" approach, the managed care organization pays a flat fee per patient per month to a physician or group of physicians. For example, under one managed care plan, physicians receive $8.43 each month for every male patient between the ages of twenty-five and forty-four and $10.09 per month for each female patient between the ages of twenty and twenty-four.[16]

15. *Moore v. Regents of the University of California*, 793 P. 2d 479, 271 Cal. Repr. 146 (1990).

16. *Compromising Health Care*, Wash. Post, June 16, 1996, at C8. At the same time that doctors and other health professionals are being pushed to see more and more patients for less and less pay, and as patients are often being denied needed treatment, it is estimated that profits of twenty to thirty percent are going into the pockets of investors. In 1995, the total compensation package of the typical health care corporate CEO was close to $2.9 million. Auerbach, *As the Marketplace Changes, Consumers Are Caught in the Middle*, Wash. Post, June 25, 1996, at Z12. Several earned between $8.8 and $15.5 million per year. Freudenheim, *Health Chief's Big Paychecks for Chopping Costs*, N. Y. Times, Apr. 11, 1995. That does not take into account stock dividends paid to investors.

In return for the monthly fee per patient, the physician is to provide all medical services (subject to the terms of the managed care contract) for each covered patient. These services generally include primary care, specialty care, hospitalization, prescriptions, and a broad range of other health care services. If, during any given month, the actual cost of care for the covered patients is lower than that of the fees paid, the doctor retains the excess. If, however, the actual cost of care exceeds the fees, the health provider loses money. The possibility of losing money by providing care can be a powerful incentive to deny even needed care.[17]

Another cost control method, often coupled with capitation, depends upon what is referred to as a "withhold" in which the managed care organization withholds a percentage of the per patient fee that would ordinarily be paid to the physician. At the end of a certain period of time, the managed care program reviews the physician's practice and determines whether the physician should receive any of the withheld fees. If the managed care program determines that the physician is spending too much time per patient or that he or she is ordering too many diagnostic tests or providing too much treatment, the managed care organization retains the withheld fee. Amounts withheld in this manner vary from a low of eleven percent (withholds of less than eleven percent have been found ineffective as an incentive for physician's to limit services and referrals) to more than thirty percent.[18] Even when income is not withheld, some managed care organizations place a lien on future earnings or reduce the capitation fee as a means of penalizing a physician's failure to meet the fiscal expectations and requirements of the managed care program.[19]

According to data compiled in 1995 by the American Medical Association, one-third of doctors have capitated com-

17. See generally: Freudenheim, *Health Care in the Era of Capitalism*, N.Y.Times, Sept. 4, 1996, at 6E; and T. Bodenheimer and K. Grumback, *Capitation or Decapitation*, 276 J.A.M.A. 1025 (1996).

18. E. Morreim, *Balancing Act: The New Medical Ethics of Medicine's New Economics*, 35 (Georgetown University Press, 1995).

19. Id.

mercial contracts, and forty-eight percent are subject to some method of fee withhold. For doctors who have such contracts with manage care programs, nineteen percent of their income is attributed to capitation accounts.[20]

The wedge that such financial incentives and disincentives places between patients and doctors is intensified by another provision, referred to as a "gag rule," that is contained in many contracts between managed care organizations and physicians.

C. Managed Care Programs Have Created Barriers between Physicians and Patients which Violate Patients' Rights to Receive Complete and Accurate Information about Their Health Care.

Doctors who sign managed care contracts that have gag rules are prevented from providing often essential information to patients. Some gag clauses forbid a doctor from telling a patient about treatment options until the plan approves the specific treatment for that patient. Other programs prevent a doctor from telling a patient that a beneficial treatment that is not covered by the program is available elsewhere.

Under the gag clause provisions doctors say they cannot talk freely to patients about either their treatment options or about the particular managed care program's payment policies. They are even forbidden to tell patients that doctors who save money by withholding care get financial bonuses.[21]

Gag clauses also prohibit informing patients about outside "gatekeepers."

For example, one managed care organization sent a notice to physicians under contract with its program stating, "Do not discuss proposed treatment with [the managed care program's] members prior to receiving authorization" and further directed doctors to avoid discussing the procedures that must be followed to obtain such authorization[22]

20. Johnsson, *Trial Focus: Public Unease with Physician Incentives*, Am. Med. News, Aug. 12, 1996, at 1, 34.

21. Pear, *Doctors Say H.M.O.'s Limit What They Can Tell Patients*, N.Y. Times, Dec. 21, 1995, at A1.

In many managed care programs, it is the primary care physician who serves as the gatekeeper. Physician gatekeepers may come under considerable pressure to deny access to services as evidenced by a warning, given by one managed care organization to physician gatekeepers in its program, stating that the physicians' contracts would be terminated if they approved too many specialist referrals. [23]

Other programs rely on outside gatekeepers (who may be physicians, nurses or persons who are not trained in medicine). Outside gatekeepers may be located in a different city or state and have no personal contact with the patient or the patient's primary care physician. This type of gatekeeper or reviewer is often compensated on the basis of cost saving for the managed care organization.

The role of an outside reviewer was described by Dr. Linda Peeno when she testified before the House Commerce Health Subcommittee. Dr. Peeno, who had served as a medical reviewer for a managed care program, said she saved her employer money by denying treatment. She explained that, in one such case, her decision led to a man's death but, rather than being held accountable, she was financially rewarded. She earned an annual six-figure income by using her medical expertise to bring financial gains to the organization. "According to the managed care industry, it is not an ethical issue to sacrifice a human being for a 'savings,'" she said.[24]

D. To Preserve a Competitive Edge in the Marketplace, Managed Care Organizations Resist Attempts to Assure Patients' Rights.

Until very recently, health institutions, both public and private, were overwhelmingly non-profit endeavors. However,

24. Gianelli, *Congress Considers Ban on Managed Care "Gag" Clauses*, Am. Med. News, June 19, 1995, at. 5, col. 1.

for-profit organizations are becoming the rule, rather than the exception, so that more than seventy percent of all HMOs are now for-profit corporations. With this change has come a shift in focus. Within the non-profit realm, any excess money is earmarked to improve services, access and care for the served population. In the for-profit sphere, money saved by limiting services benefits corporate shareholders. Meeting profit projections supplants meeting patient needs and is the driving force in the for-profit arena.

It would seem reasonable to assume that if patients demand types of care that may increase costs, managed care programs would respond since pleasing the customer has always been considered good business practice. The program could then pass on the costs to the consumer by raising premiums. However, this assumption misses a crucial point. In most cases, employers, not individual subscribers, pay the premiums, so they are the customers who must be pleased. Further, it is the employer, seeking to keep expenditures for employee benefits down, who will opt for a program that keeps rates down.

In 1995, a broad coalition of patient and provider groups drafted a set of standards on the rights of patients, including the right to information about provider incentives or restrictions that might influence practice patterns. Managed care organizations refused to sign on. Although the principles were endorsed by over one hundred groups including the American Medical Association, American Cancer Society, American Association of Retired Persons, and the Joint Commission on Accreditation of Health Care Organizations, a managed care representative explained that the principles seemed to be "too close to the operational issues" of managed care.[25] A subsequent attempt to adopt government regulations restricting managed care organizations' practice of incentives and gag rules was successfully resisted by managed care programs. The

25. Page, *Managed Care Firms Balk at Patient Rights Agreement*, Am. Med. News, Dec. 4, 1995, at 3, 23.

managed care industry claimed that such practices are important in "a fast-moving, intensely competitive industry."[26]

With their sites firmly on profit margins and beating the competition, it seems reasonable to predict that managed care corporations would be more than willing to reimburse for inexpensive assisted suicide services that would eliminate the need for some costlier services.

E. Denial of Emergency Care which Often Occurs as a Result of Managed Care Can Create the Very Conditions that May Lead to Assisted Suicide.

The Emergency Medical Treatment and Active Labor Act (EMTALA) requires hospitals to provide "a standard medical screening evaluation"[27] to anyone who goes to an emergency room requesting care. In addition, the hospital must give any treatment that is necessary to stabilize the patient's condition, making use of all necessary and routinely available facilities of the hospital to reach a diagnosis that rules out the presence of a legally defined emergency medical condition.[28]

Emergency physicians are well aware that any delay in emergency care while seeking to obtain authorization for payment may be detrimental not only for the patient but may result in liability for the hospital.[29] However, managed care organizations and clinics run by health maintenance organizations are not within the scope of these requirements since "the plain wording of the statute makes reference only to 'hospitals' and shows legislative intent to provide emergency medical treatment by hospitals to all individuals."[30] Managed care organizations escape responsibility under EMTALA because they are only authorizing payment, not treatment.

26. Pear, *U.S. Shelves Plan to Limit Rewards to HMO Doctors*, N.Y.Times, July 8, 1996.

27. 42 USC 1395 dd (a).

28. 42 USC 1395 dd (b).

29. 42 USC 1395 dd (h). See, e.g., *Griffith v. Mount Carmel Hospital*, No. 92-1141-MLB, (D. Kan. Aug. 23, 1993).

30. *Dearmas v. Av-Med Inc.*, 814 F. Supp. 1103, 1108 (S.D. Fla. 1993).

Although, technically speaking, the managed care organizations cannot deny authorization to receive emergency treatment,[31] managed care policies do operate to block emergency room care by denying payment if pre-authorization is not obtained. Thus, a clear conflict exists between federally mandated medical screening examinations and the pre-authorization processes that are required by most managed care organizations. "Managed care requirements that patients be pre-authorized for emergency department visits or admissions are totally inconsistent with and unregulated by EMTALA."[32]

Emergencies are, by definition, unexpected and difficult to manage. Obtaining pre-authorization in an emergency situation can result in loss of time and loss of life. Nonetheless, managed care programs continue to require pre-authorization. As one members' handbook stated (in fine print), "Failure to contact the primary care physician prior to emergency treatment may result in denial of payment."[33]

According to Dr. Charlotte S. Yeh, chief of emergency medicine at the New England Medical Center in Boston, "In some ways, it's less frustrating for us to take care of homeless people than HMO members. At least we can do what we think is right for them, as opposed to trying to convince an HMO over the phone of what's the right thing to do."[34]

Such inconsistencies can place patients at risk and may force emergency room physicians to choose between providing necessary medical care or facing loss of hospital privileges for providing care that may not be reimbursed. In a survey of 1,047 board-certified emergency physicians, 18.6% said "they

31. "Managed healthcare plans cannot deny a hospital permission to examine or treat their enrollees. They may only state what they will and will not pay for, and regardless of whether a hospital is to be reimbursed for the treatment, it is obligated to provide the services specified in EMTALA." HCFA's Rules and Regulations, 59 *Fed. Reg.* 32,116 (1994).

34. Id.

had been threatened or lost hospital privileges because they voiced concerns about quality of care."[35]

At a time when managed care cost containment provisions make even emergency care difficult to obtain, it would be incredibly naive to assume that the same managed care programs would authorize access to all medical options, some of which may be expensive, before approving the cost effective treatment of assisted suicide.

Indeed, managed care programs have consistently resisted providing services which, under fee-for-service, were previously included within even the most basic type of health care coverage. Even after there was tremendous public outcry about so-called "drive through deliveries" – in which new mothers and their infants were sent home from the hospital within hours of birth – many managed care programs maintained their refusal to pay for more than a day of hospitalization. It took federal legislation to require that new mothers and their infants could receive a minimum hospital stay of 48 hours after birth.[36]

It seems reasonable to believe that managed care programs which had to be forced to allow new mothers and infants to receive an additional 24 hours of hospitalization, may be less than willing to permit months of palliative care or great amounts of long term therapy for chronic conditions. This would be particularly true if the same managed care programs could authorize the provision of a lethal prescription as a quick and inexpensive means to "treat" the same condition.

In fact, most managed care organizations fail to provide services which address anything other than short term cost effectiveness.

35. *American Academy of Emergency Medicine Survey Preliminary Report*, Emergency Med. News, August 1995.

36. Veterans Administration.-HUD Appropriations Act of FY 1997, Pub. L. No.104-204, 110 Stat.2874, Title VI, Sec. 601 (Sept. 26,1996).

F. Managed Care Programs Often Operate in a Manner that Indicates a Quest for Only Short Term Effectiveness and Maximum Cost Containment

For medical conditions, like appendicitis or minor infections that can be addressed in the short term, managed care programs do relatively well. Problematic, however, is the care received by people who have conditions that require long term care. Thus, a relatively healthy person who enters into a managed care program will generally be satisfied with the program as long as his or her health remains good overall. If, as often happens, a person develops a condition, like multiple sclerosis, that requires on-going care, managed care often falls short of expectations.[37]

Additionally, while all managed care programs emphasize preventative care, not all have programs to prevent complications that can result from chronic disease. The way in which managed care deals with diabetes is an illustration of the quest for short term cost effectiveness. Fewer that one-half of HMOs have implemented programs to manage diabetes[38] even though more than 14 million Americans are known to have diabetes,[39] which can cause blindness, kidney failure, nerve damage and is the fourth leading cause of death in the United States.[40]

Regimens that could result in greatly reduced costs in terms of patients' lives and health care resources have sometimes been ignored in the interest of immediate monetary saving. When the National Institute of Health (NIH) supported a study on diabetes that showed that good control would reduce the complications of diabetes, managed care organizations indicated a marked lack of interest in the program. According to Dr. Judith Vaitukaitis, director of the National Center for

37. Rosenthal, *Patients Say N. Y. HMOs Don't Deal Well with Complex Illnesses*, N.Y.Times, July 15, 1996, at A19.

38. Reuters Health News Service, *HMO Enrollment Surpasses 59 Million in U.S.*, Oct. 23, 1996.

40. *New Diabetes Treatment May Block Worst Effects*, San Francisco Chron., June 14, 1993, at A3.

Research Resources at NIH, this stance on the part of managed care programs was due to the fact that the managed care organizations did not want to spend the extra time and resources that good control would require. She explained that "the benefit of reduced complications is not seen for years ahead and they [managed care organizations] don't see the benefit in reduced costs because of the rapid turnover of their members."[41]

This emphasis on quick profits has also been described by Dr. George Lundberg, editor-in-chief of the *Journal of the American Medical Association*, who stated, "Getting managed care companies to think in terms of the long term is starry-eyed. Profit is to be made here. The managed care companies are not interested in the long term."[42]

It would seem logical for managed care organizations to promote long term preventative care since this would result in future savings. However, according to health care consultant Theodore J. Weinberg, individuals change health care programs about every three or four years.[43] The advantages of long term preventative measures may not show up for ten years or more and, by that time, a person may be in another managed care program. Consequently, competitive managed care programs are unlikely to invest in outcomes that would not pay off within a short period since the investment in a prevention program paid for by one managed care organization may result in better health (and thus lower expenditures) for enrollees in a competitor's program.

With this short sighted approach to health care, the long term consequence could be greater numbers of debilitated individuals who would create additional strain on the health delivery system. This, in turn, could spur greater incentives for managed care programs to promote assisted suicide as what one euthanasia advocate has called "a new age form of hospice care."[44]

G. Patients' Fears of Dependence, Unremitting Pain and Loss of Dignity Are Often Exacerbated by the Practices of Managed Care Programs.

A 1996 Gallup poll, conducted for the National Hospice Organization, regarding public attitudes about assisted suicide found that, among their greatest fears about death, people fear most the prospects of dependence, pain and loss of dignity.[45] In many ways, the current practices in managed care programs operate in a manner that turns these fears into reality.

It is often chronically ill patients, particularly those who are elderly or poor, who are hardest hit by the cost containment aspects of managed care. Within HMO plans, such patients fare poorly in comparison to similar patients in fee-for-service plans.[46] Their plight may become even more pronounced in the future since these patients "account for a disproportionate share of health care expenditures and are therefore prime targets of cost containment." [47]

It is well known that chronic conditions can often be controlled or, at least, their progression can be slowed down if appropriate and necessary care is provided. The lack of emphasis placed on chronic care by managed care organizations can actually lead to patients' becoming dependent sooner than they would have been if appropriate care had been provided. Thus, managed care's lack of attention to chronic conditions may serve to heighten dependence which a great number of people fear and could actually lead to a greater number of people considering assisted suicide.

NOTES *(Continued)*

47. Id., at 1040.

The fear of unremitting pain which causes great anxiety for patients and which some have said could lead them to seek assisted suicide is heightened due to the inaccessibility of pain control for many people. It is the lack of access, not an absence of such interventions, that creates this tragic situation. Patients are often forced to endure pain because third party payers refuse to reimburse for its treatment. In effect, "by rationing pain management on a financial basis, patients are being forced to consider death as their only option."[48]

Navigating the murky waters of services not covered, services not approved and the complex methods of co-payments is particularly difficult for patients who are in pain. They have precious little energy to deal with a system that seems to block their access to necessary pain relief at every turn.

This denial of needed pain control is most pronounced within certain categories of patients. In 1994, the State of California's "Summit on Effective Pain Management"[49] found that third party payers often restrict payment for pain-related services.[50] It further found that pain is more likely to be undertreated if the patient is a member of a minority, female, elderly, or a child.[51]

Among these groups who are undertreated, the problem of pain relief is especially difficult for the elderly. Until recently, management of pain in elderly patients was largely ignored, although findings indicate that the prevalence of pain in the elderly is known to be twice that of younger people and can be as high as eighty-five percent in older people living in

51. Id.

long-term care settings,[52] even though individualized pain management plans for older people can be highly effective.[53] The problem in a managed care context is that individualized plans are time consuming.

Nurses, in particular, have been important in providing the personalized attention needed for effective pain management plans. The nurse's role has been particularly important since it has been the nurse who has previously been able to spend the time to communicate carefully with the elderly patient so that pain control needs can be accurately assessed. Now, however, in attempts to reduce costs in the realm of managed care, many hospitals and other health facilities are cutting back on their nursing staffs and patients are finding that not only doctors, but nurses, no longer have time for them.

According to Howard Berliner, professor of health policy at the New School for Social Research, "Hospitals are under pressure from managed care to reduce costs, and they are looking at nurses as their highest-cost line item."[54] In many cases, nurses are being replaced with unlicensed aids who have neither the training nor skill required to serve as effective patient advocates.

The failure to allocate the necessary time and resources to giving adequate pain management creates the untenable situation, so greatly and rightfully feared by many people. This could well lead a patient to believe erroneously that "nothing can be done" to alleviate suffering and, in turn, this could result in a patient's choosing assisted suicide as the only available means to escape pain.

Patient concerns about loss of dignity are also heightened by the cost containment policies and requirements of managed care programs. It is difficult for patients to feel valued and

54. Rosenthal, *New York Hospitals Cut Costs by Laying Off Nurses*, N.Y.Times, Aug. 19, 1996.

cared for when physicians are compelled to treat them as though they were assembly line products being processed in an allotted number of minutes. This production line mentality was described by Dr. Leonard Laster, distinguished professor of medicine and health policy at the University of Massachusetts Medical Center in Worcester: "Business managers working in the interests of cost-cutting now tell doctors how much time to spend with a patient, and many allow only ten minutes for a returning patient and no more than twenty minutes for a new patient. How can anyone perform even a passable evaluation in twenty minutes on an elderly patient with a massive written clinical record. . . .?"[55]

Mandated time restrictions are not the only thing that can leave patients feeling demeaned and unimportant. Sometimes the greatest assaults on one's sense of self-worth emanate from small indignities. When one of the nation's largest managed care companies experienced losses in 1995, it instituted cost cutting measures which included the refusal to provide gowns for gynecological exam patients. Patients were told to disrobe and then, instead of being provided with a gown, they were given a small square of paper on which they were to sit while awaiting the examination.[56]

It stretches credulity to think that managed care programs — which fail to reimburse for adequate pain control, control exam times down to the minute, and deny a patient even a simple gown with which to cover herself — would allot large sums of money for comprehensive services so that assisted suicide would be used only as a last resort.

It could be assumed that, if patients are faced with demeaning and life threatening conditions such as have been described, they need only avail themselves of the appeal or complaint procedures that are in place in large corporations, including large health care corporations. However, the process of appealing a managed care program's decision is often time-consuming, costly and beyond the ability of many patients

55. Laster, *Managed Care Translates to "Let the Patient Beware,"* Am. Med. News, Feb. 19, 1996, at 18.

56. Auerbach, supra note 16.

who are already using every ounce of energy and every financial resource to exist on a daily basis. Meanwhile, as the quest for administrative remedies drags on, the patient's agony remains unrelieved.

H. The Appeals Process under Managed Care Is Often So Complex that Patients Could Consider Assisted Suicide to Be Their Only Recourse.

When essential treatment is denied, the appeals procedure under managed care is often so complex and time consuming that the accompanying delays can cause a patient grave harm. Additionally, personnel investigating the appeal may not have expertise in assessing the actual medical condition or its appropriate treatment. One such case involved a child with an extremely rare kidney tumor that is fatal if not treated but has a ninety-seven percent cure rate with prompt surgery. The child's primary care physician sought permission from the group plan to refer the child to an out-of-group specialist, since the group itself had no one with the needed expertise in treating the child's condition. The group's acting medical director, an ophthalmologist (eye specialist), refused to authorize the referral, saying that an in-group physician should perform the surgery. When the child's parents appealed, the appeal procedure was handled by a nurse who also denied the referral.

This left the family with two options: Have the surgery performed by a surgeon who was unqualified for it or personally bear the cost of an experienced medical team outside the group. Her parents opted for the latter, and the child's condition was cured. However, the managed care group not only refused to pay for the surgery but also denied any reimbursement for the accompanying hospital costs, even though these costs were identical to those that would have been incurred if an in-group physician had performed the surgery.

It took close to four years but, in October of 1996, the managed care program was fined by the California Department of Corporations for failing to provide the child "as well as all member patients with all medically necessary physician

services." It was also found that the managed care program had failed to demonstrate that its refusal to refer the child to a qualified surgeon was unhindered by fiscal and administrative considerations.[57]

Unfortunately, many people who are denied care, give up. They have neither the money to obtain care outside their managed care program nor the inclination to embark on court challenges. The outcome for such individuals could mean that a potentially fatal, yet curable, condition is allowed to progress. If assisted suicide is permitted, such individuals may well find that the same managed care organization that denied reimbursement for life-saving interventions will approve reimbursement for life-ending medication.

Obtaining necessary services through HMOs has been particularly difficult for Medicare patients. For many elderly patients, the process required for peer review of an HMO's decision to deny them care is too confusing, involves long time delays, and ultimately ends up being a useless endeavor. These facts prompted a class-action lawsuit on behalf of the millions of Medicare beneficiaries who are in HMOs.[58]

The administration and the HMO industry contended that federal Medicare law "does not require an impartial review procedure for Medicare beneficiaries enrolled in HMOs before a termination or denial of their HMO services."[59] However, U.S. District Court Judge Alfredo C. Marquez found otherwise. He stated that Medicare patients in HMOs are entitled to immediate hearings whenever they are denied medical services.[60] The need for immediacy is particularly important for Medicare patients since, "When Medicare services are denied, they are often foregone and, depending on the medical condition, final adjudication may come too late

---

57. *Comm'r of Corp. v. Takecare Health Plan*, (Cal. Dept. of Corp., No. 933-0290, OAH No. N 9412060, Oct. 29, 1996).

58. Between 1987 and 1995, the number of Medicare beneficiaries covered in capitated programs almost tripled. D. Berwick, *Payment by Capitation and the Quality of Care*, 335 New Eng. J. Med. 1227 (1996).

to rectify the situation, especially if the deprivation contributed to or resulted in unnecessary pain and suffering or death."[61]

In a strongly worded opinion, Judge Marquez noted that, even though there were regulations and guidelines that should have protected Medicare beneficiaries, they were not being followed. Complex and confusing in-house review procedures amounted to little more than "a 'rubber stamp' of the initial denial,"[62] which has "grave consequences because an HMO denial may mean the enrollee will go without medically necessary service."[63] He further noted, "Given the length of time it takes for further appeal of the HMO denial, deprivations will certainly have significant impacts on quality of life and some may even be life threatening."[64]

According to Judge Marquez, an HMO often "hides the ball"[65] and frequently doesn't let Medicare patients know that they have a "right to present additional evidence to the HMO for reconsideration."[66] He concluded, as did the District of Columbia Circuit Court in *Gray Panthers v. Schweiker,*[67] "Current procedures allotted to the elderly Medicare claimant, probably disadvantaged by disability and poverty, resemble playing against a stacked deck. . . ."[68]

Yet, it is not only patients that are detrimentally affected by the manner in which managed care organizations are presently operating. The impact on the medical profession as a whole and, along with it, the increased risk to patients which may not be evident for several years must also be considered.

I. The Policies of Managed Care Corporations Compromise the Quality and Expertise of the Medical Profession, Making It Imperative that States Have the Right to Protect Residents from Assisted Suicide.

Credentialing procedures for those in the health care field are not new. For years professional organizations have established standards for credentialing physicians and other licensed independent practitioners. Historically, hospital review committees and other professional organizations examined a physician's educational background and professional competency to determine his or her ability to render appropriate medical care. With the advent of managed care, however, a new type of credentialing, known as "economic credentialing," was instituted. This type of determination about physicians' suitability to practice medicine is unrelated to the quality of care they provide or to their professional competency. Rather it is based upon economic criteria. Thus, if a physician is deemed to spend too much time with patients or found to be ordering too many diagnostic tests (even though the time and tests may have been medically appropriate), the physician risks dismissal from a health plan or physician group.[69]

Ironically, at the same time that managed care organizations have placed great emphasis on credentialing as it relates to competency in reducing costs, they have often paid far less attention to credentialing that would insure patient safety. For example, one HMO solicited physicians by mail and encouraged them to become providers within the managed care organization. The screening process for the physicians was limited to verifying that the physicians were licensed, had hospital medical staff privileges and were able to prescribe narcotics. No personal interviews and no investigations about prior medical malpractice claims were conducted.[70]

Although an increasing number of physicians are alarmed by the harmful impact of managed care upon professional practice, this may not be enough to deter young physicians,

69. See, e.g., Cal. Med. MEDFAX, (So. Cal. Ed.) Jan. 8, 1996, at 2.
70. See, e.g., *Harrell v. Total Health Care, Inc.* 781 S.W. 2d 58 (Mo. 1989).

just entering medical practice, from embracing managed care. Due to the increased competition for health care dollars and the decline of the traditional fee-for-service practice, many physicians feel compelled to contract with managed care firms out of a sense of economic survival. Since large managed care firms offer employers a reduced rate for employee health coverage, and since these firms, in turn, contract with physicians, physicians who practice in fee-for-service are being left high and dry. Thus, a young physician who is entering into practice with the burden of heavy medical school debts may find that the economic security of a managed care contract — flawed though it may be — is the only economically viable option.

Indeed, with managed care beginning to dominate the entire health care delivery system, doctors may find themselves forced to choose between practicing managed medicine or not practicing medicine at all.

III. POLICIES WHICH PUT COST CONTAINMENT AND HEALTH CARE INDUSTRY PROFITS BEFORE PATIENT WELL-BEING MAKE IT ABUNDANTLY CLEAR THAT STATES HAVE BOTH A VITAL AND A RATIONAL INTEREST IN PROTECTING THEIR RESIDENTS BY PROHIBITING ASSISTED SUICIDE.

As providers in a managed care environment, many physicians will continue to be sincerely motivated by respect for patient well-being and autonomy, but the cost factor will always lurk in the shadows. As precarious as the situation resulting from managed care is at present, it would only become worse if physician-assisted suicide were to be considered a legitimate and legal medical option. If states are not permitted to protect their citizens from assisted suicide, the managed care provider would, in many cases, become the managed death provider. Dr. Daniel Sulmasy described the link between managed care and assisted suicide in concise terms when he stated that "the movement toward managed care as a preferred means to control health care cost and the

movement toward managed death as the preferred means to control terminal suffering are strong, active and current."[71]

To gauge the accuracy of Dr. Sulmasy's warning, one need only reflect on the vise-like pressure placed on doctors that has been described above and examine what has happened when voters in the state of Oregon approved Measure 16, the "Death with Dignity Act," which permits assisted suicide under certain conditions.[72] Less than five weeks after Measure 16's passage, Oregon's Medicaid director, Jean Thorne, said that assisted suicide would be covered under a part of the Oregon Health Plan called "comfort care."[73] Noteworthy was the fact that, as assisted suicide was being scheduled as a covered service, other existing services for poor Oregonians were being scrutinized for cuts.[74]

While some may question any direct relationship between the passage of Oregon's assisted suicide measure and attempts to cut health services, the cost effectiveness of hastened death is as undeniable as gravity. The earlier a patient dies, the less costly is his or her care. In any event, dead patients do not threaten managed care profits.

Likewise, there are varied opinions about any link between cost of care and euthanasia in the Netherlands where thousands of assisted suicide and euthanasia deaths occur annually, and more than one half of those deaths are not requested by the patients who died.[75] Of note is the cost of

---

71. D. Sulmasy, *Managed Care and Managed Death*, 155 Arch. Int. Med. 133 (1995). Although Sulmasy refers to managed death for "terminal suffering," it is highly unlikely that assisted suicide would or could be limited to those whose conditions are diagnosed as "terminal." See e.g., E. Chevlen, *The Limits of Prognostication*, 35 Duq. L. Rev.337 (1996); and Marker, supra note 13, at 90-94.

72. The Oregon statute was enjoined by federal district court Judge Michael Hogan the day before it was to take effect. See *Lee v. State of Oregon*, 891 F.Supp.1429 (D. Or. 1995).

73. Postrel, *State Could Cover Assisted Suicide*, Statesman Journal (Salem, OR), Dec. 1, 1994, at A1.

74. Deitz, *Lawmakers May Trim Health Plan*, Statesman Journal (Salem, OR) Jan. 9, 1995.

75. Marker, supra note 13, at 85. Although the Dutch practice of physician induced death began with the intent of offering patients greater con-

performing euthanasia in the Netherlands which, Dutch euthanasia practitioner Dr. Pieter Admiraal has explained, can be performed for about five guilders whereas the cost of a single day of hospitalization is five hundred guilders.[76] Perhaps coincidentally, perhaps not, the Netherlands has the lowest per capita health expenditure in all of Europe.[77] According to Dr. Jeffrey Jackson of the Walter Reed Army Medical Center in Washington, this low per patient expenditure "reflects an ongoing effort to ensure that Dutch physicians are sensitive to cost and practice economically prudent medicine."[78]

CONCLUSION

Managed care has been referred to as a "work in progress"[79] which may eventually work very well if improvements are made. But those improvements could take years as legislatures and courts wrestle with the complex problems and conflicts of interest inherent in managed care programs. Meanwhile, the issues before this Court demand immediate resolution.

This Court faces the momentous task of determining whether the United States Constitution precludes states from enacting statutes prohibiting assisted suicide. Proponents of a constitutional right to have a doctor actively participate in assisted suicide argue that the issue before this Court is one of individual rights. But their assertions ignore the context within which that activity would be undertaken.

NOTES *(Continued)*

trol over their own deaths, the practice of euthanasia and assisted suicide has actually increased the power and control of doctors, not patients. See generally: H. Hendin, *Seduced by Death: Doctors, Patients, and the Dutch Cure* (New York: W.W. Norton & Co.1997).

76. R. Marker, *Deadly Compassion* 146 (New York: Wm. Morrow & Co. 1993).

79. P. M. Ellwood, *Managed Care: A Work in Progress*, 276 J.A.M.A. 1083 (1996).

This Court must decide the issue based not only on abstract notions of individual liberty but on the reality of the environment within which personal and medical decisions would be made. Only then can it determine whether the state laws under consideration sufficiently support valid state purposes and thus, pass constitutional scrutiny.

This brief has demonstrated that the current health care environment is evolving into a system defined by cost-cutting imperatives and dominated by a form of health insurance known generically as managed care. Further, it has shown that the very purpose of managed care, which is to reduce the cost of providing medical care, is accomplished, in large part, through a system that rewards reduced levels of care.

In such a milieu, the kind of treatment that modern medicine is capable of providing (e.g. pain control, symptom management, and treatment of depression which is often essential to patient well-being and a desire to continue living) can be difficult to obtain. This problem would be exacerbated if the less costly and less time consuming "service" of assisted suicide were available mandatorily as a constitutional right. This could well create scenarios in which agonized and depressed patients would elect to have their deaths facilitated since their relievable suffering went unalleviated because of their health providers' financial imperatives. Moreover, forcing physicians to elect between providing patients with care, at the risk of having their own incomes reduced, and suggesting assisted suicide as a cost saving measure, would place doctors in an ethical and moral conundrum. The deleterious impact of that would be felt by the medical professionals, patients, and society as a whole.

This is the reality with which the Court must grapple.

In sum, legalizing physician-assisted suicide in a health care system in which financial incentives would favor denying care and hastening death would create a profound injustice.

Rather than serving the noble cause of individual liberty, it would make a mockery of freedom, since the "choice" to commit assisted suicide would, in many cases, have essentially been predetermined by managed care's financial imperatives.

Decisions to die would often be based, not on the inability of physicians to control pain and limit suffering but on pecuniary determinations.

That being so, state legislative decisions to prohibit assisted suicide are constitutional since they serve vital and rational state interests. Such laws ensure that managed health care does not devolve into a system of managed death. They protect and reinforce the traditional ethics of the health care profession. They strengthen the bond of trust essential to the patient-physician relationship by preventing doctors from being tempted to end patients' lives in order to promote their own financial ends. Perhaps most importantly, they reinforce the essential moral concept that human beings are not commodities, that lives cannot be measured in pecuniary terms, and that rich or poor, powerful or weak, no one should be sacrificed to benefit financial bottom lines.

Respectfully submitted,

INTEREST OF AMICI

The American Association of Homes and Services for the Aging (AAHSA), and its related state associations are national and state nonprofit membership associations that together represent over 5,000 not-for-profit facilities and organizations providing housing, health care, and other services to more than 1,000,000 aging and disabled individuals. Seventy percent of AAHSA homes and organizations have religious sponsors, which include Catholic, Protestant, Jewish, and Muslim denominations. Others are sponsored by private foundations, fraternal organizations, government agencies, unions, and community groups.

Many of AAHSA's members are nursing homes. Both its nursing home members and most other members also provide community-based services such as home health care, hospice care for those in the last stages of terminal illness, and specialty care for those with Alzheimer's disease and other forms of dementia. Other members provide housing for low- or moderate-income seniors, often with supportive services (*e.g.*, periodic routine tasks) or more intensive home-based services. Approximately 700 AAHSA members are continuing care retirement communities, which provide "continuum of care" health care and housing on one site for the remainder of their residents' lives: residents maintain independence in their own homes for as long as possible by using home-based services, but they receive skilled nursing home care if needed.

This case is of extraordinary importance to all Americans. It will affect how millions of people view and treat the end of their lives. It may fundamentally alter the

relationship between patient and physician or other caregiver. And it may erode this nation's long-held convictions about the intrinsic value of all human life.

In particular, though, the Court's decision will directly and practically affect all of AAHSA's 5,000 members. AAHSA members' mission is to provide both quality care and a high quality of life for people at the end of their lives. Their residents and clients increasingly choose to die outside a hospital—in an AAHSA member nursing home, housing facility, community care retirement community, or in their private home while receiving AAHSA member services. Most of the individuals they serve are seniors; many are frail and in the last stages of their lives. These individuals are among society's most vulnerable populations. Because such patients will become terminally ill or die while in their care, AAHSA's facilities and service organizations are among the few structures in American society that deal with death, and must directly confront end-of-life issues, on a daily basis.

Based on a report by the AAHSA Commission on Ethics in Long Term Care, and by resolution of its Board of Directors, AAHSA has declared that "all persons are sacred regardless of their physical or mental condition" and that it is "opposed to a physician or other person assisting another in the taking of their own life." App. 1a. Like the American Medical Association, AAHSA distinguishes between physician-assisted suicide and both the withdrawal of life support and the prescription of pain therapy that has an expected but unintended consequence of shortening life; "intention is important," and society has long recognized that the right to be free of bodily contact and to let nature take its course includes a right to refuse medical treatment. *Id.*

AAHSA fears that a decision by this Court establishing an overarching right to physician-assisted suicide would profoundly harm the lives of its members' 1,000,000 residents and clients. Many AAHSA members would undoubtedly exercise their right of conscience and refuse to participate in assisted suicides. But that would not eliminate such a decision's harm. Striking down dozens of State laws against assisted suicide would create a risk, which no regulatory safeguards could eliminate, of decisions for death that are made while a person is clinically depressed, incompetent, or overly vulnerable to coercion by others and by societal expectations. And it would inexorably move homes and services for the aging away from a culture of life, caring, and trust towards a culture of death and distrust.

SUMMARY OF ARGUMENT

The opinions of the Ninth and Second Circuits mistook the exception for the rule. Only in exceptional circumstances may judges countermand the majority's will as expressed through a democracy. Only in exceptional cases may judges take it upon themselves to solve complex and controversial societal problems—in essence, political questions. Especially when the governing political body is a State and the court is federal, *see Gregory v. Ashcroft*, 501 U.S. 452, 457-59 (1991), the exception must be well grounded in the Constitution and in this Court's jurisprudence. No such exception applies here.

There is no fundamental right to receive assistance in committing suicide. Our Constitution and history not only fail to support such a notion; they flatly contradict it. Nor can any right be deemed nonfundamental but

nevertheless of enough constitutional significance to require a "balancing of interests" or any other form of heightened scrutiny. History and the Court's unbroken precedent contradict even this more limited holding. What is worse, such a holding only *appears* more limited; it would necessarily free courts to balance away any number of State interests in favor of any number of hitherto unrecognized rights. The Ninth and Second Circuit decisions do not merely create this slippery slope; they themselves proceed well down the slope.

Even if there were a right to assisted suicide (fundamental or otherwise), it would give way to compelling State interests. The first is the most compelling interest of all, that of protecting human life. This Court and others have already recognized that a State may assert an interest in protecting *all* human life, without devaluing a particular person's life based on his physical or mental condition. As a corollary, the State has a compelling interest in protecting the lives of individuals who do not make competent or truly voluntary decisions to commit suicide. Even physician-assisted suicide's strongest proponents acknowledge as much. But they fail to acknowledge the experience of AAHSA's members and other health care providers showing that competency and voluntariness are so fluid, complex, and subjective, and terminally-ill patients so vulnerable to pressure, that nothing short of a prohibition on assisted suicide will serve the State's interest. Finally, the State has a compelling interest in maintaining the relationship of trust between organizations that serve the aging and their clients, as well as between physicians and patients. Physician-assisted suicide would poison that relationship

and create fundamental conflict with AAHSA members' missions.

Once the due process question is answered, the equal protection analysis should follow *a fortiori*. Once the distinction between the generally accepted right to refuse life-sustaining treatment and the claimed right to assisted suicide is determined to be constitutionally significant under the Due Process Clause, it is unquestionably rational under the Equal Protection Clause. The distinction also has long been recognized by AAHSA members, physicians, ethicists, legal societies, courts, and democratic majorities. For the Second Circuit to declare all these thinkers' conclusions *irrational*, and for it to miss the glaring inconsistency between its due process and equal protection holdings, reveals the decision for what it is: a novel substantive due process holding in disguise.

ARGUMENT

I. THERE IS NO FUNDAMENTAL RIGHT TO ASSISTED SUICIDE, AND THAT CONCLUSION SHOULD END THE INQUIRY.

The primary issue in this case is whether the Federal Constitution confers any right to receive assistance in committing suicide notwithstanding the laws of the many States that still make such conduct illegal and have done so for a very long time. No such right exists, and this Court can create one only if it jettisons firmly-established and unquestioned precedent on identifying which interests receive any sort of heightened protection under the Due Process Clause. Neither *Cruzan v. Director, Missouri Department of Health*, 497 U.S. 261

(1990), nor *Planned Parenthood v. Casey*, 505 U.S. 833 (1992), strayed from that precedent, and the Court should not do so now.

Even the Ninth Circuit labeled "not controversial" the Court's description in *Bowers v. Hardwick*, 478 U.S. 186 (1986), of what liberty interests are deemed fundamental. *Compassion* Pet. App. 31a n.16.[1] An interest "not readily identifiable in the Constitution's text" must be " 'implicit in the concept of ordered liberty,' " or, stated differently, " 'deeply rooted in this Nation's history and tradition.' " 478 U.S. at 191-92 (citations omitted). This formulation has a very long pedigree, *see, e.g.*, *Snyder v. Massachusetts*, 291 U.S. 97, 105 (1934) (referring to a "principle of justice so rooted in the traditions and conscience of our people as to be ranked as fundamental"), which continues to this day, *see, e.g.*, *Reno v. Flores*, 507 U.S. 292, 301-02 (1993).

Even the Ninth Circuit did not venture to say that a fundamental right to suicide can exist under this standard. Not only is such a right not "rooted in the traditions and conscience of our people," *Snyder*, 291 U.S. at 105, but as numerous academic articles, court decisions, and now briefs to this court detail, both suicide and assisting suicide were widely considered criminal offenses for centuries; states largely decriminalized suicide for reasons other than changed attitudes about its morality, and a large majority of states still make assisting a suicide a felony. *See especially* Thomas J. Marzen, et al., *Suicide: A Constitutional Right?*, 24 Duquesne L. Rev. 1, 17-100 (1985).

[1] The Ninth Circuit opinions as appended to the Petition for Writ of Certiorari in *Washington v. Glucksberg* are cited as "*Compassion* Pet. App. __." The Second Circuit opinion as appended to the Petition for Writ of Certiorari in *Vacco v. Quill* is cited as "*Quill* Pet. App. __."

Instead, the Ninth Circuit created out of whole cloth a new substantive due process doctrine designed to subvert the purpose behind limiting the range of interests deemed fundamental. According to the court, the identification of a nonfundamental liberty interest unleashes a "balancing test" that still "requires the state to overcome a substantial hurdle in justifying any significant impairment." *Compassion* Pet. App. 33a. The only support the court enlisted for its test was *Cruzan* and the earlier cases recognizing an interest in refusing medical treatment. But those cases cannot honestly be read to treat that liberty interest as anything other than fundamental.[2]

Other decisions directly contradict the Ninth Circuit's imagined framework. Nearly every decision declining to find a fundamental liberty interest simply ends its analysis without performing any scrutiny of the statute. *See, e.g.*, *Bowers*, 478 U.S. at 196 (brushing aside respondent's "assert[ion] that there must be a rational basis for the law and that there is none in this case"). The most this Court has ever suggested is that, if a liberty interest

[2] *See Cruzan*, 497 U.S. at 269 (" 'No right is held more sacred, or is more carefully guarded, at common law . . . .' " (citation omitted)); *Youngberg v. Romeo*, 457 U.S. 307, 315-16 (1982) (resting on a " 'historic liberty interest' " and an interest "recognized as the core of the liberty protected by the Due Process Clause"); *Mills v. Rogers*, 457 U.S. 291, 301 (1982) ("[T]his interest of the individual is of such importance that it can be overcome only by 'an overwhelming State interest.' " (citation omitted)).

exists that is not fundamental, a law need only be "rationally connected to a government interest." *Reno*, 507 U.S. at 303.

This Court should not follow the Ninth Circuit's attempted lead in creating a balancing test for non-fundamental rights. The Court has limited the list of fundamental rights because "[t]he doctrine of judicial self-restraint requires [it] to exercise the utmost care whenever [it is] asked to break new ground in this field." *Collins v. City of Harker Heights*, 503 U.S. 115, 125 (1992). Such a balancing test could be applied to an endless list of newly-found interests that could never be deemed fundamental. Courts could then use the test—as the Ninth Circuit did here—to elevate an interest to fundamental status in all but name and to run roughshod over legitimate State interests by denigrating their importance. *Compassion* Pet. App. 63a-114a. Accepting the balancing test would give courts license to sidestep the "guideposts for responsible decisionmaking in this uncharted area." *Collins*, 503 U.S. at 125.

Cruzan provides no more support for substantively inferring a right to suicide than it does for creating a new framework for inquiry. The right against physical invasion of bodily integrity, on which *Cruzan* squarely rested its recognition of an interest in refusing treatment, *see* 497 U.S. at 269, simply does not apply to a desire to kill one's self by ingesting death-inducing drugs.

Planned Parenthood v. Casey and its predecessors are also not helpful, let alone "prescriptive," *Compassion* Pet. App. 57a, in inferring a right to suicide. The Court has disclaimed the Due Process Clause as a basis for a woman's interest in terminating her pregnancy. The

three Justices announcing the Court's judgment in *Casey* upheld *Roe v. Wade*'s finding of a liberty interest based on a concern for *stare decisis* principles and the Court's legitimacy, "whatever degree of personal reluctance any of us may have" for doing so. *Casey*, 505 U.S. at 854-69; *see also id.* at 871. Four more Justices voted to overrule *Roe*. *See id.* at 944-66 (Rehnquist, C.J., concurring in part and dissenting in part). If the Court today would not on a clean slate find a new fundamental liberty interest in choosing to terminate a pregnancy, it would be quite peculiar to hold that the reproductive choice decisions compelled the Court to find an entirely different new fundamental liberty interest.

Even if used to discern a different liberty interest, the reproductive choice decisions provide little guidance here. The Court has recognized that "abortion is a unique act" and that with pregnancy "the liberty interest of the woman is at stake in a sense unique to the human condition and so unique to the law." *Casey*, 505 U.S. at 852. Abortion involves ending what the Court has necessarily deemed only "potential life," *id.* at 870, not the fully realized life of a person seeking suicide.

Both the Ninth and Second Circuits rested their decisions on *Casey*'s dicta describing prior privacy decisions as "involving the most intimate and personal choices a person may make in a lifetime, choices central to personal dignity and autonomy," and "the right to define one's own concept of existence, of meaning, of the universe, and of the mystery of human life." *Id.* at 851. But *Casey* used that passage to frame its explanation that abortion involves more than "beliefs about these matters"; it is

"conduct" that is "fraught with consequences for others." *Id.* at 851-52.[3]

The lower courts lifted the *Casey* passage out of context and used it as an engine that can mint a practically unlimited number of new fundamental constitutional rights that contradict long-held societal consensus. For "[i]f physician-assisted suicide is a protected 'intimate and personal choice,' why aren't polygamy, consensual duels, prostitution, and indeed, the use of illicit drugs?" *Compassion* Pet. App. 10c (O'Scannlain, J., dissenting from denial of rehearing en banc by the full court). Especially in light of the *Casey* opinion's true holdings, this passage cannot be read to overturn decades of constitutional jurisprudence intended to limit courts' temptation to substitute their judgment for that of democratic majorities. This Court should take the opportunity to foreclose such a use of *Casey* by lower courts in the future.

II. THE STATES' COMPELLING INTEREST IN PROTECTING HUMAN LIFE OUTWEIGHS ANY RIGHT TO ASSISTED SUICIDE.

Petitioners and other *amici* raise several compelling state interests that prohibitions on assisting suicides promote. AAHSA focuses on three: the interest in protecting the sanctity of all human life, the interest in preventing suicides that are not truly made voluntarily by mentally competent patients, and a corresponding interest in preserving the trust the disabled and aging place in long-term care institutions such as AAHSA's members. A prohibition on physician-assisted suicide is necessary to preserve all human life, to protect against less-than-voluntary deaths, and to ensure that long-term care facilities and services for the aging do not become centers of death and suspicion.

[3] The Court's list of individuals bearing those consequences, *see id.*, applies with full force to the act of committing assisted suicide.

A. Protecting the Sanctity of All Human Life is the Most Compelling of All State Interests.

The Due Process Clause itself lists life as the first interest worthy of its protection. Prohibitions on suicide reveal that society has long recognized that the State's interest in preserving life can outweigh the individual's desire to die. Nor does the quality of the individual's life eliminate the State's interest; prohibitions on suicide or assisting suicide have never made an exception for terminal illness. *See Cruzan*, 497 U.S. at 295 (Scalia, J., concurring) (citing several cases and other authorities). Apart from the Ninth Circuit, courts and other thinkers throughout time have recognized that "it would violate the concept of human dignity to measure the value of a person's life by that person's physical and mental condition." *People v. Kevorkian*, 527 N.W.2d 714, 727-28 n.41. (Mich. 1994). Thus the Court in *Cruzan* held that, even when a patient is in a persistent vegetative state, "a State may properly decline to make judgments about the 'quality' of life that a particular individual may enjoy, and simply assert an unqualified interest in the preservation of human life." 497 U.S. at 282.

Here, too, the State may assert an unqualified interest in preserving all human life, including that of terminally

ill patients. The Ninth Circuit's attempt to diminish that interest to near-nothing based on its cavalier judgment that the terminally ill patient's life is not worth protecting, *Compassion* Pet. App. 63a-101a, runs counter to *Cruzan* and to an unbroken consensus throughout history.

The Court's reproductive choice precedent firmly supports the State at this point in the analysis. A central principle of cases from *Roe* to *Casey* is that the State's " 'important and legitimate interest in potential life' " becomes paramount upon viability. *Id.* at 871 (quoting *Roe v. Wade*, 410 U.S. 113, 163 (1973)). Even a terminally ill patient is a viable human life. *Cf. Compassion* Pet. App. 146a (Beezer, J., dissenting) (distinguishing between a patient seeking assisted suicide and a patient on life support by categorizing them as essentially viable and nonviable). The same decisions also acknowledge the State's " 'important and legitimate interest in protecting the health of the pregnant woman,' " notwithstanding the burdens State restrictions place on that very same woman's liberty interest. *Casey*, 505 U.S. at 875-76 (quoting *Roe*, 410 U.S. at 162).

Nothing short of a prohibition on ending a life will further the State's interest in protecting that life. Thus the reproductive choice decisions allow the State to prohibit abortions of viable fetuses. *Casey*, 505 U.S. at 879 (quoting *Roe*, 410 U.S. at 164-65). As in those cases, the State's interest in protecting a viable human life outweighs a burden on any liberty interest a terminally ill person arguably has in assistance to suicide.

B. States Cannot Practicably Limit Physician-Assisted Suicide Only to Mentally Competent Patients Making Voluntary Decisions.

Cruzan held that Missouri's compelling interest in preserving even vegetative human life outweighed a patient's interest in refusing medical treatment because it helped prevent "an erroneous decision to withdraw life-sustaining treatment," which "is not susceptible of correction." 497 U.S. at 283. Here, as in *Cruzan*, a serious risk of irreversible error exists—a risk that a patient's decision to commit suicide will not be made while he is sufficiently competent or will not be truly voluntary.

The Ninth Circuit cavalierly brushed aside these risks by making the naked assumption "that sufficient protections can and will be developed" to "ensure that the possibility of error will be remote." *Compassion* Pet. App. 103a-104a. The individuals who comprised the New York State Task Force on Life and the Law, with far more relevant experience than federal judges, found such a faith in safeguards "naive and unsupportable." New York State Task Force on Life and the Law, *When Death Is Sought: Assisted Suicide and Euthanasia in the Medical Context* (May 1994). AAHSA members' actual experience with terminally ill residents is similar.

Paradoxically, the same terminal illnesses that place a person within the lower courts' newly-"protected" class often cause clinical depression, neurological dysfunction, and corresponding competency questions. And no question exists that these ailments affect a person's decision to live or die: "patients who desire suicide or an early death during a terminal illness are usually suffering from a treatable mental illness, most commonly depression." *Id.* at 13 (footnote omitted). Indeed, 95 percent of

all suicides "have a diagnosable mental disorder at the time of death." *Id.* at 11.

The proper response to a mental ailment is to treat it, not surrender to it. Treatment for clinical depression in particular can produce a complete recovery. Many people who initially express a desire to take their lives later regain their mental balance and regain a sense that their lives are worth living. Even sufferers of Alzheimer's disease, who over the long term face irreversible mental decline, experience day-to-day ebbs and flows in their lucidity.

All agree that a decision to take one's life should not be made while incompetent or clinically depressed. But merely imposing competency requirements on assisted suicide decisions cannot prevent such errors. Both competency and depression exist along subtle continuums that are not susceptible to precise measurement. Individuals can suffer a range from mild depression to psychotic depression; indeed, the same individual may slide from one to the other, with a correlating shift in their competency. And competency is a multifactorial concept; persons can be disabled in some cognitive areas and not others.

Almost all residents of AAHSA members experience what is called "aging in place": they begin their stays competent but *gradually* slide toward incompetency. Many, if not most, reach the point at which they are deemed incompetent before passing away or leaving the facility. At any given time, a facility's staff can identify some residents that are still clearly competent and some that are clearly not, but the majority falls somewhere in the undefined middle.

Competency determinations are problematic in and of themselves. They depend on interview measurements that are highly subjective and highly variable across interviewers. Psychological examination is also particularly susceptible to a diagnosis that merely confirms the examiner's pre-interview expectations. If diagnoses are made by physicians without advanced psychiatric training, the examiner is even more likely to overlook some mental illnesses or other competency factors. A physician also may base a determination on very infrequent contact with the individual; residents receive their daily care from nurses, and physicians may see them as little as once per month.

The risk that this sea of complex subjectivity may obscure the decision to die of a mentally incompetent person—a person who might regain his mental equilibrium and later choose to live—is a compelling reason for a State to enforce a prophylactic rule.

Equally compelling is the terminally ill's extraordinary vulnerability to the overt suggestions of others, to psychological pressure, or to perceived societal expectations that they take their own lives. Here, too, no regulation can assure that such pressures have not caused a less-than-willing suicide.

Terminally ill individuals are often disconcerted, preoccupied, emotionally unsettled, and fully confronting their existence and their mortality for the first time. They are seeking aid and answers from those around them. They are, almost by definition, physically frail—often severely fatigued, in pain, and having trouble performing simple tasks such as breathing, eating, and relieving themselves. They may experience depression or

other mental deficits that do not raise serious competency questions but nonetheless further reduce the independence of their decisionmaking.

Such vulnerable individuals may face pressure to take their lives from several sources. One is the physician herself. The original three-judge panel was correct that "[p]hysician neutrality and patient autonomy, independent of their physician's advice, are largely myths. Most patients do what doctors recommend." *Compassion* Pet. App. 15d. Another source is the individual's family. A family's suggestion may be spurred by a selfish desire to lift the financial and emotional burden of caring for the terminally ill,[4] or merely by an honest belief, not otherwise shared by the individual, that a faster death is better for him.

A third source is society as a whole. Even in the absence of overt or subtle suggestion by medical personnel or family members that taking one's life is "the right thing to do"—even in the presence of statements reassuring the patient that the choice is his—he may feel an unwanted obligation to unburden his family and society of himself. Our choices, even our most important and personal ones, are constrained by accepted norms. We

[4] Terminally ill patients typically have very high medical costs. Medicare payments provide one indicator: In recent years, expenses for patients in the last year of their lives have accounted for between 27.2 percent and 30.6 percent of all such payments. *See* James D. Lubitz & Gerald F. Riley, *Trends in Medicare Payments in the Last Year of Life*, 328 New Eng. J. Med. 1092 (1993). Society may reasonably consider whether this is the best possible allocation of either public or private resources, but it should not reallocate them by pushing the elderly to kill themselves.

largely do what is expected of us, and the terminally ill may see taking their own lives as expected of them.

Indeed, the very act of constitutionalizing a right to suicide would alter attitudes about what society *expects* of individuals, not just what it *permits*. If this Court affirms the judgments below, physician assisted suicide will be more than an option; the nation's highest court will have declared it a constitutional right of enough weight to overcome the informed judgments of numerous democratic majorities and several admittedly compelling State interests. As one facility staff member has written in correspondence to AAHSA, residents

> may use such an assumption [that there is a Constitutional right to assisted suicide] as a further endorsement that the community also does not believe they have the right to continue to live.

The opinion for the Court in *Casey* relied explicitly on its recognition that the Court's earlier reproductive choice decisions have had such an effect. *See* 505 U.S. at 856 (noting that people have relied on *Roe* to "ma[k]e choices that define their views of themselves and their places in society" and "have ordered their thinking and living around that case"). This Court should not spur society to downgrade the value it places on human life and, by so doing, cause vulnerable, terminally-ill patients to "choose" suicide when they otherwise would not have done so.

One final barrier to true safeguards ensuring voluntariness springs from the intersection of the competency and coercion questions. Because competency determinations are highly subjective, a physician's belief that suicide is the better choice may either color her determi-

nation in favor of finding competency or, in the worst case, provide cover for her decision to act "paternally." Even if regulations require a second opinion, the reality of medical practice is that a physician's colleagues are unlikely to challenge her determination in close cases—especially if she has a hand in selecting the colleague. This level of subjectivity is simply not prone to effective regulation.

The same concerns that are present here—a vulnerable population and subjective, unpolicable questions of voluntariness and competency—have supported prophylactic rules against statutory rape, even though some minors can make competent, voluntary decisions to engage in sex with an adult. This Court should not dismiss such concerns in the context of physician-assisted suicide. Error here leads to an unquestionably wrongful taking of a human life, and lowering that risk is the most compelling of all State interests.

C. Physician-Assisted Suicide Will Undermine the Trust that the Elderly and Their Families Must Have in Institutions and Organizations Serving Them.

AAHSA's members and other providers of care and services to the aging are dedicated to the preservation and enhancement of each client's life and quality of life. This dedication is reflected in their respective charitable missions and in the care and compassion they show to all whom they serve, particularly the most vulnerable—the frail and infirm elderly who face end-of-life decisions. Congress also has not only acknowledged but mandated

this purpose for Medicare and Medicaid providers.[5] The statutes explicitly place the interest in residents' health and safety above some of their own wishes.[6]

The potential for physician assisted suicide would fundamentally alter the relationship between the aging and the organizations that serve them.[7] If prohibitions on assisted suicide are struck down, these institutions could be asked—and perhaps required—to be the agents of their clients' deaths rather than the protector and enricher of their lives. Such an obligation would conflict irreconcilably with the mission of many AAHSA members, both those that are religiously sponsored and those

---

[5] *See, e.g.*, 42 U.S.C. §§ 1395i-3(b)(1)(A), 1396r(b)(1)(A) (requiring a facility to "care for its residents in such a manner and in such an environment as will promote maintenance or enhancement of the quality of life of each resident"); *id.* §§ 1395i-3(b)(2), 1396r(b)(2) (requiring a facility to "provide services to attain or maintain the highest practicable physical, mental, and psychosocial well being of each resident, in accordance with a written plan of care" for each resident).

[6] *See, e.g.*, *id.* §§ 1395i-3(c)(1)(v), 1396r(c)(1)(v) (residents have the right to "reasonable accommodation of individual needs and preferences, except when the health or safety of the individual . . . would be endangered").

[7] Assisted suicide creates an unquestioned conflict with specific norms and rules within facilities for the aging; the very act that may be deemed a constitutional right is otherwise specifically forbidden by regulation. *See, e.g.*, 42 C.F.R. 483.25(l) ("Each resident's drug regimen must be free from unnecessary drugs. An unnecessary drug is any drug when used: (i) In excessive dose . . . (iv) Without adequate indications for its use; or (v) In the presence of adverse consequences which indicate the dose should be reduced or discontinued . . . .").

that are not.[8] AAHSA has received many letters from staff at member facilities expressing this view. As one wrote:

> If within our settings suicide is an abetted activity in response to the client's frustration, it can unwittingly become an encouraged activity in response to the agency's frustration. . . . I am unalterably opposed to undermining our few remaining pockets of caring culture by turning them into places of purposeful killing.

Many medical ethicists have written that introducing physician-assisted suicide into the physician-patient relationship will seriously undermine patients' trust that physicians are committed to preserving life, which is at the core of the relationship. *See, e.g.*, *Decisions Near the End of Life*, 267 J. Am. Med. Ass'n 2229, 2232 (1992); *cf.* American Medical Association *Code of Ethics* § 2.211 (concluding that physician-assisted suicide is "fundamentally incompatible with the physician's role as healer"). This breakdown of trust has even more drastic effects on the relationship between AAHSA members and the people they serve.

Unlike the selection of a doctor, the choice to enter a nursing home or other facility for the aging entails a fundamental life shift—uprooting one's home and placing large areas of one's life into the hands of others. Many seniors choose to make this move even when their physical state does not make it necessary because they view it as beneficial; they can trust in a facility's mission of preserving life and health when they entrust their lives to it.

One of this nation's most vulnerable populations relies on AAHSA members to show a compassionate commitment to life at one of its most trying yet precious moments. Especially if residents fear that the choice will be subtly forced upon them, physician-assisted suicide will threaten this relationship and poison the environment in which long-term care and services are provided, to the detriment of both caregiver and recipient. Some caregivers' refusal to participate in assisted suicide would not

---

[8] Although the invalidation of statutes *prohibiting* assisted suicide would not *require* facilities to engage in such practices, states may move in that direction in response to this Court's decision. And although religiously-sponsored organizations have a constitutionally protected right to refrain from practices such as assisted suicide that violate their religious principles, the right does not extend to AAHSA members who are not religiously sponsored and who hold the same views on secular grounds.

Even for religiously-sponsored members, the right is not absolute. *Compare Employment Division v. Smith*, 494 U.S. 872 (1990) (finding no Free Exercise Clause violation of generally applicable governmental regulation of conduct) *with* Religious Freedom Restoration Act of 1993, 42 U.S.C. § 2000bb(b)(1) (requiring a compelling interest for regulations that burden religious exercise). If this Court finds a constitutional right to assisted suicide and a state attempts to require facilities to assist, advocates and perhaps courts will use the Court's finding here to argue that the State has a compelling interest in furthering the constitutional right. *Cf. Swanner v. Anchorage Equal Rights Comm'n*, 874 P.2d 274, 279-284 (Alaska) (finding that a compelling interest in preventing marital status discrimination outweighed the defendant's free exercise rights even though marital status has never received heightened constitutional protection), *cert. denied*, 115 S. Ct. 460, 460-62 (1994) (Thomas, J., dissenting from denial of certiorari) (noting the conflict among the courts on this issue).

If this Court finds some right to assisted suicide, it should at the least make clear that organizations serving the aging have a right of conscience to refuse to assist.

prevent the degradation of trust for the profession and aging community as a whole. One facility's staff member put it succinctly in a letter to AAHSA.

> Many of [the people we serve] believe if they enter a nursing home they will not receive compassionate and quality care. Why would we want to add another fear—the fear that we might take their lives?

There is no doubt that the State has a compelling interest in mitigating this fear.

III. STATES MAY RATIONALLY DISTINGUISH BETWEEN A DECISION TO DECLINE LIFE-SUSTAINING TREATMENT AND ONE TO COMMIT SUICIDE.

The Equal Protection Clause "simply keeps governmental decisionmakers from treating differently persons who are *in all relevant respects* alike." *Nordlinger v. Hahn*, 505 U.S. 1, 10 (1992) (emphasis added). This Court has stated many times, in many different ways, the extreme deference courts must pay to the State's determination of what is relevant for line-drawing purposes. A distinction is rational "if there is any reasonably conceivable state of facts that could provide a rational basis"; when there are " 'plausible reasons' " for the State action, " 'our inquiry is at an end.' " *FCC v. Beach Communications, Inc.*, 508 U.S. 307, 313-16 (1993) (collecting cases; citation omitted); *accord Gregory v. Ashcroft*, 501 U.S. 452, 473 (1991).

In finding an Equal Protection Clause violation, the Second Circuit restated the bare-bones rational basis test but conspicuously omitted mention of the deference due

the State in determining what is rational. *Quill* Pet. App. 21a-23a. Even a cursory examination of the classification at issue confirms that, when such deference is given, prohibitions on physician-assisted suicide must be found constitutional.

The Second Circuit examined state laws that apply equally to all citizens, apart from one small group (people who require life-sustaining treatment). It then performed its own exquisite line-drawing to create a new small group with different, ill-defined, and in some cases unidentifiable characteristics ("mentally competent patients who seek to end their lives during the final stages of a terminal illness" through "prescribe[d] drugs to be self-administered"). *Quill* Pet. App. 4a. The two groups are not coextensive: not all patients who need life-sustaining treatment are terminally ill, *see, e.g.*, *Cruzan*, 497 U.S. at 266-67, and not all terminally ill patients need life-sustaining treatment. Incredibly, the Second Circuit concluded that the Equal Protection Clause *requires* the State to lift the court's newly-created group out of the general citizenry protected by laws against assisted suicide and place them in the small category currently occupied only by patients needing life-sustaining treatment.

Two rational bases exist for distinguishing between the two groups of patients. One is the age-old common law right to maintain one's bodily integrity, as explained so forcefully in *Cruzan*, *see* 497 U.S. at 269; that right comes into play only for patients needing medical treatment to survive. The other is the distinction between affirmatively employing medical science to shorten a patient's life and letting nature, in the form of some otherwise-fatal affliction, take its course. Although these

are thin lines, *see Cruzan*, 497 U.S. at 295-98 (Scalia, J., concurring), they are lines that have been drawn throughout much of history and are drawn today—by AAHSA,[9] by physicians (including groups submitting *amicus* briefs in this case),[10] by academic ethicists, by legal groups such as the American Bar Association,[11] by courts[12] (including this one),[13] by carefully selected interdisciplinary task forces,[14] and by democratic majorities that have criminalized one but not the other.[15]

For three or eight federal judges to declare this overwhelming weight of authority from many segments of society *irrational* is a breathtaking exercise of judicial hubris.

---

[9] App. 1a-2a.

[11] American Bar Association, Commission on Legal Problems of the Elderly, Memorandum of Jan. 17, 1992, *reprinted in* 8 Issues L. & Med. 117, 118 (1992).

[12] *See Compassion* Pet. App. 10c n.12 (citing court decisions). Judge Kleinfeld's analogy to General Eisenhower's decision to launch the Normandy invasion is a powerful dissection of the Ninth Circuit majority opinion's confusion on this issue. *Compassion* Pet. App. 163a (Kleinfeld, J., dissenting).

[13] While assuming a right to refuse treatment, *Cruzan* also noted the many laws criminalizing assisted suicide. *See* 497 U.S. at 279-80.

[14] *See* New York State Task Force, *supra*, at viii, 71.

[15] *See* Thomas J. Marzen, *"Out, Brief Candle": Constitutionally Prescribed Suicide for the Terminally Ill*, 21 Hastings Const. L.Q. 799, 806 n.25 (1994) (citing statutes of forty states).

It is even more breathtaking when one realizes that the Second Circuit had already found the distinction to be *constitutionally mandated* under the Due Process Clause. One reaches the Equal Protection Clause issue at all only by first concluding, as the Second Circuit correctly did, that refusing life-sustaining treatment and ingesting poison are different enough to mandate a fundamental liberty interest in one but not the other. The Second Circuit's studied indifference to this glaring inconsistency, coupled with its peculiar balancing of State and liberty interests that would be appropriate only in a substantive due process analysis,[16] reveals a "creat[ion of] substantive constitutional rights in the name of guaranteeing equal protection of the laws," *San Antonio Sch. Dist. v. Rodriguez*, 411 U.S. 1, 33 (1972).

CONCLUSION
